"The heritage of a people is a nation's most priceless possession, as it mirrors the soul of that nation and is forever engraved upon the face of history." The cultural heritage of these United States is deeply rooted in the many people of diverse ethnic and racial backgrounds. The sum total of these contributions enrich our national life and truly make us an amalgam representative of the world's people, a unique human experience in our world civilization. It is only through an understanding of each other's backgrounds, the culture, the traditions that have been a part of each group's past that will make us a more informed and tolerant people towards each other.

One of the most dynamic and progressive ways to create "avenues of understanding" in an ethnic community is to create regional Ethnic Heritage Studies Centers in the major centers of ethnic concentration throughout these United States. These centers would become regional information, educational, research, and study institutes for the use of the students, scholars, colleges, and community interests for giving new approaches to people's mutual understanding through creating the much needed image awareness of each ethnic and racial group's past, its traditions, culture, heritage, and past contributions to America since arriving upon these shores.

One of the greatest concentrations of racial and ethnic groups in our country exists in Western Pennsylvania in and and around Allegheny County. Here we have people from all the nations and continents living and working together. On many occasions these same people participate together in community festivals like Pittsburgh's own International Folk Festival, McKeesport's International Village,

The heritage of a people is a nation's most priceless possession, as it mirrors the soul of that nation and is forever engraved upon the face of history.

Michael Kolesar, Jr.

and Ambridge's Nationality Days.* These celebrated festivals, in which the entire communities participate, are a proven indication of the underlying ethnic traditions that prevail among the people. It has been said that first we are Americans, patriotically proud of our country, our history, its people; and secondly we are all descendants of immigrants, proud people all, retaining some of the rich ethnic traditions and the cultural heritage of our past.

The time for action of this most important contribution towards making us a more harmonious society is now. Let us make the Ethnic Heritage Studies Centers Act of 1971 but the first step on a national level towards seeding our future national life with a homogeneous culture based on the cultural contributions of all the racial and ethnic people within our nation.

It is the firm, irrevocable belief of this organization, The American Nationality Heritage Foundation, which is promarily interested in the preservation of the cultural heritage of all the diverse races and nationalities, that our greatest hope for a healthy and prosperous society is to relieve the existing tensions, the hatred prevailing amidst our races, ethnics, and creeds through fostering greater understanding among our people. The passage of the Ethnic Heritage Studies Centers Act of 1971 constitutes the most significant step to bring peace and harmony to our country.

With best wishes for success in your efforts for passage of this most significant Senate bill.

Sincerely,

Michael Kolesar Jr.

Michael Kolesar Jr., Director

---

* Our reconstructions at Williamsburg, Virginia; Sturbridge Village, Massachusetts; Greenfield Village of the Henry Ford Museum in Dearborn, Michigan; and Upper Canada Village near Morrisburg, Ontario, among the many heritage and historical museums in North America will attest to this cultural renaissance. Over the years these reconstructions have been a Mecca for students, historians, scholars, and interested citizens in increasing numbers. As an example, Sturbridge Village in Massachusetts draws around 400,000 visitors a year. World-famous Henry Ford Museum and Greenfield Village are one of the great attractions of America, drawing over a million visitors each year.

United States Senate
Washington, D. C.

Dear Mr. Chairman:

Individually, and as a member of the staff of the Providence Human Relations Commission, I would like to urge you and your committee members to recommend immediate passage by the Senate of Bill S. 23 cited as "The Ethnic Heritage Studies Center Act of 1971."

Such centers would provide a base of operations for the dissemination of knowledge, affording students an opportunity to learn about the nature of their own cultural heritage and to learn about the contributions of the cultural heritages of other ethnic groups of this nation.

With the ever-increasing social tensions and polarization that is besetting our cities, it behooves our leadership to encourage our educational systems to provide programs designed to counteract this trend by stimulating interest in the heritage and cultures of our poly-ethnic American society.

By advancing us toward a redefinition of the meaning of America as a mosaic, rather than a melting pot, we may be more secure in our own cultural identity and thereby better equipped to understand the cultural identity of others, as well as more sympathetic to the struggle for human dignity in which other groups are presently engaged.

Sincerely yours,

Elizabeth J. Shea

Hon. Richard S. Schweiker
United State Senate
6221 New Senate Office Building
Washington, D. C. 20510

Dear Senator Schweiker:

It is with pleasure that I respond to your request for a statement on the "Ethnic Heritage Studies Centers Act of 1971."

The enclosed statement deals with your bill as well as the one filed by Congressman Pucinski in the House. It was sent to all Armenian-American newspapers and periodicals in this country with the request that continued publicity be given to the legislative progress of both bills.

Of the two measures I think yours is more comprehensive in that it takes in also institutions of higher education. However, I think the funding in Congressman Pucinski's bill is perhaps more realistic in that, once these measures are enacted and the differences reconciled, the program will require all of $50,000,000 to be fully realized. Perhaps, when and if the bills pass the respective Houses, the compromise measure will provide for funding over a three-year span with $10 million allocated for the first year and $20 million each for the next two years.

One other suggestion which I would make is to broaden the applicability of the bill so as to include private elementary and secondary schools as being eligible under its provisions. There are numerous ethnic schools throughout the country in dire need of funds in order to improve their curriculums in the areas which both bills envisage.

I am pleased to enclose also a selected group of printed materials describing the nature, scope, and objectives of our organization.

I shall look forward to receiving further information on the progress of your measure, and I shall be glad to assist in any way I can.

Sincerely yours,

THE CONGRESS AND ETHNIC HERITAGE STUDIES

A Statement on Impending Legislation Requiring Community Support

by Manoog S. Young
Chairman, Board of Directors
National Association for Armenian Studies and Research, Inc.

- - - -

Senator Richard S. Schweiker of Pennsylvania and Representative Roman C. Pucinski of Illinois have introduced legislation in the respective Houses of Congress in order to provide for the study of the cultural heritages of ethnic groups in America.

The Senate bill (S.23), entitled "The Ethnic Heritage Studies Centers Act of 1971," and the House bill (H.R. 1499), entitled "The Ethnic Heritage Studies Act of 1971," are nearly identical in language and purpose. Both are important and long overdue pieces of legislation which should cause every American to rejoice.

These bills provide for financial grants in order to enable public and private nonprofit educational agencies and organizations to (1) develop curriculum materials for use in public schools as well as institutions of higher learning for the study of the history, geography, society, economy, literature, art, music, drama, language, and general culture of ethnic minorities; (2) disseminate such curriculum materials for use in academic institutions from the elementary school level to universities; and (3) provide for training of persons in the utilization of such curriculum materials.

The creation of ethnic studies programs, as provided by these bills, will help not only to bring about a greater recognition and understanding of the role of the ethnic minorities in the growth and development of the United States but will also help to preserve for present and future generations the rich cultural heritage and traditions which these groups have brought to this country.

It will help them develop greater pride in their cultural past and will encourage them to maintain those traditions which are consistent with our multi-ethnic American culture. More important, it will help the various minorities to develop better understanding of each other and will as well promote greater tolerance of each other.

In this day and age when our country is being confronted by a mounting internal crisis as a result of the war, racial tensions, conflicting life styles, economic uncertainty, and the rising expectations of the people, the enactment of such legislation will anger well in helping to bring about much

needed understanding and tolerance and to redirect the energies and efforts of minority groups towards lasting constructive ends. If the Congress of the United States enacts this legislation, it will show all groups that it - and the nation - cares.

For Armenian-Americans this means that significant financial assistance will be available to develop greater and better library resources, much needed curriculum materials, and more meaningful and extensive cultural events and activities. These will be valuable and practical ways to augment the efforts of the various cultural and educational organizations within the American-Armenian community to perpetuate and promote Armenian culture and traditions.

The financial grants which will become available will serve to complement and provide needed additional financial support for the various Armenian studies programs which are now in operation at such institutions of higher education as Harvard University, University of California - Los Angeles, Columbia University, Fresno State College, and Wayne State University as well as at other colleges and universities which have or are now introducing courses in Armenian language and history.

Sen. Schweiker and Rep. Pucinski should be congratulated for conceiving and introducing this legislation in Congress. At present hearings are being conducted in both Houses by their respective education committees. The support of many other Senators and Congressmen will be needed to make this comprehensive ethnic studies legislation a reality. In this respect individual Armenians can help by making their sentiments known to their own senatorial and congressional representatives regarding this legislation.

April 19, 1971.

The Honorable Richard S. Schweiker,
United States Senate,
6221 New Senate Office Building,
Washington, D.C., 20510.

Dear Senator Schweiker:

Relative to your memorandum dated April 6, on Ethnic Heritage Studies Centers, I submit to you the following:

As President of the Greek Catholic Union, with a membership of 50,000 throughout the United States, I strongly urge and will support the passage of Senate Bill S. #23, establishing Ethnic Heritage Study Centers.

Ethnic fraternalism has made lasting contributions to the stability and development of American ethnic groups. The Ethnic Hertiage Study Center Bill offers a unique opportunity for fraternals to become involved in a process whereby the entire nation may learn and benefit from sources of history.

At a time of national discord this important legislation will focus emphasis on cultural contributions of all groups, and will hopefully serve to counteract the fragmentation that endangers our nation's existence. I would like to further point, that all ethnic and racial groups must be represented in the Ethnic Studies Centers, since no single group or social class has claim to the title of "Ethnic American."

I further recommend for your consideration that the Greater Allegheny County area be designated as one of these centers, since 17 fraternal organizations are domiciled here and over 77 affiliated fraternal groups have active local

branches. Annual ethnic festivals held in Pittsburgh, McKeesport, Ambridge, McKees Rocks and other smaller surrounding communities attract thousands of people, indicating that ethnic cultural interest exists, and Senate Bill S #23, will provide necessary framework of permanence equipollent to the interest evident in ethnic activities.

I commend you for your vigouous support for Senate Bill S. #23, and we stand ready to support you in this endeavor.

Sincerely yours,

George Batyko,
President.

GB/tk

April 16, 1971

Senator Richard Schweiker
U.S. Senate
Senate Office Building
Washington, D.C.

Dear Senator Schweiker:

We would like to have the following statement included in the forthcoming record of the Senate Hearings on Ethnic Studies Heritage Bill #23.

The revitalization of American ethnic groups is a social fact that needs only the newspaper for confirmation. The existence of cultural and social heterogeniety has characterized American society from the colonial period to the present, only growing much more complex as time has added more ethnic groups. The beginning point for all future research and planning lies in the recognition of ethnic diversity and inquiry into its specification.

Over the past decade, in response to civil rights movement and in recognition of the need to assist Blacks, many primary and secondary schools and universities have established departments of Black Studies. At the University of Pittsburgh a program in Black Studies was established in 1969. Local and national foundations also support such programs. Within the Black Studies curriculum there is considerable emphasis on demonstrating the absolute differentiation between black and white but rarely focusing on ethnic or cultural differences and similarities a) among blacks themselves, b) between blacks and whites and c) among whites. In short Black Studies are not taught comparatively but rely wholly on subjective experience for explanation. It is clear there persists a common misunderstanding of the meaning of race and ethnicity.

Color is not culture. Indeed, it is culture that dictates the meaning of color, yet the two concepts are often equated and the misunderstanding is perpetuated. Only by focusing on culturally engendered similarities and differences and interpretations that follow therefrom can a comparison between all racial and ethnic groups be made.

In recent months educators have come to question the future of Black Studies. One of the problems is the lack of available and qualified persons to instruct Black Studies as well as scholarship in this area. Recently the Ford Foundation has made a series of grants to universities and to students to study Black, Mexican-American, and Puerto Rican groups. Beyond this, there is a large amount of work to be accomplished in training of teachers and in preparing curriculum materials not only for Black Studies but for genuine inter-ethnic exploration.

If programs for Black Studies can be said to be overdone, then studies of European Ethnics can be said to be virtually non-existent.

There are hardly any classes in universities and colleges in the country that focus on the European immigrant dimension of ethnicity. One such class was given by Professor Otto von Mering at the University of Pittsburgh, Winter, 1969, entitled "American National Ethnic Traditions."

Many classes in political science, anthropology and history focus exclusively on foreign cultural areas and neglect the vital link provided by historical immigration movements. It is clear that this "overseas" focus on foreign areas has been stimulated and maintained for a long time by foreign area fellowships. Departments of Sociology, Anthropology, Political Science, Social Psychology are just beginning to awaken to the need for such comparative studies in history and society. However, the existence of new, but centrifugal interest in comparative ethnic studies within universities and colleges results in a politicization of scholarship in departments, between departments, and between universities.

There is a clear need for inter-institutional, inter-departmental and inter-disciplinary cooperation and coordination in order to achieve the desired end of programs in comparative ethnic studies. There is also a need for a central repository for scholars and interested readers to refer for bibliographic assistance. However, the current trend in fragmenting libraries into sections for Black Programs, and for area studies has the effect of scattering resources. This scattering effect is complemented in the fragmentation of scholarship, curricula, and student body along ethnic and racial lines. This situation must be remedied if genuine comparative research is to be accomplished. Finally, the basis for sound public policy cannot lie in one-sided arbitrariness, but can only emerge from the fullest possible understanding of the complexities of modern multi-ethnic life.

The Ethnic Studies Planning Committee, a Pittsburgh based multi-disciplinary and inter-university group of persons trained in various aspects of "Ethnic Science", has been meeting weekly for the past year to plan programs in Ethnic scholarship, education, traineeships and community action. The basis for this planning has been an attempt to understand more deeply the multi-ethnic community in which it is embedded and which it currently serves.

Certain committee members have been involved in a) local ethnic community workshops, b) seminars on ethnicity in American history in both private and parochial schools, c) an inquiry into the nature and function of the role of ethnic fraternalism in health and insurance, d) the role of ethnic leadership in local and the wider communities, e) an inquiry into the persistence and change of ethnic identity, f) a systematic study of "Ethnic folklore" and g) a continuation and expansion of European expressive culture, (music, dance, costuming, etc.).

It is our belief that the greater Allegheny County area would serve as a rich human laboratory for long-term study and involvement by an Ethnic Studies Center located here. Historically, the Allegheny County area is where the east ends and the west begins, the funnel through which all change in America has taken place. It is not much stretching the point to say that a history of "The Point" encapsulates the history of America.

Sincerely,

Ethnic Studies Planning Committee

CHANCELLOR OF THE UNIVERSITY

APR 16 10 01 AM '71

April 14, 1971

The Honorable Richard S. Schweiker
United States Senator
Room 4311, Senate Office Building
Washington, D. C. 20515

Dear Senator Schweiker:

Dr. Burkart Holzner, Chairman of the University's Ethnic Studies Committee, has sent me the enclosed letter supporting Senate Bill 23 that you recently introduced providing for a program for the study of cultural heritages of ethnic groups. I endorse the recommendation of the Ethnic Studies Committee, including the suggested amendments.

I hope that you and your colleagues will be successful in the passage of this important legislation. If I can be of any assistance to you in this regard, please let me know.

Best regards.

Sincerely,

Wesley W. Posvar
Chancellor

FACULTY OF ARTS AND SCIENCES
UNIVERSITY OF PITTSBURGH
PITTSBURGH, PENNSYLVANIA 15213

DEPARTMENT OF SOCIOLOGY

March 22, 1971

Chancellor Wesley W. Posvar
107 Cathedral of Learning

Dear Wes:

The Ethnic Studies Committee met and reviewed the language of the Bill introduced by Senator Schweiker on January 25, 1971, entitled S. 23, "To provide a program to improve the opportunity for the study of cultural heritages of all ethnic groups in the Nation." The Committee feels that in every respect this Bill represents considerable progress over the earlier bills introduced both in the Senate and the House and recommends that the University indicate to Senator Schweiker its support.

It further recommends that the language of the Bill be modified to include the necessary emphasis on research required to prepare the basis for curriculum development. To this end, it suggests that line 21 of page 2 after "Each such center will have" the words be inserted "programs of research and" with the text continuing "courses of study related to all ethnic groups represented in the regional area to be served by such center." On page 2 it is suggested that on line 1 be inserted a new paragraph 1, "Establish and maintain archival collections and programs of research as a basis for the development of curriculum materials." The present paragraph 1 then would become paragraph 2, etc.

Otherwise no modifications are desired.

Sincerely,

Burkart Holzner

APR 16 1 05 PM '71

April 14, 1971

The Honorable Richard S.Schweiker
United States Senate
Washington, D.C.20510

Dear Senator Schweiker,

In reply to your Memorandum of April 6, I would like to state the following :

The Ethnic Heritage Centers Bill corresponds to such basic needs in the United States that one may only wonder why its ideas have not been implemented in Federal legislation sometime ago.

In a country which during the last 150 years has absorbed 45 million immigrants from various nations the process of integration must be of fundamental concern to the Administration and Congress.

This is primarily a practical problem, since life alone will decide among the various theories that have been applied to its solution. Obviously a process of assimilation will exist side by side with expressions of national and other individualism for a long time.

Wherein lies the interest of the American community as a whole ?

It has been often too lightly accepted that the United States should look forward to the simplest process of national absorption of the immigrant. This concept overlooks important psychological aspects of the transformation of an immigrant into a valuable citizen. Without elaboration it can be pointed out that a person who easily rejects his background and tradition may easily become a rootless individual, a stranger in his new country, solely interested in the pursuit of material gains and impervious to the higher ideals of citizenship, nowadays often undermined in this period of transition. On the contrary, participation in an ethnic group keeps the same individual to the values of honesty and pride which were demanded of him in the old country.

I do not claim that the above reasoning is true of all ethnic groups in the United States. Undoubtedly, however, it corresponds to the mood of several of them, and most certainly of that of the Polish group, one of the most law-abiding and hard-working and always prepared to give its sons to the defense of the United States.

It is further to the United States' interest to see to it that the various ethnic groups of immigrants do not hold their mutual antagonisms, often brought with them from the old country.

In these two major respects, the level of integrating the individual ethnic groups and their mutual collaboration the Ethnic Heritage Centers may play a role of utmost importance. I give them wholehearted support.

I am unable, upon such brief notice, to express detailed opinions on the functioning of the future Ethnic Heritage Centers. In short it seems necessary that the organization of EHC takes into account the existing ethnic institutions and cultural organizations in this country. In the Polish American sector I would like to mention here: The Polish Institute of Arts and Sciences in America, The Kosciuszko Foundation, Józef Piłsudski Institute in America, The Orchard Lake Schools, Alliance College, the Polish Veterans organizations, The American Council of Polish Cultural Clubs and last but not least The Polish American Congress. This by no means is a complete list.

I mention these Polish organizations only as an example in order to stress that the EHC should not start from scratch so to speak, but supplement the activities of various ethnic organizations, some of them with working libraries, well established publications, large memberships, and engaged in extensive cultural activities.

Most of all I see the coordinating role of EHC :

a) between the various ethnic organizations and the American public at large

b) between the various ethnic groups of different backgrounds.

With reference to a particular item in your excellent speech on the floor of the Senate on January 25, 1971, it would seem that the work of EHC should simultaneously begin on two levels, i.e. the regional level you describe as a starting point, and the national level for those organizations and institutions whose scope already spreads over the entire country.

In my very brief outline I would also like to say that the organization of the EHC should not be rigid but adaptive to the different forms of ethnic sholarly and cultural life presently existing.

Please note attached sheet on the Polish Institutemof Arts and Sciences in America.

N o t e.

The Polish Institute of Arts and Sciences in America was founded in 1942 in New York by a group of outstanding Polish scholars, members of the Polish Academy of Sciences. They hoped that after the liberation from Nazi occupation the Institute would become the American station of the Polish Academy of Sciences. Owing to the political events in 1945 this hope was frustrated and the Polish Institute of Arts and Sciences in America became an independent Polish American scholarly organization. It has now nearly 500 members in the United States and 150 in Canada, comprising scholars, educators, researchers, writers and artists.

The purpose of the Institute is to maintain, develop and promote Polish American cultural relations, to spread knowledge of Poland and her culture in the United States and the knowledge of the United States in Poland, and to establish cooperation areas between American and Polish scholars.

To this end the Polish Institute organizes and supports research work pertaining to Poland in this country by offering facilities to scholars, by maintaining a private library and archives, by arranging for regularly held lectures, discussions and conferences. It cooperates with research institutions in Poland by sending them American books and scholarly material.

In 1966, in observance of Poland's Millennium, the Polish Institute convened at Columbia University, New York, the First Congress of Polish American Scholars and Scientists, at which 170 scholars, representing 20 American and Canadian universities, read papers in their special fields. A Second Congress, also to be held at Columbia University in April of 197[illegible] is now being organized by the Institute.

Over the years the Institute published two scholarly quarterlies (The Bulletin 1942-1945) and The Polish Review , now in its sixteenth year, as well as about 35 volumes of books of which the following may be mentioned :

Haiman, Miecislaus, Kościuszko in the American Revolution, 1943.
" " Kosciuszko, Leader and Exile, 1945.
Kosinski, Jerzy, ed. Sociologia amerykańska, wybór prac/American Sociology Selected Studies/, 1962.

TAKOMA PARK, MD., *April 17, 1971.*

Re Bill S. 23: Statement by the Federation of American Citizens of German Descent.

Senator RICHARD S. SCHWEIKER,
Senate Office Building, Washington, D.C.

DEAR SENATOR SCHWEIKER: Mr. Robert Brueckner, the President of the Federation of American Citizens of German Descent, has authorized me as Honorary President, to transmit to you the STATEMENT on Bill S. 23, Ethnic Heritage Studies Centers.

Though time prevented submitting the STATEMENT to the full membership for their vote, we can confidently say that it reflects the sentiments of the membership of the FEDERATION.

We hope you will present it at the hearings on April 20.

In addition to the STATEMENT attached to this note we also inclose the formal published "Aims" of the Federation.

We support your Bill S. 23, and hope for its passage.

Respectfully yours,

DR. A. J. APP,
(In behalf of National President Robert Brueckner).

Copy to Mr. Brueckner.

FEDERATION OF AMERICAN CITIZENS OF GERMAN DESCENT SUPPORTS BILL S. 23, "ETHNIC HERITAGE STUDIES"

The Bill for "The Ethnic Heritage Studies Centers Act of 1971" is introduced as intended "To provide a program to improve the opportunity for the study of cultural heritages of all ethnic groups in the Nation." In introducing the bill Senator Schweiker says "that too much faith has been put on the dream of a 'melting pot.' In the process our peoples have lost a sense of identity."

Americans of German Descent have special cause to welcome governmental efforts to promote, as Senator Schweiker put it, "greater study, awareness, and application of ethnic traditions and cultural activities . . ." The traditional "Melting Pot" concept has for some time needed qualification. This concept only works when it is non-coercive, when the dominant majority, in this case the Anglo-Saxon or the fully Americanized one, merely by its efficiency, its moral and cultural eminence, and above all by its Christian tolerance and sympathy, induces in the ethnic minorities general admiration and voluntary imitation—culturally and linguistically.

This uncoercive process for a century or more worked in America more successfully than anywhere else in the world. Then, as Professor Carl Wittke reports, "In 1915 President Wilson began the discussion of 'hyphenism' and made his first attack upon 'hyphenated Americans'" (See *The German-Language Press in America*, 1957, p. 244). Within two years, he reports:

> "German music and literature, German church services, the German language, the activities of all German societies, and everything even remotely associated with a German origin came under the ban of superpatriots . . . the 'Hun' language was banished from the curriculum . . . German books were thrown out of libraries, hidden in cellars and attics, or burned in the public square with patriotic ceremonies." (Ibid, pp. 268–9)

As a consequence of the reproach of "hyphenism" during World War I, "the German element in America "suffered" the most difficult and humiliating experiences, writes Prof. Wittke, which any immigrant group has ever had in the long history of American immigration, with the possible exception of the Japanese-Americans in World War II. Misunderstanding, suspicion, slander, emotional conflict, bewildered readjustment, and tragedy" were visited upon Americans of German descent.

But the reproach of "hyphenism" formally by the Presidency could not remain confined to making only German-Americans feel that they are being considered second-class citizens. It naturally spread first to the ethnic minorities from Austria-Hungary who were associated with Germany in World War I. And then the impetus of logic forced all the other ethnic heritage groups to feel that if those of German descent, who had furnished so many industrial and

cultural and even military leaders to America, were accused of "hyphenism" and inferior Americanism, then they themselves were in no better case!

Therefore, this proposal to establish "Ethnic Heritage Studies Centers" signalizes the government's belated reversal of Wilson's tragic policy of attaching "hyphenated Americans." This is long overdue. Where the spirit of that policy caused German books to be burned and the teaching of German to be prohibited, this Ethnic Heritage Bill is intended to encourage the teaching of this and other foreign languages, and of ethnic histories and cultures. It will develop curricula for ethnic studies, and train teachers, and provide research centers for studying the ethnic heritage of the various components of the mythical American "melting pot."

Therefore, the officers of the Federation of American Citizens of German Descent believe they express the overwhelming sentiment of their membership—and even of the friends of our members—when they emphatically give their affirmative to Senate Bill S. 23, to establish "The Ethnic Heritage Studies Center."

AMERICAN HUNGARIAN FEDERATION
Washington, D.C., April 13, 1971.

Hon. RICHARD SCHWEIKER,
U.S. Senator,
Senate Office Building,

DEAR SENATOR SCHWEIKER: In response to your April 6, 1971 memorandum on the hearings scheduled for April 20, 1971 on your bill, S. 23, the "Ethnic Herfitage Studies Centers Act of 1971" we are enclosing an amended version of our supporting statement for the same bill in the House of Representatives in 1970.

We request that you include this statement into the transcript of the hearings and we are wholeheartedly supporting your efforts to get the bill enacted. If you want me to testify personally I would be willing to do as well.

With best personal regards, we are,

Sincerely yours,

Dr. Z. MICHAEL SZAZ,
Secretary of International Relations.

(Enclosure.)

STATEMENT OF Z. MICHAEL SZAZ, PH. D., SECRETARY OF INTERNATIONAL RELATIONS, AMERICAN HUNGARIAN FEDERATION, WASHINGTON, D.C.

One of our finest historians, Oscal Handlin stated that "Once I thought to write a history of the immigrant in America. Then I discovered that the immigrants were American history."

This quote may serve as the best justification of the goals and methods of S. 23, which I have the pleasure of supporting in the name of the American Hungarian Federation. Our 63-year-old organization is composed of most of the American Hungarian churches, fraternal insurance companies and many of the social, cultural and youth organizations of Americans of Hungarian descent. I was also instructed to support it in the name of other American Hungarian national organizations not officially affiliated with the American Hungarian Federation, like the United States Chapter of the World Federation of Hungarian Freedomfighters, the Federation of Free Hungarian Jurists, the Transylvanian Committee and others who met at the meeting of the Coordinating Committee on January 25, 1970. The American Hungarian Federation and the above-named organizations represent close to 90 per cent of all Americans of Hungarian descent who belong to some church or other organizations of American Hungarian character.

Americans of Hungarian descent number about 700,000 according to the 1960 census. In two states their number exceeds 100,000 (New York: 142,834 and Ohio 100,786) in another two states they approximate the 100,000 line (Pennsylvania 83,417, New Jersey, 82,017). In Middlesex County, New Jersey the 1960 census also showed 13.8 percent of the population to be of Hungarian stock.

The story of the American Hungarian immigrant is not a separate story but a thread woven intricately into an American pattern. From the beginning, whether Kossuth hussars or factory workers, freedomfighters or army heroes, scientists, musicians or scholars, they all have given their particular talents to build a new land which has also become their land.

HUNGARIAN CONTRIBUTION TO AMERICAN SOCIETY

Contributions of Hungarians to American culture and history were manifold, for exceeding the percentage of their numbers to the population as a whole. American Hungarians were loyal and patriotic citizens from the days of the Revolutionary War of 1776 (in which Colonel Michael de Kovats led the cavalry charge in the battle of Charleston), to the Hungarian generals of Lincoln's Union army (through the heroes of the two World Wars to the present Vietnam conflict in which Captain Akos Szekely has become the quintessence of the devotion of duty and love for the nation among American Hungarians.

Science and scholarship constitute other landmarks of American Hungarian achievement. By 1962 an incomplete survey listed 1,682 engineers, 1,172 physicians, 484 university and college professors, 428 lawyers, 188 economists, 110 librarians, and these numbers have increased since. Two American Hungarians are holders of the Nobel Prize, and many of the most prominent atomic scientists in the United States have been and still are American Hungarians including Professor Edward Teller and Eugene Wigner, both of them honorary directors of the American Hungarian Federation.

Hungarian contribution to American musical life has also been significant. Today two of the major philharmonic orchestras (Washington and Philadelphia) are conducted by them (Antal Dorati and Eugene Ormandy) as are three more major city orchestras. One of the best known American violin soloist (Joseph Szigeti) is also of Hungarian descent. The above incomplete survey also lists 34 more composers and 30 conductors among American Hungarians.

There is an alleged story that in the 1920's, the American Hungarian movie producer, Adolph Czukor, had a sign put up in his office: "It is not enough to be Hungarian, you must have talent, too." This reflects the number of American Hungarians involved in creating the Hollywood film industry. Two of the early movie giants, Adolph Czukor and William Fox were of Hungarian origin and even among the stars of recent past and the present we find several American Hungarians like Tony Curtis, Ilona Massey and the Gabor sisters.

The honor list could be continued for many more pages, proving that American Hungarian talent excelled in quality in the course of American cultural history. Their influence on science, scholarship, music and entertainment was substantial and remains so to this day. Yet we should also remember the masses of factory workers and miners who, living often amid squalor and inadequate wages, helped to build Cleveland, Detroit, Buffalo, the New Jersey industrial complexes and Pennsylvania mines, and who, despite deprivation, exploitation and often also derision, remained loyal citizens of their new country.

The paragraphs above sketch only inadequately and incompletely American Hungarian individual achievement in the United States. American Hungarians also developed their own institutions like the two fraternal insurance companies wihch today comprise about 110,000 members and capital assets of over $40 million. They also formed their own Catholic, Protestant and Jewish churches and synagogues which, despite the process of waning bilingualism still continue their religious and cultural work. There are several hundred American Hungarian cultural and social clubs and organizations in every major American city and in the northeast and the mid-west and California. Numerically small, but very articulate groups are also playing an active part in American politics and in keeping the facts of Hungarian life in Hungary also under close scrutiny.

If we summarize the accomplishments of these people and associations, we must also discern with sadness that little money or energy has been expended to research and publish about the American Hungarian cultural heritage and the American public has been given even less opportunity to familiarize itself with the contribution of American Hungarians to our culture.

Scholarly works, except for the Kossuth immigration of the 1850's are practically non-existent, and even journalistic works are rare, except for Professor Emil Lengyel's book (*Americans from Hungary*) and some smaller works of late 1960's vintage (Leslie Könnyü, *Hungarians in America* and Rezsö and Margit Gracza, *The Hungarians in America*). This situation proves both past neglect and a renewed residual interest.

Despite its inclusion under the National Defense Education Act, the Hungarian language is taught as a regular subject only at six universities (Rutgers, SUNY at Buffalo, Western Reserve, UCLA, Indiana and American University). These statistics compare unfavorably with the teaching of other East Central European languages, and ever the extant courses are mostly restricted to language courses, rather than the teaching of literature and culture.

As a result, there is particularly no mention of the American Hungarian even in the existing limited literature on the American immigrant, Professor Wittke's famous text, *We Who Built America* devotes only three of its 521 pages to the American Hungarian. School textbook references on high school and college levels in history, political science and geography often contain erroneous and distorted data about Hungary and its history, especially for the 1867–1945 period.

Only a handful American Hungarian cultural or scholastic foundation are in existence (New Brunswick, New York, Buffalo) and their aggregate assets do not exceed one million dollars, and much of them is in real estate. They cannot, despite their present efforts, even partially fulfill the tasks of Hungarian ethnic research, or even general Hungarian research and publishing, in the United States.

WHY ETHNIC RESEARCH?

In the past, ethnic research in America suffered not only begin neglect, but also was obstructed by the conscious belief on the part of many of the universities, schools and foundations that its promotion would interfere with the national consensus, slow down the Americanization of the immigrant and produce the emergence of unassimilated, culturally pluralistic and politically separatist national minorities. This was to be the negation of the American dream. In 1970, the President of the National Education Association, testified before the subcommittee on Education of the House of Representatives that:

The clannishness of some ethnic groups in some areas has been a detriment to minorities in their communities. We do not believe this is in the interest of the country. Conflicts between ethnic groups have been responsible for some degrading chapters in our Nation's history.

Yet, despite the eloquent presentation, his arguments are no longer valid.

First, the age of large-scale immigration has come to an end with 1924. There are no large blocs of unassimilated immigrants whose presence and attitudes in the 19th century caused the events referred to by the NEA President. Alienation from the mainstream of American culture is not an ethnic group problem in the United States, rather it has become the problem for the youth of the long-established social strata many of whose children are today in the forefront of radical and anarchist movements and proclaim their total alienation from prevailing cultural and socio-economic valuables and patterns.

Second, the American dream in its oversimplified version in which immigrants were supposed to change their language, conform to American customs, Anglicize their names, is not a reality any more, if it ever has been. Cutting off the immigrant from his tradtions and socio-economic value system was never successful, but the first-born American generation usually regarded the unwritten rules of aculturation as valid and usually struck out at the "primitive," "alien" and "reactionary" heritage of his parents, yet it was never able to forget them. This generation was given a feeling of rootlessness which was, however, more discernible in the second-generation American though he had no longer had the language problem or the problem of subtle discrimination. He still lacked, however, the social acceptance and the self-pride which older established layers of the population had already possessed.

Yet an individual must possess a positive self-image and a strong sense of his own worth in order to compete in a free society. To find one's identity, one must go outside of the ego by participating in social groups beginning with the family and ending in the broader cultural community. The search for material improvement can only temporarily overshadow the feeling of rootlessness in these generations and the shallowness of cultural life of some of our better-educated middle-class groups can only be understood against this background beyond the surface of their Americanization.

Therefore, teaching the ethnic heritage and/or researching it, does not produce alienation, but only an even more intensive commitment to American ideals, a deeper recognition of the role played by the immigrant generations and their communities in creating our present culture, a consciousness which seems to be vaning in the children of some of our elite groups.

Third, such presentation in teaching and research cannot create new conflicts between the various ethnic groups. Ignorance is always the mainspring of prejudice and accusations against any particular ethnic group are usually fed by lack of knowledge and understanding. Having a clearer understanding of the role of the various ethnic groups in American history and present-day society will bring them closer together and to the mainstream of American thought and values, assuring them their rightful heritage in a culturally pluralistic American nation.

NEEDS OF AMERICAN HUNGARIAN ETHNIC RESEARCH AND H.R. 14910

In order to promote even the most basic tasks of American Hungarian ethnic research, a concentrated and well-endowed effort is necessary which would unite community initiative, academic personnel and facilities and Federal and academic financial incentives.

The titles in S. 23 use a similar modus operandi. They call for the utilization of research facilities and personnel of the colleges and universities. At the present, there are few, if any, American Hungarian scholars engaged in full-time ethnic research of their community. There are, however, numerous American Hungarian historians, sociologists, linguists, political scientists who, given the financial and academic incentive could produce high-quality work in the field. Without the possibility of funded research or even using their results as bases for college and graduate courses, it is impossible to interest full-time academic personnel in individual ethnic research. It would be relatively easy to expand either the American, Rutgers, or Indiana University programs so that they would embrace the needed sociological, historical and political science courses and also literature and linguistic courses, and to have them promote in-depth studies on the American Hungarian community and the mutual effects of American Hungarian developments and Hungarian traditions and values on the culture, social stratification and political views of the American Hungarian community.

The American Hungarian Federation, and I believe that the other national American Hungarian organizations as well believe that the primary need is for *one* comprehensive university-affiliated Ethnic Heritage Studies Center for the American Hungarian community. If personnel or geographic reasons should make this solution infeasible, *two* centers should be established with a division of labor as far as academic disciplines are concerned. The Federation stands ready to utilize its manpower and personnel resources in helping such centers come into existence, or to help existing programs to be expanded.

As academic research into the American Hungarian community in the fields of history, sociology and linguistics is largely a virgin field, S. 23 points out correctly the need for utilizing the special knowledge of ethnic groups in local communities. For this body of knowledge will be needed for surveying and collating the available source materials. American Hungarian churches, societies and their archives, Hungarian-language newspapers and periodicals, and in some cases even the personal memory of local leadership (oral history projects) must be relied on in order to collect research materials. Journalists, writers, clergymen and local politicians who are already familiar with parts of the material must also be utilized for purposes of preliminary analysis.

While some sociological studies were published, and two bio-bibliographical directories were issued (*Hungarians in America; a biographical directory of professionals of Hungarian origin in the Americas.* New York, 1963 and 1966 editions), research on American Hungarians, their language and culture is still in the initial phase. In the field of linguistics, Elemer Bako's pioneering effort in collecting text samples, dialogs, folksongs and other materials from numerous representatives of the older generation of American Hungarians, offering the first practical and theoretical introductory courses sponsored by the American Hungarian Studies Foundation in New Brunswick, New Jersey, and publishing an outline on the aims and methods of *Hungarian Dialectology in the United States*, opened the gate for further study. But there is also an immediate need for a systematic survey of available library materials, archival collections, both public and private, which constitute the avowed purposes—on the side of a number of professional goals more closely related to librarianship—of the Hungarian Library Association of America, Inc., which has been founded in 1968. This Association is also a member organization of the American Hungarian Federation.

However, no matter how much voluntary personnel is utilized, the American Hungarian community alone is unable to carry on the financial burden of funded research. It needs federal and state funds for this purpose. In order to gain these, there must be a general need for the material thus produced, otherwise they will remain in the same community which is more or less already familiar with the main features of its own structure and development. One of the strong points of S. 23 remains that it does not seek ethnic research for its own sake, or just to satisfy the demands of ethnic groups. It points out rather the need for distributing the product of research and teaching among the American youth (elementary and secondary schools), thus including even the other ethnic communities and informing the general public.

H.R. 14910 AND THE NEED FOR INTER-ETHNIC RESEARCH

The President of NEA in his testimony was correct about his objection that the bill does not seem to sponsor inter-ethnic research. Reading it for the first time, one gains this impression. Both from the viewpoint of scholastic methdology and in some cases, even of the subject matter under study, ethnic research follow similar or even identical roads of analysis and data collection. Therefore, a need for cross-ethnic, or inter-ethnic research exists. There is also a need to know more about the heritage of the various ethnic groups not only for the general public, but also for the members of other ethnic groups which entertain narrow, and sometimes distorted images of themselves and their ethnic neighbors.

The American Hungarian Federation sincerely believes that some of funds under Sec. 905 should be expended for the establishment of centers for inter-ethnic group research in the United States, or for expanding existing institutions like the one at the University of Chicago. It is with satisfaction that I received the assurance of the subcommittee chairman that nothing in the language of the bill would preclude the use of funds under the bill for such purposes, but perhaps some clarification of the text of the bill in this regard would be helpful.

ETHNIC RESEARCH AND HUNGARY AND THE AMERICAN HUNGARIAN COMMUNITY

The American Hungarian Federation and the other national American Hungarian organizations call the attention of the Subcommittee to the considerable efforts which are made by the Budapest Communist government in order to collate and publish material on the American Hungarian community.

Publication of a history of the American Hungarian community is planned for next year by the Budapest Government's historians in accordance with Marxist-Leninist principles and proving "exploitation," "second-class citizenship" and the inequities of the "capitalist" system. If we would like to avoid that this coming work become the most complete presentation on the subject be made by Communist writers and that their work should become the standard work distributed among the American Hungarian community also promoting Communist infiltration among them there is need for competent research in the short-run on the American Hungarian heritage and its publication in accessible style and form.

The reverse side of the coin is that ethnic research could also be used as a proof of our interest in the American ethnic communities toward the countries of their origin. This is especially valid toward East Central Europe as the Voice of America and Radio Free Europe still report in part about the activities of our East Central European ethnic groups. The results of in-depth research would also constitute good cultural diplomacy showing these peoples that we appreciate their culture and have not forgotten their contribution to American life.

In conclusion, let me quote Walt Whitman's definition of America: "Not merely a nation, but a teeming nation of nations" and express our opinion that the passage of S. 23 would substantially contribute to the restoration of an equilibrium in the United States by helping our national consensus be based upon cultural and sociological realities rather than unattainable desiderata.

Department of Slavic Languages

April 6, 1971

Area Code 814
865-1352

The Hon. Richard S. Schweiker
U. S. Senator
4317 Senate Office Building
Washington, D. C. 20510

Dear Senator Schweiker:

We, the undersigned members of the faculty and staff of the Department of Slavic Languages, wholeheartedly support the bill which you introduced in the Senate on January 25, 1971, and whose intent is to provide a program to improve the opportunity for the study of all ethnic groups in the Nation.

We strongly believe, as you do, that in a multi-ethnic society such as ours a greater understanding of the contributions of one's own heritage and those of one's fellow citizens can in turn contribute to a greater national and social harmony and understanding. Therefore, we welcome the assistance which your bill would provide by affording all elementary and secondary school students, as well as our growing college population, an opportunity to learn about the nature of their own cultural heritage and to study the contributions of the ethnic groups to the cultural heritage of this Nation.

We hope that this "Ethnic Heritage Studies Centers Act of 1971", through your and your Colleagues' efforts, will be soon reported out of the Committee on Labor and Public Welfare and brought to a vote in the Senate.

Sincerely yours,

Lyman C. Bishop
Richard P. Martin

ELMER CHARLES
NATIONAL PRESIDENT

April 16, 1971

Honorable Richard S. Schweiker
United States Senate
6221 New Senate Office Building
Washington, D. C. 20510

Dear Senator Schweiker:

As I have previously on several occasions indicated interest in your program and for which I have pledged my support, I now submit this letter which you may use in the forthcoming hearings on Bill S.23, The "Ethnic Heritage Sudies Centers Act of 1971". I regret that because of previous commitments I cannot appear in person.

I can certainly agree with you that with the great strides and changes that have been made in the Civil Rights Movement, the concept of an Ethnic Center certainly is in order. While the history of different nationalities' arrival in our country varies, each group has contributed much, perhaps first in labor then in culture and today in Science. This I know from the people of my organization who are mostly of the Hungarian Ethnic background and I am sure their children, grandchildren and great grandchildren will want to be just as proud and will want it to be known and studied and preserved for centuries to come.

Our Association, I am proud to again state, is of Hungarian background and is a fraternal benefit association, celebrating its 85th Anniversary this year. The Association, through consolidation with other Hungarian background societies today is comprised of some 80,000 members with close to $35,000,000.00 of assets. Just fifteen years ago we changed our name from Verhovay and adopted the name of the father of our great State of Pennsylvania, William Penn, and recognizing our responsibility to our second, third and fourth generation, are proud of that name.

The Association's philosophy is:

"Providing fine life insurance at lowest possible cost consistent with safety is a tradition William Penn Fraternal Association has developed since 1886. Over these years, a philosophy of service and policyowner protection has made William Penn Fraternal Association one of the fastest growing and most highly regarded fraternal associations in the United States today".

Besides that, every year we support a National Bowling Tournament, a national Christmas Party for our children and just last year established the William Penn Fraternal Association Scholarship Fund to help to support an educational program. We have several social homes throughout the country and are proud that during the Second World War and Korean War, while all of our life policies contained the War Clause we paid all claims in full. We actively support our Local, State and Federal Civic Programs and churches of all denominations.

Hoping that this very important Bill receives tremendous support and I pray that you will succeed in this tremendous undertaking, I again promise my support.

Sincerely and Fraternally yours,

Elmer Charles

Re: Ethnic Heritage Studies Centers Act of 1971

The Slovak League of America, a civic and cultural federation of Slovak-American organizations, representing over 420,000 members and publications with 165,000 subscribers, fully supports Bill S. 23, because --

1. We are convinced that the Ethnic Heritage Studies Centers will aid in creating an interest and familiarity among the various nationalities in the United States and this will in turn create a recognition of the cultural, economic and social growth of these groups as one entity regardless of religion, race or political persuasion.

2. The Ethnic Heritage Studies Centers will help to research the past and present historical role of all nationalities and their severance from their mother country.

3. The Ethnic Heritage Studies Centers will be a bridge between the nationalities and their mother countries, and thus America will weld a lasting friendship with these countries that have given such a vast number of its people who are now our citizens.

4. The Ethnic Heritage Studies Centers should serve as depositors to the cultural treasury of the United

States, because in the fields of science, arts, literature and folklore the countries of origin will be drawn closer to each other and America will have the opportunity to select the best, for example, in literature and technology.

5. The Slovak League of America has a special reason to support the Ethnic Heritage Studies Centers, because --

a. America, through the medium of its citizens of Slovak descent, gave the Slovak nation a political program and philosophy for several decades with the famous Pittsburgh Pact of 1918. The spirit of the Pact was to guarantee and effect the principals of autonomous rights for Slovakia

b. Over one-third of the Slovak people migrated to the United States to find a new home. For the past 90 years Slovakia received financial and moral support from those who imigrated to these shores. The pure democratic philosophy brought to Slovakia by visitors of Slovak descent from this country, or those who returned to stay, continues to have enduring effect.

Dear Senator Schweiker:

In response to your memorandum of April 6, 1971, we transmit a statement expressing the views of Dr. Joseph Lelis, Professor of Linguistics at Howard University, Washington, D.C. His views coincide with those of the American Latvian Association in the United States, an organization representing Americans of Latvian origin living in the United States.

The goals and membership of the American Latvian Association is described in the attached pamphlet.

We appreciate your interest in and sponsorship of ethnic heritage studies.

Sincerely yours,

Bruno Albats
Secretary General

April 20, 1071

The Honorable Richard S. Schweiker
Room 6221, New Senate Building
1st and C Streets N.E.
Washington, D.C. 20510

Dear Senator Schweiker:

In addition to the common benefits that this bill enumerates and would ensure, the enactment of such bill could fill two other national needs:

1. It would create and maintain a "home-grown" minor languages pool of experts within the United States.

2. It would encourage a development of a completely American-orientated viewpoint for looking at cultural, political, and other features among the small nations of the world.

Small nations and ethnic groups constitute the majority of world population. Even where their voices are stiffled, their overlords listen to them. By the same token, to find out what is going on, for example, in the Soviet Union, one needs to ~~mx~~ watch not only Moscow, but also Riga, Tbilisi, and other places.

The United states has global interests. It needs experts not just for the languages of the populous nations. To have such experts, it often trains people with no preparatory background. That entails great expenditures of time and money.

At the same time the best material for developing such expertise goes to waste unnoticed. These are the immigrants' children, the second or third generation Americans from various ethnic backgrounds representing practically the whole world. Usually they have spoken their parents' or grandparents native tongue in their childhood, but later have lost their knowledge of it due to the fact that a small ethnic group is weaker to withstand assimilation pressures and lacks financial

resources to develop and maintain on its own the needed teaching materials and institutions for preservation of their heritage.

A descendant of speakers of a well-known language may have a chance to brush up his childhood knowledge of it even in his local high school, but for the youth of a less common linguistic background there are no outside resources or inducement to study his ancestral language.

The United States has made no efforts for the preservation of the languages of its smaller ethnic groups that immigration brings to its shores. Hence, the proficiency in the inherited language dies out in the second or third generation. Thus a valuable national resource becomes repeatedly wasted. When a need arises, trained experts are not readily available, and to train such requires more expenditures that it would have cost, perhaps more, than to establish an ethnic study center on a permanent basis.

Under the provisions of this bill, a native American pool of experts in various languages of the world could be established and maintained efficiently.

Such study centers would help to develop a national viewpoint concerning smaller nations, a viewpoint that would be well informed and America-orientated.

Despite the heterogenous origins of this country, the general attitude concerning good citizenship has been molded by the 19th century European nationalism. It really tolerates only nonessential ethnic distinctions (different foods, perhaps even garbs), but it actually discourages the maintenance of the ancestral language -- and with the loss of original language all other essential aspects of a cultural heritage are also lost.

If an individual or a small ethnic group is nevertheless motivated still to maintain its original heritage, practically everything concerning it must be imported from the ancestral country. This creates an ambiguous situation for the importers, a cultural and psychological dependence and perhaps even an involvement in the controversies of the old country.

The passage of this bill would encourage more qualitative cultural developments among the ethnic groups within the U. S. The ethnic groups would be helped to retain the best of their original heritage and given resources to adapt it to and fit it in the mainstream of the nation. Dependence on another country would be minimized or removed.

The end result would be a large number of citizenry in practically every community who would have an intimate and thorough knowledge of cultural and other aspects of another country with no emotional dependence ties involved. The benefits would be reciprocal and manyfold for all.

To illustrate the main ideas, I should like to refer to my personal observations. For several years I have been teaching summer courses xx in the Latvian language and literature at Western Michigan University (Kalamazoo, Mich.). To this program flock youths of Latvian ancestry from the whole U. S. and Canada.

Among these young people there is a strong interest to know more about and to retain the best of their Latvian heritage and cultural identity.

At the same time they consider themselves Americans or Canadians.

From the staff of this program they expect an attitude that would satisfy both of these requirements — acquaintance with their parents' language and cultural heritage, and a presentation of all this from a viewpoint that is not colored by the ideologies and biases that were or are prevalent in Latvia. They want to develop and have their own opinion.

We are trying to accomodate them, but we lack financial resources that would enable us to prepare materials for our weekend Latvian language courses for children; we lack resources for textbooks and other things that we could use. However, we are making various efforts, and they are not going to be abandoned, but with a little aid we could do more. The enactment of this bill would solve a great many of our problems.

Sincerely,

Joseph Lelis

LELIS

COLLEGE PARK, MD. 20740

AFL-CIO STATEMENT ON

ETHNIC HERITAGE STUDIES CENTERS ACT

S. 23

The AFL-CIO is pleased to express its support for S. 23, the Ethnic Heritage Studies Centers Act.

For generations, textbooks and other curriculum materials were preoccupied with middle-class, white America. American history was written as the story of the white man in America, predominately the story of the Anglo-Saxon Protestant white man, with occasional reference to the French and Spanish explorers, passing mention of European immigration in the 19th century, and condescending, brief accounts of the slaves.

Largely as a result of efforts by civil rights groups, considerable steps have been taken to change this curriculum image of America by introducing, as a corrective measure, textbooks, courses, and teaching materials dealing with black history and black culture. The result, unfortunately, still remains a distorted picture of the American nation. This nation has been a vital amalgam of the cultures of a multitude of ethnic groups. No one is in a better position to know this than the American labor movement which includes in its ranks workers who have descended from virtually every ethnic background in the world. The labor solidarity which we have achieved has been welded from the greatest conceivable diversity.

The melding of diverse ethnic cultures into a single nation is in fact the central story of America and it is a story in which the labor movement has played a major role.

We, therefore, welcome the Ethnic Heritage Studies Centers Act which has been introduced by Senator Schweiker. It would help to bring into focus one of the most important, but most educationally neglected aspects of American Life.

We note that there are several differences between S. 23 and the similar bill introduced in the House, HR 1499.

The House bill is presented as an amendment to the Elementary and Secondary Education Act whereas the Senate version is presented as an amendment to the Higher Education Act. Since the proposed ethnic study centers will presumably be located in colleges and universities, we are inclined to think the Senate approach makes better sense.

More important, the language of the House bill encourages the establishment of ethnic studies centers each of which would specialize in the study of a single ethnic group. The Senate bill has language which more clearly requires the centers to be multi-ethnic in their concerns. We very much prefer the Senate approach. One of the main functions of the centers would be to provide teacher training. We, therefore, feel that each center should be designed to help put the separate parts together into a coherent whole, rather than to focus exclusively on a single part of America's ethnic heritage.

Finally, in expressing our support for the Ethnic Heritage Studies Centers Act, we want to emphasize our commitment to the full funding of existing federal programs in education. Money appropriated under the Ethnic Heritage Studies Centers Act must be new federal funds. It would be unworthy of the purposes of the bill if it were to be supported with funds whittled away from existing federal programs. We, therefore, express our support for this bill urging in turn that others who support it pledge themselves to work for full funding of all of the education programs which Congress has enacted.

STATEMENT BY DR. LEV E. DOBRIANSKY OF
GEORGETOWN UNIVERSITY, PRESIDENT, UKRAINIAN
CONGRESS COMMITTEE OF AMERICA, SUPPORTING
S. RES. 23

Mr. Chairman, I'm delighted to submit this brief statement and the accompanying analytical article "Cosmopolitan Americanism Via Ethnic Heritage Studies Centers" in full support of Senator Schweiker's Ethnic Heritage Studies Centers bill, S. Res. 23. The Ukrainian Congress Committee of America, which it is my privilege to head in representation of the sentiments and convictions of 2 1/2 million Americans of Ukrainian ancestry, has voted unanimously in favor of the passage of this vital measure.

Last year, extensive testimonies and statements were submitted in hearings on a counterpart measure in the House of Representatives. Problems concerning the objectives, implementation, facilities, operation and financing of the proposed heritage studies centers were raised and discussed at length. Following a meeting with the basic sponsor of that measure, it devolved upon me to undertake an analysis of the treatment of these problems as covered by the hearings. In as compressed a manner as possible, the analysis was put in article form and was subsequently published in the spring 1971 issue of The Ukrainian Quarterly, under the title "Cosmopolitan Americanism Via Ethnic Heritage Studies Centers."

Our views on these problems are clearly set forth in the systematic progression of thought contained in this analytical article. They range from objectives to financing, and concrete proposals are advanced on the basis of the critical examination made of all the testimonies and statements that were published as part of the House hearings on the counterpart measure. To avoid unnecessary repetition and duplication, I attach the article herewith as the substantial part of my statement in favor of S. Res. 23, and also strongly recommend that your hearings on this bill be extended in order to examine in depth the guidelines and concrete proposals that in summary form are offered in the remainder of this statement.

COSMOPOLITAN AMERICANISM VIA ETHNIC HERITAGE STUDIES CENTERS

By LEV E. DOBRIANSKY

In the 91st Congress of the United States a couple of multi-sponsored bills were submitted, calling for the establishment of ethnic heritage studies centers throughout the country. One was H.R. 14910, offered by Congressman Roman C. Pucinski and thirteen other Representatives, including the Honorable Edward J. Derwinski of Illinois. The other, S. 3807, was an exact copy of the House bill which Senator Smith of Illinois advanced in the Senate, with the support of Senator Richard Schweiker of Pennsylvania and others. The bills were referred to the respective committees in the two chambers, to the Committee on Education and Labor in the House and the Committee on Labor and Public Welfare in the Senate. Hearings were held on the House bill, but none were conducted on the Senate one.[1] In both cases, the lagging 91st failed to act for passage of these measures.

At this writing, plans are under way for the reintroduction of these bills in the 92nd Congress. It is expected that Congressman Pucinski and his cosponsors will again assume the lead in the House. With the defeat of Senator Smith in the last Congressional elections, it is likely that Senator Schweiker will take the lead in the Senate. Because of the long-term value and vital importance of the bill, it is hoped by many observers that the need for any additional hearings on the bill be expeditiously satisfied so that the subcommittees may adequately consider the measure and report it for full committee consideration. The sooner this is done, the sooner the bill can be reported out for a House vote. In the Senate, where no hearings on the bill were held in the 91st Congress, it would be reinforcing to the anticipated process in the House to have such hearings conducted in the other chamber. A concerted effort should be made in both chambers right from the start of the 92nd Congress.

---

[1] *Ethnic Heritage Studies Center,* Hearings, Committee on Education and Labor, U.S.G.P.O., Washington, 1970, pp. 363.

On the basis of the hearings that have been held so far in the House, there is no need whatsoever to alter the main thrust and objective of this far-seeing bill. Its consummate end is to provide a program for improving the opportunity of students in elementary and secondary schools to study the cultural heritages of the major ethnic groups in our Nation. The funding of the program would be $10 million in the first year, doubled to $20 million in the second year.

Subsequent funding would depend on the results of the program's execution. A corrollary objective of the bill is to produce educationally a general awareness of the multi-ethnic composition of American society and the respective contributions made to the rich diversity of this unprecedented socio-economic organism in the history of mankind. In short, it is purposed to advance and intensify the unity-in-diversity being of the American social organism and, to all intent, to develop the special pride each and every one of us should share in being an American regardless of ethnic background.

THE UNIQUENESS OF AMERICA

The hearings before the General Subcommittee on Education in the House make for highly productive reading and understanding of the subject. Much of the data brought out by them is instructive and substantially supportive. Throughout the testimonies constant references are knowledgeably made to the major ethnic groups in our country, such as the Italians, Irish, Jews, Poles, Germans, Ukrainians, Chinese, Japanese, Negro and others. Along with these references, there are numerous problems that are properly raised. For example, concerning the problem of resource allocation, one witness states, "there are a considerable number of Hungarians in New Jersey, Ohio, and in certain other places. The Ukrainians have a number of different locations and so on. It seems to be that a regional center in Cleveland ought to reflect the spectrum of ethnic groups within the Cleveland metropolitan area." [2] His pitch is for centers of a neutral character, but it can be logically held that if the preparation of materials for primary and secondary school consumption is the prime objective, this kind of locationalizing is really unnecessary. What is necessary is the concentration of expertise.

Another witness, concerned with the problem of inclusion, observes that in his area, New York City, "we have a substantially large Greek community and a substantial Ukrainian group, et cetera.

[2] *Ibid.* p. 91.

Even if we were to get an ethnic study center, we would have to make some decisions as to which one we would include or not, otherwise the money that is available and the resources that you can mobilize make your efforts so very thin that they are not meaningful." [3] In essence, this, too, refers to the fundamental problem of resource allocation. The legislation is specifically directed at "the major ethnic groups in the nation," but the question is where does one draw the line between the major and minor ones? A witness, representing several organizations in Illinois, in effect raises this point: "And I say the majority ethnic groups, like the Poles and Lithuanians, Ukrainians, they may get some answer to it. But what will happen to the others, Croatians and Bulgarians, Estonians and Latvians and Byelorussians, and all of those, and they are adamant about their demands?" [4]

What is the answer? Among the many elements and factors supporting the uniqueness of America is the public forum to air out and discuss thoroughly problems and issues of this and like nature. If, as President John F. Kennedy put it, America is "a nation of immigrants," then we are all ethnics, and logically the base of the studies centers should be all-embracing, all-encompassing. And if conceptually this is so, doesn't the whole venture become prohibitive in cost, time and resources? Moreover, what of the "melting pot," the assimilation idea in all this? This long-standing idea emerges in testimony after testimony in the House hearings, and from the negative point of view, it isn't always treated cogently and with perspective. Furthermore, would a concentration on differences and contrasts, as the proposed program necessarily entails, intensify them to the disservice of national union and integrality? These and cognate questions must first be adequately resolved before the relatively lesser problems of resource allocation, location and so forth need be considered. In point of fact, the solution of the latter is to the largest extent predicated on the resolution of the former.

One testimony in the House hearings provides several excellent quotations that seem to answer in eloquent form the critical questions raised above.[5] For example, in 1782, Michel de Crevecoeur dubbed the American the "new Adam," and in his *Letters From An American Farmer* wrote "Here, individuals of all nations are melted into a new race of men, whose labors and posterity will one day cause great

[3] *Ibid.* p. 109.
[4] *Ibid.* p. 293.
[5] *Ibid.* p. 154.

changes in the world." In 1908, a Jewish immigrant by the name of Israel Zangwill put it this way: "America is God's Crucible, the great Melting Pot where all races of Europe are merging and reforming... Germans and Frenchmen, Irishmen and Englishmen, Jews and Russians — into the Crucible with you all! God is making the American!" With a different emphasis, Archibald MacLeish said, "America is a symbol of union because it is also a symbol of differences, and it will endure not because its deserts and seacoasts and forests and bayous and dead volcanoes are one mind, but because they are of several minds and are nevertheless together. . ." One can find similar expressions in the writings and observations of Jacques Maritain, Justice Oliver Wendell Holmes, Calvin Coolidge and others.

If reasonable acceptance can be given to the substance of thought in these and similar quotations, then it can be held that the goals and objectives of this Ethnic Heritage Studies Centers bill are thoroughly consistent with the historical basis and the significant nature of our national entity. In maintaining this we have not, of course, resolved the specific problems posed earlier. However, their resolution becomes easier once we establish a satisfactory and realistic concept of America. Without such a concept, rational answers to the pending questions cannot be offered. It is maintained further that the provisions of the measure and their systematic implementation would result in a formidable instrument capable of intensifying the qualitative growth and cultural richness of our nation-state. As the measure's statement of policy emphasizes, a deeper understanding of one's heritage and those of others cannot but contribute to our national cohesion and more harmonious and prosperous, overall development.

What is oftentimes overlooked in such discussion is the fundamental uniqueness of our Nation in the history of the world and the basic need for preserving and cultivating this unprecedented character, which by intent, content and portent this legislation would reinforce. Neither romanticism nor any form of superpatriotism need be invoked to recognize philosophically that on the basis of both historical and political evidence no nation in the history of mankind possessed or possesses the nature and character of our Nation. Historically, from the very beginning and drawn into the very body and soul of America have been people from ever corner of the globe, from every race, and from all major religions. Characterized by one of America's outstanding columnists as an historic document, the Captive Nations Week Resolution (Public Law 86-90) begins

with this very essential truth: "Whereas the greatness of the United States is in large part attributable to its having been able, through the democratic process, to achieve a harmonious national unity of its people, even though they stem from the most diverse of racial, religious and ethnic background..." [6]

Politically, and also in sharp contrast to other nation-states of the world, human diversity in developmental unity has been and continues to be another unique characteristic of America. Multi-ethnicity at work in national union has been and is the ever-expanding reservoir of resourcefulness, innovation and challenge in this grand and tremendous historical experiment called the United States of America. This Nation suffered a costly Civil War over 100 years ago, but survived it to become in the next century the most powerful politico-economic entity in the history of mankind. Its salient character of unity-in-diversity is now being tested again by hostile external forces, and the paramount question of our times is whether we can survive this divide-and-conquer operation while America peaceably pursues its Manifest Destiny in technologic progress, economic investment, and constructive creativity both at home and abroad. Then, to parallel, as many do, the USSR and its numerous nations with the U.S. in this unity-in-diversity respect well indicates more than one mark of professed ignorance regarding the nature, composition and development of the empire-state.[7]

With a measure of sober reflection, the ramifications of thought flowing from these fundamental truths cannot but impress themselves on anyone who begins to think in terms of a cosmopolitan Americanism adaptable and fitted to the needs and demands of our global position. It would be foolish to overemphasize the domestic to the exclusion of the international, or the latter to the neglect of the former. The two are intrinsically interrelated, and this fact reinforces further our chief thesis on cosmopolitan Americanism which rests on the two basic truths adumbrated above.

In this framework of understanding, then, the essence of the EHSC bill really extends beyond the passive attainment of understanding ourselves and each other to tap and regenerate the very springs of our national origin, growth and destiny. Clearly, in the global context today, it is surely not a species of putative reasoning to maintain that by its unique nature and all that this implies in

---

[7] On this, see Lev E. Dobriansky, *U.S.A. and the Soviet Myth*, Devin-Adair, New York, 1971.

terms of human progress and civilization, the presence and consummate power of America are integral parts of God's design for the future of mankind. Zangwill's Crucible and "God is making the American" make far more realistic sense with the foremost empirics at hand — almost all races and peoples, diverse cultural heritages, most powerful nation, decisive bastion of world freedom, manifest technico-economic destiny, societal pluralism, domestic-international balance, and historic experiment — than any so-called naturalistic or humanistic explanation. Whether by faith, reason and will we shall accomplish the demands of this prominent design is actually the titanic test and challenge we today face. The directions paved by EHSC undoubtedly will enable us to meet this challenge more adequately and more successfully.

THE ANSWERS OF COSMOPOLITAN AMERICANISM

Before positive action can be taken on the EHSC bill, the outstanding questions regarding the feasibility of the undertaking must be adequately answered. After having examined carefully the volume of hearings testimony on the subject, one still is left somewhat uneasy about the justification offered in behalf of EHSC. For example, one can easily take to task the bland statement that "the 'melting pot' theory of Herbert St. Jean de Crevecoeur and Israel Zangwill has not worked and today we find that a variety of ethnic and racial groups have combined to form the mosaic of the American social fabric, living in relative peace on the same turf." [8] Isn't a mosaic possible within any organic whole, and what happened to the concept of nation? Crevecoeur's and Zangwill's conceptions do not constitute a theory; they are organic views of an evolving process where successive cultural mosaics are not only possible but also desirable for the unique development of this national, moral organism. Customs and even languages perpetuated in some ethnic communities in the United States have, from one viewpoint, become outdated by the changes sweeping so-called counterpart homelands, and yet they render cultural beauty and richness in an environment that is far advanced educationally, technologically, economically and politically than the given counterpart.

So, then, in what is a far more complex subject than what appears on the surface, answers of a cosmopolitan Americanism can be given to questions such as "Won't a program of this nature prevent ideal assimilation?"; "Wouldn't such a concentration on differ-

[8] *Ethnic Heritage Studies Centers*, Hearings, p. 252.

ences produce disunifying forces, in some instances even to the point of questioned loyalty?"; "If we are all ethnics, shouldn't all be included in the program?"; "How, indeed, is the allocation of resources to be executed?" From the evidence these appear to be the dominant questions raised by some who doubt the wisdom of the proposed EHSC program.

In the broadest perspective, the emergence of the United States these past few decades from a protected stance of splendid isolation to one of necessary worldwide involvement has laid the groundwork for a cosmopolitan Americanism. This new outlook and national bent engender a growing appreciation of cultural differentiation, the need for multi-national exchange and concourse, an awareness of an evolving world community and values of change, relative peace, constructive evolution, and universal bonds. Posited in this expansive reality, the so-called ideal of assimilation becomes an elusive and vague expression, the "melting pot" process shifts more and more on a global scale, and the impact of external forces and influences on American being and existence becomes greater than ever. The assimilative process is inescapable in any changing environment, but the fundamental question is what are we assimilating to? A cosmopolitan American cannot but continually assimilate himself to the progressive realization of the principles of freedom, opportunity and challenge that have made this unique Nation what it is and also to the creative building of a world order and a free community of nations. The unity-in-diversity sought in the latter actually necessitates a resourceful unity-in-diversity in the American environment. And this is the very key to the problem here.

Logically, then, the EHSC program would not impede assimilation, difficult as that is. On the contrary, it would accelerate it in the realistic sense described above, furnishing new energies within for bountiful expression without, especially in the advancement of the numerous freedoms that have always constituted the unfolding "American dream." Likewise, and quite rationally, too, a methodical and selective concentration on differences within would intensify, rather than weaken, unifying forces within, as well as without. In addition, true as it is that America is a nation of immigrants, that by whatever point of generative remotion we are all ethnics, the fact is that by one circumstance or another, some Americans have conserved their ethnical legacies, as manifested in customs, language, community efforts, religion and so forth, providing cultural strains in the ever-evolving cultural embodiment of America and emphasizing America's intrinsic affinity to different parts of the world. It is no

accident, for instance, that the prominent listing of these groups spontaneously appears in the volume of House hearings inasmuch as their response to the EHSC bill was well nigh instantaneous.

The problem of resource allocation shouldn't be an insurmountable one if certain dominant criteria are borne in mind. These are: (1) the size of the ethnic group (2) the books and materials already available on a particular group (3) existing facilities in a group for ready implementation of the program and (4) the contributory worth of knowledge to Americans in general as concerns our foreign relationships and global tasks. These criteria can scarcely be equally weighted, and no logical priority can be imputed to the given order of criteria. For example, if a particular ethnic group is quantitatively large, this would not necessarily warrant a proportionate allocation if (2) and (3) are substantial and (4) is relatively moderate. Certainly, to begin with, a collective, university project of textbook and materials preparation should be undertaken to cover all possible ethnic groups in America, their size, communities, activities, and contributions. In the 50's, an attempt along these lines was made at Georgetown University with the foundation of the Institute of Ethnic Studies, but it was a generation ahead of its time and little public interest produced scant funding.

MEDIA FOR BASIC PROPAGATION

Above this fundamental requirement for an overall textbook, fair application of the given criteria would have to be reasonably flexible so as to maximize the output of results and performance, not to say the maximum justification for the tax-supported program. A few aspects of this problem will be described suggestively here as we conclude on the media for basic propagation and the problem of location.

Regardless of the sources preparing ethnical materials, the media for basic propagation are the elementary and secondary schools. As the writer stressed in his own testimony on the bill, "It is unnecessary to dwell on any psychology or philosophy of education in order to emphasize the primacy and crucial importance of one's early education in the formative years." [9] Since the beginning of man's history this truth has been affirmed and reaffirmed. Hebrew scribes, Chinese sages, Greek philosophers, Jesuit fathers and Red totalitarians have underwritten the basicity of this truth. Most appropriately and wise-

[9] *Ibid.* p. 320.

ly, the measure on EHSC is designed to improve and assist elementary or primary and secondary school education in connection with the multiple heritages in our evolving society.

As any educator would attest, lack of such knowledge concerning fellow citizens, their respective backgrounds, their traits and aspirations inevitably leads to misunderstandings, prejudices and biases that take their costly toll on society. Also, mistaken and fallacious preconceptions woven into maturing minds during these early years invariably remain with the students on higher levels of education in later years. Not only do they serve to perpetuate myths and early contrived misconceptions but also the millions who form our citizenry and conclude their formal education with high school. Despite the irresistible, normalizing forces of science, technology, and economic development, there has never been, nor cannot there be, any homogeneity in America, not to speak of other states in the world. The vigorous pluralism of the American environment is a tremendous and necessary asset to be preserved and deepened, and the first appreciation of it should come formally on the primary and secondary levels of our educational system.

When, in this framework of analysis, criterion four is applied, relating all this to the essential security of our Nation, an appalling fact is discovered. As the writer further maintained in his testimony, "Ironically enough, perhaps no subject has been mangled and distorted more by perpetuated myths and misconceptions than that of the Soviet Union, its multinational composition and so forth."[10] Or, as pointed out in a quote from another testimony, "Finally, it must be pointed out that there exists a certain abnormality in our universities which are engaging in the research and teaching of East European history. One may wonder about the training of our future scholars who are denied the start of the history of non-Russian nations even in our largest universities and research centers."[11] Although pluralistic America consists of heritages that in living form signify the contrary, children mistaught that the USSR is "Russia," continue to harbor this myth and all that flows from it for the rest of their lives.

In light of all this, there is little cause for wonderment that even college students today evince an ignorance as to nations such as Estonia, Latvia and Lithuania, despite their independent existence between the two world wars. The dark blemish on America's record and honor in the recent case of the Lithuanian sailor is another start-

[10] *Ibid.* p. 320.
[11] *Ibid.* p. 232.

ling case in point. As Congressman Daniel J. Flood stated in the House, "when the news broke out concerning the repatriation of the Lithuanian sailor, Simas Kudirka, to Soviet Russian enslavement, in total astonishment and with a sense of outrage every friend of the captive nations and every American honoring our treasured principle of political asylum whom I know, took to the phone or the pen to inquire into this unbelievable incident and to bring it to public account."[12] He stated further, "at this stage I am not satisfied by the probes that have taken place nor by the confused testimonies that have been given. Neither is Congressman Wayne L. Hays who in a probe recommended that "Rear Admiral William B. Ellis take a trip to the USSR to complete his education on Soviet Russian totalitarianism."[13]

The fact is one doesn't have to go to the USSR to learn the difference between a Lithuanian and a Russian. This knowledge to guide our actions resides in America's very pluralism. More, with Moscow being for years, and for years to come, the chief threat to the security of our national being, a modicum of common sense would demand that our citizenry become quickly enlightened about the different nations and peoples in the empire-state known as the USSR. With ethnic heritage studies centers dealing with Ukraine, Byelorussia, Lithuania, Estonia, Latvia, Armenia and others, there can be no question that this grave deficiency would be rapidly eliminated, with all the positive benefits that this would entail.

Quite plainly, then, with an eye to the maximum utility of the taxpayer's dollar, it is not enough to seek domestic cohesion through pluralistic understanding and knowledge but also to protect domestic gains through international understanding and knowledge, especially in the direction of the chief source of threat to our cohesive, national being. In applying criterion four, a group, like the Latvians, Estonians, Byelorussians, Georgians or others, may be small in ethnical size, it may have some availability of books and materials, as well as institutional facilities for studies centers, but it would rank high in terms of maximum national purpose. Along these rational lines it is evident that a careful, economical weighing of factors would have to be observed. For example, history courses in our schools cover Western Europe and to a lesser extent Central Europe and

[12] "The Simas Kudirka Case and a Special Committee on the Captive Nations," *Congressional Record*, December 14, 1970, p. H11673.

[13] "Go to Russia, Congressman Tells Admiral," *UPI*, Washington, D.C., December 30, 1970.

"Russia," as well as the Mideast, Asia and Latin America, but who could point to courses on the numerous non-Russian nations in the USSR? Yet in pluralistic America ancestral roots in these nations abound with immense potential good for our Nation as well as the peoples involved.

THE PROBLEM OF CENTERS LOCATION

Extensive discussion in the House hearings is devoted to the problem of locating the centers. For instance, one witness states, "I would be very surprised if the universities in New York City did not have a center for the study of the Jewish culture. I would be very surprised... that the study of Chinese culture would not be located in areas where people are more concerned about the Chinese population in terms of cultural heritage and contribution and so on."[14] Actually, there is no necessity for the center to be located in the very ethnic community itself. Are the groups simply to learn about themselves or, more importantly, is the general community there and elsewhere to learn about them? The EHSC bill would be self-defeating, indeed, if only the former were contemplated. As to the basic minimum suggested earlier, the overall textbook project, this could be economically lodged in a revived and sufficiently funded Institute of Ethnic Studies at Georgetown University.

Going beyond the initial project, the guidelines of maximized output and efficient and constructive implementation should be scrupulously observed. Safeguards against uneconomical arrangements with overloaded overhead, waste of resources in being, and fly-by-night operations, such as have characterized other programs in the recent past, can and should be strenuously invoked. To a large extent the anatomy for efficient and sound programming already exists in the case of several major ethnic groups. Unquestionably, what is desperately required is a substantial improvement and beefing-up of the apparatus and structures already in existence, such as the bill implicitly contemplates. This course of action would insure an economical use of resources, certainly as to productive results, and the necessary avoidance of waste in disuse, duplication, and symmetrical arrangements. An asymmetry or arrangement is virtually mandatory to satisfy the guideline for implementation.

The Ukrainian group, for example, is generally recognized as a major ethnic segment. References to it are often made in the House

[14] *Ethnic Heritage Studies Centers,* Hearings, pp. 88-89.

hearings. A familiarity with the organizational network of this group will show that it lends itself to an economical and efficient use of resources. One of the few of its kind, the Ukrainian Congress Committee of America is a unified, national organization to which, with the exception of minor communist elements, organizations, clubs and religious, cultural and academic groups across the country belong in integrated membership. In short, the UCCA is an educational organization of organizations. It enjoys tax exemption and supports schools and studies of Ukrainian history, culture, language, the arts, and religious development.

A thorough study of this major ethnic body would have to extend back to the eighteenth century, before the founding of this Nation, and would trace the socio-economic and other contributions to the development of American society. Such a study and the preparation of materials based on it and projected also into the international dimension could be easily undertaken through the organizational structure of UCCA. Operated from the center in New York and with little or no overhead costs, regional and local Ukrainian heritage studies associates can be formed, serving and assisting our elementary and secondary schools in the immediate areas. Moreover, hundreds of Ukrainian heritage academicians at universities and colleges across the country could be productively enlisted to participate in the undertaking.

Undoubtedly, this example of least-cost implementation can be applied in only a few other instances. Among ethnic groupings in the country UCCA is generally viewed as a unique, organizational vehicle for all Americans of Ukrainian heritage. There isn't the division or fragmentation that has marked other ethnic segments.

In conclusion, therefore, the idea of ethnic heritage studies centers is a sound and beneficial one. The 92nd Congress should consider it favorably, and the Nixon Administration should offer it its fullest support. Contrary to the doubts of some, the establishment of such centers would enrich the pluralism of our society, contribute to more vigorous national cohesion, and in the advanced spirit of cosmopolitan Americanism further the interests of our country abroad. For rational and efficient operation, an overall project should be instituted, covering all the ethnic segments of our Nation, and an asymmetrical arrangement in use of resources should be introduced in view of existing facilities and the institutional make-up of each major group. The suggested criteria and guidelines, if properly applied, would guarantee the maximization of output that the idea, in its fulfillment, most assuredly deserves.

THE COMMITTEE FOR THE STUDY OF NATIONALITIES
OF THE USSR AND EASTERN EUROPE
216 D Coleman Hall
Eastern Illinois University
Charleston, Illinois 61920
Telephone (217)581-5716

TESTIMONY

IN BEHALF OF THE CREATION OF ETHNIC STUDY CENTERS

The Committee for the Study of the Nationalities of the USSR and Eastern Europe considers it to be a high privilege to address itself to the United States Senate in support of the creation of ethnic study centers.

Speaking on behalf of some 150 professors and scholars from various American universities and being primarly interested in the problem of the nationalities, the Committee deems it appropriate to present the following points for your kind attention and consideration:

1. It is our privilege not only to be preserver of various cultures, but it is also our distinguished honor to be able to contribute to the mosaic of our American heritage as manifested in the pluralistic nature of the American nation.

2. While specializing in the problems of the minorities of the USSR and Eastern Europe, the Committee considers itself to be the depository of cultural and intellectual treasures of some 20 million Americans of East European extraction.

3. This large group of Americans, having been largely ignored for decades, must be offered on an equal basis with other such groups a place in our universities and in the cultural life of America.

4. Our highschools ought to respond to the changing nature of learning. Textbooks, curricula and libraries should reflect an honest attempt to eliminate all unfavorable practices of the past. Contribution of all ethnic groups to American society can not be overlooked or minimized.

5. Millions of Americans of East European extraction have continously contributed to the greatneess of our country and a large number of them have fought and died for the ideals of the American system.

6. The Committee feels strongly that the time has now arrived for recognition of their efforts by providing this group with an effective framework and support in the desire to maintain spiritual ties to the cultures of their ancestors.

7. For these noble reasons, the Committee suggests the creation of ethnic study centers in all States of the Union which would offer symbolic shelters to old and young persons interested in their respective cultures and heritage. To make them properly function, the Committee recommends to set up headquarters in Washington D.C. in order to supply State offices with all needed material, advise and direction. The legal base, as well as the framework, should be provided by an act of Congress.

8. The Committee, having in its rank and file experts from all ethnic groups, expresses its willingness to place at the disposal of the authorities all our knowledge as well as individuals who may serve usefully in various capacities.

9. Finally, the Committee respectfully asks for immediate action in that direction. For too long this group remained loyally silent and we therefore urge the U.S. Congress to treat them as equally appreciated members of this great country of ours.

May 8, 1971

Honorable Clairborne Pell
U.S. Senator from Rhode Island
Senate Office Building
Washington, D. C.

Dear Senator Pell: -

I am very much interested in Senate bill S 23, the "Ethnic Heritage Studies Centers Act of 1971", and hope that it will soon be favorably acted upon by your SubCommitte on Education, and eventually the Senate and House.

At a time of great polarization in this country, partly brought about by ethnic and racial differences, the creation of Centers which would serve a better understanding of all ethnic contributions to America and to the fulfillment of her dreams, would be especially important.

I do hope that you as Chairman of the Subcommittee on Education will do everything you can to effectuate the adoption of this noble piece of legislation.

Very sincerely yours,

John Otto Reinemann

John Otto Reinemann, M.D.

"The Ethnic Heritage Studies Centers Act of 1971"

Testimony Concerning Bill S 23

By Lawrence J. Losoncy, Director

Division for Adult Education, U.S. Catholic Conference

Before offering testimony in support of the bill which has been introduced by Senator Schweiker and designed as S 23, I would like to recommend three changes in the wording of the bill:

A) The title (line 1) be changed to read "Comparative Ethnic Heritage Studies Centers".

B) That line ten, page 2, be changed to read, " . . . secondary schools of the nation, as well as adults, should have . . . "

C) That line 9, page 3, be changed to read "secondary schools, non-profit groups and agencies, community education centers, and institutions of higher education . . . "

The intent of the first suggested change is that not only pride in one's ethnic heritage be fostered, but that in addition, an understanding and appreciation of other heritages be encouraged.

The intent of the second suggested change is that the program of ethnic awareness be aimed at all age levels of the population, not merely at the young. Parents, especially, should be included in the perview of this bill, since the home environment is so influential in the development and reenforcement of personal and community identity.

The intent of the third suggested change is that the research, materials, and resources of the proposed centers not be restricted to the schools, but be made available to other community groups as well, especially to adult education groups.

I wish to put myself and the United States Catholic Conference, Division for Adult Education, on record as being in full support of this proposed legislation. Our clients include the nearly fifty million Catholic citizens of this great Republic, most of whom come from second or third generation American

families. This means that our people still retain the cultural heritage and the ethnic identity spoken of by Senator Schweiker in his speech introducing the bill. It has always been our position that being American does not change one's blood nor one's ancestors. Indeed, the very richness of America comes from the unique fact that we are able to refer to ourselves as Polish Americans, Italian Americans, Mexican Americans, and so forth. The brilliance of this democracy has been its ability to unite without forcing uniformity. It is this brilliance which is now dimmed by the loss of ethnic identity and by the White-Black polarities which threaten to replace ethnic pride, and by the White-Mexican hostility which grows daily.

As we notice new and growing Cuban and Puerto-Rican communities, large African communities, large Mexican communities, and a new influx of Asian peoples, we cannot help but stress the wisdom of this bill, a wisdom which sees that each community of ethnic peoples will experience a growing need not only to understand itself but also to understand its neighbors.

The fact of the matter is that we are all ethnics and we are all minorities, but some of us have forgotten our origins and are becoming insensitive to the beauty and richness of difference.

We do not exclude Indians from concern in this testimony. They, above all others, point to the terrible desolation and poverty which can befall all of us when our identity and our heritage are downgraded or forgotten.

The Catholic Church numbers twelve thousand primary and secondary schools, and another forty thousand community-based programs of religious instruction, adult education, and educational enrichment. The encouragement of comparative ethnic centers of study and research, with the accompanying dissemination of materials and program techniques, would serve to enrich all or many of our programs. Such an enrichment has already been called for by many of our leaders and educators, both in private education and public education. It is, therefore, our opinion and our hope that the proposed legislation will enrich the nation and will be gratefully received by all of the citizens.

Senator SCHWEIKER. Thank you very much.

(Whereupon, at 12:30 p.m. the Subcommittee on Education of the Committee on Labor and Public Welfare adjourned, to reconvene at 10 a.m., Wednesday, April 21, 1971.)

EDUCATION AMENDMENTS OF 1971

WEDNESDAY, APRIL 21, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to notice, at 10 a.m., in room 4232, New Senate Office Building, Senator Claiborne Pell presiding.

Present: Senator Pell.

Staff present: Stephen J. Wexler, subcommittee counsel and Richard D. Smith, associate counsel.

Senator PELL. The Subcommittee on Education will come to order, continuing our hearings on the Education Amendments of 1971.

We have several witnesses today. I must apologize if we have to move along quite fast, but I am also the floor manager of a bill presently pending on the Senate floor, and I may have to leave before long.

Our first witness today is the Reverend Robert J. Henle, chairman of the Association of Jesuit Colleges and Universities, who is here representing that association. He is also president of Georgetown University.

Father Henle.

STATEMENT OF REV. ROBERT J. HENLE, S.J., CHAIRMAN OF THE ASSOCIATION OF JESUIT COLLEGES AND UNIVERSITIES AND PRESIDENT OF GEORGETOWN UNIVERSITY, WASHINGTON, D.C.

Father HENLE. Thank you, Mr. Chairman. I have a written statement, a general written statement, which I would like to read and submit for the record, if it is agreeable.

I am Robert J. Henle of the Society of Jesus, the president of Georgetown University here in this city of Washington. This year I am serving as chairman of the Board of Directors of the Association of Jesuit Colleges and Universities of the United States. I appear here today as spokesman for the 28 institutions which make up this association.

We are deeply grateful for this privilege which you have accorded to us to present our views to this committee as you consider legislation to cope with some of the problems faced by higher education.

At the outset, let me say that we are not seeking special legislative privileges for Jesuit institutions. Our purpose is rather to urge legislative polices which will deal with problems of higher education in general and private higher education in particular. The Jesuit insti-

60-433 O—71—pt. 2——30

tutions are a significant group of private colleges and universities, and it was our thought that we could assist the committee by giving you some insight into our problems and our thoughts as an important part of your exploration of the plight and needs of private education at this critical time.

Much of what I will say is true of all institutions of higher learning in the United States. Much of it is more relevant to private higher education in the United States. The Association of Jesuit Colleges and Universities of the United States includes 28 institutions. A list of these institutions is appended for the record. These institutions have a combined total operational budget for 1971 of $344 million. These institutions represent a significant minority within higher education.

The institutions constituting this association are privately controlled. They all are chartered or incorporated under the laws of the United States, State laws or Federal laws, as the case may be. None of them are ecclesiastically erected or incorporated. Most of them are controlled and operated by a board of directors, independent of any external authority other than the general laws under which they were incorporated.

The boards in some cases consist solely of Jesuits, but in most cases are combinations of Jesuits and laymen, of Catholics, Protestants, Jews, men and women, and more and more these boards tend to represent the general public and the general constituencies of the university or college.

The Jesuit colleges and universities receive no subsidies from the Catholic Church. They receive no subsidies from the Jesuit order as such. Those Jesuits who serve the universities in whatever capacity as faculty members, as administrators, secretaries, librarians, or whatever, do indeed return a surplus of their salary to the institution, as a freewill gift. This is the traditional contributed service of the Jesuit or the religious to the institution he serves.

The theory of a religious order is that it has a right to obtain a living from its ministry, but not to make a profit from its ministry.

However, two factors have greatly reduced this contributed service, whether it be in a cash return or an accounting entry. First of all, the order itself has felt the increasing pressure of inflation and escalation of costs, so that the surplus has been dwindling in an absolute sense.

On the other hand, even if the surplus remained the same amount, absolutely speaking, in proportion to the cost of operation of the institutions and the size of the faculty, the Jesuit contributed service has consistently dwindled relatively and has in many institutions become quite insignificant as a factor in its fiscal operations.

These institutions are obviously religiously oriented. They believe in the importance of moral development, of religious opportunities, et cetera, for the students, but they are universities and colleges in the strictest sense and provide an education in all appropriate fields that is in every way comparable and in some cases superior to programs provided in nonsectarian private institutions and in public institutions.

None of them have a discriminatory admissions policy. The student body, the faculty and the administration are made up of representatives of all the segments of our population in terms of nationality, race, religion, and sex.

My testimony rests upon the assumption, which I believe is generally accepted in the American academic community, that the strength of our university system lies in its pluralism, its diversity, its richness and its provision for a wide choice, whether this choice be religious, traditional, academic, geographic for the American college student.

I believe, consequently, that it is in the public interest to maintain this diversity and, therefore, it is in the public interest to maintain the existence of private higher education with all its diversity, sectarian and nonsectarian, religiously and nonreligiously oriented, southern and northern, western, et cetera.

Assuming, therefore, that it is in the public interest to maintain our Jesuit institutions of higher learning, the question becomes one of means.

We have taken the position, and I have expressed this position many, many times in the past 10 years, that private institutions in general and Jesuit institutions in particular will be able to survive as quality institutions with distinctive characteristics only if funding from every source is substantially increased.

I do not believe at all that the private institutions can survive solely on contributions from private sources. I have said over and over again and I repeat it now, that, unless there is an infusion of State and Federal moneys into the private universities of the United States, they will not survive as private quality institutions. They will close, deteriorate into mediocre institutions, lose their distinctive character, or go public.

Any one of these alternatives I think in most instances would be tragic. There may be some private institutions which are not viable for other reasons and perhaps should close or amalgamate with other institutions. But a wholesale closure or deterioration or going public on the part of private institutions would be a disaster.

I hope that this committee agrees that private higher education is a precious heritage which should be continued and strengthened. To do so will maintain our pluralism which is of significant importance to the quality of education and to our way of life. It will minimize disruption of our present system and give a base for improvement, change, and redirection. It offers an opportunity to maintain and expand higher education with fewer tax dollars than does the alternative of fully supported public education.

The elements which we believe should be considered in developing legislation for higher education are:

(1) The urgent necessity of continuing with appropriate expansion and perfection the sizable group of legislative authorities which are scheduled to expire on June 30, 1971.

(2) Expansion of student aid and not only for the low-income student but a recognition that the children from middle-income families are fast becoming a seriously disadvantaged group.

(3) The need for institutional support to assure financial stability and continued operation of private colleges and universities.

(4) The need to provide supplemental institutional support to accompany expanded enrollment resulting from increased student aid.

(5) The need for assistance in developing needed new and replacement facilities—academic and residential.

The President is to be commended for his program of expanded support for student aid to the economically deprived. We support the objective of this proposal.

In administering existing authority and basic to his new proposals, however, is the concept of redirecting present resources from the children from lower middle-income families to the very poor. It is our considered judgment that this is unwise public policy.

We are fast moving to a system that can accommodate only the rich and the poor. This is an unwise public policy in terms of the national youth from all segments of society and is inherently unfair and inequitable. This is an unwise public policy from an educational standpoint.

Essentially all educational authorities subscribe to the concept of the educational advantage occurring to all students from an environment which consists of a broad and diversified student body representing all of the diverse elements of our society, including students from all income levels.

The President's program fails to deal with the problem of institutional aid. This is the critical question which must be addressed if we are going to preserve private colleges and universities as a significant element of higher education.

The numerous studies and news stories on the financial plight of higher education need no elaboration from me.

It will suffice to say that I am personally in a position to support the conclusion of these studies, that problem exists now, that it is acute, that it is critical. It has sometimes been said that we must study the situation, determine the amount of aid needed; and to postpone any action into the future is like saying we will study means of putting out a fire before we begin to stop the existing fire.

The 28 Jesuit colleges and universities have long served the Nation, and I believe served them well. They are not rich institutions. They have been seriously affected by the ravages of inflation and the increasing cost of providing quality education. They are in need of assistance, and I urge your committee to enact legislation which deals with this key problem.

I am encouraged that this legislative problem is in the hands of the committee. Several of you have in past Congresses and in the present session evidenced your understanding of the problem and your support for its solution by introducing bills to deal with it and by supporting serious legislation proposals that will assure that private colleges and universities will return to their past vigor.

Much argument surrounds the formula for providing support. I am not going to burden you with still another approach or a new formula. I would urge that as you examine alternative formulae that you give serious consideration to:

(1) The need for basic support related to the size of existing institutions in order to meet the critical basic problem of financial stability which is needed in a substantial degree by all private colleges and universities.

(2) The need for supplementary institutional support for further expansion in enrollment, particularly the enrollment increases which are stimulated by increased Federal student assistance. It is a well known fact that tuition charges do not cover the cost of education.

To aid the student to meet tuition and not aid the institution to cover the cost of the education is to increase the burden to be borne by the colleges and universities.

Although lower on our list of priorities, we would urge that support be continued and expanded for needed facilities. The financial plight of many institutions has caused long delay in replacement of old facilities, development of long overdue new facilities to meet increased enrollments and changes in educational requirements; has resulted in too slow an evolution in applying advanced educational technology and has in many cases resulted in neglect of sound maintenance standards of existing facilities.

In essence, Mr. Chairman, my testimony is similar and supportive of the views expressed by the American Council on Education, the Association of American Colleges, the National Association of State Colleges and Land Grant Universities, and the American Association of State Colleges and Universities.

Senator PELL. If you will forgive me, I must interrupt you.

I have been informed that I have to leave this room at 10:30 and report to the Senate floor. I am wondering if the rest of your statement could be put in the record.

Father HENLE. Yes, I have only one more page. I have read the substance of my statement.

Senator PELL. I have three questions, and I am going to give them to you in writing.

I apologize. I have been told by the leadership that I have to be there at 10:30. I would ask that you consider answering the question in writing.

(The prepared statement of Rev. Henle follows:)

...

Testimony Presented by Rev. R.J. Henle, S.J., President of Georgetown University, to the Honorable Claiborne Pell, Chairman, and the Members of the Senate Subcommittee on Education Wednesday, April 21, 1971

Mr. Chairman and Members of the Committee:

I am Robert J. Henle of the Society of Jesus, the President of Georgetown University here in this city of Washington. This year I am serving as Chairman of the Board of Directors of the Association of Jesuit Colleges and Universities of the United States. I appear here today as spokesman for the 28 institutions which make up this association.

We are deeply grateful for this privilege which you have accorded to us to present our views to this committee as you consider legislation to cope with some of the problems faced by higher education.

At the outset, let me say that we are not seeking special legislative privileges for Jesuit institutions. Our purpose is rather to urge legislative policies which will deal with problems of higher education in general and private higher education in particular. The Jesuit institutions are a significant group of private colleges and universities, and it was our thought that we could assist the Committee by giving you some insight into our problems and our thoughts as an important part of your exploration of the plight and needs of private education at this critical time

Much of what I will say is true of all institutions of higher learning in the United States. Much of it is more relevant to private higher education in the United States. The Association of Jesuit Colleges and Universities of the United States includes 28 institutions. A list of these institutions is appended for the record. These institutions have a combined total enrollment of 160,000 students. They have a combined total operational budget for 1971 of $344 million. These institutions represent a significant minority within higher education.

The institutions constituting this association are privately controlled. They all are chartered or incorporated under the laws of the United States, state laws or federal laws, as the case may be. None of them are eccesiastically erected or incorporated. Most of them are controlled and operated by a Board of Directors, independent of any external authority other than the general laws under which they were incorporated. The Boards in some cases consist solely of Jesuits, but in most cases are combination of Jesuits and laymen, of Catholics, Protestants, Jews, men and women, and more and more these Boards tend to represent the general public and the general constituencies of the university or college.

The Jesuit colleges and universities receive no subsidies from the Catholic Church. They receive no subsidies from the Jesuit Order as such. Those Jesuits who serve the universities in whatever capacity as faculty members, as administrators, secretaries, librarians, or whatever, do indeed return a surplus of their salary to the institution, as a free will gift. This is the traditional

contributed service of the Jesuit or the religious to the institution he serves. The theory of a religious order is that it has a right to obtain a living from its ministry, but not to make a profit from its ministry. However, two factors have greatly reduced this contributed service, whether it be in a cash return or an accounting entry. First of all, the Order itself has felt the increasing pressure of inflation and escalation of costs, so that the surplus has been dwindling in an absolute sense. On the other hand, even if the surplus remained the same amount, absolutely speaking, in proportion to the cost of operation of the institutions and the size of the faculty, the Jesuit contributed service has consistently dwindled relatively and has in many institutions become quite insignificant as a factor in its fiscal operations.

These institutions are obviously religiously-oriented. They believe in the importance of moral development, of religious opportunities, etc., for the students, but they are universities and colleges in the strictest sense and provide an education in all appropriate fields that is in every way comparable and in some cases superior to programs provided in non-sectarian private institutions and in public institutions. None of them have a discriminatory admissions policy. The student body, the faculty and the administration are made up of representatives of all the segments of our population in terms of nationality, race, religion and sex.

My testimony rests upon the assumption, which I believe is generally accepted in the American academic community, that the strength of our university system lies in its pluralism, its diversity, its richness and its provision for a wide choice, whether this choice be religious, traditional, academic, geographic for the American college student. I believe, consequently, that it is in the public interest to maintain this diversity and, therefore, it is in the public interest to maintain the existence of private higher education with all its diversity, sectarian and non-sectarian, religiously and non-religiously oriented, southern and northern, western, etc.

Assuming, therefore, that it is in the public interest to maintain our Jesuit institutions of higher learning, the question becomes one of means.

We have taken the position, and I have expressed this position many, many times in the past ten years, that private institutions in general and Jesuit institutions in particular will be able to survive as quality institutions with distinctive characteristics only if funding from every source is substantially increased. I do not believe at all that the private institutions can survive solely on contributions from private sources. I have said over and over again and I repeat it now that unless there is an infusion of state and federal monies into the private universities of the United States, they will not survive as private quality institutions.

They will close, deteriorate into mediocre institutions, lose their distinctive character, or go public. Any one of these alternatives I think in most instances would be tragic. There may be some private institutions which are not viable for other reasons and perhaps should close or amalgamate with other institutions. But a wholesale closure or deterioration or going public on the part of private institutions would be a disaster.

I hope that this Committee agrees that private higher education is a precious heritage which should be continued and strengthened. To do so will maintain our pluralism which is of significant importance to the quality of education and to our way of life. It will minimize disruption of our present system and give a base for improvement, change and re-direction. It offers an opportunity to maintain and expand higher education with fewer tax dollars than does the alternative of fully supported public education.

The elements which we believe should be considered in developing legislation for higher education are:

(1) The urgent necessity of continuing with appropriate expansion and perfection the sizable group of legislative authorities which are scheduled to expire on June 30, 1971.

(2) Expansion of student aid and not only for the low income student but a recognition that the children from middle income families are fast becoming a seriously disadvantaged group.

(3) The need for institutional support to assure financial stability and continued operation of private colleges and universities.

(4) The need to provide supplemental institutional support to accompany expanded enrollment resulting from increased student aid.

(5) The need for assistance in developing needed new and replacement facilities - academic and residential.

The President is to be commended for his program of expanded support for student aid to the economically deprived. We support the objective of this proposal.

In administering existing authority and basic to his new proposals, however, is the concept of redirecting present resources from the children from lower middle income families to the very poor. It is our considered judgement that this is unwise public policy.

We are fast moving to a system that can accomodate only the rich and the poor. This is an unwise public policy in terms of the national youth from all segments of society and is inherently unfair and inequitable. This is an unwise public policy from an educational standpoint. Essentially all educational authorities subscribe to the concept of the educational advantage accruing to all students from an environment which consists of a broad and diversified student body representing all of the diverse elements of our society including

students from all income levels.

The President's program fails to deal with the problem of institutional aid. This is the critical question which must be addressed if we are going to preserve private colleges and universities as a significant element of higher education. The numerous studies and news stories on the financial plight of higher education need no elaboration from me. It will suffice to say that I am personally in a position to support their conclusion that the problem is now and it is acute and it is critical. The 28 Jesuit colleges and universities have long served the nation and I believe served them well. They are not rich institutions. They have been seriously affected by the ravages of inflation and the increasing cost of providing quality education. They are in need of assistance and I urge your committee to enact legislation which deals with this key problem.

I am encouraged that this legislative problem is in the hands of the Committee. Several of you have in past congresses and in the present session evidenced your understanding of the problem and your support for its solution by introducing bills to deal with it and by supporting serious legislation proposals that will assure that private colleges and universities will return to their past vigor.

Much argument surrounds the formulae for providing support. I am not going to burden you with still another approach or a new formula. I would urge that as you examine alternative formulae that you give serious consideration to:

(1) The need for basic support related to the size of existing institutions in order to meet the critical basic problem of financial stability which is needed in a substantial degree by all private colleges and universities.

(2) The need for supplementary institutional support for further expansion in enrollment particularly the enrollment increases which are stimulated by increased federal student assistance. It is a well known fact that tuition charges do not cover the cost of education. To aid the student to meet tuition and not aid the institution to cover the cost of the education is to increase the burden to be borne by the colleges and universities.

Although lower on our list of priorities, we would urge that support be continued and expanded for needed facilities. The financial plight of many institutions has caused long delay in replacement of old facilities, development of long overdue new facilities to meet increased enrollments and changes in educational requirements, has resulted in too slow an evolution in applying advanced educational technology and has in many cases resulted in neglect of sound maintenance standards of existing facilities.

In essence, ~~Madam~~ Mr. Chairman, my testimony is similar and supportive of the views expressed by the American Council on Education, the Association of American Colleges, the National Association of State Colleges and Land Grant Universities, and the American Association of State Colleges and Universities.

My purpose in appearing is to present to you the views and problems of a distinctive group of institutions that are an integral part of private higher education. The Jesuit institutions are, I believe, distinctive and at the same time full-fledged partners with all other elements of our pluralistic system of higher education.

It is a system which is deserving of public support for its continuation and its improvement.

We need your help. We urge you to develop effective and comprehensive legislation at the earliest practicable date. We commend to your consideration the basic elements of assistance which I have outlined in amounts that are as generous as possible.

I am deeply appreciative of this opportunity to appear here today on behalf of the Association of Jesuit Colleges and Universities.

I will be pleased to answer any question you may have or to supply any additional supportive data which would prove helpful to the Committee.

(The questions submitted by Senator Pell, and the answers supplied by Mr. Henle follow:)

GEORGETOWN UNIVERSITY
WASHINGTON, D.C. 20007

OFFICE OF THE PRESIDENT

May 21, 1971

Honorable Claiborne Pell
Chairman, Senate Subcommittee on Education
New Senate Building Room 4232
Washington, D.C. 20510

Dear Senator Pell,

Unfortunately, the three questions which you wish to pose for me did not reach my office until after I had left the country for some meetings in Rome. I have been further delayed by pressing events after my arrival back. However, I am pleased to submit to you herewith the answers to your request.

I want to thank you for a most gracious welcome to your Committee and for the opportunity of presenting not only my original statement but these further clarifications. I hope they will be of help to you and your Committee.

Very sincerely yours,

R.J. Henle, S.J.
President

Answers Prepared by Rev. R.J. Henle, S.J.
President, Georgetown University
To Questions Posed by Senator Claiborne Pell
Chairman, Senate Subcommittee on Education
May 21, 1971

Question: "If public funds are used to finance a private institution, can you maintain that that institution is a completely private institution? Does not that institution become, to some degree, a public institution and subject to public control?"

Response: In the first place I think it is important to state that words like "private" and "public" must be specified to a variety of meanings. There is a sense in which every private college and university is a public institution. It is established as a service institution; its activity is in the public interest and must take into account public interest. The private institution is already under a certain surveillance by the civil authorities, inasmuch as it has a charter under the laws of the State or of the federal government and is subject to investigation and control, precisely with regard to carrying out its public service functions. There is no private institution that is so absolutely autonomous that it does not come in any sense under "public" control.

It is, of course, the type of internal control that really determines the nature of the institution. If its Board and its officials are appointed independently of any public authority and determine the policy of the university without there being an approval or veto power beyond the board then it is, in the sense of control, a private institution. If the board, for example, is appointed by a governor of a state, or the state legislature, and if the officials of the university are responsible to state officials for their own functions, then it is under public control. That there are grey cases is, of course, one of the facts of life.

What we are contending is that it is in the public interest that certain institutions be maintained under private auspices and private "control" as described above. If it is in the public interest so to maintain them, it is also in the public interest to furnish reasonable financial support as necessary to achieve this purpose, without at the same time destroying the private "control." There is, of course, always a danger that the allocation of federal funds to a state institution or to a private institution would give

some added measure of control on the part of the federal government over these institutions. This is perhaps inevitable, but again we believe that it is in the public interest that the control attached to institutional grants should be as minimal as possible and should only be established in order to maintain the accountability of a public authority.

It is precisely for the complex reasons involved in this difficult question that I have urged on the one hand institutional grants from the federal government to all colleges and universities and on the other hand that these institutional grants be not so large that they totally remove the burden from the private sector or the states for supporting these institutions. I think this would be a tragic mistake both from the standpoint of the public economy, and from the standpoint of the welfare of the institutions and the public policy of preserving them as private institutions. I have constantly said that more federal funds are necessary for the whole higher education establishment in the United States, but that, by the same token, as federal funds increase, they must be balanced by an increase in funds from all other sources, foundations, alumni, friends, benefactors, etc. It is only by obtaining funds from a wide variety of sources that a private university can truly maintain its rightful degree of autonomy and independence.

Question: "What is the average cost of instruction to the institution in your colleges?"

Response: The question of per student cost of instruction by school is a valid question. Before presenting our data I would like to point out that there has not been developed a method which is considered acceptable to all university administrators. A study to develop an acceptable method is now under way by the Western Interstate Conference on Higher Education supported by the Department of Health, Education and Welfare. Georgetown, however, has made a preliminary study which produces relatively reliable results. The study is now being further refined and we are watching the broader study of WICHE in order that we might apply the results of their efforts and produce data which will be comparable to all other similar institutions.

The cost per student developed by our preliminary study covering budget cost for the school year 1971-72 are as follows:

	Total Cost Per Full Time Student
Undergraduate:	
College of Liberal Arts	2,700
School of Foreign Service	2,250
School of Business	2,640
School of Languages & Linguistics	2,970
School of Nursing	6,780
Graduate School	3,147
Professional Schools	
School of Medicine	23,617
School of Dentistry	9,303
Law School	3,100

Question: "Should the Federal Government aid private institutions without providing comparable aid to public institutions?"

Response: I believe that if the Federal Government undertakes to give direct institutional grants it should do so to all institutions regardless of whether they are private, semi-private, or state institutions. As one of the members of the House Committee pointed out, the money thus distributed to state institutions could be viewed as a kind of educational revenue sharing. The state institutions are for the most part in financial difficulties, very comparable to the difficulties of our large cities. State funds are not adequate, just as private funds are not adequate to maintain the services and the quality of private institutions. I hope I did not give the impression in my main testimony that I was asking for a bill which would be exclusively for the benefit of private institutions. I was representing a segment of private higher education and, therefore, I was speaking of private education, which is the area in which I have had my personal experience and about which I know the most. But I would be opposed to a bill which would provide federal funds exclusively for private institutions or exclusively for public institutions.

LOYOLA UNIVERSITY OF CHICAGO

OFFICE OF THE PRESIDENT

April 7, 1971

Dear Senator Pell:

It is more and more apparent that private colleges and universities are experiencing a financial crisis. If these institutions are to continue to offer educational services to the young citizens of the nation, they must receive adequate financial assistance. Despite this serious need, higher education seems no longer to be a high priority in the policies of the federal government. I solicit your help in restoring higher education to a level of high national priority.

Specifically, I urgently recommend that the 92nd Congress pass legislation providing direct operating grants to U.S. colleges and universities. Such aid would be a great help in balancing budgets.

Since many of our young people continue to be without the resources necessary for financing a college education, there is need for a continuation of student financial aid programs, particularly the NDEA loan program.

The objective of Mr. Nixon in seeking to make higher education a possibility for more students from low-income families is laudable and deserving of whole-hearted support. However, it would be regrettable and unjust if federal financial assistance programs were to neglect the needs of students from middle-income families.

There is a serious need for continuing the programs of the Higher Education Facilities Act of 1963. Although caution and constraint are necessary in evaluating plans involving new construction, there are certain pressing needs that can be filled only by providing new facilities.

You play an important role in shaping the policies and programs of the federal government. Your assistance in helping to provide support and adequate funds for higher education will be greatly appreciated by the trustees, faculty, administrators and students of Loyola University of Chicago.

Cordially yours,

Raymond C. Baumhart, S.J.

Raymond C. Baumhart, S.J.

Honorable Claiborne Pell
Chairman, Subcommittee on Education
United States Senate
Washington, D.C. 20510

CREIGHTON UNIVERSITY
OMAHA, NEBRASKA 68131

VICE PRESIDENT
FOR ACADEMIC AFFAIRS

April 19, 1971

The Honorable Claiborne Pell
Senate Committee on Labor and Public Welfare
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

I am writing to you concerning institutional support for higher education. I know that appropriations are very difficult to make this year but I am concerned about the direction which these appropriations take.

I think it is very important that the NSF Institutional Grants Program for science education continue. As the Newman Report says, "all institutions need some flexible funding, some means of responding to new ideas or differing circumstances." Institutional grants are very important for this purpose.

I have found our NSF Institutional Grant very helpful, even though it is small. Therefore, I request your support for:

1. maintaining higher education as a high national priority;

2. the immediate passage of an urgently needed institutional aid program;

3. the continuation of current student financial aid programs, particularly the NDEA loan program;

4. sustaining federal student financial assistance programs for students from middle-income families, as well as those from low-income families;

5. continuing the programs of the Higher Education Facilities Act of 1963;

6. maintaining or increasing the support for the College Science Improvement Program and the yearly NSF Institutional Grants.

Thank you very much for your consideration.

Sincerely yours,

Clement J. Schneider, S.J., PhD
Vice President for Academic Affairs

ST. BERNARD COLLEGE

ST. BERNARD, ALABAMA 35138 TELEPHONE (205) 734-4110

April 19, 1971

The Honorable Senator Claiborne Pell
U.S. Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

Just a few words from some Alabama friends interested in your support of higher education bills in Congress.

We commend you for your interest in federal aid for education and hope and pray that your efforts will become fruitful.

Please help private colleges. We need it.

Sincerely yours,

Father Aloysius O.S.B.

(Rev.) Aloysius Plaisance, O.S.B.
Development Director

FAP:rk

Thanks for all your work for education — especially private higher — we need it in the South —

St. Bernard Moves FORWARD

Senator PELL. I renew my welcome to you. That is why you are first on schedule, as my neighbor and friend.

The next witness, and I must ask you to put your statement in the record, is Dr. James Guthrie, School of Education, University of California, representing the American Educational Research Association, and he is accompanied by Dr. Richard Dershimer, executive officer, American Educational Research Association, Washington, D.C.

STATEMENT OF DR. JAMES W. GUTHRIE, SCHOOL OF EDUCATION, UNIVERSITY OF CALIFORNIA, BERKELEY, CALIF.; ACCOMPANIED BY DR. RICHARD A. DERSHIMER, EXECUTIVE OFFICER, AMERICAN EDUCATIONAL RESEARCH ASSOCIATION, WASHINGTON, D.C.

Dr. GUTHRIE. I will submit my written statement for the record.

Senator PELL. Your statement will be inserted in its entirety at the end of your testimony.

Dr. GUTHRIE. My name is James Guthrie. I am assistant professor at the University of California, Berkeley. I speak today as an individual who has been involved in a great deal of educational research, and I am interested in the subject generally.

I do wish to speak in support of the National Institute for Education. My statement expresses my intention about the importance of the National Institute for Education.

In addition to making a statement regarding the importance of educational research generally, I wish to point out to you and to your colleagues that at the moment there is no way for increasing the effectiveness or the efficiency of education in the United States given our present mileage base of education.

We have essentially used the same model of a teacher and a classroom four walls and blackboard since the inception of public schools in this Nation some 200 years ago. Now we are faced with schooling many, many more students for many, many more years, and giving them much more information. We are simply operating from that same model.

At the same time, because we have so little knowledge of educational effectiveness, the only way we get more effectiveness is to put more people into the process, and any time you have to put more people into the process, it will cost you more money.

The figures, which I document in my written statement, show that the cost of education is beginning to exceed the growth of the gross national product for the first time. Ten years ago educational expenditures amounted to approximately 3 percent of the gross national product, and are now slightly in excess of 4 percent.

We find that the cost of education in the last 10 years has grown 153 percent and the gross national product has increased about 92.8 percent. Most of that growth is in teacher salary, and again I have the dollar figures which I could make available to you.

I have no desire to debate the question as to whether or not teachers get paid too much. I think that that is an issue for some other time. My point is that until we learn how to deploy those teachers more collectively, or how to substitute technology for some, we will continue to increase our costs at perhaps a rate we can no longer afford. This

is, in general, an argument for increasing educational research. It is not a specific argument for the National Institute for Education.

Clearly that kind of research could be conducted under other auspices. I would like to impress upon you the fact that unlike agriculture, unlike medicine, this Nation does not have a network for research for education. Educational researchers exist in a number of fragmented institutions. They do not communicate with one another clearly. It is only in a very few places that they exist in a critical mass, enabling them to do any kind of sufficient research.

My feeling is that to bring some order out of this fragmented chaos you really must elevate educational research to a very high level. You need some symbolic action which says, in effect, that this is an important activity for this Nation. If you want the public to support research, research has got to come up with results, but it cannot come up with results—educational research cannot give you any results—until it is supported at the higher level.

I would ask you and the Senate generally to intervene in this cycle. It is necessary at some point simply to take the risk of supporting educational research at a high level so that it can produce. I do not think you are going to get the high level you want until you establish a new organization to do it.

Second, without some central agency coordinating the efforts of educational research, you run the large risk of having it be a very inefficient operation with much duplication, with no ability to establish long-range studies, and with no ability to disseminate results effectively, which leads me to ask a question. Why is a new organization, and not the U.S. Office of Education, necessary and what is their response to that question?

I would have to say that the U.S. Office of Education simply has a very bad track record on this matter. It has not been able to recruit the kinds of people necessary to administer or conceive research.

The Office of Education furthermore has suffered greatly from rapidly changing priorities for research, such that a project which would normally take 3 to 5 years to reach any kind of fruition is frequently cut short in its time frame before it has any chance to produce whatsoever.

I think some of the problems of administering research within the Office of Education frankly are simply endemic to that organization. I have very little faith that they can be overcome.

Consequently, I do advocate some new agency.

Lastly, let me end quickly by saying that there is increasing cynicism, I imagine, among the general public, but certainly among educators, with regard to the effectiveness of Federal education programs. That cynicism stems in part from actions such as the ambiguous or ambivalent enforcement of civil rights activities with regard to education or the misuse of some Federal funds in ESEA, title I projects, and the like.

In essence, a number of Federal programs have not produced results for a variety of complicated reasons. One reason is the programs have not been given the necessary time to produce or the necessary funds, and I think a number of my colleagues would support me in a statement to the effect that if the National Institute for Education is to be

founded, but then subsequently looked at with great impatience to produce, or subsequently funded at a very low level, I think we would rather forgo the Institute, rather than have some token effort.

On the other hand, if the National Institute is to be funded satisfactorily, and if there is to be some patience involved in allowing it to produce, then I think it could be an agency with a great deal of significance for the future.

Thank you very much.

(The prepared statement of Mr. Guthrie follows:)

A Statement in Behalf of the Proposed National Institute for Education

Submitted to

SUBCOMMITTEE ON EDUCATION

COMMITTEE ON LABOR AND PUBLIC WELFARE

UNITED STATES SENATE

April 21, 1971

Presented by

James W. Guthrie

Assistant Professor
Division of Policy Planning and Administration
University of California
Berkeley, California

WHY A NATIONAL INSTITUTE FOR EDUCATION?*

Mr. Chairman, distinguished members of the Committee -----

I appear before you today as an individual who has been engaged in specific educational research projects and who has an interest in the field generally. I would like to describe several reasons for my support of the NIE proposal, and then I would be most willing to respond to any questions you may have.

The Growing Need for More Effective Schools

Education, or at least formal education, at the time of our nation's founding was viewed as having only limited practical value. Extended schooling was a luxury reserved to an elite few. However, in the intervening years, economic and social conditions have changed remarkably and, today, schooling has become a crucial component for both individual success and societal well being. Education has become an enterprise which is presently estimated to involve approximately one out of every three Americans. From a time when almost no one went to school, we have evolved to a point where now almost everyone goes to school.

---

*I wish to acknowledge the assistance given me in the preparation of this testimony by James D. Logsdon, Research Associate, Division of Policy Planning and Administration, School of Education, University of California, Berkeley.

Despite the vast expansion in the functions schools are expected to perform and the awesome changes in the numbers and characteristics of the students they are expected to serve, the basic model for education is that which characterized schools in the 17th and 18th centuries. The traditional practice of grouping students within four walls to listen to a teacher has persisted. We have been slow to develope and utilize more effective means of preparing people to think critically or to provide them with information. Meanwhile, the amount that one needs to know to obtain and perform a job and to participate effectively as a citizen has increased severalfold.

In an earlier day, when far less depended upon having an educated citizenry, we could more easily tolerate these low levels of effectiveness. Today, however, the significance of education and the numbers of students to be schooled have grown so greatly that we badly need to develope new techniques and tools. Whereas our society has undergone fundamental revolutions in fields such as manufacturing, agriculture, transportation, and communication, schooling processes have remained stable, and their comparative ineffectiveness is beginning to be increasingly visible and burdensome.

The Need for Greater Educational Efficiency

In addition to an overwhelming need to make our educational system more effective, the pressures are building rapidly to render it a great

deal more efficient. The costs of schooling, of course, have risen greatly as a consequence of the increased numbers of students to be served. However, expenditure increases have recently begun to outrun enrollment growth. Somewhat more serious yet, educational costs have begun to outpace expansion of our Gross National Product. Elementary and secondary educational costs have increased from approximately 3 percent of our total Gross National Product to 4 percent in the last decade.

Total expenditures for elementary and secondary education have increased over the last ten years from approximately $16 billion in 1960 to slightly less than $40 billion in 1970. This represents a growth in ten years of 153 percent. By contrast, our Gross National Product increased during that period only 92.8 percent.*

These remarkable increases in educational costs are a consequence of several factors, not the least of which is the swelling of enrollments to which I have already alluded. Inflation has also added its share. However, there are two other causes of rising costs which are worthy of mention here. In part the costs have risen because we have not been able to break through the labor intensive nature of schooling. Whereas other activities are able to increase their efficiency or lower costs by employing more and more

---

*These and other figures regarding the costs of education were obtained through the efforts of Professor Michael Kirst of Stanford University.

effective technologies, education continues to rely primarily upon humans teaching other humans. And, because conventional wisdom, if not research, claims that a teacher can do a better job with fewer students, we have made steady progress in lowering our teacher-student ratios. In 1960 U.S. schools averaged 24.7 students per every instructional staff member. By 1970 that figure had been reduced to 20.5 students. This reduction in pupil-teacher ratios probably accounts for $5 to $7 billion of the increased expenses for education during the decade under consideration.

Another factor driving up the costs of education has been the rising salary levels for teachers. In the period between 1952 and 1968 average instructional staff salaries in the United States rose 128.6 percent. By contrast, personal income per capita increased only 94.7 percent, average earnings per employee rose only 94.1 percent, and the consumer price index increased only 29.4 percent. Relative to the growth of the economy, costs for education have been growing disproportionately, and a heavy share of this expansion is a consequence of greatly increased personnel costs.

My point in emphasizing the added educational expenditures stemming from teacher salaries is not to argue that teachers are over paid. Some of them are and many others of them are not; that is another debate entirely. Rather, the point I wish to make is that our present knowledge regarding the instructional process is so unsophisticated that we are left with no alternative but to increase our input of labor when

we wish to gain more effectiveness. The inability to substitute technology for labor or to deploy our teaching force with greater productivity is now driving, and will continue to drive up the costs of education. If we want greater efficiency, then we must begin to increase our knowledge about the schooling process to the point where we can specify more productive roles for our teachers and more use of technology.

It seems to me that this is where we stand today. Never before has schooling been so important to the success of the individual and the welfare of our society. On one hand, more students are going to school for more years, and probably learning more, than has ever before been the case. Yet, on the other hand, more and more individuals appear to be dissatisfied with the performance of our schools; dissatisfied both in terms of their ability to be effective with all students and with their inefficient use of resources. It is at once the best of time and the worst of time. What indeed is the problem?

The Need for More Educational Research

I do not presume to have a complete answer to this question. However, I would like to suggest as a partial response that the problem is a consequence of the fact that our knowledge regarding the educational process is simply being outstripped by our expectations of and willingness to allocate resources for schools. The traditional model of four walls, a teacher, and blackboard to which I referred earlier served us satis-

factorily in the past. However, we need new models which will enable us to educate all children, regardless of race or social class, and do so without threatening to consume a disproportionate share of our Gross National Product in the process. In short, almost everyone now desire schools to be more effective, and many desire that they become so while simultaneously striving to be more efficient. Progress toward these objectives cannot be achieved, at least in any reasonable number of years, given our limited knowledge of the mechanisms which facilitate learning. Too little is presently known about educational processes, and we will not know more until we are able to mount large scale, skillfully staffed, tightly planned, and long-term research efforts. In time, we should begin to mount an educational research effort which approximates our attempts to conquer outer space.

The Need for a National Institute of Education

To make a plea for additional educational research, however, is not necessarily to support the idea of a National Institute of Education. Clearly, research could be, and indeed is, conducted in other ways and under other auspices. More research may be crucial, but why is NIE crucial?

My response to this is twofold. In the first place, though increasingly vital to our national welfare, educational research is presently held in

60-433 O - 71 - pt. 2 - 32

such a low state of regard that it can become effective quickly only if provided with the widespread attention prestige and symbolic support which comes from a national agency.

The second argument in behalf of the NIE proposal is one of efficiency. Existing arrangements for the establishment of national priorities in educational research and the distribution of resources to meet those priorities are haphazard, uncoordinated, and unproductive. A well staffed and well funded national agency is the only real hope of bringing order and efficient use of resources out of the present chaos. Let me develope each of these points more fully.

The Symbolic Importance of a National Institute of Education

In the thirties this nation committed itself to the eradication of a major crippling disease, primarily affecting children -- poliomyelitis. Through the efforts of an enlightened citizenry and a National Institute of Health, research was begun which eventually culminated in the discovery of the Salk vacine. Dr. Jonas Salk was nor the first medical man to devote himself to the study of this dreaded disease of the young, nor did the medical breakthrough come about in the span of a few short years. Over 17 years of continuous research and untold millions of dollars went into the eventual elimination of polio.

Similarly, extensive systems of research and development under federal auspices have served the agricultural interests of this nation.

Well over $7 billion have been invested in agricultural research, development, and innovation in the past twenty years. At the present time slightly more than 1% of agriculture's annual contribution to the Gross National Product, over $1 billion, is allocated for the improvement of farming. The payoff has been an agricultural system with the potential for providing everyone in this nation with a diet unsurpassed in diversity and substance.

Thus, in agriculture, health and several other fields, the efforts of the federal government to lead and coordinate the research of universities, non-profit organizations, industrial firms, and state and local agencies have paid off in terms of remarkable progress and efficient use of funds. A unified research structure has been built which can be focused upon important health and agricultural problems whenever a national need arises. Unfortunately, no such leadership has been available in education and no such stable research structures have come about.

The research community in education is relatively small in size, fragmented, and woefully under financed. There are only a handfull of universities or research centers in which there is anything close to a critical mass of capable researchers. At present, there is no way of conducting a coordinated national effort to find the answer to a perplexing educational problem. Compare if you will the relatively well supported

and highly coordinated efforts to find cures to cancer and heart disease with our present national attempts to understand reading disorders. Another indicator of the relatively depressed state of educational research, in terms of attracting public attention and respect, is to compare the number of national awards available to medical researchers as opposed to educational researchers.

Public support must be generated for and attention paid to educational research. This, of course, is a reciprocal process. How can the public be supportive of research, if very little of it is done. Conversely, how can research be done if the public does not support it. My plea to you is to intervene in this cycle. The establishment of a National Institute for Education would symbolize the significance of the task. It would make it possible to begin to recruit more of the nation's talented researchers into the field and it would facilitate the adoption of useful research findings. Following some substantial period of time, the success of educational research efforts would be sufficient themselves to justify continued public support.

A National Institute and Efficiency in Educational Research

A second reason for needing a National Institute of Education is to bring about added efficiency in the educational research enterprise. In the absence of a strong federal agency to stimulate and coordinate educational inquiry there is a large risk that too little research will be

done overall and substantial duplication and waste will characterize that which does take place. First, let me explain the danger that too little research will take place.

The "Spillovers" in Educational Research. Unlike typical business transactions between two parties, for example, purchasing a car from a dealer or paying to see a ballet, educational research has a strong potential to benefit more than those who are paying for it or engaged immediately in doing it. Finding new ways to teach children to read or cheaper means by which to construct school buildings may have advantages for children and school districts all over the nation, not simply in the particular school or locality where the breakthrough occurs. This tendency to have widespread advantages is described as "third party benefits," "spillovers," or "externalities" by economists.

The tendency of research results to spillover borders and accrue to the advantage of third parties can act as a deterrent to systematic inquiry. Local school districts, a university, a county agency, or maybe even an individual state may be reluctant to fund research activities knowing that the results may help those with whom they are in competition or who did not contribute financially to the support of the project. Consequently, it is economically more rational to fund research at a highly centralized level wherein fewer problems are raised regarding the distribution of benefits. In the absence of such centralized support, there is a danger that agencies will be reluctant to mount such activities, and the

entire research endeavor may be seriously undersupported as a consequence.

Waste Through Duplication and Lack of Coordination. In the absence of a strong central research agency there is also a risk that locally based researchers, operating outside of any overall national policy, may duplicate each others efforts. The reading researcher in Iowa may be repeating the work of men in Oregon and Georgia simply out of ignorance and because no central clearinghouse exists. Some duplication is probably desirable in order to validate results. However, it is possible to pursue the same idea or project with too many resources and that risk is substantially higher when there exists no coordinating body.

Another point of wastage resulting from the absence of central direction is that research will be conducted which is of low priority. It is probably impossible to agree upon research priorities with absolute certainty. Moreover, it probably would not be a good idea to reach such agreement even if we could. We cannot anticipate all future conditions and consequently, some researchers should have the discretion, indeed, should be encouraged, to pursue research topics which are purely of their own choosing and interest. They may appear irrelevant today, but a twist of fate may find their results satisfying a future high priority.

Nevertheless, to argue for some degree of freedom in funding research, is not to suggest that no effort be made to mount research projects which are consistent with national education priorities. However, to decide upon such priorities and encourage the arrangements for conducting research about them calls for a central coordinating agency such as contemplated in the NIE.

Wastage and Dissemination. Lastly in the realm of efficiency, research results do little good unless they are made available to those who can use them. Presently the educational research system, or non-system, we have in this nation is extraordinarily inefficient in disseminating findings from its efforts. This is in large measure a consequence of the fact that research is now largely in the hands of individuals who frequently must make a choice between doing the research itself and disseminating their results. The nature of the true researcher is generally such that he would rather engage in the former than the latter. To be sure, there are a few entrepreneurs who find rewards in publicizing and spreading research findings, but there are few of these and their quality is frequently suspect. Thus, in order to avoid the inefficiencies which can occur simply as a consequence of failure to distribute research results, a National Institute is needed to establish an effective dissemination network.

Why a New Organization?

One might reasonably inquire as to why a new organization is needed to perform the directing and coordinating functions I have described.

The principal, if somewhat unpopular, response to this question must be that the present organizational arrangements for supporting educational research have proven unsatisfactory and there are few reasons to believe that the difficulties can be overcome.

Since enactment of the Cooperative Research Act in 1954, the U.S. Office of Education has had a major responsibility for administering federal research dollars in education. However, it has consistently had difficulty in recruiting sufficient numbers of highly qualified individuals to fulfill this function. The trained personnel and administrators necessary to provide guidance to research have not been attracted to the organization. This may be in large measure because of the relative scarcity of super grade positions available in the research realm. However, it also is a consequence of USOE having a tarnished image among a substantial number of educational researchers.

Another difficulty with present federal research arrangements is that they appear to be remarkably subject to priority shifts. As different administrations have attempted to leave their marks upon the U.S. educational slate, they have reexamined and frequently altered the research priorities of their predecessors. Moreover, even within the same administration, the high turnover in personnel has resulted in a frequent changing in signals as to what research would be funded. The overall consequences has been an inability among the research

community to mount a sustained effort in fields which demand time and funds in order to produce results. Projects which may need five or ten years to reach fruition may be hampered by funding cuts or, worse yet, terminated before completion because a new list of research priorities has been conceived.

It is possible to describe other difficulties with present arrangement, but suffice it to say that to date educational research at the federal level has been poorly administered and, unless a National Institute is established, the prospects are poor that it will improve.

A Parting Caveat

As is evident from my preceding remarks, I feel strongly regarding the need for additional educational research and about the need to have a new federal organization to oversee much of that research. However, let me close with a word of caution.

The American public and many educators have become somewhat cynical regarding federal programs in education, too frequently they do not accomplish the objectives held out for them. For example, efforts to achieve added racial integration in schools have been curtailed by inconsistent enforcement policies within HEW and the Justice Department. Efforts to relieve the educational disadvantages of poor and minority group children have frequently been fruitless because of faulty program designs and downright deception in the spending of the monies.

I would not like to see this despair and cynicism spread further to educational research. It must be clearly understood that research is a risky endeavor, the payoffs can never be assured. Furthermore, there are few educational problems of significance to which research can find the answers in a short period of time. In order for us to discover how to teach children to read more effectively, how to break the linkage between disadvantaged home and neighborhood environments and low school achievement, or how to structure new incentive systems and accountability procedures for schools and educational personnel will take time. Moreover, it will take large amounts of money. To expect the NIE to produce satisfactory results in the short run or to be effective on a small budget is highly unrealistic.

If there is to be no patience or little money for NIE, then I feel confident that most of my research colleagues would agree with me that they would rather not see such an Institute established. To found the NIE and not provide it with the resources necessary would only lead to frustration and little by way of useful research. Conversely, and on a substantially happier note, if provided with the necessary resources and allowed sufficient time to produce, the organization could contribute to the needed breakthroughs in educational effectiveness and efficiency which I described initially.

Senator PELL. Thank you very much indeed.

I appreciate the fact that you have come all the way from California. I regret that I am the floor manager of the Emergency School Aid Bill. I would appreciate it if you could stay a few moments to meet with the subcommittee staff.

NATIONAL INSTITUTE

I want to assure you that in the education bills we are considering the Institute has a prominent place. It is just a question of where. In my bill it is under an expanded Division of Education, simply because I look forward to the day when we can spin that office off and create a separate Department of Education.

The administration's approach does not agree with that. Therefore, they have it separate from the Office. But there is no question in my mind that whatever legislation we report out will have the Institute in it.

Thank you very much. If you would wait about 8 minutes, Mr. Smith will be available.

Dr. DERSHIMER. I want to submit my testimony for the record.

Senator PELL. It will be printed in full in the record.

(The prepared statement of Dr. Dershimer follows:)

STATEMENT OF DR. RICHARD A. DERSHIMER
EXECUTIVE OFFICER, AMERICAN EDUCATIONAL RESEARCH ASSOCIATION
BEFORE THE
SUBCOMMITTEE ON EDUCATION
COMMITTEE ON LABOR AND PUBLIC WELFARE
UNITED STATES SENATE
Wednesday, April 21, 1971

I am Richard A. Dershimer, Executive Officer of the American Educational Research Association, and I am pleased to have been invited to express my views in support of the National Institute of Education, one of the provisions of Senate Bill 659. I must stress that I am expressing my personal views only; AERA does not have provision for formulating public statements in the name of the Association. I wish to emphasize, however, that my views are the result of many, many days of discussions with associational officers and leaders of the educational research field.

I am strongly in favor of the National Institute of Education - for a great many more reasons than I shall give in this testimony. Today I wish to concentrate on two reasons which are overpoweringly convincing to me. They are: first, the need to bring more highly capable research producers into the federal government structure in roles of policy formation and management for educational research; and second, the need to provide for

broader long-range planning, stronger continuity of effort, and a better balance between long-range and short-range priorities in support of educational research. Let me look at each of these two issues. Although the Office of Education's educational research efforts took a healthy step forward in the mid'60's, the provision for salaries and staffing, unfortunately, did not follow suit. Since that time, too few people at too low a level in government have been supplied to plan effectively and monitor the educational research program. To cite a striking instance: Last year, NCERD had one person with a GS-17 rating: its director, who administered its appropriation of $90 million dollars. In contrast, to administer not quite five times as much appropriation, NSF had fifty persons at that or a higher level. While the OE staff worked well and hard through the 1960s, its heavy concentration on managerial matters tended to prevent staff members from being accepted as colleagues by the majority of researchers in the field, particularly in the social and behavioral sciences. This is a serious handicap and it is in contrast to most other federally

sponsored research programs, especially those housed in the National Science Foundation and the National Institutes of Health. Bureaucrats with scientific credentials in Washington have their own collegial networks. A considerable amount of information flows informally through exchanges of articles, speeches, copies of memos and even over lunches. I am aware of heavy traffic among persons in the National Science Foundation, the Office of Science and Technology, and the Office of Child Development, the Office of Economic Opportunity. (I am also aware that the Office of Education has all too often been left on the sidelines.) This informal network is a good way, I am convinced, to coordinate federal programs. It allows bureaucrats to share success and mistakes more honestly and openly. Because such agencies benefit from the informal communications network, they are better able to identify capable scientific talent, make technically competent decisions, and launch effective scientific efforts.

How would the NIE enable the government to gain and retain more competent people in educational research? Dr. Roger Levien provides very sound reasons in his report; let me but briefly detail them again. In

NIE: A Preliminary Report, Dr. Levien suggests upgrading position levels and salaries to attract more researchers to supplement the administrative staff. In support of this suggestion, I urge that the committee amend section 404, paragraph (E) (2), so as to permit many of the principal technical researchers to be appointed without regard to the provisions of Title V, USC, governing appointments in the competitive service and without regard to Chapter 51, and subchapter III of Chapter 53, of such title. While I realize that the Congress always is reluctant to grant authority to make appointments to an administration of the opposite party, the appointment of the top technical and professional personnel of NIE must be freed from any partisan consideration. The scientific and educational communities can assist the Congress to watchdog the present and all future administrations on this matter.

The second argument for the National Institute is the need for greater continuity of effort in educational research, better long range planning and more effective ways to establish priorities and assign resources.

A tracing of the priorities given to educational research over the past 15 years shows an unsteady, meandering trail. It is strewn with projects and programs that were announced with fanfare only to quietly dissolve as one or another key person left government service. Yet, look at the complex task which confronts the Office of Education in its efforts to improve the educational system of this country. Should it place its emphasis on preschool or on education beyond the high school? Should it focus on the minorities or concentrate on producing the world's greatest talent? Should it intervene through curricular reform, through encouragement of new technologies, or through new instructional techniques for individualizing instruction? Should it concentrate on producing functioning citizens, socially, politically and economically or should it concentrate on producing trained workers capable of stepping into specific jobs? All of these questions reflect policy decision made by the federal government in recent years.

The resources are limited now and will continue to be limited in the

future; the responsibility for studying and reforming American education deserves a steadier course to maximize results.

But why do we need a new agency to make these improvements? Why isn't the best course of action to improve the present Nation Center for Educational Research and Development (NCERD)?

A former professor of mine, Dr. Paul R. Mort, once jokingly said that it is difficult to enlist men's aid to build an outhouse - it is much easier to get them to build a cathedral. In spite of all the arguments for upgrading positions and salaries and assigning priorities it still will be difficult to recruit top notch talent in education and the related social and behavioral sciences unless there can be created a sense of mission. By this I mean that a group of men will be brought together with the firm expectation of opportunity for access to and influences upon top decision makers in government, with the hope that their efforts will improve American education. We had this sense of mission for a brief time following the passage of the Elementary and Secondary Education Act; we don't have

60-433 O - 71 - pt. 2 - 33

it today in educational research. I think the Congress must do what it can to recreate this sense of mission, by creating an agency dedicated to educational reform and study.

Essential to the development of this dedication, in my opinion, will be to appoint as director a person possessing not only credentials and competence, but vision, a person who understands the major problems facing education and how these might be alleviated. The National Institutes of Health were not created because of previous demonstrable medical research; they were created with the belief that the new agencies would advance medical knowledge. The choice of NIE's director will be as critical to its success as Dr. William Shannon was for the success of the NIH. For this reason I urge you to amend those sections dealing with the powers and the Director of the Advisory Council so that he may be given general authority for the conduct of the Institute. The Council should be advisory to him and the Commissioner. NIE will require a strong hand, particularly in the early years; give a strong man the authority he needs

and hold him accountable.

I have two additional comments. The Levien report is viewed by the author as only the preliminary stage of what should be a multi-stage planning effort. Thus, with those who are thinking about research in OE, the emphasis is and should be on program delineation rather than organizational structure. I think that it would be unwise to specify any kind of divisional or organizational structure in this initial legislation. So I urge you to delete paragraphs (d) (1) of section 404.

Finally, I urge that the financial ceiling be removed and that the NIE be granted unlimited financial authorization similar to that created for the cooperative research program in 1954. It simply is not possible at this time to establish sensible five year forecasts of the cost of operating the Institute. Probably the actual expenditures will be within the present authorization of $500 million; this is well within what Levien proposed in his report. But it is possible that the field can be mobilized more quickly than that for a much greater effort. There are thousands of

Ph.Ds willing and able to convert from their present careers to a field such as educational research, which has been underfinanced all of its life. With careful planning and proper review by professionals in the field, and from the Congress, it is conceivable that the field can make excellent use of $600,000,000 to $800,000,000 within five years. Certainly, as the Levien report so well documents, the field can use that kind of effort.

Let me again, in conclusion, reiterate my support for the NIE concept. I compliment you, Mr. Pell, together with other co-sponsors of this bill, for including provision for the establishment of an NIE. By its upgrading of the formal organization of educational research, I think it holds great promise for education. I hope that the subcommittee views it favorably, that it is reported out of committee to the Senate, and that ultimately it becomes law.

Senator PELL. We now have Dr. Frank Abbott, executive director, Colorado Commission on Higher Education, representing State higher education executive officers.

Please come forward.

STATEMENT OF DR. FRANK ABBOTT, EXECUTIVE DIRECTOR, COLORADO COMMISSION ON HIGHER EDUCATION; ACCOMPANIED BY CAMERON P. WEST, DIRECTOR OF THE NORTH CAROLINA BOARD OF HIGHER EDUCATION AND CHAIRMAN OF FEDERAL-STATE RELATIONS COMMITTEE OF THE STATE HIGHER EDUCATION EXECUTIVE OFFICERS' ASSOCIATION; DR. RICHARD M. MILLARD, DIRECTOR, HIGHER EDUCATION SERVICES, EDUCATION COMMISSION OF THE STATES; AND RALPH A. DUNGAN, CHANCELLOR OF HIGHER EDUCATION, STATE OF NEW JERSEY

Dr. ABBOTT. I am Frank Abbott. Dr. Cameron West of North Carolina is going to present the statement.

Senator PELL. Again I apologize for the long distance you have come. I can assure you that your statements will be made a matter of record in full.

It might be easier if you would enter a particular thought you wanted to express directly.

Dr. WEST. Senator Pell, we appreciate this opportunity. I have with me Dr. Frank Abbott, whom you have met; Dr. Richard Millard of Education Commission of the States; and our other colleague, Mr. Ralph A. Dungan, chancellor of higher education, State of New Jersey.

Senator PELL. He is an old friend.

Dr. WEST. One of the major developments, particularly in the last two decades, was the creation in the States of statewide agencies—some 47 of them now—statewide agencies responsible in all cases for a large segment of education.

Of these, 19 are governing boards, and the other 28 are coordinating boards. In all cases they are at least responsible for considerable segments of public higher education, and in most cases they have relationship to private higher education.

We have today come to you to express our interest in the nature and direction of Federal higher education, because it is of major importance, concern, and interest to us, and every State agency that we represent, all 47.

Our concern is obvious. The nature and the form of such legislation has direct bearing on the form and direction planning and coordination must take in each of the States.

The members of the association in conjunction with the Education Commission of the States would, however, like to bring to the attention of this committee the importance at this point in time and in history of more explicit Federal recognition of the role of statewide higher education planning agencies, and the need for a closer State-Federal partnership between these agencies and the programs of higher education.

All of this we have mentioned in our statement, spelled it out in some detail.

Since the Federal legislation inevitably has a major impact on such planning, we suggest that there is a Federal responsibility to reinforce statewide planning as basic to the national interest and welfare, even survival, of the kind of pluralistic and diversified, yet complementary post-secondary-educational complex of institutions that promises to meet the needs of the States, the Nation, and the citizens in the period ahead.

So we have indicated in our statement several ways in which that cooperation might take effect, and we would particularly like to compliment you, sir, on the inclusion in Senate 659 of section 1202 which recognizes, as far as we can determine, the first time the existence of these State statutory or constitutional agencies, which in all States has a major impact on higher education.

There is a great deal of frustration among us (statewide agency coordinators) sometimes, as we struggle to get State higher education legislation, and the tremendous sums that are spent in these States for higher education, that they are not always complementary and are sometimes at cross purposes.

We have suggested in our testimony appropriate ways by which we could relate future legislation, as well as present, more appropriately. We do have comments with relation to the bill that you introduced along with others, and if I may, in the brief time we have, I would like to call these perhaps to your attention.

PREFERENCE OF BILL

Senator PELL. Before you do that, do you have any views relative to the merits to the two bills, one that the committee introduced, and the so-called administration bill?

Would you be willing to make a choice between them?

Dr. WEST. I think as far as certain specifics it might not be generally true, but basically we have come today complementary of the aspects of Senate 659 and our comments are in support of certain aspects of that.

We would be prepared to react to any question that you or your associates might refer to us.

Senator PELL. But you have not had a chance to study the administration bill?

Dr. WEST. We have studied the administration bill.

Senator PELL. Would you be willing to make a choice between the two?

Dr. WEST. Well, I could speak for North Carolina, and I think in many of the aspects we would choose the relative merits of specific sections and titles within Senate 659.

Senator PELL. Thank you very much. Carry on.

Dr. WEST. In the area of student assistance, for example, we would like to commend you for your position in relation to more adequate funding and institutional supplements to help in support of additional educational costs. We are interested, however, in a matter of general policy about the possibility of a more effective Federal-State institutional partnership, in which the State efforts in student assistance are recognized and strengthened. This would include the utilization of State agencies to help in the equalization of opportunity not only for

students within an institution, but among institutions within a State and for those students who for financial reasons do not apply to any institutions.

Several of the States, North Carolina among them, have bold new programs now before the legislature that would enhance both the Federal and State posture.

In the area of continuing education and community services, we strongly support the recommended continuation of the program at a more adequate authorization level, and the provision for the consideration of special programs and projects related not only to regional and national problems, but also the metropolitan area.

We are prepared to speak specifically on that.

In connection with the developing institutions, we commend the extension of the program for 5 years at a higher authorization, but we would suggest that to insure that the funds are not dissipated that they should be awarded through the appropriate State higher education planning agency in accordance with State plans, so that their most effective use is meeting clearly identified post-secondary-educational needs which are appropriate to the institutions in question.

We strongly support your extension of the academic facilities construction grants and the continuation of State planning funds under title VII. Here we particularly appreciate the acknowledgement of the State planning agency as the comprehensive agency.

We would, therefore, like to urge that assurances be written into any legislation that planning funds shall go to the State legislatively designated agency for statewide planning where such agencies exist.

It is hardly consistent to provide in some States for two agencies, one authorized by State legislation of construction and one called for by Federal legislation, each charged with statewide planning responsibilities.

I think your section 1202 gives that assurance.

Finally, we endorse the National Foundation for Higher Education, as proposed in your bill and in the administration's bill. But we suggest that its incorporation within the provision of education as proposed in S. 659 is preferable for the coordination of educational efforts to its semiautonomous status in the administration's bill.

We would suggest that the bill be amended to insure inclusion on the Board of the Foundation of representation from statewide higher education agencies.

We appreciate this opportunity to appear, and we would be glad to respond to any questions that you may have.

Senator PELL. Thank you very much indeed.

As we move into the question of institutional support, do you agree with the approach that the support should follow the youngster?

In other words, we have a $1,000 cost-of-instruction allowance following the student. I was wondering if you felt that made sense or would you rather have institutions apply and get grants?

Dr. MILLARD. It seems to me it makes a great deal of sense to have student assistance program carry with it funds, particularly for additional costs related to needs of the students. This seems to me to make a great deal of sense. It is highly a positive factor in the bill.

I might just add, while I have the floor, Senator, that the recommendations as contained in the testimony do also have the endorse-

ment of the steering committee of the Education Commission of the States meeting in San Diego in November and in Chicago in April.

Senator PELL. I did not fully hear you.

Dr. MILLARD. I do want to point out to you that the recommendations as contained in the testimony do also have the endorsement of the steering committee of the education commission of the States in its meeting in San Diego in November, and Chicago in April.

The commission has worked very closely with the State Higher Executive Officers' Association, in fact in part serving as secretariat for it.

Dr. DUNGAN. On this point I do not want to seem to break what might appear to be a monolithic line on the particular question or any of the questions in here, except to make a general statement that unlike some of our colleagues in the education business, the State higher education officers do not take, or at least at this point, do not take firm and hard lines on a variety of issues.

On the particular one which you asked about, I myself would like to say—and I do not know whether I represent any other viewpoint except my own—that the Federal Government ought to move very, very cautiously, in my opinion, into the question of either student support followed with institution support, following that student aid money, for a variety of reasons.

No. 1, I do not think that we have thought through, nor do we have enough data to tell us, whether in a broad social sense this is the most appropriate application of resources, Federal or otherwise.

Indeed, I would make the generalization that we do not know, and I do not think the Federal Government knows enough about how much is being spent, and what we are getting for that money. One could make that comment about a multitude of programs here.

Therefore, I would just caution with respect to the institutional support program, with or without a student aid program, and you have it in your bill, that whatever the Federal Government does that it be done on a certain time basis, for a great period of time, say 3 years, at which time a very hard look would be taken as to what we got for the dollars we put out.

Senator PELL. This of course would be endemic in the bill, because there is a time limit.

Dr. DUNGAN. Except, if I may say so, that could be said for a lot of the Federal programs. I think everybody ought to be put on notice.

Dr. MILLARD. I think the question of institutional support in relation to student need has to be rather carefully distinguished from the general institution support bill. I would not want what I said earlier to be taken as disapproval of institutional support, but the importance of at least institutional supplementation to deal with the problems of particularly needy students, it seems to me, is highly desirable as it is in your bill at the present time.

Dr. WEST. I do not know how our time is, but we have come here as much as anything to comment on current legislation, and any questions that you have, but also to say to you, sir, that there are 47 State agencies that are now created, for the most part a product of the fifties and sixties, and just the last 2 weeks in Indiana, agencies that must preserve a very careful and delicate sense of relationship be-

tween the executive branch and legislature on the one hand, in which they see us as the broadly comprehensive higher education agency, and on the other hand, the institutions; we become therefore the middleman, the broker of concepts and ideas. We are called many times, with the reluctance of institutions, to break established traditions, and from the insistence on the other hand, from the executive and legislative branches, to be more realistic in facing the future.

As we have said, this is an emerging concept in the State government, and one that we feel sure has been tested even in the short time and is guaranteed an emerging role in the future so that the statewide look into higher education because of the scarcity of resources, because of the encroachment of other needs within the State and Federal, has caused this growing professionalization of these agencies to grow.

We do appreciate the opportunity to present this new idea to you and to your committee.

(The prepared statement of Dr. West follows:)

Statement
by
Cameron P. West

Chairman
of
Federal-State Relations Committee

of the

State Higher Education Executive Officers' Association

and

Director
of the
North Carolina Board of Higher Education

Before the
Special Subcommittee on Education
of the
Senate Committee on Labor and Welfare
U. S. Senate
Washington, D. C.

Wednesday, April 21, 1971

Mr. Chairman, distinguished members of the committee:

We greatly appreciate the opportunity of testifying before the Senate Subcommittee on Education on behalf of the State Higher Education Executive Officers' Association. Representing the Association are Dr. Cameron West, Director of the North Carolina Board of Higher Education; Mr. Ralph Dungan, Chancellor for Higher Education in New Jersey; Dr. Frank Abbott, Executive Director of the Colorado Commission on Higher Education; and Dr. Richard Millard, Director of Higher Education Services of the Education Commission of the States, which serves in a secretariat relation to the Association.

One of the major developments, particularly in the last two decades, was the creation in the states of statewide agencies legislatively charged with varying degrees of responsibility for statewide governing, planning and coordination of higher education. Currently, 47 of the states have such boards or agencies. While they vary both in structure and scope of operation, all are at least responsible for considerable segments of public higher education; and in some states with planning in relation to private institutions, as well as public institutions. A majority of them also have the responsibility of administering one or more Federal programs.

Of the state agencies for higher education, some nineteen are governing as well as coordinating and planning boards at least

for all the senior public institutions of higher education in their states; and twenty-eight are coordinating boards. The most recent addition is Indiana, in which legislation authorizing a coordinating board has been passed within the last few weeks. The justification of statewide planning and coordination as an essential condition for the development, diversity and effectiveness of post-secondary education, if it is to meet the needs of the citizens, the states, and the nation now and in the period ahead, is now firmly established in most states.

The State Higher Education Executive Officers' Association consists of the Chancellors, Presidents and Executive Directors of these agencies in the various states. Dr. Ted Gilbert of Kentucky is the Chairman of the Association, and Dr. Cameron West of North Carolina is the Vice Chairman and Chairman of the Committee on Federal-State Relations. The nature and direction of Federal higher education legislation is a matter of major concern and interest not only to the members of the Association, but to every state and agency involved. The nature and the form of such legislation has direct bearing on the form and direction planning and coordination can and even must take in the various states to meet student, institution and public needs and concerns. We wish to express our appreciation to the various members of the Senate Subcommittee on Education for their continuing concern and leadership in support of post-secondary education as demonstrated in the major bills they have submitted during the current session.

The members of the Association, in conjunction with the Education Committee of the States would, however, like to bring to the attention of the Committee, the importance at this point in history of more explicit Federal recognition of the role of statewide higher education planning agencies; and the need for a closer state-federal partnership in realizing institutional, state and federal post-secondary educational objectives. The primary responsibility for education planning for post-secondary education, public and private, rests with the states. The need for such planning is constant, but is particularly acute during the present period due to a number of factors, including:

1. The scarcity of resources for support and expansion of post-secondary education at state and national levels;

2. The increasing emphasis on public accountability for all forms of education and post-secondary education in particular;

3. The apparent imbalance of educational products and manpower needs;

4. The aggravated financial plight of many private higher educational institutions;

5. The general acceptance at national and state levels of the goal of equality of post-secondary educational

opportunity, commensurate with individual ability, need and interest for all citizens, regardless of economic status;

6. The emergence of new and more sophisticated informational and management tools for post-secondary educational institutions and systems;

7. The increasing recognition of the desirability of institutional and programatic couplementation, rather than duplication and competition;

8. The current number and variety of public institutions in each state; and

9. The basic need for a rational sense of direction.

Accordingly, since Federal legislation inevitably has an impact on such planning, we suggest that there is a Federal responsibility to re-enforce statewide planning as basic to the national interest and to the health, even survival, of the kind of pluralistic and diversified, yet complementary post-secondary educational complex of institutions that promises to meet the needs of the states, the nation, and the citizens in the period ahead.

Thus, we suggest first, that consideration be given to amending pending higher educational legislation to make a substantial and continuing matching, but not necessarily equal, fund commitment to each state, which has a legally-authorized comprehensive

statewide planning process for post-secondary education, including both public and non-public institutions. Such funding would make it possible to control costs induced by Federal, as well as state support for post-secondary education before they are incurred. It would effectively establish sound comprehensive planning on which further plans for post-secondary educational support may be based. It would assist tremendously in the task of coordinating Federal plans with state objectives for post-secondary education. It would encourage the states to further carry-out their own responsibilities in statewide planning.

Second, we suggest that Federal funds for such planning be allocated to the state agency legally responsible for general comprehensive planning for post-secondary education in each state.

Third, we suggest that Federal funds allocated for state planning and administration of various post-secondary categorical grant programs be administered by the designated planning agency. This would help to avoid the type of isolated planning in connection with categorized grant programs, which can and sometimes would lead to conflicting plan objectives and ensure greater equality for the smaller institutions not as likely to have strong influence with granting operations.

Fourth, we would also suggest that provisions be made so that a portion of the Federal funds allocated to the comprehensive planning agencies may be alloted to any appropriate agency or institution for the purpose of aiding in the formulation and implementation of a statewide plan.

In addition to direct Federal recognition of the importance of statewide planning, we would like to call attention to the need for sustained commitment and advanced funding in all Federal post-secondary educational programs. It is highly desirable that the Federal government establish definite objectives in its higher educational policies and programs, and achieve some stability in their financial support. Currently, among the major inhibitors of effective utilization of Federal higher educational funds in the service of national, state, and institutional purposes are underfunding, late funding, and fluctuating funding which create uncertainties or negate reasonable planning efforts.

In the area of student assistance, we would like to commend Senators Pell and Mondale for their positions in relation to more adequate funding and institutional supplements to help in support of additional educational costs for particularly needy students. We are concerned, however, as a matter of general policy about the possibility of more effective development of a real Federal-state-institutional partnership in which state efforts in student assistance are recognized and strengthened. This should include the utilization of state agencies to help in the equalization of opportunity not only for students within an institution, but among institutions within a state; and for those potential students who for financial reasons, do not apply to any institutions.

In the area of continuing education and community services, we strongly support Senator Pell's recommended continuation of the program at an adequate authorization level, and his provision for consideration of special programs and projects relating to regional and national problems on the one hand; and metropolitan-area programs or the other. However, we would also suggest that this would be an appropriate time to consider the consolidation of Title I with other Federal programs in these areas into a single comprehensive and well-defined community service and continuing education title. Not only should the legislation consolidate existing programs; it should more clearly designate continuing education as integrally related to community service in order to avoid some of the ambiguities of the past. This is one of the areas in which statewide planning is particularly needed and close cooperation with authorized planning agencies is essential, if we are to effectively utilize the higher educational resources of a state.

In connection with developing institutions, we commend Senator Pell's highly desirable extension of the program for five years at a higher authorization. We suggest, however, that to ensure that the funds are not dissipated; they should be awarded through the appropriate state higher education planning agencies in accordance with state plans to ensure their most effective use in meeting clearly-identified post-secondary educational needs which are also appropriate to the institutions in question.

We strongly support Senator Pell's five-year extension of academic facilities construction grants and the continuation of state planning funds under Title VII. We would, however, like to urge that assurances be written with the act that planning funds shall go to the state legislatively-designated agencies for statewide planning where such agencies exist. It is hardly consistent to provide in some states for two agencies; one authorized by state legislation or constitution, and one called for by Federal legislation, each charged with statewide planning responsibilities.

Finally, we endorse the recommended National Foundation for Higher Education as proposed both in Senator Pell's bill and in the administration's bill. We would suggest that its incorporation within the Division of Education as proposed in S659 or under the Office of Education is preferable for the coordination of educational efforts to its semi-autonomous status in the administration's bill. However, we would strongly suggest that the bill be ammended to insure inclusion on the Board of the Foundation representation from statewide higher education agencies. Again, the proposed programs of the Foundation have state, as well as institutional, higher educational implications, and it is critically important that the statewide point-of-view be represented.

Again, we wish to express appreciation to you for the opportunity to meet with the Committee today, and we would be happy to offer to you or your staff, any appropriate aid we can make available, through the members of the State Higher Education Executive Officers' Association either individually or collectively.

Senator PELL. I thank you very much. I want to assure you that there is no subject that interests me more than higher education. I looked forward to the chairmanship of this subcommittee and working on this bill very much indeed.

I regret exceedingly that we cannot spend the whole morning with you and the preceding witnesses conversing and exchanging ideas. I hope that if you have any further thoughts you will send them to me in writing, with the notation in the letter whether you want it made part of the record or not.

TELE: AREA 303
892-2116

April 27, 1971

Mr. Steve Wexler
Subcommittee on Education, Senate Committee
on Labor and Public Welfare
Room 4428, New Senate Office Building
Washington, D. C. 20510

Dear Mr. Wexler:

In a brief conversation with Dick Smith following the presentation by Cameron West and the State Higher Education Executive Officers group, April 21, Dick invited comment on the possibility that some of the provisions or ideas in the Williams bill (S.545) might be encompassed in Senator Pell's bill.

Speaking for myself and in reference to our Colorado situation, I would make the following points.

1. Federal assistance in the community college area, if rendered through the statewide higher education agency, would be significant assistance to all of higher education in our state, because we are committed to the development of an ambitious, vocationally-oriented, urban community college system which is growing rapidly and requiring large infusions of state funds. Such funds, upon being assigned here are not available for support of other needs within the total system. Federal help will both speed the development of the community colleges and help strengthen the whole system.

2. The emphasis upon preparation of a state plan, including assistance in accomplishing this, is significant and worthwhile. I would emphatically agree that responsibility for formulation and submittal of such a plan should be that of the state agency designated by the Governor, and where there is a state agency having responsibilities relating to all segments of post-secondary education should certainly be that agency rather than one identified with the existing community junior colleges.

3. Seems to me it would be wasteful to allocate funds to all states on some basis related to population, and thus preferable that funds be awarded on the basis of approved state plans. Safeguards against favoritism could readily be provided

through appropriate procedures for the evaluation and review of state plans and for appeals to some such body as the proposed "National Advisory Council."

4. Similarly, I believe wide discretion should be given the Commissioner as to appropriate activities to be supported, because the status of community college planning and development, and the resulting needs for planning, construction, or operating support, vary so greatly among the states.

While I would not like to see Senator Pell's bill jeopardized by an effort to add major new programs, I do feel that the concepts behind the Williams bill would represent very significant encouragement and assistance in our state in moving forward more rapidly and forcefully along lines already laid down here.

Sincerely yours,

Frank C. Abbott
Executive Director

EDUCATION AMENDMENTS OF 1971

THURSDAY, APRIL 22, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10 a.m., in room 4230, New Senate Office Building, Senator Claiborne Pell presiding.

Present: Senators Pell, and Javits.

Staff present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; Roy H. Millenson, minority staff director.

Senator PELL. The Subcommittee on Education hearings on the Education Amendments of 1971 will come to order.

The first witnesses will discuss title VI NDEA—area language centers. I welcome Dr. Lea Williams of Brown University, an old friend of mine from Rhode Island, Dr. Stanley Spector of Washington University, St. Louis, Mo., and Mr. Morehouse of the New York State Department of Education.

If you will come forward, please. I will advise you that I am the floor manager of a bill presently pending on the Senate floor. We are going to limit this morning's hearing to 1 hour, with 20 minutes to each panel.

Dr. Williams, do you want to take the chair?

STATEMENTS OF DR. LEA WILLIAMS, BROWN UNIVERSITY, PROVIDENCE, R.I.; DR. STANLEY SPECTOR, WASHINGTON UNIVERSITY, ST. LOUIS, MO.; AND WARD MOREHOUSE, NEW YORK STATE DEPARTMENT OF EDUCATION

Dr. WILLIAMS. Thank you very much, Senator Pell. In view of the time limit I will be very brief indeed. My two colleagues have already been introduced.

Each of us has sought in his written statement to present certain points critical to a consideration of legislation in this area. In my own case, I paid particular attention to the value, indeed the essential value, of a Federal backing for international education, as for example through the language and area centers which now operate. Such support is of particular value as a catalyst in order to permit those of us involved in negotiating budgets with university administrators to establish the fact that, as evidenced by aid from outside the university, in this instance by the Federal Government, that we have a certain amount of recognition and backing; and, therefore, the total funding of our programs does not need to rely on our universities. In the past

we have across the country been obtaining something like 10 percent of our support from Federal sources. So, Federal funding is a very modest but a tremendously significant and essential ingredient.

The other point I sought to make was one to deal with the question of the oversupply at the moment of advanced scholars, Ph. D's, the argument being that there are too many of these people and, therefore, why train more. There are not too many of these people by any means. What is now happening is that all Ph. D's are able to obtain suitable jobs, although they may not get the jobs they would have chosen a few years ago in terms of the prestige of institutions or whatever. They are going out across the country into junior colleges and community colleges. This in fact is what we should have been doing all along in bringing international education where it is most urgently needed; that is, to the smaller, less well-known institutions. So there is no oversupply of Ph. D's.

Having said that, I should like to turn to either of my colleagues.

Senator PELL. Dr. Spector.

Dr. SPECTOR. Senator Pell, thank you very much for this opportunity to appear before this distinguished subcommittee which is dealing I think with a subject very, very important to the national interest.

Senator PELL. I would completely agree with you that what we are doing is tremendously important, and yet the public is really not greatly interested in the problem with which you and I are seized. I see one representative of the press here, and very rarely does the general public take an interest in these hearings. But I will agree with you that they are important.

Dr. SPECTOR. I think that is precisely the problem: that the general public does not take an interest in it because in the course of its normal education the general public has not had the kind of necessary exposure to help it understand its very important role.

Mr. Chairman, my testimony has been submitted in writing. I would like to just concentrate on two important points which are in my written testimony, and one derives from a very recent experience I had.

I was invited by the Academy of Sciences of the U.S.S.R. to visit their programs relating to foreign areas study, and I was a guest of the Institute of the United States of America which is responsible for research on the the United States of America, an institute which was set up only 3 years ago in Moscow because they were concerned about the commanding lead we had established in studying their society while they had no counterpart in Russia. My host there was Anatoly Gromyko, the son of the Foreign Minister. I was also invited as a specialist to visit their Institute of Far Eastern Studies and to spend time with my Soviet counterparts in comparing the way we study China. Obviously both nations have a very deep interest in China.

I was able to inquire about their system to make some assessment of the scholarship there, and I should report to this committee that I was deeply impressed by the great strides which the Russians have made in the past few years in creating a body of scholars who for instance could carry on all their conversations with me, all these intricate discussions, in perfect English in the one case and in perfect Chinese in the other. This made a very deep impression.

I am convinced that the Russians have created an excellent pool of specialists through maintaining central government institutes for research and training, but where they are failing and precisely the difference between the Soviet system and our own is they get no diffusion. They mark their specialists out early in their careers, train say two or three hundred in Chinese and that is all they have. That is not enough for them either but certainly it is a good supply, whereas what we are doing is trying at the same time to disseminate information to our entire population. That explains the need for many area and language centers throughout the country as opposed to one central institution.

Senator PELL. Thank you very much.

Your statements will be put in the record fully at the end of your testimony.

Mr. Morehouse.

Mr. MOREHOUSE. Thank you very much, Senator Pell.

I, too, have a written statement which I would appreciate having inserted in the record.

I would like to deal with just one or two points very briefly in amplification and extension of the observations made by my colleagues.

One is to underscore the vital importance of undergraduate programs in the total Federal Government effort in the field of world language and area studies. As Professor Spector indicated in his remarks, we are very much concerned not only with training a small cadre of highly developed specialists on various critical areas of the world, but we need to diffuse this knowledge throughout our population; and in order to do this, we must have a strong underpinning in programs at the undergraduate level as well as at more advanced levels.

The second point I would like to emphasize is my belief that we need to move beyond, but without diminishing our present effort in the field of language and area studies, to programs that are focused on topical programs or issues which cut across major geographical regions of the world. For example, the problem of expanding human population which is something that concerns all mankind. It concerns us on the North American Continent as well as elsewhere in the world.

The third point I would like to make is that I think there is an important role to be played in strengthening international aspects of American higher education through interinstitutional cooperation. We still have, as Professor Williams has indicated, too few specialists in, for example, Chinese, his field of special interest and competence, to cover the country; and, therefore, we are going to have to share these scarce resources. In this connection I work very closely, Senator, with an organization which is committed to the proposition that we can enrich this aspect of American higher education significantly through cooperation among institutions, the National Council of Associations for International Studies.

Senator PELL. Thank you, Mr. Morehouse.

(The prepared statement of Mr. Morehouse follows:)

STRENGTHENING THE INTERNATIONAL DIMENSIONS OF AMERICAN HIGHER EDUCATION

Testimony of Ward Morehouse, Director, Center for International Programs and and Comparative Studies, State Education Department, University of the State of New York, and President, National Council of Associations for International Studies, before the Special Subcommittee on Education of the Senate Committee on Labor and Public Welfare, Thursday, April 22, 1971.

My name is Ward Morehouse. I am the Director of the Center for International Programs and Comparative Studies of the New York State Education Department. I also appear before you on behalf of the National Council of Associations for International Studies, an organization composed of a dozen regional associations of colleges representing over 400 institutions from Vermont to Hawaii. The views I am expressing to you today reflect as well the concerns, needs, and objectives of the State University of New York.

Mr. Chairman, I appreciate very much this opportunity to come before you to offer testimony in support of legislation which will strengthen the international dimensions of American higher education. I should like first to comment on important aspects of international education which I believe should be reflected in the higher education legislation now under consideration by this Committee. These comments will be followed by some observations on changing environment for public policy toward international education in the United States. My comments rest on the assumption , for which I believe, there is persuasive evidence, that American society in the decades ahead will become more, not less, interdependent with the rest of the world.

The principal legislative authority now being used by the federal government to support the strengthening of international dimensions of American higher education is Title VI of the National Defense Education Act, which provides support to colleges and universities in programs of training in critical languages and related area studies deemed to be important to our national security. This legislative authority has

been in existence in substantially the same form for over a decade and has made vital contributions to enlarging our national capability for dealing more effectively with the rest of the world.

The need for such a national capability continues, and in my judgment will increase in the coming decades, but the character of the capability required is changing. Programs designed to enhance this capability must also change. This has been wisely recognized by the present Administration in the plans which it is developing for the coming fiscal year. I quote from the justification statement submitted by the Office of Education in support of fiscal year 1972 appropriations for NDEA Title VI:

> Despite the limitations of funding constraints, some important program innovations are included within the level proposed. Six new graduate programs are planned at an average cost of $40,000 for a total of $240,000. These graduate programs of excellence will focus on such new and critical areas as contemporary Europe, Eastwest relations, international trade and business, and comparative urban and environmental problems. Ten new undergraduate programs are envisaged at an average cost of $30,000 for a total of $300,000. These innovative undergraduate programs will demonstrate new approaches to undergraduate education in world affairs and international studies, with particular attention to teacher education.

Congress also recognizes the need for change. The higher education bill introduced by Senator Pell and others (S.6591) proposes, after a year extension of existing NDEA Title VI, a new title designed to aid graduate programs in different fields, including international studies. Senator Javits' bill to consolidate and extend a number of existing but thus far unfunded higher education programs (S.1073) also would make possible important changes and improvements in federal government support of international studies in American higher education if the International Education Act, which is included in his bill, were to be funded. I will not address myself to the specifics of either these bills or the Administration bill (S.1123), which provides for a two-year extension of NDEA Title VI and which would also make possible, in light of the passage quoted from the Office of Education justification statement for the fiscal 1972 NDEA Title VI appropriation, some changes in program emphasis. More significant in my view than the specific details of these alternative pieces of legislation, all of which have merits, are the emphases which should be given in the future to federal programs related to this important but still very much neglected aspect of American higher education. I should like to mention three emphases which I believe should be reflected in legislation emerging from this Committee.

The first is the need for recognition of the importance of undergraduate programs in international studies. Undergraduate programs are vital in providing an essential foundation for more advanced studies which will help to enhance our national capability for dealing with the rest of the world. Past experience suggests, furthermore, that undergraduate institutions often show greater ability to bring about important changes in academic programs which reflect the changing environment in which international studies are being undertaken. Beyond that, undergraduate programs provide an absolutely vital dimension to our total national effort in this field by enlarging the base of enlightened citizen understanding of the relationship

of our society to the rest of the world. There are many more citizens who have only an undergraduate degree than are trained to the Ph.D level. Without such understanding and consequent support of constructive public policies reflecting this interdependence, I believe that many of the qualities of American life which we most cherish will be increasingly difficult to maintain in the coming decades with a rapidly growing human population, increasing disparities in wealth throughout the world, and growing impact of human civilization on our natural environment.

The second concerns the need for strengthening programs at both the undergraduate and graduate level which deal with critical problems confronting human society in the second half of the twentieth century. Population, food, peace and the quality of the environment are all global concerns which vitally affect the future of American society. We need to strengthen our capacity as a nation for dealing with these and other critical problems in the decades ahead.

It is important to emphasize in this connection, Mr. Chairman, that the basic purpose toward which NDEA Title VI has been directed continues to represent an important and vital national need served by our institutions of higher education, and the emphases which I have suggested do not imply any diminished significance to our continuing requirements for highly trained professional manpower with knowledge of critical languages and areas of the world. The far greater expense of training such manpower, furthermore, continues to justify, in my judgment, a federal contribution to programs in our colleges and universities which train this manpower.

The third point which I wish to emphasize and which I believe should increasingly be reflected in federal programs to strengthen international studies in American higher education is inter-institutional cooperation. At a time when all of our colleges and universities are experiencing grave financial difficulties, efforts to share scarce resources, thereby enabling groups of institutions to provide opportunities for their faculty and students which they would not be able to do singly, merit fullest possible support. The National Council of Associations for International Studies, of which I am currently serving as President, reflects at the national level the principle of cooperation and sharing scarce resources which has gathered increasing momentum as a means of strengthening the international dimensions of higher education at the regional level. This important approach to strengthening international dimensions of our institutions of higher education should be given increasing emphasis in the years immediately ahead.

This leads me to a consideration of the changing environment for public policy toward international education in the 1970's. The political, economic, and social enviroment for international education has been changing in recent years and appears likely to continue to change along certain basic lines. Here are some factors in this changing enviroment:

1. The United States relationship with the rest of the world in the 1970's and beyond appears likely to be characterized by continuing political and military disengagement, growing recognition of a relative decline in our national power, at least militarily, and growing economic

interdependence. To manage our relationships in this enviroment will require more advanced skills and more general understanding of the position of American society in its global contextthroughout our society.

2. The gap between the advantaged and disadvantaged which has generated such social tension in American society in recent years, will grow at an accelerating rate over the next thirty years on a world scale. By the year 2000, the gap in per capita income between the United States and India will have almost doubled, even though India will experience a more rapid growth rate than the United States. By the end of the century, America, along with Europe and Japan, will consititute golden ghettoes in a worldwide slum of grinding proverty. As we have been pondering the educational implications of social tensions generated by a similar gap in our own society in the past few years, we surely need to consider what the educational consequences will be for a similar gap, much wider and on a much broader scale, in the future.

3. In the next thirty years (which is the operative time frame for educating today's students), the population of the world will double. Never before in human history has the world experienced population growth of such absolute magnitude. Most of this increase will occur in the poor countries of the Third World so that by the end of this century, four out of five human beings will live in Asia, Africa, and Latin America, areas of the world about which we now study least in our schools and colleges.

4. The most urgent problems facing U.S. society in 1971--urban growth and decay, enviromental pollution, the place of cultural and racial minoirties in our social system-- all have a worldwide context and are being experienced by other societies as well as our own. Some will certainly depend for their solution on action which transcends national boundaries; enviromental pollution is an obvious illustration. We have much to learn from others who have been struggling with the same kinds of problems. And we have much to gain from exploring together with others ways and means of dealing with these problems.

There remains, Mr. Chairman, the critically important question which is implicit in the issues which I have been discussing--namely, the relationship of "categorical" and "non-categorical" aid to our colleges and universities by the federal government. In my opinion, the two are not mutually exclusive but go hand in hand. I believe, furthermore, that this position has been reflected in a variety of ways by the Congress and recent administrations, including the present one.

Formal education at whatever level is supported by society because it serves goals and purposes which society recognizes as important. A recent case in point is the Environmental Education Act, which reflects the concern of both the present Administration and the Congress, as well as the American people, with the deteriorating quality of our enviroment and the need to educate future generations of Americans about the importance of protecting that environment. Categorical programs of support to education like the Environmental Education Act and the legislation to strengthen international aspects of American education will always be needed in order that society may give support to aspects of formal education which serve critically important goals of society. At the same time it is also clear that our institutions

of higher education, whether publicly or privately controlled, require increasing public support, whether at the state or national level, of a non-categorical character. The two forms of aid should be regarded as complementary and mutually reinforcing.

We need to recognize, furthermore, that the categorical characteristics of federal programs in many different fields exist at different levels. To the proponents of general revenue-sharing with the states, even programs which seek to aid education "non-categorically" are "categorical" in character. The same observation can be made with respect to federal programs of "non-categorical" assistance to higher education or to elementary and secondary education, which again reflect a "categorical" determination by the federal government of priorities to be attached to different levels of formal education in our society.

I submit, Mr. Chairman, that the critical issue is not whether a particular program is "categorical" or "non-categorical", for this is a relative proposition. Rather it is whether or not the program serves a vital need of society. The matter was succinctly expressed by Daniel P. Moynihan, former Counsellor to the President, in his letter of April 27, 1970, to President Nathan Pusey of Harvard, in which, writing on behalf of the President and indicating that the present Administration was reversing itself and would continue to support NDEA Title VI, he stated:

> It would be difficult to find an area in which pursuit of disinterested scholarship was more ~~correctly~~ directly a matter of national interest than here.

There is substantial evidence that the international dimensions of American higher education are indeed related to and serve vital needs of our society. The education policy-making body in New York State--the Board of Regents of the State of New York--has stated, in a 1970 policy paper on international education, that:

> It is necessary that the citizen of tomorrow be informed about the parts of the world beyond the borders of his own country because what happens in those countries is bound to affect him and his country. Further, societies and traditions other than our own are worthy of our attention in their own right because of the quality and richness of human experience which they

60-433 O - 71 - pt. 3 - 7

> represent. But, by all odds, the single most important educational reason for studying other societies is that it helps us to understand better our own. .
>
> The Regents believe that increased emphasis should be placed on the international dimensions of education....The educational objectives involved are critical ones: to prepare men to take their place in a world where isolation no longer exists.

The Center for International Programs and Comparative Studies for which I am responsible was created by the Board of Regents in recognition of this need. The Center seeks to strengthen opportunities and resources for teachers and students in our schools, colleges, and universities to understand the modern world in all of its diversity and complexity. In this effort, we cooperate actively with state and national education agencies and institutions in other parts of the country and abroad.

The federal government has also recognized the importance of these concerns to American education. The Congress of the United States has declared it to be the policy of the United States Government that:

> ...a knowledge of other countries is of the utmost importance in promoting mutual understanding and cooperation between nations; that strong American educational resources are a necessary base for strengthening our relations with other countries; that this and future generations of Americans should be assured ample opportunity to develop to the fullest extent possible their intellectual capacities in all areas of knowledge pertaining to other countries, peoples, and cultures...

The need for greater knowledge and understanding of the world beyond our national boundaries was one of the sobering experiences of the Second World War, and all Presidents since then, regardless of party, have emphasized on more than one occasion the vital importance of enlarging our capacity to know and to understand other peoples and nations with which we live on this often troubled planet. In 1966, for example, President Johnson stated that:

> We would be shortsighted to confine our vision to this nation's shorelines. The same rewards we count at home will flow from sharing in a worldwide effort to rid mankind of the slavery of ignorance and the scourge of disease. We bear a special role in this liberating mission. Our resources will be wasted in defending freedom's frontiers if we neglect the spirit that makes men want

> to be free... The search continues-more urgent today than ever before in man's history.

Earlier this year, President Nixon, in his "State of the World" message, observed that:

> Around the globe, East and West, the rigid bipolar world of the 1940's and 1950's has given way to the fluidity of a new era of multilateral diplomacy. Fifty-one nations joined the United Nations at its founding in 1945; today 127 are members. It is an increasingly heterogeneous and complex world, and the dangers of local conflict are magnified. But so, too, are the opportunities for creative diplomacy.
>
> Increasingly we see new issues that transcend geographic and ideological borders and confront the world community of nations. Many flow from the nature of modern technology. They reflect a shrinking globe and expanding interdependence. They include the challenges of exploring new frontiers of space and sea and the dangers of polluting the planet. These global issues call for a new dimension of international cooperation.

Mr. Chairman, I hope that this Committee will shape, from the bills now before it, legislation which will reflect the need to strengthen aspects of international studies of American higher education which have been discussed in this statement.

Thank you.

Senator PELL. Incidentally, Dr. Spector, Senator Eagleton was particularly sorry he could not be with us this morning. Unfortunately, he is chairing another subcommittee hearing and his time is spread rather thin. But he asked me to welcome you here.

Dr. SPECTOR. I regret it because I understand he has just recently become an Asian expert himself, having just returned from Asia.

LANGUAGE FACILITY—U.S.

Senator PELL. Would it be a correct statement to say that, of all the technologically advanced societies, we are the one with the least knowledge of foreign languages?

Dr. SPECTOR. No; I would not think so.

Senator PELL. Who else would compete with us for this role of ignorance?

Dr. SPECTOR. I think the role of ignorance could be shared with us by the Soviet Union and England and perhaps Japan, although they try harder in Japan.

Senator PELL. I went to school in England and have traveled in the Soviet Union. I would have thought that there was greater knowledge of foreign languages in the streets in both those countries than there would be in the streets of our own country.

Dr. SPECTOR. In speaking, that would be true, Senator. They do get much more practice because they are on a single continent and see many more tourists. But in terms of doing research and so forth, we are not behind. But the point is, we have a long way to go.

Senator PELL. I am not talking about research. I am talking about the majority of the people in our country who have little knowledge of other languages. I think we assume that when an Italian comes over here and speaks only his native tongue, rather than the English, he is stupid, and when we go to Italy we think they are stupid because they speak only Italian and no English. I would like to know whether that view is off base.

Dr. SPECTOR. My impression was, from what the Russians told me, that they do have English speakers. That is because they have special schools in each city where they teach their children English from the very beginning. But when you get into the masses of the population, they are probably in bad shape, too. And they are doing a lot about it now. They have established special schools all over Russia. They are ahead of us.

Mr. MOREHOUSE. May I comment briefly on this, Senator, from the point of view of a technologically less-developed country, namely, India, which is my special area of interest. Deal with this in terms of individuals from our country and from India at comparable levels of education; if we take the average college or university graduate in India, he will invariably command a working knowledge of at least two languages, one of which would ordinarily be English because that is the language of higher education. The other would be his own mother tongue. I do not think we have yet, and I believe this was the burden of your question, reached the point where it is widely recognized that one of the hallmarks of a well-educated individual in our society is a capacity to conduct himself in at least one other language beside his own.

Senator PELL. Are we not going in reverse in this regard as to Ph. D. requirements? Many colleges used to call for spoken and writ-

ten knowledge of two languages; this requirement has been dropped to one. Frankly, I think you sound much too optimistic about how well we are doing.

Another point which bothers me is the drift throughout the world toward the Tower of Babel. Many new languages have become national tongues; for example, 30 years ago when we did not have all these national languages. Do you see any way to reverse it? I always thought that World War II would have generated English as a type of Esperanto.

Dr. WILLIAMS. Senator, of course, actually there are these languages you mentioned. My impression in traveling in places like Indonesia, the Philippines, and Malaysia is that English is gaining ground rapidly despite official efforts in various countries to supplant it with something else. This has been the source of tremendous unhappiness, particularly in the Philippines and Malaysia where they have tried to do away with English with a complete lack of success.

Mr. MOREHOUSE. No; I don't think so, Senator Pell. I would agree with Professor Williams. It is indeed true that there are important political forces promoting the use of Indian languages. But I still believe it to be true, although we lack accurate statistics, that there are more English-speaking individuals in India today than at the time of independence. And my basis for that statement is a very simple one. I have never met English-knowing parents in India whose children were not also receiving an English-medium education.

Senator PELL. Is it not a fact though that the public in India will soon not be able to read basic English? Are they not turning off English as a language?

Mr. MOREHOUSE. That is not true. In fact, English is still a widely used language in science, government, business, and other areas of national life.

Senator PELL. According to the law it is being phased out.

Mr. MOREHOUSE. But as a practical matter I don't think that time will ever come.

Senator PELL. But is it not written into the law?

Mr. MOREHOUSE. Not in fact. The constitution has been reinterpreted to permit continued use of English.

Senator PELL. The constitution has been amended in the last year or two in this regard?

Mr. MOREHOUSE. English continues as a so-called "associated official language," although Hindi is now the official language of the country.

Senator PELL. Yes; but I do not think the debates conducted in the Parliament are in English.

Mr. MOREHOUSE. Oh, yes, they can be and indeed are.

Senator PELL. Well, I stand corrected then and I am delighted to hear that. When I was there the intention was that they were going to phase out English by a set time.

Mr. MOREHOUSE. Well, indeed this was the law; you are quite correct. And there was considerable civil disturbance in some parts of the country over the provisions of this law when the date in question approached, and as a consequence of this considerable political agitation the position regarding English was changed.

The question, however, is a complicated one, and I should like to submit additional material on this point for the record.

Dear Senator Pell:

With reference to our discussion of the position of English vis-a-vis Indian languages in India today, at the April 22 hearings on higher education legislation of the Special Subcommittee on Education, I think the record should be clear that your basic point is entirely correct--namely, increasing emphasis on the use of Indian languages in government at the state and national levels, particularly Hindi but also other major Indian languages as well. Furthermore, as you rightly suggested, Hindi has become the "official language" of the Indian federal union, in terms of provisions of the Indian constitution with effect from 1965.

As far as the Indian parliament is concerned, Hindi, other Indian languages, and English are all permitted, and a fair amount of the debates does take place in English, which also continues to be used as a language of publication for a good many central government documents and reports, where communication on an all-India basis is considered important. But Indian languages at the state level are increasingly used for both written and verbal communication in all activities of government, and Hindi is certainly more widely used inthe central government (and in those states where it is the offical language) than has been the case in the past.

The official Government of India explanation of the current language policy position is given in the following extract from the Indian Ministry of Information and Broadcasting, India: A Reference Manual, Delhi: 1967, p.24:

> Official Language
>
> As provided in Article 343 of the Constitution, Hindi became the official language of the Union with effect from January 26, 1965. The form of numerals to be used for the offical purposes of the Union is the international form of Indian numerals. However, under section 3 of the Official Languages Act, 1963 provision has been made for the continued use of the English language in addition to Hindi, even after January 26, 1965 for (a) all the offical purposes of the Union for which it was being used immediately before that day, and (b) for the transaction of business in Parliament. Under Article 346 of the Constitution, the language (or languages) for the time being authorised to be used for the official purposes of the Union shall also be the language (or languages) to be used for communication between a State and the Union and between one State and another.

If it is not inappropriate, may I suggest that this letter be included in the hearing record in further clarification of the point which you raised about use of English and Indian languages in India.

Yours sincerely,

Ward Morehouse
Director

The Honorable Claiborne Pell
Special Subcommittee on Education
Committee on Labor and Welfare
United States Senate
Room 325, Old Senate Office Building
Washington, D.C.

WM/gc

Dr. SPECTOR. The Parliament of Malaysia has put such a law into effect and now in fact within the last few years only Malay can be used in the Parliament of Malaysia. English is now out.

Dr. WILLIAMS. I must correct my colleague. English is now out, but as the speaker always permits its use, so the debates continue completely uninhibited in English in violation of the spirit of the law.

Dr. SPECTOR. But it is still not the legal language and all government functions must be conducted in Malay.

Senator PELL. Gentlemen, with specific regard to the legislation before us; the administration bill which extends the program for 2 years and the committee bill, S. 659, which extends it for a longer period consolidating it with international education and strengthening graduate schools—that is very subjective questioning—do you have any preference as to which bill you prefer?

Dr. SPECTOR. May I address myself to that point. I was formerly special consultant with the U.S. Office of Education for the International Education Act. I drew up much of the wording for the undergraduate portion of that. I might say that at that time interestingly enough the thinking was that the International Act might absorb title IV of NDEA which was considered desirable if title VI could be guaranteed further existence. It is important that title VI continue through the indefinite future. It has a specific function. Now if the International Education Act provisions which the Senator's bill incorporates should go forward I think this would be very desirable because one rests upon the other. We must have this area and language as the base. From there we can then make comparative studies, ultimate studies of NDEA or those provisions, and we can also go on with undergraduate training which is necessary for diffusion. So I think the two mesh very well, and I think the committee should be complimented on coming forward with this idea provided, of course, that title VI moneys are not lost in the shuffle.

Senator PELL. To make a preference between the two helps us in getting our work enacted into law. If you were to choose between the two bills, would you as a panel express a preference for one or the other?

Dr. SPECTOR. The only difficulty, sir, is that I am not skilled in the political meaning of much of this. I know international education and title VI.

Senator PELL. Have you studied the legislation that we asked you to comment upon?

Dr. SPECTOR. Yes, sir.

Senator PELL. Which bill do you prefer?

Dr. SPECTOR. I would prefer your bill, sir, provided we could be sure that the title VI provisions were there. The longer, extended time is absolutely necessary. That is what the Soviet experience convinced me. They are long-term projections of what we need—not just 2 years but say a 5-year authorization for funding. We know where we stand and I think the general bill is in the exact direction we should be moving.

Senator PELL. Would this be the general view of the panel?

Mr. MOREHOUSE. Yes, sir; I would like to add just one comment, in addition to the importance of continuing the provisions of NDEA title VI for advanced training in language and area studies for which this

very title provides. I believe that the committee's bill would be greatly strengthened if there could be provision also for support of undergraduate programs. As the language now reads it is confined to graduate programs, but I believe the undergraduate dimension is a vital part of the total Federal program in this field.

Senator PELL. Thank you very much.

I have some more technical questions which I wonder if you could reply to briefly. Would you send them back to us some time within the next 10 days or 2 weeks if that is convenient. Thank you.

I am sorry for the pressure operating here. Dr. Williams is an old friend and has been very hospitable to me and I appreciate it tremendously.

April 28, 1971

Dear Senator Pell:

I should like to express my very real appreciation to you for giving Professor Lea Williams of Brown University, Professor Stanley Spector of Washington University (St. Louis), and myself an opportunity to present our views on legislation related to international studies in American higher education before the Special Subcommittee on Education on April 22. Here are my comments on the five questions which you asked us to answer at the conclusion of the Hearings:

1. Order and magnitude of tasks: what are the priorities? How long do you envision Federal support as needing to be continued?

There are three critical needs, only the first of which is being met in significant degree at the present time, if international studies are to be strengthened as a vital dimension of American higher education in the 1970's:

1. Programs to train specialists in critical but neglected languages and major world areas.

2. Programs of advanced training and research devoted to important world problems which transcend geographical boundaries--population growth, urban and environmental problems, conflict resolution and international peace, etc.

3. Undergraduate programs in language and area studies and world problems, necessary to build a sound foundation of preparation for graduate specialization and to develop a broad base of citizen awareness and understanding of these key areas and problems which will be confronting the nation with increasing urgency during the coming decades.

These are the critical priorities. More support will be required in the future if all three are to be met in any significant degree. Present support, primarily for the first need listed above (and to a very limited degree, the third need) is $15.3 million. Support should be increased to at least the present authorized level of NDEA Title VI, namely, $38 million.

The length of time for federal support is dealt with in the next question.

2. Re: Categorical aid
In light of the trend away from categorical aid, and special program funding, how do you justify NDEA Title VI?

The relevant criterion is not whether a particular federal program is "categorical" or "non-categorical" but rather, whether it serves an important national need. Thus, even the Congress and this Administration, which have professed to be opposed to continuation of categorical programs in education, have pushed for an Environment Education Act because the deteriorating condition of our environment is demonstratably important to the nation. The same is true of the international dimensions of American higher education which are very directly related to our nation's capacity to deal effectively with the rest of the world. The question of how long federal support should be continued should, therefore, be answered in relation to the length of time that an important national need served by a particular federal program continues to remain significant and important. Viewed in this manner, federal support for specialists in neglected languages and related area studies and in major world problems will be required for the foreseeable future. The federal government has supported agricultural research and extension activities at the state and county levels for a good many years and is likely to continue to do so for some time in the future, for essentially the same reason.

3. Would this production of specialists be better accomplished through one national institute, instead of so many centers scattered throughout the country?

In our pluralistic society with its equally pluralistic education system, the diversity of emphases in international programs in our universities is a real source of strength in enhancing our national capability to deal more effectively with the rest of the world. It is part of our American tradition that competition within reasonable limits encourages change, stimulates progress, and is generally a good thing for society. The same may be said of international programs in American universities. This diversity and sense of competition in trying to be the best would be lost if all of this activity were concentrated in one national institute.

4. What would be the benefit of consolidating the IEA and NDEA Title VI?

The most important issue here is preserving the "funding continuity" of NDEA Title VI. The difficulties which the International Education Act has experienced as a "new" program in not being able to secure funding over the past five years is a sobering lesson. At the same time, the additional programs contemplated under the IEA (essentially the second and third needs outlined above) are vitally important. There is much to be said, therefore, for amending NDEA Title VI to include provision for the additional kinds of programs authorized but thus far not funded under IEA.

-2-

5. What role could the National Foundation for Higher Education have vis-a-vis international education?

While it is important that the legislation creating the National Foundation for Higher Education permits the Foundation to follow a broad focus on needed changes in our colleges and universities, encouragement should also be given, perhaps through inclusion of language to this effect in the Committee's report on the higher education foundation bill, for appropriate attention and support to be given to innovative ideas which will strengthen the international dimensions of American colleges and universities.

Once again, I want to express to you my appreciation for the opportunity which you gave us to present our views on international studies in American higher education.

Yours sincerely,

Ward Morehouse

Statement to be submitted to

the Special Sub-Committee on Education of the
Committee on Labor and Public Welfare
of the United States Senate

By: Lea E. Williams, Director
East Asia Language and Area Center
Brown University

April 22, 1971

It is by no means without significance that to speak of the crisis in education is to use a cliche. The fact that all who administer, finance, offer and profit from advanced education are uniform in their recognition of the challenges and dangers confronting the universities of this country is proof that apprehension is general and genuine. It is my purpose today to focus on only one of many problems, the financial squeeze. More specifically, I propose to offer some observations on the crucial role of Federal support to institutions providing instruction in languages and substantive fields related to East Asia.

Costs in education have not merely risen in the post-war years; they have doubled and redoubled. The building and maintenance of classrooms and dormitories combine to devour a major share of university budgets. The acquisition of books for libraries, the most vital function of any respectable institution, is twice as expensive as it was a decade ago. Faculty salaries have been improved in an effort to permit teachers the attainment of middle class living standards. (It is presumably needless for me to add that I have little quarrel with that particular development).

In the recent past, private benefactors, state legislatures and the foundations have either cut back their funding or redirected support to endeavors other

than education. University administrators are thus caught in a cruel budgetary vise. Perhaps no college or university president would admit it, but all are being driven toward a point where the arguments of cost-price analysis will win precedence over considerations of educational merit in the making of decisions on the distribution of university resources. It will grow difficult indeed for the more highly specialized departments to claim a just share of the budgetary pie. The professor who teaches ten students will be regarded as only half as valuable as the one who teaches twenty. Departments able to reach huge student audiences will be seen as economically viable; the less popular in enrollment will be viewed as marginal. When the ax crashes down on the departments with high unit costs per student, university administrators will speak of curricular development, reformulated goals or rational priorities. They will in fact be acknowledging the triumph of campus economic determinism.

As I am truly proud to report, the President of my own institution recently observed that it is often precisely in the continuation of scholarly programs that may serve relatively few students that the designation university is earned. Political science, anthropology or sociology would have been killed in infancy if administrators of a generation or two ago had evaluated those disciplines in raw budgetary terms. That is the nature of the threat that hangs over the economically marginal endeavors today. Included among that insecure group are programs focused on the non-Western world. Far fewer students are in Chinese than in French. Any decent undergraduate knows about the industrialization of the North Atlantic countries; only rare individuals can discuss the transformation of Japan from agrarian feudalism to super economic power in just one century. The number of doctorates in European history is many times greater than that of all scholars trained to teach and do research on Asia, Africa and Latin America combined.

The place of the federal government in these circumstances is clear. There is no alternative source of support to which those of us in non-Western fields can turn. I should be much happier if this were not the case; but, it seems that, as in so many other areas, the federal hand is needed where private or state resources and initiative are inadequate for the accomplishment of tasks in the national interest.

At this time in history, the feeling that we ought to know more about China is stronger than ever. If we are actually moving toward increased exchange with the Chinese fifth of humanity, then government, industry and commerce will all demand the services of people trained to seek ways of interpreting China. Journalists and teachers at all levels will want information on that country. Even brief encounters with the Chinese will be more productive and realistic if Americans are better informed. For example, one of the trail-blazing table tennis players was reported in the press as having been awed by the power of Mao Tse-tung's moral leadership when he saw three-year old Chinese infants treating two-year olds with protective affection. Any one with a background on the Chinese family, a student from my own courses, for example, would have known that older children have been the custodians of younger ones for centuries.

Two arguments against federal support for non-Western studies seem to make considerable sense. At the risk of abrasiveness, I should like to destroy both of them. First, it is frequently pointed out that government funds, as in the case of the language and area centers, have contributed only a minor share of total funding. The figures for the country as a whole demonstrate that about ninety percent of the costs of such centers comes from university budgets with only a tenth of total costs being met through federal contributions. The arithmetic leads to the questioning of why federal money is so important, Surely, it is claimed, the universities can simply get along on their own means, possibly with a ten percent retrenchment in center activities.

The reasoning of the argument would be decisive except for the oddities of the budget-making process at a university. The faculty member who can approach his university administration armed with even modest external funding is far better able to negotiate for a just share of university support than the man who has been given no tangible sign of outside backing. Federal grants are catalytic agents essential to the funding of non-Western studies. The term seed money has no more appropriate application than in this situation.

The second argument against continued federal help to programs of the sort with which I am involved has the advantage of timeliness, or so it seems. Reports are wide-

spread to the effect that newly earned advanced degrees are no longer guarantees of employment. There is alleged to be a vast intellectual proletariat of the unemployed or under-employed. Doctorates are said to be a drug on the market. If this dreadful state of affairs exists, so it is argued, there is no reason to provide training to more misfits.

Two points can be made here. Even if there were a superabundance of scholars in the fields under discussion, to stop the flow for short term reasons would leave the country without a reservoir of expertise when circumstances change, as they most surely will. Progress through the pipeline bringing non-Western specialists to the job market requires many years. If the line is closed now, it cannot be brought back into service for a very long time, if ever.

In fact there is no surplus of non-Western scholars. People are finding employment, though the positions the newer specialists are beginning to fill may not carry the prestige or provide the benefits of jobs viewed as attractive a few years ago. It is all for the good. For the first time, junior and community colleges can recruit men who formerly would have set their sights only on esteemed universities with elaborate research facilities, preferably on one of our two coasts. There may be some hardship or disappointment among younger scholars at the moment, but economic necessity has brought non-Western studies to formerly neglected campuses. In the final analysis, that ought to have been our purpose all along.

By way of conclusion, it may be useful to indicate some of the things done by the East Asia Language and Area Center at Brown University. The Center, of course, coordinates degree programs at both the undergraduate and graduate levels. Twelve staff members are represented in five academic disciplines. Our Chinese library is one of the country's finest. Graduates are now in government service, in journalism and in academic pursuits. Our campus role is but one of several. Cooperation with the Naval War College at Newport has helped in the advanced training of officers at that institution. The place of the Center in the local community is of particular, yet often overlooked, significance. Center faculty frequently are invited to lecture at neighboring educational institutions, both public and private. State and church-

supported campuses in the area have all been served. Faculty members and qualified students from a variety of local institutions are provided with consultation and the use of the library at the Center. Curricular planning is an area in which the Center has been notably helpful to outside colleagues. For example, the secondary educational system in Warwick, Rhode Island will soon inaugurate a program in non-Western studies based in substantial measure upon recommendations from the Center at Brown. Many of the teachers in the high schools in the state have done course work under Center faculty. It is hoped that we can be of service to the Oceanographic Institute at the University of Rhode Island where there will be established an international center, largely for students and specialists from abroad, to aid developing countries to utilize food and other resources from the sea. Supporting letters endorsing these points are now being submitted to the Sub-committee by educators and others in Rhode Island.

The example of Brown is a small one indeed. It is not difficult to realize the impact of language and area programs across the country. Limited backing by the federal government has permitted the achievement of something far too rare in American education --- excellence. Yet, success has not been won in isolation from practicality and national needs. As the peoples of the non-Western world grow in numbers and in power, as they certainly will, the United States will increasingly rely on the services of the pool of manpower and knowledge that has been created. We must hope that our resources will be adequate for the great tasks we are sure to have to undertake.

5

BROWN UNIVERSITY Providence, Rhode Island • 02912

EAST ASIA LANGUAGE
AND
AREA CENTER

April 26, 1971

The Honorable Clairborne Pell
Room 325
Old Senate Office Building
Washington, D. C.

Dear Senator:

Permit me to thank you again for receiving me in your office and accepting my testimony to your subcommittee last week. I am particularly grateful in view of the heavy pressures on your time at this point.

You transmitted to those of us who testified last week five questions which had not been adequately covered in our presentation. Professors Spector and Morehouse are better qualified than I to handle some of the questions, so I shall deal here only with two broad topics.

The matter of categorical aid is one on which I have rather strong feelings. The high cost of programs such as those maintained by language and area centers, when calculated in terms of budgetary investment per student, make international education quite unattractive to university administrators faced with the problems of the revenue-expenditure squeeze and the claims of a multiplicity of contending programs within a university. If categorical aid to the language and area centers were abandoned, it is most unlikely that programs in international education could count on adequate support for their continuance from general university resources.

I recognize that categorical aid is cumbersome to administer from Washington, but I see no attractive alternative. Possibly a plan for the awarding of support equal to the full costs involved per individual student

in language and area centers merits study. There would, however, under such a program be the danger that programs at various universities would be driven to engage in an unseemly contest for popularity.

The second question to consider here relates to the feasibility of achieving our goals in international education through the development of a single, giant institute comparable to that in the Soviet Union in place of many language and area centers. It is certainly hard to dispute the idea that economies would be realized through centralization. It would be equally difficult to convince me that the purposes for which the present one hundred or so centers in the country exist could be effectively served if we were all to be combined in a megacenter, The traditions and the needs of American education oblige us to be diversified in academic approach and wide-spread geographically. This is simply a function of our fundamental commitment to democracy in education.

Furthermore, we do not in the United States have the means whereby students can be authoritatively directed to enter a central institution. Such national control, except for the patterns long established by the service academies, would be alien in our environment. Perhaps decentralization is another of the expensive systems to be maintained for the sake of democratic growth and survival.

Please call upon me should you wish any elaboration of the points made here or further discussion of other questions relating to international education. With renewed thanks for your kindness of last week and with best wishes to Mrs. Pell and you, I am,

Sincerely,

Lea E. Williams

ROBERT J. SHAPIRO
SUPERVISOR OF SOCIAL STUDIES

April 20,1971

Senator Claiborne Pell
United States Senate
Senate Office Building
Washington,D.C.

Dear Senator Pell:

This letter is in support of the program and consulting services offered to the Warwick public schools by the East Asian Language and Area Center at Brown University.

Under the very capable leadership of Professor Lea E. Williams the center has provided the schools eith lectures and seminars led by outstanding scholars during the past two years. This year our Asian lecturers included Mr. Loren Fessler (China) and Dr. F. Roy Lockheimer (Japan). Hish school students have appreciatied the opportunity to listen to and speak with these scholars.

In addition, the center provides free of charge curriculum consulting services for a new series of independent study programs that will be offered in Warwick during the September,1971, semester. Professor Williams has also extended invitations to the Warwick teachers for monthly colloquiums in Asian studies in order to enhance their backgrounds.

The Warwick public school system is indebted to the East Asian Language and Area Center at Brown University for the services offered to secondary students and teachers.

I would appreciate your incorporating this statement into the Congressional Record.

Thank-you.

Yours truly,

Robert J. Shapiro

The Honorable Claiborne Pell
Chairman
Special Education Sub-Committee
of the Senate Committee on
Labor and Public Welfare
United States Senate
Washington, D. C.

Dear Senator Pell:

Last year I have written to you a letter in support on the future of the language and area centers.

Being aware of the fact that your Committee is again about to conduct hearings on the future of the language and area centers, I would like to submit some remarks on the subject in general, and on the importance of one of such centers at Brown University, in particular. I would like also to request you that the remarks made by me herein be read into the minutes of your Committee and in any Congressional sources which you deem proper for the inclusion of these remarks.

For a Senator whose record and service clearly indicate his concern for and a knowledgeability of the requirements for foreign policy planning, and the concomitant educational background necessary to train personnel for policy decision-making process, an attempt to explain excessively the value, the importance, and, indeed, the necessity for the training of an expert personnel for policy decision-making process mechanism, is surely not necessary.

It should suffice to state briefly, however, that the Brown University East Asia Language and Area Center, under the directorship of Professor Lea E. Williams, indicates an institutional studies dimension of liberal education.

Most meaningful training and research in non-Western area studies in the United States are conducted at foreign area

study centers. While the undergraduate "area programs" have tended to be limited to the large universities which have the necessary resources, there is a growing interest at Providence College in following the strength.

The Department of Political Science at Providence College was able to add a few survey courses in area studies, however, any development of the in-depth, specialized courses, offered by the Center at Brown University is simply financially prohibitive for us.

Now, the East Asia Language and Area Center at Brown University has supplied in the past and continues to supply invaluable services to Providence College, in general, and to the Department of Political Science, in particular.

These services range from the easy accessibility of the Center's library sources to our staff and our students, to the direct participation by Providence College students in course offering at the Center. The staff of the Center, moreover, is always available for guidance and advise on study and research projects, undertaken by the Providence College staff and by the Providence College students. Colloquia conducted by outstanding scholars in the Asian area, offered by the Center, are always open to both the staff and the students of Providence College, and few members on the staff of the Center deliver lectures at Providence College. What is most important to point out, however, is the fact that all the above services have been offered by the Center at Brown University without any cost to Providence College.

I have no knowledge of the extent similar Centers across the country share their facilities with small sister institutions. As far, however, as the Department of Political Science in Providence College is concerned, I would like to impress upon you and your Committee the fact that the existence of the Center at Brown University is indispensable to furthering education of young men interested in Asian area at Providence College.

In brief, the manifold services of the East Asian Language and Area Center at Brown University opened to the staff and the students in the Political Science Department

at Providence College, provide facilities which otherwise would not be available to Providence College. Measured in terms of sustaining the educational and intellectual interests among both the students and faculty at Providence College, the continuing existence and support of the Center at Brown is truly indispensable to us.

Sincerely yours,

Zygmunt J. Friedemann
Professor & Chairman
Dept. of Political Science

ZJF/gp

STRENGTHENING THE INTERNATIONAL DIMENSIONS OF AMERICAN HIGHER EDUCATION

Testimony of Ward Morehouse, Director, Center for International Programs and and Comparative Studies, State Education Department, University of the State of New York, and President, National Council of Associations for International Studies, before the Special Subcommittee on Education of the Senate Committee on Labor and Public Welfare, Thursday, April 22, 1971.

My name is Ward Morehouse. I am the Director of the Center for International Programs and Comparative Studies of the New York State Education Department. I also appear before you on behalf of the National Council of Associations for International Studies, an organization composed of a dozen regional associations of colleges representing over 400 institutions from Vermont to Hawaii. The views I am expressing to you today reflect as well the concerns, needs, and objectives of the State University of New York.

Mr. Chairman, I appreciate very much this opportunity to come before you to offer testimony in support of legislation which will strengthen the international dimensions of American higher education. I should like first to comment on important aspects of international education which I believe should be reflected in the higher education legislation now under consideration by this Committee. These comments will be followed by some observations on changing environment for public policy toward international education in the United States. My comments rest on the assumption , for which I believe, there is persuasive evidence, that American society in the decades ahead will become more, not less, interdependent with the rest of the world.

The principal legislative authority now being used by the federal government to support the strengthening of international dimensions of American higher education is Title VI of the National Defense Education Act, which provides support to colleges and universities in programs of training in critical languages and related area studies deemed to be important to our national security. This legislative authority has

been in existence in substantially the same form for over a decade and has made vital contributions to enlarging our national capability for dealing more effectively with the rest of the world.

The need for such a national capability continues, and in my judgment will increase in the coming decades, but the character of the capability required is changing. Programs designed to enhance this capability must also change. This has been wisely recognized by the present Administration in the plans which it is developing for the coming fiscal year. I quote from the justification statement submitted by the Office of Education in support of fiscal year 1972 appropriations for NDEA Title VI:

> Despite the limitations of funding constraints, some important program innovations are included within the level proposed. Six new graduate programs are planned at an average cost of $40,000 for a total of $240,000. These graduate programs of excellence will focus on such new and critical areas as contemporary Europe, Eastwest relations, international trade and business, and comparative urban and environmental problems. Ten new undergraduate programs are envisaged at an average cost of $30,000 for a total of $300,000. These innovative undergraduate programs will demonstrate new approaches to undergraduate education in world affairs and international studies, with particular attention to teacher education.

-2-

Congress also recognizes the need for change. The higher education bill introduced by Senator Pell and others (S.6591) proposes, after a year's extension of existing NDEA Title VI, a new title designed to aid graduate programs in different fields, including international studies. Senator Javits' bill to consolidate and extend a number of existing but thus far unfunded higher education programs (S.1073) also would make possible important changes and improvements in federal government support of international studies in American higher education if the International Education Act, which is included in his bill, were to be funded. I will not address myself to the specifics of either these bills or the Administration bill (S.1123), which provides for a two-year extension of NDEA Title VI and which would also make possible, in light of the passage quoted from the Office of Education justification statement for the fiscal 1972 NDEA Title VI appropriation, some changes in program emphasis. More significant in my view than the specific details of these alternative pieces of legislation, all of which have merits, are the emphases which should be given in the future to federal programs related to this important but still very much neglected aspect of American higher education. I should like to mention three emphases which I believe should be reflected in legislation emerging from this Committee.

The first is the need for recognition of the importance of <u>undergraduate</u> programs in international studies. Undergraduate programs are vital in providing an essential foundation for more advanced studies which will help to enhance our national capability for dealing with the rest of the world. Past experience suggests, furthermore, that undergraduate institutions often show greater ability to bring about important changes in academic programs which reflect the changing environment in which international studies are being undertaken. Beyond that, undergraduate programs provide an absolutely vital dimension to our total national effort in this field by enlarging the base of enlightened citizen understanding of the relationship

of our society to the rest of the world. There are many more citizens who have only an undergraduate degree than are trained to the Ph.D level. Without such understanding and consequent support of constructive public policies reflecting this interdependence, I believe that many of the qualities of American life which we most cherish will be increasingly difficult to maintain in the coming decades with a rapidly growing human population, increasing disparities in wealth throughout the world, and growing impact of human civilization on our natural environment.

The second concerns the need for strengthening programs at both the undergraduate and graduate level which deal with critical problems confronting human society in the second half of the twentieth century. Population, food, peace and the quality of the environment are all global concerns which vitally affect the future of American society. We need to strengthen our capacity as a nation for dealing with these and other critical problems in the decades ahead.

It is important to emphasize in this connection, Mr. Chairman, that the basic purpose toward which NDEA Title VI has been directed continues to represent an important and vital national need served by our institutions of higher education, and the emphases which I have suggested do not imply any diminished significance to our continuing requirements for highly trained professional manpower with knowledge of critical languages and areas of the world. The far greater expense of training such manpower, furthermore, continues to justify, in my judgment, a federal contribution to programs in our colleges and universities which train this manpower.

The third point which I wish to emphasize and which I believe should increasingly be reflected in federal programs to strengthen international studies in American higher education is inter-institutional cooperation. At a time when all of our colleges and universities are experiencing grave financial difficulties, efforts to share scarce resources, thereby enabling groups of institutions to provide opportunities for their faculty and students which they would not be able to do singly, merit fullest possible support. The National Council of Associations for International Studies, of which I am currently serving as President, reflects at the national level the principle of cooperation and sharing scarce resources which has gathered increasing momentum as a means of strengthening the international dimensions of higher education at the regional level. This important approach to strengthening international dimensions of our institutions of higher education should be given increasing emphasis in the years immediately ahead.

This leads me to a consideration of the changing environment for public policy toward international education in the 1970's. The political, economic, and social enviroment for international education has been changing in recent years and appears likely to continue to change along certain basic lines. Here are some factors in this changing enviroment:

1. The United States relationship with the rest of the world in the 1970's and beyond appears likely to be characterized by continuing political and military disengagement, growing recognition of a relative decline in our national power, at least militarily, and growing economic

interdependence. To manage our relationships in this enviroment will require more advanced skills and more general understanding of the position of American society in its global contextthroughout our society.

2. The gap between the advantaged and disadvantaged which has generated such social tension in American society in recent years, will grow at an accelerating rate over the next thirty years on a world scale. By the year 2000, the gap in per capita income between the United States and India will have almost doubled, even though India will experience a more rapid growth rate than the United States. By the end of the century, America, along with Europe and Japan, will consititute golden ghettoes in a worldwide slum of grinding proverty. As we have been pondering the educational implications of social tensions generated by a similar gap in our own society in the past few years, we surely need to consider what the educational consequences will be for a similar gap, much wider and on a much broader scale, in the future.

3. In the next thirty years (which is the operative time frame for educating today's students), the population of the world will double. Never before in human history has the world experienced population growth of such absolute magnitude. Most of this increase will occur in the poor countries of the Third World so that by the end of this century, four out of five human beings will live in Asia, Africa, and Latin America, areas of the world about which we now study least in, our schools and colleges.

4. The most urgent problems facing U.S. society in 1971--urban growth and decay, enviromental pollution, the place of cultural and racial minoirties in our social system-- all have a worldwide context and are being experienced by other societies as well as our own. Some will certainly depend for their solution on action which transcends national boundaries; enviromental pollution is/an obvious illustration. We have much to learn from others who have been struggling with the same kinds of problems. And we have much to gain from exploring together with others ways and means of dealing with these problems.

There remains, Mr. Chairman, the critically important question which/is implicit in the issues which I have been discussing--namely, the relationship of "categorical" and "non-categorical" aid to our colleges and universities by the federal government. In my opinion, the two are not mutually exclusive but go hand in hand. I believe, furthermore, that this position has been reflected in a variety of ways by the Congress and recent administrations, including the present one.

Formal education at whatever level is supported by society because it serves goals and purposes which society recognizes as important. A recent case in point is the Environmental Education Act, which reflects the concern of both the present Administration and the Congress, as well as the American people, with the deteriorating quality of our enviroment and the need to educate future generations of Americans about the importance of protecting that environment. Categorical programs of support to education like the Environmental Education Act and the legislation to strengthen international aspects of American education will always be needed in order that society may give support to aspects of formal education which serve critically important goals of society. At the same time it is also clear that our institutions

of higher education, whether publicly or privately controlled, require increasing public support, whether at the state or national level, of a non-categorical character. The two forms of aid should be regarded as complementary and mutually reinforcing.

We need to recognize, furthermore, that the categorical characteristics of federal programs in many different fields exist at different levels. To the proponents of general revenue-sharing with the states, even programs which seek to aid education "non-categorically" are "categorical" in character. The same observation can be made with respect to federal programs of "non-categorical" assistance to higher education or to elementary and secondary education, which again reflect a "categorical" determination by the federal government of priorities to be attached to different levels of formal education in our society.

I submit, Mr. Chairman, that the critical issue is not whether a particular program is "categorical" or "non-categorical", for this is a relative proposition. Rather it is whether or not the program serves a vital need of society. The matter was succinctly expressed by Daniel P. Moynihan, former Counsellor to the President, in his letter of April 27, 1970, to President Nathan Pusey of Harvard, in which, writing on behalf of the President and indicating that the present Administration was reversing itself and would continue to support NDEA Title VI, he stated:

> It would be difficult to find an area in which pursuit of disinterested scholarship was more directly a matter of national interest than here.

There is substantial evidence that the international dimensions of American higher education are indeed related to and serve vital needs of our society. The education policy-making body in New York State--the Board of Regents of the State of New York--has stated, in a 1970 policy paper on international education, that:

> It is necessary that the citizen of tomorrow be informed about the parts of the world beyond the borders of his own country because what happens in those countries is bound to affect him and his country. Further, societies and traditions other than our own are worthy of our attention in their own right because of the quality and richness of human experience which they

> represent. But, by all odds, the single most important educational reason for studying other societies is that it helps us to understand better our own.
>
> The Regents believe that increased emphasis should be placed on the international dimensions of education....The educational objectives involved are critical ones: to prepare men to take their place in a world where isolation no longer exists.

The Center for International Programs and Comparative Studies for which I am responsible was created by the Board of Regents in recognition of this need. The Center seeks to strengthen opportunities and resources for teachers and students in our schools, colleges, and universities to understand the modern world in all of its diversity and complexity. In this effort, we cooperate actively with state and national education agencies and institutions in other parts of the country and abroad.

The federal government has also recognized the importance of these concerns to American education. The Congress of the United States has declared it to be the policy of the United States Government that:

> ...a knowledge of other countries is of the utmost importance in promoting mutual understanding and cooperation between nations; that strong American educational resources are a necessary base for strengthening our relations with other countries; that this and future generations of Americans should be assured ample opportunity to develop to the fullest extent possible their intellectual capacities in all areas of knowledge pertaining to other countries, peoples, and cultures...

The need for greater knowledge and understanding of the world beyond our national boundaries was one of the sobering experiences of the Second World War, and all Presidents since then, regardless of party, have emphasized on more than one occasion the vital importance of enlarging our capacity to know and to understand other peoples and nations with which we live on this often troubled planet. In 1966, for example, President Johnson stated that:

> We would be shortsighted to confine our vision to this nation's shorelines. The same rewards we count at home will flow from sharing in a worldwide effort to rid mankind of the slavery of ignorance and the scourge of disease. We bear a special role in this liberating mission. Our resources will be wasted in defending freedom's frontiers if we neglect the spirit that makes men want

> to be free... The search continues-more urgent today than ever before in man's history.

Earlier this year, President Nixon, in his "State of the World" message, observed that:

> Around the globe, East and West, the rigid bipolar world of the 1940's and 1950's has given way to the fluidity of a new era of multilateral diplomacy. Fifty-one nations joined the United Nations at its founding in 1945; today 127 are members. It is an increasingly heterogeneous and complex world, and the dangers of local conflict are magnified. But so, too, are the opportunities for creative diplomacy.
>
> Increasingly we see new issues that transcend geographic and ideological borders and confront the world community of nations. Many flow from the nature of modern technology. They reflect a shrinking globe and expanding interdependence. They include the challenges of exploring new frontiers of space and sea and the dangers of polluting the planet. These global issues call for a new dimension of international cooperation.

Mr. Chairman, I hope that this Committee will shape, from the bills now before it, legislation which will reflect the need to strengthen aspects of international studies of American higher education which have been discussed in this statement.

Thank you.

Dear Senator Pell:

It is my understanding that the portion of the Appropriation Bill which would support the foreign language fellowships of Title VI of the National Defense Education Act is now being considered by your Committee. I should like to urge strongly that you seriously consider an increased appropriation for these fellowships over the amount available last year. These fellowships form the very backbone of the nation's program for developing some knowledge of those little studied foreign languages such as Chinese, Japanese, Arabic, and others which are so vital to our national defense and welfare. With the support of other NDEA funds and these scholarships, a number of major centers for the study of these slightly known languages have been developed, including a fine one at The University of Arizona. Because of the unusual time required to master some of these exotic languages and the culture associated with them, students seldom undertake their study unless they can look forward to the type of financial assistance which these fellowships have provided. The decrease in funding which has taken place over the last year or so has seriously handicapped this program. If strong support is not continued, we shall very likely find ourselves soon in the position we occupied during and immediately following World War II when it was impossible to find within the United States a suitable number of people conversant with the languages of the Orient and the Middle East and the cultures associated with them. It takes a great deal of time to build up an effective educational system which can provide adequate training in this field. If this system is allowed to wither and decline because of lack of support of competent students, this important national resource will disappear once more. When we need it in an emergency, it will not only be gone but it will take years to build up again.

For the reasons outlined above, I urge strong financial support of the foreign language fellowship program identified with Title VI of the National Defense Education Act.

Sincerely yours,

Herbert D. Rhodes
Dean

Dear Senator Pell:

It is my understanding that the appropriation to support the Fellowships under NDEA Title VI is now being considered by your Committee, and I would like to support very strongly an increased appropriation for these Fellowships over the amount made available last year. These Fellowships are in effect the backbone of the Nation's program for developing the knowledge of those little studied foreign languages such as Chinese, Japanese, Arabic, etc., which are vital to our national defense and welfare. With the support of other NDEA funds and these scholarships, a number of major centers for the study of these little known languages of vital importance have been developed, but because of the time required to master one of these languages, and the culture associated with it, students will seldom undertake their study unless they can look forward to the type of support which these Fellowships have provided. The decrease of funds made available for these Fellowships during the past year has seriously handicapped the program, and, if strong support is not continued, the turning out of American students effectively trained in the language and civilization of these countries, about which it is so important for us to know, will rapidly wither and decline to a trickle wholly inadequate to our national needs.

It is for this reason that I write you and urge the strong financial support of the NDEA Title VI program.

Yours sincerely,

John P. Schaefer
Dean, College of Liberal Arts
President-designate, University of Arizona

JPS:hs

BUCKNELL UNIVERSITY
Lewisburg, Pennsylvania 17837

OFFICE OF THE PRESIDENT

April 29, 1971

Dear Senator Pell:

I wish to register with you my conviction that the NDEA Language and Area Centers are serving an estimable purpose, have great potential for further contribution to the nation's welfare, and deserve both continuation and augmentation of federal support. Other presidents of higher education institutions where such centers have been established are, I am sure, equally convinced of the worth of the NDEA Title VI programs.

Bucknell's Center for Japanese Studies, which was established in 1965, has contributed immeasurably to the whole educational atmosphere at our University, stimulating interest in world affairs throughout the campus and among all students, in addition to the extraordinarily fine experience provided for those students directly enrolled in the courses and programs.

As one of the undergraduate centers, the Bucknell center has sought and continues to seek to provide the inseparable links which bridge our total educational structure between the secondary school world cultures and the graduate NDEA centers. The undergraduate centers in their brief existence have done the following, among other things: (1) They reach the college undergraduates at the relatively early stage, and train future lawyers, architects, engineers, doctors, ecologists, or businessmen, who may not otherwise be exposed to a culture distinct from their own. The new perspectives they gain from exposure to other cultures can enrich their lives when they commence work in their chosen professions. (2) By the adoption of their "area" approach, the undergraduate centers have enriched the curricula of other academic departments in their own institutions. In our continuous quest to attain a synthesis of man's relation to his total environment, these centers, often in cooperation with each other,

and along with the graduate centers, have made a good beginning in relating to such fields as ecology, ethno-musicology, archaeology, art history, and architecture. (3) The undergraduate centers have contributed a significant number of Peace Corps volunteers, foreign service officers, and employees of other governmental agencies. (4) These centers also provide the training ground for future area specialists who will enter graduate schools, identifying them early in their careers, and equipping them with the necessary tools, namely the languages. (5) And last but not least, the undergraduate centers are the most significant sources of teachers of world cultures in the secondary schools. They also often cooperate closely with State Departments of Education and with school boards in the training of in-service teachers, and in establishing challenging world cultures and language programs for secondary schools.

On the last point, I wish to provide an example. In the spring of 1970, our Center introduced a Japanese language program in the local Senior and Junior High Schools. It has enrolled their best students, and has proved to be so successful that it will become part of the Senior High School's regular curriculum next year.

However, recently, to our dismay, we discovered that the Title VI fund could not be used to support the high school language program which we initiated.

We believe that Title VI of the National Defense Education Act was an extraordinarily creative and farsighted piece of legislation and that it is producing what the Congress intended. However, the country's needs have grown even faster than the productivity of the program. May we therefore recommend not only the continuation of Title VI, but also its extension to create more undergraduate programs, programs concerned with teacher training, and in general, the diffusion of international non-Western studies at all levels of education.

Yours very truly,

Charles H. Watts

May 21, 1971

Honorable Clairborne Pell, Chairman
Senate Education Subcommittee
The United States Senate
Washington, D. C. 20515

Dear Senator Pell:

We have recently learned that Congress has cut back funds available for National Defense Student Loans, College Work-Study Programs and E.O.G. grants. The cut back has hit Humboldt State College particularly hard.

This action is most distressing. Federal funding in recent years, has opened avenues for education and subsequent employment to large segments of society that had never before enjoyed a realistic opportunity for higher education. And it is clear that the Federal Government is the only possible source of fund's sufficient to create more than token educational opportunities. Federal funds have been particularly important in making educational goals of members of ethnic minorities achieveable. Historically, there have been very few Indians in higher education. Only in the last few years, as a result of federal resources, have a number of Indian students been admitted to institutions of higher learning.

Increased educational opportunities have played an essential part in the new Indian movement towards self-reliance and independence from governmental paternalism. A reduction in federal funding of educational programs will have substantial adverse effects upon the Indian people as a whole.

This effect will be felt more strongly at Humboldt State College than anywhere else in California. Humboldt State College currently enrolls seventy-five (75) Indian students and is developing a program that will increase the number of Indian enrollees. A reduction in federal funds

places the education of Indian students presently attending college in jeopardy and reduces the possibility of developing new programs that could provide increased opportunities for future students.

We urge reconsideration of your funding cutbacks. Work-study and E.O.G. grants are of particular importance to students from an impoverished background.

Sincerely,

Lawrence O. Eitzen

BERKELEY, CALIFORNIA 94720

April 29, 1971

The Honorable Claiborne Pell
325 Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

As Director of the East European Language and Area Center at the University of California (Berkeley), I am writing to urge your support for the President's recommendation that the NDEA Title VI programs be renewed for 1972-73.

Rather than deal in generalities, I will try to point out to you what I consider the specific values of the program of our Center and its importance to this country.

1. In our center, Federal funds under Title VI of the NDEA are now being used exclusively for the partial support of area and language programs concerned with East European countries outside the USSR, specifically, Poland, Czechoslovakia, Yugoslavia, and Hungary. We are training young Americans to read, write, speak, and comprehend orally the languages of these countries and to know something about their history, culture, and political and economic life. Our graduates go on to utilize these skills and knowledge in a variety of ways from which our country derives benefit--in government service, both military and civilian, in private business, and in education. They form a growing reservoir of knowledge and talent, continually adding to our understanding of that part of the world, and available to the government on a more intensive basis if the need should arise. Furthermore, many of them spend time in those countries and help to spread a positive image there of American concern and interest in them.

I hardly need argue the crucial importance of Eastern Europe in the world today--political, economic, strategic. The United States cannot afford ignorance of this area. It was long neglected by American educational institutions; but in the last decade or so, with NDEA support, great strides have been made in overcoming this neglect. Russian studies in particular are now well established as

part of the regular curriculum at most major universities and colleges. Studies in the rest of Eastern Europe, however, are much less firmly based, and for them continued Federal support is crucial.

2. As you know, drastic cuts in the NDEA program were made by the last Congress. Our Center budget for 1971-72 as submitted to the Office of Education had to be reduced to 70% of the budget for 1970-71; student fellowships were drastically curtailed.

These cuts hit us at a time of fiscal crisis in the state and of severe budgetary crisis in the University. There is no hope that the Federal cuts can be made good by the state. They mean, simply, curtailment or abandonment of our programs. Specifically, we have had to reduce our instructional staff (and thus the quality of our program) in Hungarian, Czech, and Polish. We can no longer train our students as well as we did; our graduates will be less qualified than they were. This, I submit, is a loss to the country--a loss we can ill afford.

We are pleased that the President evidently agrees with this position and recommends renewal of the Title VI language and area programs and the restoration to their previous level. I hope very much that you and the distinguished members of your committee will accept this recommendation,

Respectfully yours,

Hugh McLean

Dear Senator Pell:

It has come to my attention that the bill to renew Title VI of the National Defense Education Act is in jeopardy, because congressional leaders are disappointed by what they think is a lack of interest, on the part of the academic community, in the bill and the programs that fall under it.

This is to indicate to you, in the strongest possible terms, that the Berkeley campus, like, I assume, all other campuses concerned with the study of Near Eastern, South Asian, and East European languages, is vitally interested in the renewal of Title VI of the National Defense Education Act. Especially during the present period of budgetary retrenching in the universities, the cutting off of the funds supporting these critical languages would be disastrous educationally, politically, and culturally. It so happens that at Berkeley the departments and research units looking after the languages and areas in question are among the most distinguished. Without sacrificing academic quality, they have managed to train students who will make an increasingly important contribution in the real world of political co-existence and cooperation. I respectfully urge that your Committee recommend adequate support, so that they be allowed to continue to do so.

Sincerely,

W. D. Knight

Chancellor Roger Heyns
Professor Hugh McLean

April 30, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I am a professor of political science and a specialist on Middle Eastern and North African politics at the University of California, Los Angeles. I have reached this position only because of the National Defense Foreign Language Title VI Fellowships (in Arabic) I have held in the past. Therefore I write from the vantage point of personal experience when I urge full funding for this program.

This program has had an immense impact upon higher education and scholarship in the United States and has resulted in this nation's absolute preeminence in specialized area studies. This is important and relevant for your consideration but there is an even more important relevancy, namely the impact of this program upon public policy. Already I know Foreign Service Officers who are now only just beginning to get into influential positions in North African and Middle Eastern embassies. These far exceed their predecessors in linguistic skills and comprehension of area issues. If this program had started half a decade earlier, the ignorant talking to the ignorant aspects of debate over Vietnam policy and probably the policy itself would be different. This kind of program is in the nature of a long term investment in American foreign policy expertise, cutting it short at this point can only have great negative consequences for future U.S. policy in all areas of the world.

Sincerely,

Louis J. Cantori
Assistant Professor
of Political Science

Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I understand that the extension of NDEA Title VI is now under consideration by your committee. The support received under this Act has been vital to the effectiveness of this Institute, which is a major national center for the graduate training of American specialists on East Asia, providing over the past years highly needed government officials, journalists, businessmen and university teachers for service throughout the United States and abroad.

I hope you will give the extension your fullest support.

Thank you very much.

Sincerely yours,

James W. Morley

INSTITUTE OF AFRICAN STUDIES 622 West 113th Street

April 29, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

As Director of the Institute of African Studies, Columbia University, I write to urge that your subcommittee reconsider the proposed reduction for the fiscal year 1972 in the appropriation under Title VI of the National Defense Education Act.

Support for the study of African languages has been afforded under the Act to language and area centers over the past several years. Prior to the establishment of these centers, virtually no teaching in the indigenous languages of Africa had been possible in American universities. Since their inception, however, both graduate and undergraduate instruction have developed on a serious basis at a number of major universities, particularly in the two most commonly spoken African languages, Swahili (for East Africa) and Hausa (for West Africa). Students from all parts of the United States have been able to attend the NDEA centers with the help of National Defense Foreign Language Fellowships. In consequence, a foundation for language and area teaching has been laid which can now be built up to provide teachers at the college level and elsewhere .

Those of us who have been engaged in setting up language and area courses are aware that the network of NDEA area centers, while not perfect in operation, has played a vital part in affording opportunity to engage in teaching programs which would otherwise not have been possible. The universities have themselves contributed substantially in excess of the Federal government contribution in each of the centers.

Abrupt termination of the present program in language teaching would not only have the effect of dismantling the language staff assembled in many centers at considerable effort and expense, but would substantially interrupt the training of students already in the program. The universities would, of course, to the best of their ability seek to retain as

many of these courses as possible but the pressure currently on university budgets from all sides would make any full continuation highly unlikely.

For the African field in particular there has been a sudden rise in interest in Swahili and Hausa as part of the search for cultural identity on the part of students from the American Black Community. Demand for teachers of Swahili has extended not only to colleges and junior colleges (especially in Black Studies Programs) but to the secondary schools as well. The NDEA Language and Areas Centers have acted as a reservoir for the production of Swahili teachers for all of these levels of education, as the experience of the Institute of African studies which I direct at Columbia can amply testify.

A review of Area Studies Programs, with a view toward evaluating in detail their accomplishments over the past few years and toward making recommendations for greater effectiveness and economy of operation is now being undertaken by Professor Richard Lambert of the University of Pennsylvania. It would be most unfortunate if the appropriation for the centers were drastically reduced before the results of this survey and recommendations for the rationalization of all language centers could be planned for.

Sincerely,

Graham W. Irwin

DEPARTMENT OF EAST ASIAN
LANGUAGES AND CULTURES

Kent Hall

May 5, 1971

Senator Claiborne Pell
Old Senate Office Building Room 325
Washington, D.C. 20510

Dear Senator Pell,

Last year as President of the Association for Asian Studies and as spokesman for the Area Studies Associations, I wrote to you concerning the importance of extending NDEA Title VI. Whether under this name or title, or under some other, it is vital to the national interest that the basic language and area programs be continued so that the full benefit may be gained from our investment in this area.

Competence in difficult Asian languages can only be developed by long and sustained study. This involves intensive and expensive training, which private universities in severe financial difficulties can only provide if their own contribution is strongly supplemented by government support. In Chinese, Japanese and Korean real competence can be gained only in six, seven or eight years. A long-term, vigorously sustained effort is required if capable young persons are to commit themselves, at a crucial period in their learning years, to this demanding profession. Above all we must not leave stranded students who have already invested several crucial years to such programs. A break of even a year or two causes a rapid loss of proficiency.

If you are holding hearings on the renewal or reformulation of NDEA Title Six programs, I should be glad to testify, and to bring with me student spokesmen who would represent an eloquent testimonial to the quality and calibre of young people at work in this field.

I am afraid that, in the midst of all too visible and audible student demonstrations, people may fail to appreciate the young Americans in the title VI programs whose constructive efforts sharply contrast with the mindless and anarchic activities so publicized in the newspapers.

Sincerely yours,

DUKE UNIVERSITY
DURHAM, NORTH CAROLINA 27706

April 29, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington D.C. 20510

Dear Senator Pell:

I am writing on behalf of the NDEA Center for South Asia at Duke University, but I know I am also expressing the views of those concerned with other areas of the world. I do not think that any other program has contributed so much to American understanding and expertise in regard to Asia as NDEA Title VI. To speak of our own situation, our own center is the only one of its kind between Washington, D.C. and Texas. Our graduates have filled teaching positions in many states, but particularly in the colleges of the South. Training in Asian languages is a long and expensive process, and given today's cost of higher education, quite prohibitive without fellowships. A program like ours - which is typical of NDEA Centers throughout the country - supplies not only teachers but provides a source for spreading information and understanding. I might mention that one recent concern of Asian scholars has been to introduce more Asian content in elementary and secondary education. We have met with an enthusiastic response from teachers and school boards. Our NDEA Centers are resources for business, government and the publishing world as well as education. The U.S. through NDEA Title VI has been able to build up specialized knowledge on Asia unmatched in any other country of the world, but this talent has to be continually fostered; we cannot assume that the task has been completed.

Your own interests in the welfare of higher education are so well-known that those of us who are involved on a local level trust that you will guard with jealousy a concern so important for the nation.

Sincerely yours,

Ainslie Embree

Ainslie T. Embree
Professor of History and
Chairman, South Asia Program

CORNELL UNIVERSITY
SOUTHEAST ASIA PROGRAM
108 Franklin Hall
ITHACA, NEW YORK 14850

Code (607)
256-2378

28 April 1971

The Honorable
Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

The Southeast Asia Program at Cornell University is completing its second decade of growth and development. Today there are over four hundred former graduate students of the Program engaged in government service, university teaching, international service, and other activities, using their specialized language and area skills in the United States and abroad. Currently there are some one hundred graduate students receiving Southeast Asia area and language training at Cornell, or overseas in Southeast Asia for research purposes, or writing their dissertations.

Critically important funding for development of Southeast Asian studies at Cornell has been provided by Title VI of the National Defense Education Act under Office of Education programs which support language and area teaching activities and fund graduate student fellowships. Title VI funds available to the Southeast Asia Language and Area Center have enabled Cornell to (a) provide a range and depth of training in the languages of Southeast Asia unmatched by any other American university and (b) to build up a unique collection of library and reference materials to support teaching and research on Southeast Asia. These functions on which Southeast Asian studies must be built, are continuing responsibilities of the Southeast Asia Language and Area Center and the Southeast Asia Program at Cornell University. Title VI funds spell the difference between the high level of accomplishment which over two decades has made Southeast Asian studies at Cornell outstanding in the United States and possibly in the world and the sharply reduced level of these activities we can fund if our support is limited to that available from the university and private foundations.

I write to urge you to support extension of NDEA Title VI which is now under consideration by the Senate Subcommittee on Education. Withdrawal of support for Title VI will have

debilitating consequences for Southeast Asian studies in the United States. The dimensions of this nation's future need for such area and language expertise may not be entirely clear, but the need almost certainly will not diminish as we thread our way through a transitional period in American policy toward Southeast Asia.

Sincerely yours,

Frank H. Golay

EARLHAM COLLEGE
RICHMOND, INDIANA 47374

International Programs Office

April 27, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

You will be hearing from our President Landrum Bolling on this important matter, but I thought I should also communicate to you a sense of urgency about the renewal of federal support for international studies which is provided by the Office of Education request for $15.3 million for language and area studies under NDEA Title VI. This is the amount requested in fiscal 1970 which was later cut by the House Appropriations Committee to $8 million. The cuts thus required in Language and Area Center budgets have been very keenly felt around the country, and nowhere more so than here at Earlham College where we have so little access to foundation and government support for international education. We think we have made our modest grants do yeoman service, not only to Earlham College students, but to other students in the area and to the Richmond community where we have frequently made available these services and materials that the Office of Education Center provides.

The small grants we have received have made it possible for Earlham College to provide basic Japanese language instruction for nearly as many students as are serviced by a large university center such as the University of Michigan. Without this support we could not continue.

Additionally, we provide significant personal and material resources for local public schools. Our film library and book collection could not be sustained without this help.

In a day when we need to generate a maximum amount of light rather than heat on the crucial issues of the time, it does seem short-sighted to reduce the funding available for this kind of long-range educational job which is so critically necessary if America is to play a constructive

role in the world of the 1970's. I hope that you will find it appropriate to make strong representations on behalf of this funding. It is vital to the well-being of small colleges that we have continuing modest support for such vital work. If I can help by providing you with any further information, please feel free to call on me.

Sincerely yours,

Jackson H. Bailey

EARLHAM COLLEGE
RICHMOND, INDIANA 47374

THE PRESIDENT

May 9, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

As you and your colleagues wrestle with questions of priorities and budget needs for various aspects of the nation's educational system, I want to impose on your time with this brief but urgent appeal that you give special attention to adequate financing of programs in foreign languages and area studies developed under NDEA Title VI.

This aid in the operation of Language and Area Centers has been of enormous importance in strengthening one of the chronically weak sectors in U. S. higher education. With all the international burdens placed upon American governmental, business and cultural organizations our colleges just must do an expanded and improved job of teaching in the international and intercultural fields.

On the basis of quite modest grants, over the past several years, Earlham College has been able to develop a remarkably significant program of studies related to the language and social life of Japan. We have not only served an appreciable number of our own students but have drawn in regularly students from other institutions in our twelve-college Great Lakes Colleges Association. Indeed, the total impact of this program compares quite favorably with the results of far more expensive programs at the large universities. And the point of this is that we would not have been able to attempt such a program at all had it not been for the NDEA funds.

Accordingly, I appeal to you to use your influence to secure a renewal of the language and area studies program, for which the Office of Education has requested $15.3 million, and to support the restoration of the funds which were cut by the House Appropriations Committee. The long-term results of this program are of major importance.

Sincerely yours,

Landrum R. Bolling

The Honorable Claiborne Pell
United States Senator
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I understand that your committee has under consideration a matter of extension of the Title VI section of the National Defense Education Act. I would like to express to you my conviction about the importance of this program, both for the academic development and the interest of broadening public education so vital for support of our national policies. I think it imperative to maintain the momentum already established under this program. This extremely valuable support must be continued until other forms of assistance have been introduced that can supplant the present program. Any break in the continuity would create a set-back difficult to overcome.

I have expressed my views on this subject in testimony before a House committee and I am enclosing a copy of my statement. I would be very happy to provide any information you might wish or, if that would be useful, testify before your committee on this issue.

Yours sincerely,

Franz Michael

THE
GEORGE
WASHINGTON
UNIVERSITY

Washington, D.C. 20006

Hearing:
Thursday, March 11
House Committee on Appropriations
Sub-Committee on Labor, Health,
Education and Welfare

Mr. Chairman, honorable members of the Committee:

I greatly appreciate the honor of being able to testify before this Committee at the invitation of the Chairman. Let me say that I do not represent one of the larger universities, but rather one of the smaller private institutions, the George Washington University, where I am Director of the Institute for Sino-Soviet Studies and of an NDEA Center. I would like to state at the outset that the NDEA Center program has been, in my view, one of the most important contributions made to education by Congress in the national interest. A comparatively small amount of financial support under the Title VI program has been of far-reaching impact on the American educational scene and on the American ability to deal with its new and inescapable responsibilities. At the end of World War II, when the United States was forced to assume a leading role in the development of a peaceful pluralist world, our educational program in high schools and colleges was little prepared for the task of developing an American citizenry equipped to understand and deal with the complexities of world problems. Today, cultural contact and exchange with the rest of the world is still one of the most essential means of contributing to a peaceful international world in a complex and dangerous period.

The NDEA Title VI program in the past had as its primary task the promotion of language skills to serve as a foundation for understanding of the history, economics, politics, and intellectual-cultural tradition of the nations of the world. Secondarily, the program supported area studies in the aforementioned disciplines. This program has made a decisive impact on the American educational scene, where a need for broader training in the cultures of other countries not only continues to exist but has grown.

To indicate that with all its success, the NDEA Title VI program should be expanded still, let us take the case of Japan. One of the most important problems for the future is, in my opinion, our understanding of Japan and our relationship to that country. Yet there are no more than half a dozen centers in this country which deal in depth with Japanese studies. At present none exists in Washington, D. C. At our own Institute we are currently developing a Japanese studies program which we feel is badly needed in the nation's capital.

There are two aspects of the program I would like to stress. One is the approach to the problem of better understanding of the international scene and American interests. The emphasis of the program in the past has been mainly on the developing of language training. That is as it ought to be. But language alone does not provide the expertise needed to deal with the problems which we encounter on the international scene. The program would be strengthened if it were to become more issues-oriented at each of the Centers.

One main purpose of the Centers is to train a comparatively small group of specialists needed in the academic world and to provide the expertise needed by government and business for contact with other countries. An urgent need exists, however, to broaden our understanding of world problems in the country at large. After all, it is an informed American public which will determine the success or failure of our foreign policy. To me, one of the more important aspects of the program has been its effect in increasing understanding of global problems at every level of American life. Lecturing to freshmen we learn again each year how inadequate high school training has been on those parts of the world that are not our immediate European heritage. Both directly and indirectly, the educational support provided by the NDEA program can have a much larger impact on this area of national education. Let me give but two minor examples: One is the utilization of university teachers from NDEA supported fields of study for lectures to groups of high school teachers under special programs. This has been an experience shared by many of us. The other is the possibility of the use of NDEA faculty as well as students for occasional lecturing in high school classes in their respective fields of geography, history, and culture and civilization of the countries under study.

The second point I would like to make refers to the question of distribution of support under the NDEA program. If the purpose is not only the training of language experts and specialists, but also the broad

influence of the program on the country at large, then this issue appears to be rather crucial. In the past, the program has benefitted the development of special studies at both large institutions and smaller universities. But the emphasis has been heavily weighed in favor of the well-known large institutions and their programs. I believe the effectiveness of the program would be greatly increased if greater attention were paid to the smaller private colleges. Through them, we can reach the public on a broader basis and help to bridge the threatening gap between the prestigious few in the academic world and the public-at-large. I am particularly concerned with smaller private colleges and universities which do not have the vast capital resources of some of the long-established private universities nor the state funds of the state-supported universities. My point is, therefore, that the poorer institutions -- although poverty is relative -- are not only most in need but can also best serve the purposes of broadening public knowledge of world areas and problems.

Many of these smaller universities are in difficult financial straits today, more so, indeed than the larger, well-endowed private institutions. Without outside support they could not continue these specialized programs, which do not draw the large enrollments of students necessary to cover costs from institution fees. And yet, the impact of these programs on the non-academic world throughout the country is more diverse and broader than that of the few well-known large universities. This broader distribution of NDEA support will also provide a greater variety of intellectual input into the program under the principle which was

characterized in ancient Chinese history by the motto "Let the hundred schools of thought contend" (a principle recently so mis-used in Communist China). This conforms with the American principles of diversity and intellectual freedom.

Here in Washington, D. C., with its unique importance nationally and internationally, there can be no state university -- in contrast to most other capitals of the world -- and the continued influence and growth of viable academic life depends on the survival and well-being of the local private universities even more than elsewhere in the United States. Specialized programs of the private universities here have been undertaken with some NDEA support, though the amount was very limited. The importance of developing such language and area studies in Washington needs no explanation, and the decisive role of federal support in this and in other cases of smaller institutions cannot be stressed enough.

Mr. Chairman, your committee is considering the continuation of a program that has been funded in 1970 - 1971 at $15.3 million. The allocation for 1971 - 1972 is $8.0 million. The figure under consideration for the year 1972-73 is $15.3 million. In proportion to the vast amounts needed to protect ourselves in other ways in this uncertain world, this is indeed a very small figure.

I well remember how, after the outbreak of World War II at the Western university where I was in charge of an ASTP program, we had to search the country to find qualified teachers of Japanese, Korean and Chinese languages. Thanks to the foresight of Congress, the foundation

has been laid with NDEA to avoid such unpreparedness for the future. It would be tragic if this program were aborted. The more we as a people become familiar with the world situation and world problems, the better can we follow a constructive policy in handling them. NDEA legislation is a major factor in providing the support without which much of the present work in the field could not continue.

As a student in the field and as a fellow citizen, I would like to express to you my hope that you will find it possible to allot to the NDEA Title VI program at least the proposed amount of $15.3 million or, if it is in your power, to increase this amount by another $5 million or more to broaden the contribution and strengthen the nation-wide program. It will be money well spent to educate our youth in the realization of the interrelationship of the world's problems and the tasks which will confront them as our future leaders.

SCHOOL OF ADVANCED INTERNATIONAL STUDIES
THE JOHNS HOPKINS UNIVERSITY
1740 MASSACHUSETTS AVENUE, N. W. WASHINGTON, D. C. 20036

April 26, 1971

The Honorable
Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I am writing on behalf of the Middle East Center at SAIS to express our deep appreciation for the funding we have received under Title VI of the National Defense Education Act. Federal funding has played an important part in our developing a better understanding of the dynamics of Middle East politics. It goes without saying that in light of the present Middle East crisis the more scholarly work that can be done in this area the better off we all are.

I understand that a renewal of Title VI funding is now before your Sub-Committee on Education. I do hope that you will use all your influence to achieve an extension, and hopefully an expansion of this funding which is so important for our work.

Sincerely,

Michael C. Hudson
Director, Center for Middle
East Studies

SCHOOL OF ADVANCED INTERNATIONAL STUDIES
THE JOHNS HOPKINS UNIVERSITY
1740 MASSACHUSETTS AVENUE, N. W. WASHINGTON, D. C. 20036

FRANCIS O. WILCOX, DEAN

May 4, 1971

Dear Clay:

I write you today to underscore the importance which we at the School of Advanced International Studies attach to an adequate funding of Title 6 of the National Defense Education Act. For a number of years we have had the support of H.E.W. for our Middle East Center. This has been exceedingly helpful to us in developing the kind of graduate program we need here in the nation's capital.

I am sure you will agree that in these days it is highly important for us to continue our work in this vital Middle East field of study. Inasmuch as the matter is before your Subcommittee on Education I do hope you will use your influence to extend and expand this portion of the National Defense Education Act.

With many thanks and with kind personal regards, I am

Cordially yours,

Francis

Francis O. Wilcox

OFFICE OF THE
CHANCELLOR
913-864-3131

May 4, 1971

The Hon. Claiborne Pell
Room #325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

The University of Kansas, some fifteen years ago, decided to concentrate its efforts in International Education in three geographic areas, and thus to seek to make a maximum contribution from its very limited resources. With this beginning, the University was able to qualify for support from NDEA Title VI in both the East Asia and Slavic areas. I believe that we can demonstrate that we have made good use of the Federal funds, and I believe that we can also demonstrate that the returns have been well worth the investment.

The task of providing enough people qualified in these unusual languages and areas is far from completed. We have a continuing need for college and university students to receive adequate instruction in these area programs, a task which can be continued only if there is assurance that Title VI will be continued. On behalf of the University of Kansas, I most strongly urge the extension of NDEA Title VI.

Sincerely yours,

E. L. Chalmers, Jr.

SOUTH ASIA CENTER
209 KEDZIE HALL

May 4, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I would like to write you regarding the NDEA Title VI program which is currently being considered by Congress for 1972-1973. The development of area centers has been crucial in the development of higher education in the mid-West, not so much for the fact that these centers have developed a few elite experts on specific world areas, but because they have mobilized forces existing on campuses such as our own and provided students at both undergraduate and graduate levels with an international dimension which has been sorely lacking in the past. If we as a nation want to remain a leader on the international scene, we must, I am convinced, educate our young people to think in global terms, and to be able to interact with peoples in cross-cultural situations. On our campus, I believe that this has been the greatest benefit out of the federal support through NDEA.

We were encouraged to hear that the funding for NDEA Title VI has tentatively been restored for 1972-73, to the 1970-71 level. We are concerned, however, that this be finally approved. The amount of funding to universities such as our own are relatively small and the university has provided the major costs in terms of salaries and supplies of personnel involved. A major cut in the funding would threaten not only federal funding, but would undermine state commitments as well, for it is clear that states have followed the lead set by the federal government in the development of programs in higher education. It is for this reason that we feel that federal support is needed, as "seed" money for encouraging state support for what I consider to be one of the most productive programs initiated by the federal government in recent years.

Sincerely yours,

Paul G. Hiebert

Latin American Studies Association Secretariat Hispanic Foundation, Library of Congress, Washington, D.C. 20540

LASA

April 27, 1971

The Honorable
Claiborne Pell, Chairman
Senate Special Subcommittee on Education
Room 228
New Senate Office Building
Washington, D.C. 20540

Dear Mr. Pell:

I am writing to urge your support for the extension of NDEA Title VI legislation. This program has proved to be indespensable in the development of programs that have produced a large number of well trained graduates who now serve in government international agencies, private agencies, business, and education. Research and teaching in Latin American studies has been greatly strengthened by the funds made available since 1958. At this time of strong interest in events in Latin America, it is important that well developed programs not be allowed to disintegrate.

Continued support is all the more urgent in view of the uncertainty which still surrounds the president's proposal for a Foundation for Higher Education. Until the nature of future federal support is clarified, it is important that existing support be maintained. Otherwise, the slowly accumulated expertise on Latin America cannot be sustained.

Many members of our Association strongly support the extension of Latin American studies to other levels of education: secondary, teaching, college, etc. I speak for these members in urging you to consider carefully the continued need for federal funding in the field of language and area studies.

Yours Sincerely,

Thomas E. Skidmore

MANHATTANVILLE COLLEGE PURCHASE · NEW YORK 10577

May 11, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

May I call upon you to give us your assistance in maintaining what we believe to be an important part of liberal arts education here on our campus and elsewhere throughout the country?

Manhattanville, a small liberal arts college in New York, started an Asian studies program about five years ago with Federal assistance under Title VI of the NDEA. We introduced a variety of subjects in the East Asian field including Chinese and Japanese language courses. Apart from the general interest of the students the program has served, it has been able to draw a small, but highly motivated, group of students. Some of them, since graduation, have gone on to do graduate work at large universities, such as Harvard and Columbia.

The justification for offering these difficult subjects on the undergraduate level is that the students can learn foreign languages with greater facility on the undergraduate level than they can on the grade ate level and that, with adequate language preparation, they are able to shorten the length it takes them to earn graduate degrees considerably. This is a good way to train more and better qualified specialists in the area with which our country has been developing increasingly close and complex relationships.

A College such as ours, faced as we are with financial problems besetting instututions of higher learning throughout the country, would not be able to support for long a program which is costly but should, however, be maintained in the larger interests of our country.

The continuous support of the Federal government is essential if our program is to continue.

Sincerely yours,

K. Kim

May 5, 1971

Senator Claiborne Pell
Room 325 Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I am taking this opportunity to express my concern over the possibility of cessation of NDEA Title VI Fellowships for students in universities and colleges. I am currently the Acting Director of the Institute of Ethnomusicology, University of California, Los Angeles. Many of our students working in areas of non-Western music are involved with learning languages, and these Fellowships are of invaluable assistance to them in preparing themselves for field work. Today, when we are trying to advance international understanding, we feel that in our work in researching and making known the music of the non-Western areas, we are an integral part of this drive for mutual peaceful interrelationships. May I take this opportunity to urge that you do everything possible to ensure that these Fellowships continue, and even that the program will be enlarged. It is of vital importance both to students receiving such aid, and, in the long run, to everybody in general who will be receiving the benefits of the results of the research carried on by these students.

Sincerely yours,

David Morton

Dear Senator Pell:

The University of New Mexico earnestly requests your support of the move to restore NDEA Title VI, Fulbright-Hays, and Public Law 480 funds for educational purposes to their previous levels. The growing demands for new knowledge and competent experts in all world areas makes crucial the restoration of such funding.

We would appreciate any representations you might make on behalf of these vital programs in the forthcoming hearings.

Sincerely yours,

George P. Springer

Representative Marvin L. Esch
Rayburn House Office Building
Washington, D.C. 20515

Dear Representative Esch:

I am writing with regard to the matter of the extension of NDEA Title VI, which is now under consideration by the Senate Subcommittee on Education and by the Special Subcommittee on Education of the House of Representatives. I would begin, however, by acknowledging gratefully the past support you have given this program and, I assume, are willing to continue to extend at this time.

I place before you arguments which we consider crucial in the need for continued federal support of the language and area programs. My particular area of concern relates to the area of Japanese studies.

We are convinced of the need for greater study of Japan and the training of more specialists both because of the centrality of Japan's importance to the United States and the world and because of its direct and fundamental relevance to intellectual and educational development. The resurgence of Japan to the position of the third industrial power in the world has occured at a time when United States policies in Asia are being re-evaluated. In any future international policy planning Japan will be at the center of American concerns and our close political and economic relationship places the understanding of Japan's problems near the top of our national needs.

Equally important is the educational and intellectual relevance of Japan's experience. As the only instance of highly developed industrialization in a non-Western society and as a unique example of the transformation of a feudal to an industrial state, Japan's experience is of direct relevance in the analysis of Western society and the consideration of change in other non-Western and non-industrialized societies. In this sense, the study of Japanese society is crucial to every scholarly discipline in the humanities and social sciences and the results of that study must be integrated into the broader body of universal knowledge.

We are persuaded that these needs can best be filled at universities where Japanese specialists are concentrated and most succuessfully realized through a training and research program coordinated and administered by a center with vigorous support from both the university and outside sources. Graduate training is perhaps the most important activity of such a center because of the need for an increasing number of specialists with expert knowledge of the society and language of an area of vital importance to the United States. Graduates of the program flow into American public life and into schools and colleges providing leadership and specialized knowledge in national affairs and in the introduction of Japanese studies on a broader level.

The NDEA, Title VI, has been absolutely decisive in enabling students to pursue graduate studies in this field. The National Defense Foreign Language fellowships have been virtually the only source of fellowship funds available to graduate students, and the recent cut in the total number of NDFL's available has hit the area of Japanese studies particularly hard since it comes at a time when the few other sources of funding available to graduate students have also been sharply reduced. As an example, the University of Michigan suffered a severe cut in the number of NDFL fellowships awarded to students in the East Asian field for the academic year 1971-1972, a reduction of roughly half from 29 fellowships to 16 awards for the coming year. Of these 16, only half can be awarded to students in Japanese studies, the other half going to students in Chinese studies. We, therefore, find ourselves in the excruciatingly painful position of having to select 8 nominees from approximately 80 qualified applicants.

While I have cited only the example of the field of Japanese studies, other language and area programs have been equally hard hit by the cut in the NDEA allocation. We strongly urge that serious consideration be given the extension of the NDEA, Title VI and we deeply appreciate your efforts on the behalf of this bill.

Sincerely yours,

Roger F. Hackett

Washington, D.C.

Dear Mr. Chairman:

Enclosed is a letter I have received from Mr. A. William Johnson, Dean of the Graduate School of the University of North Dakota.

Dean Johnson is very concerned about the proposed phasing out of the National Defense Education Act Graduate Fellowship program. His letter, I think, points out an important and often over-looked benefit of the program to Universities that are developing their graduate programs.

I would appreciate your consideration of Dean Johnson's letter in your review of this program.

With kind regards, I am

Sincerely,

Quentin N. Burdick

April 27, 1971

The Honorable Quentin Burdick
United States Senate
Washington, D.C. 20510

Dear Senator Burdick:

The Senate Appropriations Subcommittee for the Departments of Labor and Health Education and Welfare now are considering appropriations for the Office of Education for 1971-1972. For the first time in thirteen years the Appropriations Measure does not contain a request for funds for new National Defense Education Act Title IV Graduate Fellowships. The Bill presently includes only enough funds to carry on and phase out the fellowships now being held by students all around the country.

I should like to urge that your influence be used in an attempt to add approximately $8.4 million to this measure which would provide the funding for 1,500 new doctoral fellowships. For comparison, this past year funding was available for approximately 2,300 new fellowships.

Out of the FY 1971 Budget, the State of North Dakota received eleven new doctoral fellowships, six at NDSU and five at the University of North Dakota, to support existent doctoral programs. Both North Dakota universities have been a part of this program for virtually all of its life and have relied heavily on this program for assistance in the development and growth of their doctoral program. As a result of these efforts, our enrollments have increased and the quality of our programs has increased such as to attract better and better students. In addition, the institutional funds which are a part of this fellowship program have assisted us in building the doctoral programs to a point where we can compete in quality with many other programs in the country. Finally, numerous North Dakota students have been given the opportunity to go on to Graduate School and complete a Doctor's degree, thereby enabling them to take their place in both teaching institutions and industry both in North Dakota and outside of the state.

One of the major benefits of the Title IV Program is that the fellowships have been awarded directly to the institutions all around the country, thereby assuring a geographical distribution of graduate student financial aid of this form. With the recent phasing out of the National Science Foundation Science Development Program, the termination of the NSF Graduate Traineeship Program, and the severe cutbacks in the National Institutes of Health Graduate Training Programs, most of the graduate student and graduate school support programs which assured and required geographical distribution have been terminated or are being phased out. If this process goes to completion, we will return to the times of the mid-1950's when virtually all of such support funds were awarded directly to students and ended up on the northeast or southwest coasts of this country. One of the very

significant factors in the development of the institutions in mid-America has been the support offered them through programs such as the NDEA Title IV Program whereby funds were allocated to institutions and programs. By this means, the institutions were in a position to attract students and financial aid to themselves.

I would hope we would have your support in an effort to add sufficient funds to the U.S.O.E. Appropriations Bill such that new NDEA Title IV fellowships could be added and the program continued.

Sincerely yours,

A. William Johnson

A. William Johnson, Dean

AWJ:nm

OAKLAND UNIVERSITY Rochester, Michigan 48063
Area 313 377-2000
OFFICE OF RESEARCH SERVICES

May 20, 1971

Senator Claiborne Pell
Room 325, Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I am writing to report the experience of Oakland University with NDEA Title VI. Since 1965, this University has received support for Language and Area Center in East Asian Studies. This support has been extremely useful, not only in preparing specialists in Chinese language and Chinese studies, but in increasing the sensitivity of our entire undergraduate student body to non-Western cultures. Perhaps the best evidence we can present is that we now have nearly twenty full-time faculty members in the non-Western studies area, offering a variety of courses probing into the languages, cultures, histories and philosophies of India, China and Japan. Our commitment is indicated by the fact that, while support for our efforts under NDEA Title VI has been decreasing, our investment of University resources has been going up steadily.

However, as indicated in the enclosed article, the project system of support of higher education has severe shortcomings. One must hope that the Congress and the executive branch of the Federal Government would move steadily toward broader-based, multi-year support for the improvement of institutional programs. NDEA Title VI, for example, would find its purposes much better served if grants could be made on a three to five-year basis. Parenthetically, one must say that my general unhappiness with staff practices and policies at the Office of Education does not extend to the staff of the Title VI Program. We have had excellent relations with the Institute of International Studies, and in particular with Dr. Stanley Wilcox, Chief of the Language and Area Centers and Research Branch, and with Dr. Robert C. Suggs, Chief of the Language and Area Centers Section.

In summary, we believe that NDEA Title VI is an extremely effective and productive program which should be continued. At the same time, we are concerned about starts and stops in federal funding, frequent changes in direction, and, in general, a style--or lack of style--which suggests that the federal government and higher education have yet to work out an effective basis for attacking our common problems.

Sincerely yours,

Lewis N. Pino

Enclosure

Reprinted from Michigan Academician Vol III No 2 Fall 1970

MICHIGAN ACADEMICIAN

THE STATE OF THINGS

In 1969, a National Science Foundation publication, entitled *The Impact of Federal Support of Science on the Publicly Supported Universities and Four-Year Colleges in Michigan*, reported the results of an NSF-supported study conducted by Paul L. Dressel and Donald R. Come, of Michigan State University. From the pattern of funding for academic science in Michigan (documented in spite of difficult data collection problems), Dressel and Come draw a coherent set of conclusions and recommendations which deserves the attention of all those concerned with the future of higher education. Those familiar with Michigan colleges and universities will also note some unique insights into the personalities of individual institutions.

One is tempted to quote at length from various portions of the study, particularly the last chapter. I have selected only one short section, in the hope that this sample will encourage careful reading of the entire report.

The following selection, drawn from Chapter VI, indicates "some of the major funding patterns and their impact upon the institutions."

1. The expenditures for Separately Budgeted Research in the sciences at the University of Michigan in 1965–66 were more than twice the General Fund Expenditures for Instruction and Departmental Research. At Michigan State University they were about equal; at Wayne State University about one-half; at Michigan Technological University about one-fourth; at Oakland University about one-sixth; at Western Michigan University about one-thirteenth; and at other institutions a considerably smaller fraction.
2. The absolute differences among the institutions in expenditures for Separately Budgeted Research increased over the period 1957–66 despite increases in less well-funded institutions. Funds from Federal agencies in 1965–66 accounted for more than three-fourths of all Separately Budgeted Research funds spent by the Michigan institutions. The Proportion of Federal funds between 1957 and 1966 either remained the same or increased at most institutions.
3. Funds from outside the institutions for specially organized Science Education Projects (such as institutes for science education teachers) were almost wholly Federal in source and were much more evenly distributed among the institutions than Separately Budgeted Research Funds.
4. Within each institution in which research funding was strong, there was great unevenness of expenditures among the areas of science. Usually, heavily funded areas of science received the great bulk of their funds from one to three Federal agencies.

5. Institutions seeking to become more strongly research-oriented, select and assist a few science disciplines in obtaining project grants by assigning internal resources to provide staff and facilities to initiate research.
6. Strong majorities of faculty sampled maintain that research programs are conceived internally rather than arising out of the availability of outside funds for specified purposes. However, similar majorities maintain that such funds strongly influence the actual initiation of projects. Thus, some imbalance, or movement away from the pattern of activity desired by an institution, occurs.
7. Most faculty see a strong and necessary connection between a strongly funded research program and a graduate program of high quality in science.
8. Graduate training was facilitated in the largest institutions through the use of: research plant and facilities funded by outside sources; by the use of sponsored research funds for major purchases of equipment, employed both in research and graduate education; and by the use of sponsored research funds to provide direct financial support to the greatest proportion of graduate students holding research assistantships or traineeships. The greatest proportion of the funds were from Federal sources.
9. Most faculty see a helpful, but not necessary, relationship between a strongly funded research program and an undergraduate science program of high quality. At the three largest institutions, 30 percent of the faculty said that strong research programs were not necessary for, or were harmful to, undergraduate science programs.
10. Both senior undergraduate and graduate student majors in science at the five institutions with Ph.D. programs in science were generally favorable toward the contribution made to their professional training by professors who were engaged in research activity. Some drawbacks were noted, however.

Rather than attempting to review the study, I will limit my comments to a few aspects of the complex relationship between the federal government and higher education, from the viewpoint of one who traded his academic regalia for a National Science Foundation garment in 1959 and then traded back again in 1966.

According to the Roth Study[1] there are currently 1,315 federal grant and contract programs, with perhaps 500 of these having some direct or indirect impact on higher education. Most of these programs use the project approach, under which an agency invites proposals by: publishing a set of objectives and guidelines for proposal preparation; collecting requests normally under one or more annual deadlines; assembling an expert panel or panels to rate the proposals; and then, after intensive staff discussion, negotiation, and so forth, issuing letters of award and letters of denial.

One of the problems a college or university faces is finding those programs which are responsive to the concerns and capabilities of higher education. As an aid in identification, let me suggest some not commonly

[1]Document 91-177, House of Representatives, prepared by the staff of Representative William V. Roth, Jr., 1969. U.S. Govt. Printing Office, $4.50

60-433 O - 71 - pt. 3 - 7

used criteria for determining the character and style of a federal program. First of all is ease of information availability. Any first-rate program will provide promptly, upon request, detailed yet concise written statements of program objectives, procedures, and past performance. An established program which hesitates to give such information to a college or university, or does not have it at hand, is suspect.

A fairly quick scan of a set of guidelines often conveys a great deal about the attitude of the program staff. Anyone who has read these documents with any care can cite examples of guidelines which are excellent, while at the same time identifying others which are administrative and literary nightmares. I have, in unkind moments, speculated that the worst ones I've seen were written by lawyers and edited by idiots, or vice versa. One all-too-common trait of this sort of document is size increase each year, with each increment in size matched by at least an equivalent decrement in intelligibility.

Some organization, such as the Michigan Academy or the American Council on Education, could perform a major public service by establishing a review committee to rate federal guidelines. My own informal rating suggests that the U.S. Office of Education has built, over the years, a remarkable system for preparing guidelines that are dense, thick, murky, and late.

On a kinder note, we have seen, over the past ten years, project-oriented programs for research and educational purposes, joined by a small but growing number of programs aimed at institutional development. The various developmental programs of National Science Foundation are probably the most advanced. These operations are smoothly and professionally run (e.g., guidelines are brief, literate, comprehensible, and available), show sensitivity to the needs and practices of higher education, and suffer only from being greatly under-funded. We trust that all of higher education recognizes that developmental funds of this sort are extremely important, and that the press for greater research and training project support will not be diverted by the destructive cry that project support must inevitably decrease if institutional development support is increased. One need only cite the Morrill Act (which for nearly 110 years has encouraged the formation of land-grant colleges) as the measure of what can be done through the enlightened use of federal resources for developmental purposes.

Over the past few years, some support for the arts and humanities has become available both from the National Foundation on the Arts and the Humanities and, in a very limited way, from the U.S. Office of Education. The results so far are minimal, but there are encouraging signs that the Endowment for the Arts and the Endowment for the Humanities have built, and are building, professional staff competence in the difficult game of giving away federal money without losing the confidence of either Congress or the academic community. One would expect, and we are beginning to see, concise and cogent statements of purpose and guidelines for proposal preparation from these agencies as

evidence of their professional styles.

Finally, one wonders if the current fiscal stringency in Washington will reveal a fatal flaw in the project system; specifically, I have in mind its vulnerability when faced with decreasing resources or, put in other terms, its ability to survive when it makes more enemies than friends.

A typical new proposal requires perhaps ten to twenty man-days for preparation (including typing and internal approval). Review and processing in most federal shops takes four to six months, and involves not only staff time but the services of external reviewers (generally drawn from the universities and colleges on an unpaid basis). Thus, we might estimate an additional twenty man-days for review and for processing. If thirty to forty percent of proposals are ultimately funded, perhaps the investment of human time and talents is justifiable. However when, as now, some programs report that at most only one out of ten new proposals is being funded, the input required per dollar of output begins to go beyond the bounds of reason and the good will of the prospective principal investigator begins to be strained.

Federal officials and their advisors, as well as college and university officials and faculty members, are beginning to ask whether there are not more direct and less costly ways (in time and in money) to do what must be done. Add to this the suspicion that, in most programs, the sorting is not between good and bad but rather between excellent and adequate (with the culls amounting to no more than 20 percent in the typical case), and one wonders if better mechanisms are not needed. Finally, the agencies tend, during times of financial stress, to cut back on multi-year grants in favor of short-term support, so that even the winners must return to the competition each year or two instead of every three to five years.

Thus, although the project system has served us well during times of rapid growth, it may not survive an extended drought. Perhaps the time is ripe to design and test new approaches, based on fresh thinking, about ways in which the higher education enterprise can best be strengthened in the public interest. Perhaps we begin by recognizing that we must deal with the entire spectrum of educational concerns, since the old spillover theory—support research and graduate education, and all else in higher education will prosper—seems much less politically and academically sound than it may have in the days of Sputnik I. The new spillover theory—support the students and higher education will prosper—simply seems wildly unrealistic if even a minor goal is institutional development.

In fairness, it must be pointed out that relations between higher education and the federal agencies, which have grown unevenly though largely fortuitously, are better than they have any right to be. A pretty good poor system is in existence, largely because some very capable people in the federal service have worked hard and imaginatively under trying circumstances.

If one believes that the fate of the colleges and universities is important to society, one must also believe that

the burden of cumbersome, less-than-elegant ways of distributing federal resources can be eased. The attention given by Dressel and Come and an increasing number of other concerned citizens to this problem will, I trust, encourage all of us to think more deeply about the ways in which more effective and permanent relationships between campus and government can be designed and instituted.

Lewis N. Pino
Oakland University

OBERLIN COLLEGE
OBERLIN, OHIO 44074

OFFICE OF THE PROVOST

May 21, 1971

The Honorable Claiborne Pell
325 Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I am writing regarding NDEA Title VI and the matter of its extension, which will be considered by your Subcommittee on Education. Oberlin College and its faculty in East Asian Studies are very concerned that this act be extended.

In the past, Oberlin College has been fortunate to have benefitted under NDEA Title VI by grants to maintain a Center for East Asian Studies and to conduct language and area programs abroad for undergraduates. We are confident that the projects we have sponsored with NDEA support have made substantial contributions to Oberlin College, our students, the community, and the national welfare. The continuation of these programs will be affected by the results of action on legislation soon to come before your Subcommittee. The failure to extend Title VI will add additional strains to financial pressures on institutions of higher education caused by the many cutbacks in various areas of federal support for education.

Since 1964 Oberlin College has been an NDEA Center for East Asian Studies. This Center, with an emphasis on the Chinese language and area studies, is a development that is unprecedented in recent Oberlin educational history. It is the first program here to provide an opportunity, on such an extensive scale, for students to immerse themselves in the multi-dimensions of a foreign culture. The program has had a positive and constructive impact on the campus as a whole. The program is designed for the undergraduate and is not subject to the professional and elite pressures of the large graduate centers at major universities. It began with a modest language curriculum, expanded annually by more advanced work in language and literature, and enriched by courses in East Asian History, Art, Religion, Linguistics, Sociology, Government, and Economics.

The students in our classrooms today are the people who will man the important positions of the nation tomorrow. I would be extremely pessimistic about the chances of the United States to maintain satisfactory relations with a nation like China unless we can foster the training of younger men who will be sensitive to Asian needs for international scope. We need students who understand Asians.

We have lacked men with this kind of understanding in the past. The need will be critical in the future. To terminate programs which encourage young students to study the cultures and the traditions of Asia today would be a serious mistake.

I strongly urge you to support the continuation of NDEA Title VI, including the program of Language and Area Centers.

Sincerely yours,

Ellsworth C. Carlson

Office of the Director

April 27, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I am writing you to express my strong support in favor of extending NDEA Title VI, in support of language and area studies, for FY 1972, which is now before your Subcommittee. Such federal aid as provided by NDEA VI has been vital to the continued operation of Ohio University's African Language and Area Center. As I am sure you are aware, these NDEA Language and Area Centers are instrumental in adding a vital non-Western element into higher education (principally the social sciences and the humanities), which all too few students gain exposure to.

Among institutions supporting language and area centers, such as Ohio University, any plans by the Administration to cut back its commitment to international studies would be viewed with deep concern. The concept of interdisciplinary area studies programs has been one of the most innovative in the field of higher education in the past two decades. Because of their relatively high cost (in terms of such items as language training and field research) their support necessarily came from the foundations in the beginning. Governmental commitment to the continuance of these programs and the initiation of new ones was realized by the National Defense Education Act, enacted under the Eisenhower-Nixon administration. As the foundations gradually withdrew their support (acknowledging governmental support and turning to other pressing problems), language and area studies centers became more heavily dependent on continued NDEA backing for their continued operations. Now that assistance is threatened, placing in jeopardy many of the carefully built programs it has taken so long to nurture. These Centers should be looked upon as national resources, rather than as institutions tied to particular campuses.

Should federal assistance be reduced any further, the most serious consequences for the future of internationalized education necessary for our continued survival and leadership in the twentieth century are sure to follow. And most tragically, this would occur precisely at the time when the greatest benefits of the language and area centers are being felt, in terms of students education and qualified professors produced. It will happen not because there is a lack of university commitment: during the past five years Ohio University has matched the federal dollars invested at a ratio of nearly ten to one.

Rather, it will happen because at a time when we are experiencing the greatest budgetary crisis in the history of American higher education, the universities will view such a pullout as symbolic of an abandonment of concern. History proves that, for better or worse, such an action on the part of the Government inevitably leads to a reassessment of priorities.

Allow me to express one point in particular, as to why I view the projected phase-out at this particular time with such deep concern. It is well known that humanity is now faced with its greatest challenges: problems of race and urbanization, and particularly the crisis of our environment. No long-range solution to any of these problems is possible on a national basis, for ecology is global. No programs are contributing or have contributed more significantly to our ability to understand and cooperate with other peoples of the world than our language and area centers. To threaten the existence of those centers at this critical juncture caries, in my view, grave implications. Quite admittedly the focus of attention of these centers might well be altered to meet changing needs and problems, but to cut back their support would be a needless waste of a national resource.

I would therefore urge you to use your influence to keep the funding of this vital program at the level projected by the presidential budget request. Once this is done, let us seek ways to improve on NDEA VI or replace it with something more substantial, rather than to simply eliminate it.

Sincerely yours,

Alan R. Booth
Director of African Studies

Center for
LATIN AMERICAN STUDIES

Bolivar House
582 Alvarado Row

April 29, 1971

The Honorable Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

My dear Senator Pell:

I am writing to ask for your support of Title VI of the National Defense Education Act. Those of us concerned with the teaching of international studies are once again faced with trying to alert the national government to the importance of our professional field and to urge restoration to the $15.3 million level, which was recommended by the Administration in mid-1970 and again in recent months.

Speaking as an individual who has been in the field of international education, more specifically Latin American affairs, both as a university professor and as a member of the State Department, I am deeply disturbed that at a moment in history when we are seeking desperately to reduce our military visibility abroad and to increase our cultural visibility, many individuals in our national government are disposed to undercut that area of learning designed specifically to train members of the upcoming generation as teachers, public servants, and business representatives to understand the values of other cultures and how they relate to their own culture.

As you know, Title VI was funded at the level of $15-18 million for several years prior to the present one, although legislation permitted appropriations in the range of $30 million. What the pressures of your office may have prevented you from discovering is that Title VI support contributed most significantly to the development of international education, as I believe the following information will confirm. In 1968-69 (the last year that Title VI was funded at the level which the Administration recommended in 1970 and again this year), Title VI funds received by Stanford University were used to (a) provide partial support for three NDEA centers (East Asian, African, and Latin American), (b) support library acquisitions in the University libraries and Hoover Institution, (c) finance research abroad for at least a dozen scholars, (d) fund a summer institute for intensive language training, (e) support fellowships for 48 graduate students in the first year of their training, and (f) support 4 full fellowships for graduate students to do field research. Enrollment at Stanford University in courses supported

in whole or in part with Title VI funds totalled 4,609 during the academic year 1968-69. I feel that these statistics provide an excellent example of how Title VI funds have helped a private institution of higher learning to develop and maintain, up to now, an international education program of world-wide visibility and of, we believe, lasting service to the nation. Having made the case for Title VI, I feel obliged to point out that Stanford's own contribution to international studies is far in excess of the amount received under Title VI. I am asking for cooperation, not that the national government carry the major burden.

Nationally, the record for Title VI is equally impressive. In 1967-68, the last full year for which I have the complete records, Title VI funds provided partial support for 106 centers at 63 colleges and universities. More than 2,000 faculty were involved in the work of the centers, over 3,000 language and area courses were offered and enrollment totalled over 70,000, a spectacular and critically important increase over the enrollment of 18,000 in similar courses in 1958 when Title VI was initially legislated. At least as important, Title VI funds have provided opportunities for professors to develop greater expertise in their chosen areas and as a consequence become better prepared to train students to understand those people and cultures with which the United States as a world leader must work.

Impressive as have been the achievements of Title VI to date, there is still much to be done. In the national interest, we must insure an increasing flow of well-trained undergraduates into graduate programs. We must continue to train potential elementary and secondary teachers who are aware of the latest methodologies and interpretations as they relate to other cultures. We must provide informed individuals for government and international agencies, and we must train individuals for international business who not only know business practices but who have acquaintance with the languages and societies in which their companies operate.

I sincerely hope that I have presented my case for Title VI convincingly enough that you will not only give your strong and much appreciated support for international education, but will use your influence to win support from your colleagues. I urge you first, to vote to restore funding for Title VI to $15.3 million in FY 1971 and second, to support continuance of Title VI beyond FY 1972, when, under existing legislation, it is due to expire. International relations is primarily the concern of the national government; if it does not partially fund international education, support at the state, local, and private levels is, I greatly fear, apt to be both restricted and erratic.

Sincerely yours,

John J. Johnson
Director

Washington, D.C. 20510

Dear Senator Pell:

While you are doubtlessly beseiged by requests urging on you all manner of priorities, let me appeal in the strongest possible terms for an extension and augmentation of the NDEA Title VI program. Our hemisphere relations are at least as critical as they ever were, if indeed not moreso, and there is a growing demand these days, on the part of Latin Americans, that any and all North Americans with whom they deal should have a considerable understanding of the Latin American cultural milieu and socio-economic complex. Although my own professional competence as an area-specialist economist lies in my long involvement with that particular region, I see little evidence that our relations with the Middle East, Africa, and Asia are any more tranquil.

We shall require an even broader range of area-oriented specialists over the years ahead, and given the present circumstances, an extension and enlarging of the NDEA Title VI program is the best way of adjusting supply to meet this critical need. The growth of the community college and adult educational systems (with concomitant trends towards introducing a greater "international" component into the curricula thereof) is another compelling reason for increasing the support of the NDEA Title VI, because the training it affords constitutes a

desirable element in the preparation of community college teachers, among other occupations.

The benefits of continued NDEA support will likely accrue to the nation over many years ahead.

Cordially,

William Glade,
Acting Director

THE UNIVERSITY OF UTAH
SALT LAKE CITY 84112

ACADEMIC VICE PRESIDENT

May 11, 1971

Senator Clayborne Pell
U. S. Senate
Washington, D. C.

Dear Senator Pell:

On behalf of the University of Utah I am writing to urge you to continue the extension of NDEA Title VI funds.

These funds have supported our Middle East Center at the University of Utah for a number of years, and I can tell you that without the Federal impetus which these funds gave us, we never would have developed a fine program in Middle East Studies which we now have. We have accumulated an excellent library of source materials dealing with all of the Middle East countries, have hired a number of faculty members with both the Title VI funds and other which we have been able to attract because we had those funds and, hence, have been able to offer a number of courses to our students which will enable them to understand that important part of the world in which we live.

The money provided by those funds has been indispensable for developing the program we have. Without that money our program will be curtailed severely.

Sincerely,

Jerry R. Andersen
Academic Vice President

AIRMAIL

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I feel that universities constitute one of the best agencies in our country for fostering a desirable understanding of other cultures and other peoples. The NDEA Title VI programs at our own university, although small, are rendering an appropriate and worthwhile service to our nation in this respect. The programs are of particular significance in that persons in this part of the United States have fewer opportunities than, say, those on the East Coast, for coming in contact with the literatures, the languages, and the other aspects of foreign cultures. Moreover, our local business men are more and more entering into trade with other countries, and our graduates are, in a few cases, being of direct benefit to business. Thus, in a very real sense, the Title VI programs are having an immediate as well as a long-run benefit.

Sincerely yours,

Robert T. Lagemann

April 28, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

I write to support the extension of programs under NDEA Title VI. The relevant academic programs here at the University of Virginia, and at other universities also, I am sure, would suffer badly if authority to extend these programs were not forthcoming. The need, clearly, goes beyond the universities. The longer the war in Indo-China continues, the stronger old-fashioned isolationist public sentiment is likely to grow. One way to minimize growth of this opinion is to educate our able young people on these matters through the extension of Title VI programs.

Sincerely yours,

David A. Shannon
Dean

UNIVERSITY OF WASHINGTON
SEATTLE, WASHINGTON 98105

Office of the President

April 23, 1971

The Honorable Claiborne Pell
Room 325
Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

I am writing on behalf of the University of Washington to recommend extension of authorization for support of language and area studies programs, currently funded under Title VI of the National Defense Education Act. The University of Washington has made a major commitment in support of language and area studies programs on East Asia, Russia and Eastern Europe, South Asia, the Middle East, Africa, and Latin America. It regards these programs as essential components of university instruction from the standpoints of general, specialized, and professional education. Yet it must be pointed out that the University cannot carry the burden alone in maintaining programs that serve the national interest. They should be supported by the Government at least in part. NDEA Title VI funds have served as a catalytic agent in mobilizing local educational resources for the creation of language and area studies centers which give direction to more effective utilization of those resources. This support is crucial. We must maintain the faculties, courses, libraries, fellowships, and research operations that have required many years and great effort to build. It would be foolhardy to cut back language and area studies at institutions like the University of Washington at a time when need for educated professionals and general knowledge of foreign affairs is so great.

Moreover, it may be appropriate at this time to raise the question whether in the national interest there should be Federal support of other kinds of international studies. It is increasingly clear that problems concerning population, urbanization, pollution, and ecological balance are shared by all nations. More and more, there is need for cooperative, comparative, and problem-oriented approaches. I think that your committee should seriously consider the question of whether to authorize support of comparative and problem-oriented international studies in addition to language and area studies.

During the past two years, Professor George M. Beckmann, director of the Far Eastern and Russian Institute of the University of Washington, has been active in the national academic effort to maintain funding of NDEA Title VI programs. I enclose for your information the testimony of Professor Beckmann before the Senate Appropriations Subcommittee in 1970 and 1971.

Sincerely yours,

Charles E. Odegaard

Enclosures

STATEMENT OF DR. GEORGE M. BECKMANN, DIRECTOR,
FAR EASTERN AND RUSSIAN INSTITUTE AT THE
UNIVERSITY OF WASHINGTON IN SEATTLE BEFORE THE
SENATE APPROPRIATIONS SUBCOMMITTEE ON LABOR-HEW
March 30, 1971

I appreciate having the opportunity to testify in support of the Administration's FY 1972 budgetary request of $15.3 million for the National Defense Education Act Title VI and the Mutual Educational and Cultural Exchange Act, Section 102(b)6. I would, however, like to recommend an increase in the allocation of funds under Public Law 480 (as amended by PL 90-436), from $3 million to $4 million, for the educational use of U.S.-owned excess foreign currencies.

Before proceeding with this statement, I would like to take this opportunity to thank the Senate Subcommittee for its positive and encouraging last year, even before the issue of the special budget amendment restoring $9.3 million to the NDEA VI budget. I also want to express my gratitude to the Administration, however, which, in responding to appeals from leaders in the academic community, reevaluated its position as to the importance of this program, and in April requested a restoration of these NDEA VI funds. Unfortunately, the level finally appropriated was $8 million.

My recommendations are based on the premise that the United States will continue to be deeply involved in world affairs and, hopefully, increasingly in educational, economic and cultural activities

with less involvement militarily. There is, therefore, continuous need for more competent people in both public and private institutions and agencies of our society, people whose skills tend to be high in cost to produce, but whose expertise benefits the nation as a whole. Area studies programs at universities and colleges are crucial for the education and training of such personnel for other educational institutions, for U.S. government agencies like the Department of State or the Foreign Service, and for American companies or multinational businesses. Such area competence should include linguistic skill, as well.

Not only do we need a continuing and expanding supply of well-trained personnel, we also need on-going research and new ways to study foreign areas, for example, immense and populous countries like mainland China, which is so crucial in foreign policy considerations. This growing demand for new knowledge and information comes from all sectors of society--not just from government agencies and educational institutions, but also from businessmen, labor unions, women's and professional groups, churches and local world affairs councils. Area studies centers funded by this program constantly provide information services to such groups.

Since area studies programs serve the national interest, they should be supported by the government at least in part. The universities, colleges and secondary schools cannot carry the burden alone. NDEA Title VI and Fulbright-Hays funds have served as a catalytic agent for the mobilizing of educational resources and the

creation of area studies centers which give direction to more effective utilization of those resources. Government funds provide basic foundations for these programs and enable them to maintain essential elements not available from local resources. This support is crucial at a time when educational budgets are under great pressure, and in many cases, where retrenchment is the order of the day. A sustained reduction in NDEA VI (and Fulbright-Hays) funding beyond the one-year cutback, will severely damage programs and no doubt force some to terminate. We must maintain the faculties, courses, libraries, fellowships and research operations that have required many years and great effort to build.

It would be foolhardy to cut back East Asian studies at institutions like the University of Washington, at a time when the need for educated professionals and knowledge of foreign developments is great. Again, take the case of China. The present Administration, with strong Congressional support, is making a determined effort to establish economic, cultural and scholarly relations with the People's Republic of China and her 800 million citizens, but, we must have the personnel and expertise needed for any expansion of contact. At this time, we have neither. Especially needed is the continuation of a graduate fellowship program to provide the extra time necessary to educate a well-trained specialist with the knowledge of a discipline, area and its language, often two or more years beyond the normal time for a doctoral program. Moreover, the National Defense Fellowship Program trains teachers and professors for a large number of universities, colleges and community colleges with area programs that do not receive direct monetary support from this $15.3 million allocation. Thus, this program has a

substantial multiplier effect. Former fellows are now teaching at approximately 120 four-year colleges and universities. Equally important, this fellowship program at present provides graduate training opportunities at a limited number of federally-funded area studies centers for students coming from some 200 colleges and universities across the United States. (See the attached lists for examples of this multiplier effect at the University of Washington.)

Area studies are also becoming more relevant to domestic problems. To try to separate domestic from international concerns is a misconception. It becomes increasingly clear that problems concerning population, urbanization, pollution and ecological balance are shared by all nations. More and more, area studies are taking on a comparative and problem-oriented arproach, because the definition and solution of such problems will be expedited by a cooperative approach. The United States has been a leader for other countries in the development of technologies, but now, cooperative efforts with other nations will be able to help the United States in finding solutions to some of its own pressing concerns.

NDEA VI and Fulbright-Hays funds are not used solely to train new specialists at the large universities. Funds are used for a wide variety of educational purposes and at many kinds of educational institutions. At the University of Washington, for example, the funds help enrich the general education of a substantial number of undergraduates. Total undergraduate enrollment in area and language courses related to the Far Eastern and Russian Institute alone have averaged over 6,000 students per year for the past three years.

In addition, large universities like the University of Washington have been sharing library and research facilities with other state institutions and private colleges, training teachers for high schools, developing area and language instructional materials for local school systems and cooperating with the Seattle World Affairs Council in presenting special programs in response to community needs. Through television, the University reaches a larger audience by means of a variety of programs on the cultures and problems of the countries in Asia. These programs have been quite popular and reach general viewing audiences as well as classrooms in the Pacific Northwest and the Rocky Mountain regions.

More recently, the Far Eastern and Russian Institute has begun planning a special Doctor of Arts graduate degree program in East Asian studies for prospective community college teachers. It is working closely with community colleges in the Seattle area in formulating the degree program which will emphasize teaching and curricula development and not research.

Many smaller colleges and school systems have received direct support from NDEA VI and Fulbright-Hays funds in this program, and there is increasing emphasis in this direction. A number of schoolteachers and community and junior college teachers have been able to study and travel abroad so that they might add more international dimensions to regular social studies classes. The development of international curricula materials for all levels of education is another important aspect of the program. In the case of the State of Washington, for example, Spokane School District #81 used funds (in FY 1970) to sponsor a French curriculum

consultant, and the Tacoma Public School System (in FY 1970 and FY 1971) used a Nigerian consultant to prepare materials on the language and culture of Africa. In general, programs under the Fulbright-Hays Section 102(b)6 authority have provided considerable funds to smaller institutions and to local and public school systems.

The Far Eastern and Russian Institute at the University of Washington has assisted in the development of Asian-American studies in the College of Arts and Sciences. A number of Latin American centers at other universities have paralleled this action by preparing special materials and encouraging both informal seminars and formal classes on Puerto Rican/Mexican-American studies, just as a number of the African studies centers have considered African-American studies. All of this is an attempt not just to ease some of the ethnic tensions in U.S. society, although it will help, but more importantly, to encourage an appreciation of the cultural plurality in the United States by the entire populace.

The recommended increase in allocation of excess foreign currency funds (PL 480) from $3 million to $4 million will enable the Office of Education to provide more needed opportunities for training and research overseas. The countries in which these funds are currently available are Guinea, India, Pakistan, Poland, Tunisia, the United Arab Republic, Morocco and Yugoslavia.

These increased opportunities would help teachers in schools and professors in colleges and universities to improve their professional competence as well as their teaching. Moreover, expanded use of PL 480 funds for educational purposes would permit more comparative studies in

problems of concern between these countries mentioned above. Inter-institutional, binational research projects would benefit both societies involved, as for example, problems of mutual concern like the environment, urban planning and development, literacy, population planning, health, the restructuring of legal systems and laws, and special education problems like education for the handicapped. Expansion of PL 480 funds would enable a greater sharing of research and resources on a number of problems in the physical sciences and in the social science fields. Language training could also be improved and made more effective by providing overseas training opportunities for students at the intermediate level, whereas in the past, such experiences have been limited more or less to students at the advanced levels.

For these reasons, I recommend an increase in the PL 480 allocations from $3 million to $4 million, an increase which would not represent an increase in the overall U.S. dollar budget.

ON NDEA TITLE VI AND FULBRIGHT-HAYS

Statement by George M. Beckmann, Director,
Far Eastern and Russian Institute
University of Washington

April 17, 1970

1. The NDEA Title VI Program and the Fulbright-Hays Program have made important contributions in helping colleges and universities to meet national needs for trained personnel with international competence and for more extensive knowledge of foreign countries. The executive and legislative branches of the Federal Government have until very recently recognized the continuing success of these programs by extending authorization and by providing funding at modest but reasonable levels. Both programs are now being threatened by substantial cuts in funding.

2. The executive and legislative branches of the Federal Government have also recognized that the need for international competence and knowledge must be met by more than the language and area studies capacities of American colleges and universities. The International Education Act was sponsored and passed to broaden our educational capacity in international studies and to widen its impact on American education in general. Unfortunately, this authorized legislation has not been funded and the authorization itself will soon lapse.

3. This situation with regard to international studies is more than disturbing, especially in view of the efforts of the past twenty-five years to build our international studies capacity in colleges and universities. There are still recognized needs which higher education is prepared to commit resources to meet in partnership with the Federal Government. These needs are national, not local, in character and scope, and hence should be met by a combination of (1) Federal Government and (2) college and university resources.

4. What can the Federal Government, especially the Congress, do? First, there is sufficient evidence to indicate that the International Education Act should be funded as a means to develop the variety of programs in international studies that this nation needs. Or, if it is not the International Education Act, then other legislation with similar objectives. Second, NDEA Title VI and Fulbright-Hays should be extended in Fiscal 1971 at the present level of funding (Fiscal 1970, estimated $15.3 million) because language and area studies programs must remain as one important core of international studies. It would be possible to phase out NDEA Title VI when there is broader Federal Government authorization and funding of international studies to include language and area studies programs. The present effort to reduce funding of NDEA Title VI to $6 million in Fiscal 1971 makes no sense at all. Language and area studies programs continue to meet important national needs.

5. Office of Education administration of NDEA Title VI and Fulbright-Hays can and should be improved. The present study of language and area studies being conducted by Professor Richard Lambert of the University of Pennsylvania is designed to provide comprehensive data as the basis for such improvement. There is need for new priorities according to language, area, discipline and profession, level of education, and nature of graduate training. The Institute of International Studies of the Office of Education is funding this study with these objectives in mind. The study will be completed during the next academic year.

6. Colleges and universities must also maintain their commitment to international studies development in face of increasing budgetary pressures and at a time when major private foundations do not have adequate resources to continue to assist program development on the scale of the decades of the 1950's and 1960's. Federal support is crucial because it enables colleges and universities to use their resources more effectively in training students and conducting research. Especially important are funds for graduate student fellowships in fields where training requires greater commitment and a longer period of training, faculty and student foreign travel and research, library personnel and materials acquisitions, and teaching of languages where there are not large enrollments but where there are particular national needs.

7. The University of Washington has two NDEA Title VI Language and Area Centers, one on Russia and Eastern Europe and another on Asia, including China, Japan, Korea, South Asia, and Southeast Asia; moreover, it receives forty NDEA Title VI graduate fellowships for disciplinary training in these areas. It also receives faculty research support for two specific projects. I am appending to this statement (1) a brief profile, or basic fact sheet, about the University's programs in these two major areas as well as (2) a recent publication on the University's International Programs and Research. It is clear that NDEA Title VI support is a crucial element in the University's effort to play an effective role in international studies training and research. The University is not in a position to generate local or state support of graduate training fellowships and foreign travel for advanced graduate student field research, or to provide minimum support for library development or the teaching of some critical languages like Korean, Mongolian, Hindi, Tamil, Thai, Czech, Polish, Roumanian, Bulgarian, and Hungarian. Partnership with the Federal Government should be preserved. It is clear also that the University of Washington is serving national and even international needs as an educational institution (1) training graduates from a large number of American and foreign colleges and universities and (2) placing them after training in a similarly large number of American colleges and universities.

UNIVERSITY OF WASHINGTON

FAR EASTERN AND RUSSIAN INSTITUTE

1. Character of the Far Eastern and Russian Institute. The Institute coordinates undergraduate and graduate instruction on Russia, Eastern Europe, China, Japan, Korea, Inner Asia, South Asia, and Southeast Asia in cooperation with discipline departments (History, Political Science, Sociology, Anthropology, Economics, Geography, Art, Music, Philosophy), especially the Department of Asian Languages and Literatures and the Department of Slavic Languages and Literatures, and professional schools like Law and Education. The Institute also coordinates research on the above foreign areas.

2. Funding of the Institute. The sources of funding of the Institute and related discipline departments in 1969-70 are approximately as follows:

   (a) State of Washington: $1,400,000 for academic administration, instructional staff, library personnel, language laboratory staff, retirement and other benefits, library acquisitions, language laboratory, maintenance, and supplies. This does not include operational overhead.

   (b) Office of Education, HEW: $385,000 broken down as follows:

      (1) $73,940 for NDEA Title VI Asian Language and Area Center: funds used for language instruction in Chinese, Japanese, Korean, Turkic, Mongolian, Tibetan (native speakers), faculty research travel to foreign areas, and library personnel and acquisitions

      (2) $42,060 for NDEA Title VI Russian and East European Language and Area Center

      (3) $156,000 for 40 NDEA Title VI graduate fellowships broken down as follows: East Asia, 27; Russia and Eastern Europe, 9; South Asia, 3; and Southeast Asia, 1

      (4) $33,000 for faculty research on East German education and for the preparation of a Romanian language textbook

      (5) $33,226 for Slavic and East European studies summer program to cover partial instructional costs and fellowship awards. The University of Washington contributed $66,000.

      (6) $46,744 for South and Southeast Asian studies summer program to cover partial instructional costs and fellowship awards. The University of Washington contributed $58,000.

   These figures do not include several graduate student and faculty Fulbright-Hays awards.

(c) Private foundations

(1) Ford Foundation, $187,000 for faculty research on Russia and Eastern Europe, China, Japan, Korea, Inner Asia, and South Asia

(2) Rockefeller Foundation, $13,000 for research operations (secretarial)

(3) Mellon Foundation (Scaife), $35,000 for foreign graduate students

3. Instruction

(a) Undergraduate

(1) Total student enrollments in foreign area and language courses related to the Institute have averaged over 6,000 for the past three years.

(2) Majors in foreign area studies related to the Institute have increased from 322 in 1965-66 to 379 in 1969-70. These figures include interdisciplinary area studies majors and discipline majors with concentration on a foreign area.

(3) Approximately 20% of the majors in foreign area studies related to the Institute go on to graduate schools. The remainder go into elementary and secondary school teaching; domestic business; international business and foreign trade; U. S. Government agencies; the armed forces; religious, charitable, and international agencies; and become housewives.

(b) Graduate

(1) The University has trained 86 Ph.D.'s in a wide variety of disciplines with concentration on foreign areas related to the Institute since the academic year 1964-65. The foreign area breakdown is as follows: Russia and Eastern Europe, 38; China, 23; Japan, 13; Korea, 3; Inner Asia, 4; South and Southeast Asia, 5. The discipline breakdown is as follows: Anthropology, 4; Business Administration, 2; Comparative Literature, 5; Economics, 5; Education, 2; Geography, 11; History, 29; Language and Literature, 20; Music, 1; Philosophy, 1; and Political Science, 6. Most Ph.D.'s have gone into college and university teaching. See the attached sample list of Ph.D. placements.

(2) The University has trained 124 M.A.'s since 1964-65. The foreign area breakdown is as follows: Russia and Eastern Europe, 54; China, 25; Japan, 9; Korea, 12; Inner Asia, 8; and South and Southeast Asia, 16. The disciplinary breakdown is as follows: Architecture, 2; Area Studies, 45; Art, 2; Business Administration, 1; Drama, 1; Economics, 1; Education, 3; Fisheries, 1; Geography, 5; History, 17; Home Economics, 1; Language and Literature, 30; Library, 1; Linguistics, 10; Music, 1; Oceanography, 1; and Political Science, 2.

(3) The University of Washington Law School has developed an outstanding program in Japanese law. Courses in this program are open to LL.B. students and are part of Law masters and doctorate programs. During the past five years, some 150 Law students have taken courses in Japanese law concerning U. S.-Japan business relationships.

4. Research. The Institute maintains a broad research program which is fundamental to good teaching and to expanding knowledge of foreign areas through publication. A list of Institute and University of Washington Press books is attached. Institute faculty have also published a long list of books through other presses and numerous articles in a wide variety of academic journals.

AND PORTUGUESE

May 15, 1971

Senator Claiborne Pell
Room 325
Old Senate Office Building

Dear Senator Pell,

I understand that you and your subcommittee are considering the extension of NDEA Title VI. I hope that you will be able to extend this title, for it has meant a great deal to us in our academic work. Our Latin American Center was instrumental in my going to Mexico for a long residence, where I finished two books and did other research.

Most sincerely yours,

Gerard Flynn

Gerard Flynn
Professor of Spanish.

Senator PELL. The next witnesses are from the Association of Research Libraries, Dr. Stuart Forth and Stephen A. McCarthy.

STATEMENT OF DR. STUART FORTH, DIRECTOR OF LIBRARIES, UNIVERSITY OF KENTUCKY; ACCOMPANIED BY STEPHEN A. McCARTHY, EXECUTIVE DIRECTOR, ASSOCIATION OF RESEARCH LIBRARIES

Senator PELL. You have a statement here which will be put in the record in full, and I wonder if you want to make one or two comments verbally and then we might chat with each other a little bit.

Dr. FORTH. Senator, I am very pleased to have this opportunity to talk in support of S. 659. It is a bill which has in it many things which are very important to those of us in the research libraries of the country. I would ask that my entire statement be made part of the record.

Senator PELL. This will be done.

Dr. FORTH. Thank you.

I would point out that the thing that is most important is to continue the programs under title II A, B, and C as provided in existing legislation. I understand that these programs have been criticized, and I would like to read briefly from the current issue of the Educational Record, the official statement of the American Council on Education. This is very important to us and I would like to stress it at this time. That policy statement is:

> It has become commonplace to attack much of the existing Federal support of higher education as a hodgepodge of categorical programs. The attack is unwarranted . . . Title II of the Higher Education Act of 1965 has provided basic support to libraries, one of the most essential elements in all of higher education, and has been especially valuable to new developing institutions. These programs should be continued and, in the case of the Library Title, expanded. In particular, the enormous financial burden under which the National Research Libraries are laboring requires greatly expanded federal support. In the truest sense of the word, they represent a vital national resource.

I cannot stress too strongly what title II A means to us.

In terms of title II B where we are talking about library research and library training, again this is a small, comparatively small, professional group in the country. We need to recruit more of the best people we can find to meet the demands of society and of our students. In addition, we need to have research in the area in which we are held responsible.

Library research is one of these areas that everybody knows about, everybody who is not a librarian. We are constantly told by the computer people how it should be done but they are unable to help us get it done. We need the kind of support necessary so we can do our own work.

In terms of title II C, I think this committee has heard from other librarians on how important the Library of Congress national acquisitions and cataloging program is to American libraries. It makes no sense to us to have 80 individual libraries around the country performing the same function that the Library of Congress can do better for us if it is adequately funded.

In that particular area, we support the Library of Congress' own desire to have the Higher Education Act of 1965 amended, the title II, part C, section 231, to delete the phrase "to enable the commis-

sioner to transfer funds," in the first and last sentences of the section. We feel this would further strengthen the Library of Congress in its efforts to help us.

There are two final things I would like to say in these informal comments. One is that nationally our libraries are falling behind in meeting the demands for resources that our growing student enrollments put upon us. I need not tell you anything about the growth of enrollments in American universities. My own university has almost doubled in size—not quite—in the last 6 or 8 years, and the Commonwealth of Kentucky is a fairly good example of many other States. It is putting almost 70 percent of its general fund revenues into education. e Wcannot get additional money—or so it appears—from our citizens for higher education, and we do need the help of the Federal Government in developing our book collections. The price of books goes up every year 10 or 15 percent. The inflation in journals is even higher. We have fewer books per capita in academic libraries at this time than we had in 1965.

One other thing I would like to comment on is the matter of loans to students to enable them to go to college. All of us are interested in realizing the dream of higher education for increasing numbers of Americans, but I think we must examine the results of this. The students are enabled to go, but if resources for their use are not provided, resources in libraries, resources in librarians who can interpret and service the collections for them, and resources in research that will enable these large collections to be used more easily, students are being sold a bill of goods. In other words, they may get an education but its value will decrease as support for it becomes increasingly hard to come by.

I think I have commented on everything that I feel is most important in this bill. It meets just about every requirement that I can think of to get the job done that we want done.

I particularly like the specific authorization of funds and the fact that the bill is recommending a 5-year extension. It is important to us and we much prefer it to the administration bill.

PREFERENCE AS TO BILLS

Senator PELL. As you know, we are faced with two definite choices and we want to try to be specific about which we want to do. As opposed to the two bills, the administration bill, S. 1123, and the committee bill, S. 659, when it comes to your area of interest do you have a choice between them?

Dr. FORTH. Yes. As far as I am concerned, S. 659 is the one that we want.

Senator PELL. That is a nice statement which is very hard to get. Thank you. This helps us as we move ahead in the legislative process, and you will be amazed how rarely it is that witnesses will say we want this and we want that.

CATALOGING FUNCTION

Now, in connection with the problems that would arise if S. 1123 were enacted and the deletion of those cataloging functions was allowed to happen, thus ending them, who would pick up the slack? Indeed, who could pick up the slack?

Dr. FORTH. You mean the Library of Congress acquisitions and cataloging program?

Senator PELL. Yes, the actual function of cataloging. Who would pick it up? If the administration view prevails, do you see anybody picking up this function or do you see it going down the drain?

Dr. FORTH. Senator, I hate to think of it being deleted. But if it were I suspect that much of the work would not be done. Most of the libraries around the country simply do not have enough staff sufficiently trained in the various disciplines and knowledgeable enough in the many different foreign languages that the Library of Congress catalogs books in, to do the job. At the present time, in my own institution we have almost 50,000 uncataloged books that we cannot get on shelves except on demand. If a scholar knows that a book is there and he says, "Can't I, for heaven's sake, get this one cataloged?" the answer is, "Yes, you can." But in terms of providing this body of material to our students and faculty in general or to the general community, we can't do it. I don't have enough people and I am not likely to get them. What happens, as you probably know, in universities is that the usual priority is put on getting a teacher in front of the students. It is the essential support function that weakens a student's education if it is not there.

Senator PELL. Thank you very much indeed for the record, and I thank you for your explicit expression of views. Let's hope we succeed.

Mr. MCCARTHY. Yes, I hope you do.

Senator PELL. Thank you very much, both of you gentlemen.

(The prepared statement of Dr. Forth follows:)

1352

ASSOCIATION OF RESEARCH LIBRARIES

STATEMENT

BY

STUART FORTH

DIRECTOR OF LIBRARIES

UNIVERSITY OF KENTUCKY, LEXINGTON

REPRESENTING

THE ASSOCIATION OF RESEARCH LIBRARIES

BEFORE

THE SENATE'S COMMITTEE ON LABOR AND PUBLIC WELFARE

SUB-COMMITTEE ON EDUCATION

ON BEHALF OF

S. 659

APRIL 22, 1971

1365

Statement by Stuart Forth
Director of Libraries, University of Kentucky

Mr. Chairman, and members of the sub-committee:

My name is Stuart Forth. I am the Director of Libraries, and a Professor of Library Science, at the University of Kentucky, in Lexington. I might also mention that I am an American historian and for a couple of years I served my University as Vice President for Student Affairs. As the librarian of a fairly typical emergent state university with a central campus and fourteen community colleges, a total enrollment of over 27,000, and aspirations to excellence, I personally appreciate the opportunity to comment on S. 659. My personal pleasure aside, I am appearing today as the spokesman for the Association of Research Libraries, the principal organisation of the major university and other large research libraries of the country. I ask that my statement be made a part of the record.

Mr. Chairman, I am impressed with S. 659. It seems to me an excellent bill which, if enacted, would be of benefit to the educational efforts of our country's academic institutions and, thus, of great value to our national well being. There are a number of points I would like to make about the problems we are faced with before I comment on the bill itself.

My experience at Kentucky suggests that our problems are fairly typical of those of many other colleges and universities. Because of

increased enrollments and new program demands, literally thousands of institutions must depend on older, richer, better established schools to supplement their comparatively meager resources. In Kentucky, for example, we turn often to Indiana University, Ohio State, the Universities of Illinois, Michigan, Chicago and North Carolina for help in supplementing our book and information resources. We also expect and receive help from the Library of Congress and, of course, from the Center for Research Libraries of which we are a member.

To many other schools in the Ohio Valley and the mountains to the east of us, however, we are the richer, better established institution and we give help in the form of books and information to hundreds of private individuals, to business and industrial firms, to high schools, junior colleges, and colleges and universities. Pikeville College, Berea, Lees College, Kentucky Wesleyan, Centre College, Morehead State, Eastern Kentucky University, and many others have a legitimate demand on our resources and services which we honor to the extent of our ability.

Librarians are enthusiastic about these and other cooperative efforts in the interest of saving building costs, reducing duplication of collections, and utilizing information specialists. Members of the committee may be familiar with the Center for Research Libraries in Chicago, the Hampshire Inter-Library Center, the New England Deposit Library and other cooperatively organised or administered depositories some of which, I might note parenthetically, have benefitted from the HEA's Title IIA's special purpose grants.

Such cooperative efforts are often designed to house valuable but less-used research material (and the Center for Research Libraries also has a sophisticated program for acquiring such material for the benefit of its members) thus insuring its preservation but relieving member libraries of the necessity of housing, and administering, it. I should also mention that the Association of Research Libraries, for which I speak, is even investigating the possibilities of planning, on a national level, now for the creation of regional depositories of important research and teaching resources.

I would do you a disservice if I did not note, however, that in spite of the accomplishments of the past, and regardless of what we may accomplish in the future, the fact remains that on each of the nation's campuses there will still have to be large collections of materials used by faculty and students in their day-to-day participation in the teaching, learning, and research processes. Knowing what we do of the present burgeoning enrollments, planning for the inexorable growth of the nation's population, and expecting the dream of higher education for ever more Americans to remain a constant, libraries with a million volumes or more will become increasingly common and, more important, vital to the success of the educational mission. A sociologist at Kentucky, working against time on a human problem related to, let us say, an urban renewal program, has the same need for the same material here and now that a man in Massachusetts or Minnesota or Iowa has. I know from my own teaching experience the frustration of knowing important material exists which would "turn a student on" but either not having the funds to buy it, or having to borrow it briefly from another school. Some things, many things, must be duplicated.

These things being so, we hope the Congress will realize yet another fact with which we live. Traditionally, our government has responded to the needs of many varied groups of citizens organised to bring their needs and responsibilities, their potential for better serving the nation to government's attention. We academic librarians are at a disadvantage here: There are just not many of us as over against, say, the tens of thousands of school teachers and professors who also make their problems known to you.

Although few in number, our function in quality higher education is vital. Without us, without what we do and what we know, academic teaching and research would fail. You might compare the librarian to anesthesiologist -- bladder stones can be cut out without anesthetics (it was done for years) but success is more likely to be assured if one member of the medical team performs his highly specialised function at the appropriate time. You might carry the comparison even further: Time was, the surgeon himself administered the anesthetic, then it became a nursing function, now, as medical science has improved to meet the demands of a better educated more demanding public, it is done by a medical specialist. So it is in libraries. As they become larger and more complex, the demands on them for specialised services and information have increased phenomenally.

Based on the evidence of S. 659, I assume that this committee is fairly knowledgable about the function of librarians. I hope that you will agree that the unique rôle, the unique needs of librarianship <u>not</u> be submerged in some vague, general education legislation which does not specifically provide for:

1) The provision of college and university library resources.

2) Funds for library research and training in librarianship.

3) Specialised service from the Library of Congress to all academic libraries.

The Higher Education Act of 1965, as amended, has been of great benefit to the academic libraries of the nation which, in turn, means that the quality of education, and of American life, has also been improved. The Act has, indeed, been a conspicuous success, its detractors to the contrary. The journal of the American Council of Education, entitled Educational Record, notes in the current issue (Winter 1971), on page 111, that organisation's official policy statement:

> "It has become commonplace to attack much of the existing Federal support of higher education as a hodgepodge of categorical programs. The attack is unwarranted... Title II of the Higher Education Act of 1965 has provided basic support to libraries, one of the most essential elements in all of higher education, and has been especially valuable to new developing institutions. These programs should be continued and, in the case of the Library Title, expanded. In particular, the enormous financial burden under which the National Research Libraries are laboring requires greatly expanded federal support. In the truest sense of the word, they represent a vital national resource."

I want to state flatly that on my Lexington campus, on the campuses of the University of Kentucky's 14 community colleges, and on the campuses of my Commonwealth's regional state universities and private colleges, I have heard nothing but praise for the specific Library provisions of the Higher Education Act. Much of the enthusiasm of librarians for S. 659 is because it not only proposes to continue and extend the Higher Education Act, but identifies specific library provisions with the appropriation of adequate funds for implementation.

Believing as I do that the Higher Education Act has been successful, I regret that funds authorized for its implementation have not been provided, and that it is being gradually and arbitrarily weakened by administrative fiat. In my triple role, if you will, as a student of American history, a librarian, and a citizen who has long been fascinated by government and active in various political campaigns, I have a concern for several things:

1) The first is the so-called "impounding" of appropriated funds by H. E. W. Indeed, it has been reported to me that the only Higher Education funds so impounded are Title II A funds. The Administration's apparently deliberate and systematic de-emphasis of the program, its indifference to a demonstrably effective service to higher education, and its failure to offer a viable alternative program seriously disturbs me, and my colleagues around the country.

2) The second is what appears to this observer as a reasonably serious legal, or Constitutional, question, i. e., the Administration's policies to thwart the intent of Congress. At the risk of appearing antedeluvian, may I ask what's become of the independence of Congress? Should this happen? Congress has indicated its interest in and concern for academic libraries as being a major informational source for the whole nation. It reaffirmed this position last summer when it voted to override the Executive's veto of the 1971 fiscal year appropriation act, but where are we now?

3) The third, from the vantage point of having been responsible for the administration of my University's ~~(which included our student financial aid program),~~ Office of Student Affairs and from a first-hand knowledge of student characteristics and attitudes, it seems to me that the Administration's emphasis on providing funds to get students to college, while at the same time reducing funds to provide learning resources, well-trained librarians, and modern information services based on the results of strong library research programs, makes very little sense indeed. In fact, it arouses expectations which cannot be fulfilled. This, in turn, leads to frustration, disillusion, and contempt for "the system's" educational process on the part of students. We encourage them to aspire to higher education but we are not adequately supported in our efforts to maintain the standards which make that education of value. In other words, under these circumstances, merely by assisting students to go to college, while it may be politically popular, does not solve the problem of higher education -- it makes it worse.

Finally, let me comment on some specific proposals in S. 659, proposals which, if enacted and implemented, would do much for all academic libraries, although, to be sure, I can speak most authoritatively for my own.

I am unable, I should mention, to separate the first three alphabetical sub-sections of Title II from one another -- A B and C are, in effect, like the Trinity, one and indivisible, but I can comment on them separately.

While you are doubtless accustomed to hearing academic librarians talk about the need for books and other information resources, let this librarian first talk about academic programs.

The Commonwealth of Kentucky, according to its Council on Public Higher Education, spends 68.5% of its general fund money on all education, and 28% of its general fund monies on higher education. Ours is a state with a rural tradition, a farm-based economy, an extensive problem with the rural poor in the Appalachian area, a staggering welfare load, and the problems of aspiring minorities and decaying urban areas. Under these circumstances, Kentucky's citizens are supporting education to the limit of their ability. Other states, as you know, have serious problems which may differ in degree or kind from ours, but most of us are in similar if not identical situations.

Our problems, while typical, are nevertheless very serious. You might be interested in some specifics:

1) Title II A is extremely important to our programs because of several factors which inhibit our effectiveness. One of them is the national phenomenon of enrollment growth, with which you are familiar. At my own institution, our Lexington campus enrollment grew from 12,443 in 1965 to 17,668 in 1970. Our community college enrollments grew from 4,530 to 9,766 in the same period.

2) While our book budgets, both in Kentucky and on the national scene, have grown, even with the assistance provided by HEA,

there are fewer books per capita in American academic libraries than there were in 1965. The cost of books and journals, as you probably know, increases from 10 to 15% per centum every year! Publisher's Weekly reports that the average price for a hard-cover book rose from $9.50 in 1969, to $11.46 in 1970! This fact of economic life being what it is, we hope the sub-committee will recommend increasing the money for supplemental grants under II A from the present $10 per capita to $20 per capita. Presently we are failing our students. Milton said it better: "The hungry sheep look up and are not fed."

3) We have a number of new and revitalised programs which, through research, serve both to help solve local, regional, and national problems, and to teach students the things they will need to know as responsible leaders of tomorrow. Some of these are programs in allied health professions, in architecture and urban planning, in sociology and anthropology which help us with ethnic and racial minorities, in librarianship and information sciences, in agriculture, business administration, marketing, and many others. In the years since 1965, we have used our federal library grants, both basic and supplemental, in support of these programs and one or two others I have not mentioned. These funds have been of great assistance but when we did not succeed in securing all we needed, as in 1970, a program of studies on the American Indian, on the

rural poor, and several other areas in applied anthropology and behavioral science were casualties. This in one department alone!

Related to this need for full funding for Title II A, is the equally imperative need for full funding for Title II C, the Library of Congress national program in acquisition in cataloging and to this, in turn, is related our need for better trained librarians and for research in new methods to secure bibliographic control of the growing volume of publication both here and abroad and to quickly provide information society needs.

Legislation to extend Title II C, and funding to implement it, will assure that important teaching and research materials are available in America; that cataloging can be done once at the Library of Congress rather than duplicate the efforts in 80 research libraries around the country; that material, having been bibliographically identified, other libraries may more quickly acquire it as needed; and that money formerly spent on duplicate cataloging programs can be diverted to service for our growing student population and faculty. This program makes superb sense bibliographically, economically, administratively, and intellectually.

It is our hope that your committee will support the change in the language of the Higher Education Act legislation as recommended by the Library of Congress, that II C funds be appropriated directly to the Library of Congress, and not to H. E. W. for transfer. I hope the sub-committee will see the wisdom of amending the Higher Education Act's Title II, part C, Section 231 to delete the phrase "to enable the Commissioner to transfer funds" in first and last sentences of the Section.

And in conclusion I would recommend that the training and research function of librarians be specifically included in any legislation adopted to extend and provide funds for the Higher Education Act. Our profession is rapidly changing to meet new demands on the use of our increasing resources, to respond to and utilize the new technology, and to prepare for the anticipated sophisticated participation which will come as the nation grapples with its future informational needs.

Because librarians are so few in number and have had little political or economic clout, adequate fellowship and training programs have been extraordinarily scarce. So, too, have research funds desperately needed to help solve society's informational problems. Title II B has helped us recruit excellent and promising young people to the profession, has enabled us to increase those trained through the doctoral level, has contributed to the up-grading of our library schools and to the quality of our total service not only to academia, but to society. Funds have made research possible in automated bibliographic services, in evaluating the utility and cost of computerized catalogs, in studies of user requirements in large libraries, in reviewing availability of primary scientific and technical documents in the United States, etc.

None of these projects, all of which will be of value in the discharge of our responsibilities to society, would have been possible without Title II B money. Libraries have no means of generating their own money, no endowments to provide research funds, and no industrial or commercial organisations with the ability to do their research for them. While millions use libraries, and all know what they want libraries to do now and in the future,

only librarians have the bibliographic, administrative, and technical knowledge to solve the problems of the future. It is true, we are concerned with all fields of knowledge, and we draw on all fields in seeking solutions to our problems, but we cannot hire the basic research expertise, we must provide it ourselves. We cannot do it without the help of federal money.

12

(A letter to Senator Pell follows:)

THE LIBRARIAN OF CONGRESS

WASHINGTON, D.C. 20540

April 14, 1971

Dear Senator Pell:

I understand that your Subcommittee now has under consideration S. 659, a bill to amend the Higher Education Act.

As you know, the Library of Congress' primary interest is in Title II-C (Sec. 124 (a) (b) of S. 659) of the Higher Education Act, the National Program for Acquisitions and Cataloging.

As I stated before your Subcommittee last year, Title II-C of the Higher Education Act was proposed by the Association of Research Libraries and the American Library Association in 1965 as an extension of Federal aid to libraries. It provides for the transfer of funds to the Librarian of Congress by the Commissioner of Education for a centralized cataloging program. Prior to this Act, college and university libraries were unable to obtain cataloging copy from the Library of Congress promptly enough to serve their readers. The Act makes it possible for the Library of Congress to catalog the books promptly and make the catalog copy available to libraries, thus avoiding wasteful duplication in cataloging.

Congress saw the reasoning behind the proposal and the Committees in both Houses reported the bill with the amendment. This amendment and the technical amendments of 1968 had bipartisan support.

The centralized cataloging program--known as the National Program for Acquisitions and Cataloging--even though it has had limited funding, has been acclaimed by college and university libraries as one of the greatest innovations in library science in this century. It is a working solution to one of education's greatest library problems.

College and university libraries, which were not even in 1965 able to hire sufficient professional cataloging personnel, are now quite dependent upon the national cataloging program. They are, in fact, reporting savings in cataloging costs in excess of the amount of money appropriated by Congress for Title II-C.

To quote Frederick H. Wagman, Director of Libraries, University of Michigan: "It can be seen at a glance that strengthening the acquisitions and cataloging program at the Library of Congress is without a question a most significant way to assist the libraries of the United States engaged in supporting higher education and research." And, it might be added, under the present arrangement it is one of the least costly and one of the most effective aids to education beyond the secondary level.

The Office of Education has, as the Act states, funded this program since fiscal 1965. In late December 1970, however, the Library of Congress received word from the Department of Health, Education, and Welfare that the Office of Management and Budget had decided that the program should be removed from the HEW budget and funded directly as part of the Library of Congress appropriations. I subsequently included this item in the Library's appropriations requests for fiscal year 1972 in order that this important program could continue.

Because of this development I would like to suggest that Title II-C of the Higher Education Act be amended by striking the words "to enable the Commissioner to transfer funds" in the two places that these words appear. The authorization would then provide that the sums would be appropriated to the Librarian of Congress for carrying out the purposes of the act and funds for the program would hereafter be included in the budget of the Library of Congress. The Senate Committee on Appropriations suggested last year that it would be more logical for this program to be funded directly to the Library rather than through the Office of Education, HEW. I have discussed this matter with Senator Jordan, Vice Chairman of the Joint Committee on the Library, and he would have no objection to such an amendment.

I would be happy to provide your Subcommittee with additional information should it be desired.

Sincerely yours,

L. Quincy Mumford

L. Quincy Mumford

May 13, 1971

MAY 21 1971

The Honorable Claiborne Pell
United States Senate
325 Old Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

For the third year in a row, the Administration's budgetmakers have sought to reduce or eliminate library programs. Even when money is appropriated, it is not authorized for expenditure. This year the application forms for HEA Title IIA library resources grants stated that while $15.34 million was appropriated for this vital program for college library materials, the Office of Education decided to provide funds to only 700 institutions (instead of last year's 2,200) in the amount of $9.9 million.

This low budget for the HEA Title IIA program was explained at an HEW briefing as follows:

> "Assistance for college libraries will be reduced substantially in recognition of the marginal effect the wide distribution of these funds has had. Through administrative action and proposed legislation, the funds will be concentrated on the neediest colleges and universities."
> (American Libraries, March 1971, p. 276)

We believe the effects of Title IIA appropriations in developing library collections for the members of the Lehigh Valley Association of Independent Colleges challenge this statement. In Lehigh Valley college libraries Title IIA funds have developed:

- A black studies collection.
- An urban studies collection.
- A basic collection of music materials of scores and recordings.
- A research collection of periodical backruns where students previously had no access to titles published before 1960.
- Core collections to support ecological and environmental studies programs in two colleges.
- A theatre collection to support a new drama major program.
- Several microfilm collections of periodical and newspaper backruns.

These resources not only serve more than 10,500 students enrolled in the Lehigh Valley Association of Independent colleges but are available to adult residents (including high school students) in the Lehigh Valley through free circulation privileges extended by each LVAIC library.

The budget recommendation for the Higher Education Act cut the 1971 appropriation of $28,009,500 by 40% to $16,853,000. The Title IIA program to develop library resources was cut 68% from the 1971 appropriation of $15,325,000 to $5,000,000. These appropriations are distressingly low, and administrative guidelines for these programs are radically altering the objectives and focus of the program. Although the House-passed Education Appropriations Bill, HR 7016, has doubled the administration's request for $42,709,000 to $72,109,000, it is still 6.3 million below the 1971 level.

We urge that Title IIA of the Higher Education Act be extended through 1976, and support HR 32 and S. 659 which extend the act, with explicit provisions for:

(1) Annual authorization of $130,000,000 each year for Title IIA, Parts A and B, with 70% reserved for library grants under Part A, and 30% for training and research under Part B.

(2) 25% of the funds under Part A be reserved for Special Purpose grants. These grants are primarily important in assisting the development of interinstitutional library projects like the LVAIC consortium of libraries. The grants pave the way for participation in successful interinstitutional projects, and unite cooperating libraries into effective organization.

(3) Part B be allotted as 2/3 for training, 1/3 for research.

(4) Part C, Shared Cataloging, receive a new five year authorization of $15,000,000 each year.

Very truly yours,

James P. McCabe

Science and Technology Purchase Guide
The 1968 Supplement of *Science and Technology: A Purchase Guide for Branch and Small Public Libraries,* by Virginia L. Garland of the Carnegie Library of Pittsburgh's Science and Technology Department, is now available. The *Supplement* contains over 1000 titles which have been selected for the student and nonspecialist adult from books received in the Science and Technology Department during 1968. To facilitate ordering catalog cards, this supplement contains the Library of Congress card number. It continues to carry the name of the first author only, title, and bibliographic information including the paging and price. The cost is $3.00, which includes handling and postage. Prepayment is required. Orders should be sent to The Director's Office, Carnegie Library of Pittsburgh, 4400 Forbes Avenue, Pittsburgh, Pennsylvania 15213.

ACLCP Motorized Library Delivery Service
The Area College Library Cooperative Program has inaugurated a motorized Library Delivery Service which will speed service to the borrower who is using materials from ACLCP members and from a selected group of libraries in the Philadelphia area. Truck delivery service is now available to libraries in the central Pennsylvania area twice a week and to those in the Philadelphia area once a week. Books, photocopies, microfilm, pictures, records, and other types of library materials that would normally be sent by mail can now be delivered on a scheduled basis with less time and effort involved since the wrapping, insuring, and mailing of these items is eliminated.

This program, which is financed in part by a Federal grant and in part by the thirty-five participating libraries, is administered by Mr. Harold R. Jenkins of the Lancaster County Library. It includes the following libraries: Altoona Public Library, Bryn Mawr College, Bucknell University, Chester County Library, College of Physicians of Philadelphia, Coyle Public Library of Chambersburg, Crozer Theological Seminary, Dickinson College, Elizabethtown College, Franklin & Marshall College, The Free Library of Philadelphia, Gettysburg College, and the Harrisburg Area Community College.

Also included are the libraries of the city of Harrisburg, Haverford College, Juniata College, Lancaster County, Lancaster Theological Seminary, Lincoln University, Messiah College, Millersville State College, PMC Colleges, the Penn State campuses at University Park, Altoona, Harrisburg, and Mt. Alto, Rosemont College, Shippensburg State College, the State Library, Susquehanna University, Swarthmore College, University of Pennsylvania, Villanova University, Wilson College, and York College.

Lehigh Valley Consortium
Six Lehigh Valley academic libraries — those of Allentown College of St. Francis de Sales, Cedar Crest, Lafayette, Lehigh, Moravian, and Muhlenberg — have joined in a cooperative interlibrary loan project to provide fast and comprehensive exchange of materials for users in each institution.

The six libraries are linked by teletype, and daily pickup and delivery service by station wagon to each is provided five days a week. The project is designed to meet the everyday needs of students, in particular, by furnishing them with materials available in one library but not in another, or which may be in use locally at the time of the request. The total book resources of the six libraries is over one million volumes.

The project is one phase of a cooperative arrangement among the institutions themselves, which have incorporated as a consortium under the name of The Lehigh Valley Association of Independent Colleges. Funds for the library phase of the operation are being supplied by the member institutions.

NEWS

Workshop on Nonprint Materials

A Workshop on Nonprint Materials as Learning Resources for teachers, media specialists, A-V directors, and librarians will be held June 28-July 16, 1971, at Millersville State College. The workshop will provide participants with an opportunity to achieve familiarity with nonprint materials and the appropriate equipment needed to use them, in order to develop an expertise in this area. Workshop E.M. 501 is a 3-credit graduate course which can be taken for credit or noncredit. Enrollment will be limited. Details are available from Mrs. Minda Sanders, Director of Workshop, Department of Educational Media, Millersville State College, Millersville, Pennsylvania 17551.

LVAIC Union List

A Union List of Current Periodical Subscriptions has been published by the six academic libraries affiliated with the Lehigh Valley Association of Independent Colleges consortium. This computer-produced directory lists the locations of more than 4,000 periodical titles on the subscription lists of the libraries at Allentown College of St. Francis de Sales, Cedar Crest College, Lafayette College, Lehigh University, Moravian College, and Muhlenberg College.

Arranged alphabetically by periodical title, the directory identifies the library holding the longest file of each title and the beginning date of the file, and notes other libraries holding shorter runs. Title entries are accepted as submitted by each of the six participating libraries. Twice a year the list will be updated to record new titles and changes in holdings records.

The first phase of the union listing project was prepared by Lehigh University's computer facilities and is an extension of the Lehigh University Library's computerized serials records project under the direction of Library Director James D. Mack. The next phase will add LVAIC noncurrent serial holdings to the list. Continuations will be added in the future.

The LVAIC union list of current periodical subscriptions extends the facilities of the LVAIC libraries made available to more than 10,000 borrowers at these institutions through a cooperative interlibrary loan project initiated in September 1969. More than 1,500,000 volumes are available through a network which includes teletype communication and a daily delivery system.

In addition to utilizing the periodical collections within the LVAIC consortium, the union list will assist the LVAIC libraries to evaluate their periodical resources and develop collections which are mutually useful.

The librarians coordinating the LVAIC libraries network are Brother James P. McCabe, Allentown College; Patricia L. Sacks, Cedar Crest; Clyde L. Haselden, Lafayette; James D. Mack, Lehigh University; Henry L. Williams, Moravian College; and John S. Davidson, Muhlenberg College.

Copies of the 99-page Xerox list can be purchased for $10 each, without binders. Orders on institutional order forms should be addressed to the Mart Library, Lehigh University, Bethlehem, Pa. 18015.

1384

THE STATE HISTORICAL
SOCIETY OF WISCONSIN
816 STATE STREET / MADISON, WISCONSIN 53706 / JAMES MORTON SMITH, DIRECTOR

Office of the Director

May 12, 1971

Senator William Proxmire
Senate Office Building
Washington, D. C. 20510

Dear Senator Proxmire:

Under the language of the Higher Education Act of 1965, the State Historical Society of Wisconsin was ruled ineligible to receive library development grant money under Title II-A because we were not an educational institution with enrolled students.

There are now four bills before the Congress relating to the extension of the 1965 act, which is scheduled to expire on June 30, 1971. These bills are H. R. 32, H. R. 5191, S. 659, and S1123.

Except for H. R. 32, these bills continue the wording of the 1965 act in restricting funds to "institutions of higher education." H. R. 32, however, stipulates that Special Purpose Grants may be given to "institutions of higher education, and to other public and private nonprofit library institutions which provide library and information services to institutions of higher education on a formal, cooperative basis" (p. 32, lines 23 and 24, page 33, lines 1-5).

While this broader definition of institutional eligibility will be beneficial, we would like to see this wider definition of eligibility under Special Purpose Grants made applicable also to the Basic Grants section of the law so that the State Historical Society of Wisconsin, and other libraries whose main function is the support of instruction in institutions of higher education, might benefit from these types of grants that have in the past been given to individual academic libraries for the development of their book collections.

Although we have no students enrolled in the Historical Society, our library is charged by state law with the development of an American history collection for the students and faculty of the University of Wisconsin. The three largest users of our collection on interlibrary loan are

the Wisconsin State Universities at Stevens Point, LaCrosse, and Oshkosh, all of whom have received funds yearly under Title II-A.

For over 70 years there has been a very close relationship between the libraries of the University and the Historical Society. Until 1953 the University library was housed in the Historical Society building. When the University library occupied its present building in 1953, some 100,000 volumes were transferred from the Society's holdings to the present University library. At that time an agreement was entered into by the Society and the University defining the collecting scope of each institution to avoid unnecessary duplication in collecting library materials. Under the informal agreement the Historical Society was given the responsibility of continuing its development of a research collection in American history, thus relieving the University library of this responsibility. Probably 90 percent of the use of the Society's collection is from students and faculty in the Madison University community. This use is in several disciplines, including American history, journalism, political science, geography, and anthropology. We circulate over 100,000 items a year to University clientele. We have faculty and student carrels and study desks which are assigned by the Society to undergraduates, graduate students, and faculty of the University. There are many operational links between the University library and the Society library. Acquisitions are cross-checked to avoid gross duplications of holdings; the University library produces many of our catalog cards; we service the University library's newspaper collections, both in the original and on microfilm.

Despite this supportive role in providing research resources in American history for the University of Wisconsin and the state university system, the Society receives no funds from the University. As a state agency it is funded through state appropriations, along with a small measure of support from private endowments.

Since we perform all of the library services of an academic instructional library, we feel that we should be made eligible to receive federal grants for library resources development under any new legislation which may be enacted to continue the Higher Education Act of 1965.

Sincerely yours,

James Morton Smith

James Morton Smith

JMS:dk

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE
WASHINGTON, D. C. 20201

MAY 10 1971

Honorable Claiborne Pell, Chairman
Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D.C.

Dear Senator Pell:

Please accept my apology for not responding sooner to your letter of March 11 requesting the legal authority and rationale for limiting the availability of basic grants under Title II-A (College Library Resources) of the Higher Education Act of 1965 to only new institutions of higher education and other institutions which qualify for supplemental grants. I assume you are referring to the change in policy reflected in the amendments to the regulations in 45 CFR Part 131 set forth in 35 F.R. 11875, particularly amendments 1 and 2 (see copy enclosed).

The purpose of the new policy, effective for the first time this fiscal year, is to concentrate Title II-A funds in those institutions of higher education with the most critical financial need. These include new institutions, developing institutions, junior and community colleges, and those institutions with a high proportion of disadvantaged students. The Administration requested $9.9 million for this program in Fiscal Year 1971, and believes that this amount is sufficient to achieve these purposes.

The legal rationale for this policy is that the authority of the Commissioner to award basic grants under Section 202 of the Higher Education Act is a discretionary one which can be made subject to such conditions, consistent with the purposes of the program, as he deems necessary and proper. While Section 202 specifies certain conditions which must be met before any basic grant may be made, there is nothing in this section or elsewhere in Title II-A of the Higher Education Act which mandates the Commissioner of Education to make basic grants to all applicants meeting these requirements.

Therefore, the Commissioner may, with the advice of the Advisory Council on College Library Resources established pursuant to Section 205 of the Act, establish criteria for determining priorities among applications for basic grants as well as those for supplementary and special purpose grants.

With kindest regards,

Sincerely,

Elliot L. Richardson
Secretary

Enclosure

[From the Federal Register, Vol. 35, No. 240, Rules and Regulations, p. 18875—Friday, December 11, 1970]

PART 131—COLLEGE LIBRARY RESOURCES PROGRAM UNDER TITLE II-A, HIGHER EDUCATION ACT OF 1965, AS AMENDED

MISCELLANEOUS AMENDMENTS

Part 131 of Title 45 CFR is hereby amended as follows:

1. Paragraph (a) of § 131.7 is amended to read as follows:

§ 131.7 Content of applications.

(a) *Applications for a basic grant.* All applications for a basic grant shall contain information sufficient to enable the Commissioner to determine—

(1) The eligibility of the applicant pursuant to § 131.5 and the Civil Rights Regulation in Part 80 of this title.

(2) That the applicant will expend during the fiscal year for which the grant is requested (from funds other than funds received under this part) for all library purposes an amount not less than the average annual amount it expended for such library purposes during the fiscal years 1964 and 1965 or during the 2 fiscal years preceding the fiscal year for which the grant is requested, whichever is the lesser:

(3) That the applicant will expend for all library purposes an amount (from funds other than funds received under this part) equal to not less than the amount of such grant;

(4) That the applicant will expend during the fiscal year for which the grant is requested (from funds other than funds received under this part) for library materials an amount not less than the average amount it expended for such materials during fiscal years 1964 and 1965 or during the 2 fiscal years preceding the fiscal year for which the grant is requested, whichever is the lesser;

(5) That the applicant will comply with the requirements in §§ 131.15, 131.16, and 131.17 relating to fiscal accounting and auditing procedures, retention of records and reports.

(6) That except for new institutions of higher education, the applicant will include in his application the information required in subparagraphs (4), (5), and (6) of paragraph (b) of this section.

(20 U.S.C. 1922)

2. Section 131.8 is amended to read as follows:

§ 131.8 Criteria for review of applications for supplemental grants.

Except for applications for basic grants to new institutions of higher education, the following criteria will be applied by the Commissioner in approving applications for basic and supplemental grants:

(a) Degree of deficiency in the number of volumes of the applicant's library in relation to the present and expected increase in, student enrollment and the type of institution or branch applying for a grant;

(b) Participation in other Federal programs aiding disadvantaged students;

(c) Degree of economic disadvantagement of students enrolled;

(d) Recency of the establishment of the library collection.

(20 U.S.C. 1023)

3. Section 131.9 is amended to read as follows:

§ 131.9 Criteria for review of applications for special purpose grants.

The following criteria will be applied by the Commissioner in approving applications for special purpose grants:

(a) *Type A grant.* (1) Location in a community characterized by significant social and economic deprivation;

(2) Location in a designated Model Cities area;

(3) Number of economically disadvantaged students;

(4) Other demonstrated special needs;

(5) Use of Federal funds to meet special needs.

(b) *Type B grant.* (1) Existence of a comprehensive collection which meets special needs of other institutions in communities characterized by social and economic deprivation;

(2) Availability of a published catalog of, or other guide to, such collection;

(3) Extent to which such collection will be made available;

(4) Use of Federal funds to meet special needs.

(c) *Type C grant.* (1) Number and type of member institutions in the combination;

(2) Availability of a published catalog of, or other guide to, the special collection;

(3) Adequacy of staff, equipment, and facilities;

(4) Capability to continue the program of the combination;

(5) Coordination with other Federal programs;

(6) Use of Federal funds to meet special needs.

(20 U.S.C. 1024)

Effective date. This regulation is effective 30 days after publication in the FEDERAL REGISTER.

Dated: October 22, 1970

T. H. BELL,
Acting U.S. Commissioner of Education.

Approved: November 5, 1970.

ELLIOTT L. RICHARDSON,
Secretary of Health, Education, and Welfare.

[F.R. Doc. 70-16075; Filed, Dec. 10, 1970; 8:47 a.m.]

Senator PELL. The next witness is President Glen Ferguson of Clark University.

Welcome, and I am glad to see that a man who has had the experience you had directing VISTA now has the responsibility of directing a university.

STATEMENT OF GLENN FERGUSON, PRESIDENT, CLARK UNIVERSITY, WORCESTER, MASS.

Senator PELL. Because of the time pressures, I was wondering if it would be agreeable to you if the full text of your statement, which I can see from here extends to considerable length, was put in the record at the end of your testimony?

Mr. FERGUSON. Certainly, Mr. Chairman.

In prior years, Federal funding of higher education has tended to endorse projects rather than institutions, fields of study rather than educational approaches, individual professors rather than outstanding institutional leadership, research rather than operating needs, and the growth of academic specialties rather than integrated academic programs.

As a nation, we are moving in the direction of endorsing the idea that financial circumstances should not be the pivotal factor in determining whether a student can pursue his education beyond high school. To make that concept a viable reality for our young people, we must also endorse the philosophy that higher education, in a variety of forms, will be available to each of them. The public university is prepared to cope with part of the problem, but the private university must also fulfill its responsibilities.

Because of financial realities, it is extremely difficult for State governments to allocate resources to private institutions. I suggest that the Federal Government review its priorities in an effort to sustain diverse elements of higher education.

The small, private university needs help. It needs help now to meet the current demands for change.

Traditionally, it has been the responsibility of the private school to innovate and to offer a broad range of academic programs. In recent years, both public and private colleges and universities have shared Federal dollars. Given current pressure, I am concerned that the Federal Government may minimize its commitment to the private institution.

If Federal financial support continues in the traditional format, the heterogeneity of American higher education will be in jeopardy. If the Federal Government does not provide a larger percentage of financial assistance to private institutions per se, rather than treating public and private colleges and universities in parity, the number and diversity of colleges will decline, the large will grow larger, and the remaining private colleges will become havens for the socially and financially elite.

Given financial strictures, the Federal Government must consider a combination of institutional grants and direct loans and grants to the individual student; however, unless national higher educational priorities are established, the status quo will be unaffected. A recommended priority incorporates Federal support for private rather than public institutions.

To obviate this development, the Federal Government might consider awarding a basic institutional grant to each accredited private college coupled with variable monetary increments reflecting national priorities. All colleges and universities were not created equal, even though the Federal Government has treated them equally. At the national level, we should exercise judgment and attempt to assign financial values to stipulated educational objectives. Several variables exist, and in each case hard decisions would have to be made.

Through the medium of private institutional financial grants to the private colleges and universities, the Federal Government can stimulate academic excellence, innovation, reform, and diversity.

Senator PELL. Thank you very much indeed. Your testimony which we have been through is good specific testimony about the problems of the small private colleges. President Hester of New York University, a representative of the larger private institution, and you cover the spectrum and I see how acute the problem is.

I have a couple specific questions.

NEED FOR SUPPORT

Why do you feel that private colleges have particular need of Federal support as opposed to the general publicly supported institutions?

Mr. FERGUSON. Mr. Chairman, as a result of recent problems in higher education, I feel that the States will tend to give almost exclusive support to State public institutions. This will be coupled with historic Federal support, roughly a 50–50 ratio, for public and private institutions. At the same time, some State legislatures are beginning to take approaches which preclude the kind of diversity which appears to be a hallmark in higher education.

For example, in the Midwest, some legislatures are restricting nonresidents to precise quotas. As this trend continues, inevitably more State dollars will support public institutions, and it will be more difficult for the large public institution to maintain the variety and quality of programs which are required in our pluralistic system.

Therefore, I think that the Federal Government must, at some point, begin to make judgments with regard to national higher educational objectives and support, to a greater extent, those private institutions that reflect innovation, a willingness to endorse high standards of academic excellence, and smallness per se, because that too appears to be an important ingredient as many State universities decentralize to avoid the relatively invidious aspects of the multiversity.

Senator PELL. If we enacted public support for the private universities and colleges, how do you get away from the old adage that "he who pays the piper calls the tune," as you become more and more affected by the Federal Government's views and restrictions?

Mr. FERGUSON. As I understand it, about 30 percent of the support for higher education comes from the Federal Government. Up to the 50-percent level, I do not think that control is a critical question either philosophically or in practice.

Senator PELL. Excuse me. I am not sure I would agree with you because the threat in that 30 percent on the board of trustees might cause you to move in a direction you might otherwise not want to take, whereas if it is only 10 percent you can thumb your nose at the Government. So I am not sure you would have to wait for the 50.01 percent figure.

Mr. FERGUSON. I would agree. The question of control, on which I was focusing, was the immediate effect of stipulated guidelines from the Federal Government.

Senator PELL. I am very concerned about getting the legislation through and getting help to you. I see some young people here today. I just hope to goodness that they do not have too much excitement on the campuses this spring as we try to get this bill through, because the more excitement there is and the more blown up it is, there is harm to the program. People remember last year as a year of violence when in fact there were 28 institutions of higher education where there was violence out of hundreds of institutions. People think they not only have to send their child to the university with a toothbrush and toothpaste but a gas mask as well.

Mr. FERGUSON. Mr. Chairman, I do have a comment on the question of Federal control or the threat thereof.

In the past, the Federal Government has tended to support specific projects. Grants were given to nurture a different project or approach. As we used to say in economic development, the best way to bankrupt a lesser-developed country was to build a university and a hospital and then depart. In many ways, what the Federal Government has done is to create appendages to higher education which require additional operating expenses and which put the colleges and universities in the position of not having the requisite flexibility. If we can move in the direction of institutional grants, as opposed to precise project support, this may in itself help to obviate the threat of Federal control because you are avoiding precise guidelines related to definitive projects.

Senator PELL. What kind of formula do you endorse for institutional grants? Are you familiar with President Hester's formula?

Mr. FERGUSON. Yes, I am.

Senator PELL. My formula is much more simple—$1,000 a student. I think his is more complicated. Maybe there is another formula which is better.

Mr. FERGUSON. Mr. Chairman, as you have stressed repeatedly in prior testimony before the subcommittee, this is a complex question. Generally, I accept the elements of the bill which you have submitted. For example, the institutional grant, as a concept, is not incorporated in the administration bill as it is in your bill. I think that it is naive to expect private capital to produce an additional $1 billion for the student loan market. Your bill continues direct Federal support for student loans. I think that these are profound distinctions. In your bill, I am worried, in only one respect, about the proposed $1,200 institutional grant, less the amount of tuition. In reality, under the provisions of your bill, most private institutions would not receive institutional support. Our tuition is now at the $2,600 level. Most private colleges and universities are way above the $1,200 tuition level.

With regard to a precise formula——

Senator PELL. Excuse me. I would agree with you on that, and I think it should be a simple institutional grant of a flat $1,000 without making the deduction.

Mr. FERGUSON. All right, sir. May I comment on the other half of the question, the formulas that have been discussed.

Most recently, Mrs. Green presented a bill in the House, which I think is comparable to Congressman Quie's previous bill, which attempts to give additional weight to the smaller college by authorizing a larger basic institutional grant and which provides declining support as enrollment increases. In addition to that approach, there are a variety of association proposals.

For example, the AAU, the distinguished group of graduate research universities in America, suggests that institutional grants should be based on existing Federal support in the form of research grants. Clearly, that plan would perpetuate the status quo. In contrast, the Quie and Green bills place the emphasis on the need for diversity.

I would suggest that your plan to give an institutional grant to each private or public college, where a student receiving Federal support is enrolled, will help greatly. At the same time, I do not think it will promote diversity or insure the survival of many smaller institions which are an important element in the higher educational equation.

PRIORITY OF SUPPORT

Senator PELL. What in your view is more important—aid to the student or grants to the college?

Mr. FERGUSON. As suggested in your bill, I think a combination is required. I am concerned that the student loan program will not suffice unless it is coupled with institutional support. Dr. Hester, and a variety of other witnesses, have endorsed this contention. Even with the generous amounts incorporated in your combination of student loans and grants, many private colleges will not be able to attract the student who needs full financial support. If you are considering a $2,500 base, or even $2,900 as proposed under the administration bill, this is inadequate when compared to the $5,000 average which is required for a student in a private college or university. Through the institutional grant mechanism, each college could make the decision whether additional funds should be allocated to student financial assistance or to other needs.

NATIONAL FOUNDATION

Senator PELL. Do you think the National Foundation of Higher Education should make grants to promote higher education?

Mr. FERGUSON. I endorse the concept, Mr. Chairman. My concern is that prior national efforts, including those of the National Science Foundation, have tended to reward projects rather than institutions. The National Foundation will have $100 million to spend. It is charged with responding to innovation. One hundred million dollars will not suffice to allow all private institutions to respond with new programs. Invariably, we will be competing for dollars based on comparative project analysis, new institutes for innovation and new projects for change. I would rather see the National Foundation award grants to reflect outstanding institutional leadership and to give maximum flexibility to colleges and universities which are recognized because they are good, because they are relevant, because they are making important strides, rather than awarding project grants for some precise innovational application.

PREFERENCE AS TO BILLS

Senator PELL. Right. I thank you very much for your testimony. It has been good, clear, and explicit. In conclusion, if you had to make a choice between the administration bill introduced by Senator Javits and the committee bill which of those two would you take?

Mr. FERGUSON. Mr. Chairman, for the reasons I have cited, I would endorse the philosophy of the bill presented by the chairman. I feel that the three elements in the administration bill, which have been discussed, leave a great deal to be desired.

If I may, I would like to suggest that the time has come to begin to focus on diversity in higher education and for the Federal Government to make some substantive judgments with regard to long-term national higher educational goals. We should not continue an exclusive per capita response. All institutions are not equal. The States will probably not make distinctions based on qualitative judgments. At some point, I hope the Federal Government will say, yes, it is important to place 12 million students in college by 1980; yes, it is important to insure that financial reality will not preclude admission. At the same time, we, the Federal Government, believe in diversity and believe that smaller institutions must survive. In order to insure that survival, we, the Federal Government, would like to make some distinctions to support small colleges as opposed to large, private colleges as opposed to public, and innovation as opposed to the status quo.

Senator PELL. Senator Javits.

Senator JAVITS. Mr. Chairman, I shall not delay the proceedings. I am very interested in your evaluation of the respective approaches. If there is going to be any alternative, other things being equal, my first choice is always Senator Pell.

I have only one question. We do have a program for developing institutions. We thought we were going to try to reach for that program at the very small institutions for innovations and so forth. I thoroughly agree. I do not think there is anything holy about this.

Get the summer off—the 4-year course—undergraduate before you go to law and medical school. Nothing is holy. It is probably most obsolescent. I thoroughly agree with you. But why have not you small institutions been able to dip into these funds we have made available to the developing institutions?

Mr. FERGUSON. That is an excellent question. First, it is my understanding that grants pertaining to the developing institutions program have been awarded to predominantly black institutions which are experimenting in a very critical field.

Second, there are so many of us. There are only 70 public institutions in America which enroll approximately 60 percent of the students. In contrast, there are 1,400 private colleges and universities, and in the next 10 years, the percentage of students in public institutions will rise to 70 percent. These 1,400 private institutions are competing, in a declining market, for funds. Literally, we are walking the halls of the foundations looking for a rubric, or the appropriate language, to support special projects. With most of the prior higher education bills, the tendency has been to endorse pieces rather than endorsing leadership and institutions. I would hope that the concept of assisting developing institutions would mean precisely that we support the institution per se rather than elements of the higher educational package.

SUGGESTION FOR TASK FORCE

Senator JAVITS. I was going to suggest to our chairman, perhaps, we could get together a task force of a handful of people in the smaller college and university field to come up with some really creative concept of what we can do for that 30 percent that comprises so-called private institutions.

I don't consider the private institution to be juxtaposed to the public institution in terms of the weight of numbers. But I do think that we have to get something out of the private institutions which is as much in the public interest and which is much less oriented to the established pattern. In other words, I think every young person who can undertake it is entitled to a college education, but that does not necessarily mean he has to be a doctor or a lawyer or a minister. He might also be a quasi-professional in one of a hundred fields. He might have only 2 years instead of 4 years. I think we ought to deemphasize these big institutions with enormous student bodies, but I think we ought to put as much into enabling you to stay private as we put into enabling them to maintain the load in the public sector.

Senator PELL. The longest part is just thinking it out. I think this witness today is as specific and articulate as we have had and of course we were very impressed with president Hester of New York University.

Do you know president Hester?

Mr. FERGUSON. Yes, I do.

Senator PELL. I wonder if the two of you might sit down and have a cup of coffee and discuss this matter along the same vein as Senator Javits suggested?

Senator JAVITS. Could we pick somebody up from the Midwest and and the far east and the South and make it five? Could you put yourself in charge of that project?

Mr. FERGUSON. I would be glad to do that, Senator.

Senator JAVITS. We hereby delegate you.

Mr. FERGUSON. In America, today, we have a great variety of higher education associations. On Monday, I will be attending an AAU meeting in North Carolina with Dr. Hester and 46 other university presidents representing the leading research-oriented universities. Each association has a different approach. For example, the land-grant colleges and State universities differ with the AAU in terms of what specific formula should be applied.

Senator JAVITS. You are missing our point. We will take care of the land-grant colleges and the public institutions. Senator Pell and I are interested in the pinpointing what you gave us which I liked very much. You pick up a task force and put it together for us of five fairly representative members, especially geographically of the private institutions which have this problem. What can be their unique contribution to higher education? Let us know and we will see what we can do about it.

Mr. FERGUSON. All right.

Senator PELL. And include Dr. Hester in it.

Mr. FERGUSON. Yes, sir.

Senator PELL. Thank you very much indeed. It was excellent testimony.

(The prepared statement of Mr. Ferguson follows:)

Statement by Glenn W. Ferguson, President, Clark University Before Subcommittee on Education - Committee on Labor and Public Welfare - United States Senate
April 22, 1971, 10:00 a.m., Room 4232

President Nixon has suggested that the United States must provide "post secondary education for all who aspire to it". This is a commendable objective. The American people are supporting a higher level of education for more people than any society in history, and the projected requirement to place twelve million "aspiring" students in college, by 1980, has become one of our basic national goals.

At the same time, twelve million Americans will not desire the same kind or level of higher education. The hallmark of American higher education has been diversity. As we realize the quantitative goal, we must nurture the qualitative attributes which are produced by pluralism and diversity.

Today, approximately one-third of our 2,200 colleges and universities are public institutions. They enroll more than sixty per cent of the college students, and in

another decade, they will enroll more than seventy per cent. Each of seventy universities in America, predominantly public institutions, enrolls in excess of 20,000 students. Clearly, the trend is toward the large, public university, and current financial realities enhance the growth potential of the large and public combination.

While public universities are increasing enrollments, the multi-versity is under attack. Many contemporary students are "turned off" by the relatively de-humanized large university, and some are "searching for relevance" in smaller colleges or outside of the educational system. Of equal importance, a significant percentage of faculty members are beginning to recognize that the multi-versity has failed generally to produce the cross-fertilization of ideas, the inter-disciplinary programs, and the academic innovation and reform which were anticipated.

The Secretary of Health, Education and Welfare, Mr. Richardson, has stated that colleges and universities are "among the most inefficient institutions in the country". As a student of business and public administration, I challenge that statement. At the same time, I recognize

that a degree of inefficiency, poor communication, and lack of relevance, which are associated with the multi-versity, has been made more acute by the nature of existing Federal aid programs.

In prior years, Federal funding of higher education has tended to endorse projects rather than institutions, fields of study rather than educational approaches, individual professors rather than outstanding institutional leadership, research rather than operating needs, and the growth of academic specialties rather than integrated academic programs.

When Federal funds were available to launch a new institute or academic unit, the multi-versity was prepared to add another academic feather. The results are manifest: academic excellence in narrow substantive fields, faculty withdrawal from student contact, and high-cost individual programs which cannot be maintained without extensive public subsidy.

To meet these criticisms, including the inefficiency which results from isolation, the multi-versity is attempting to decentralize without losing administrative control. In virtually every state, branches of the

that a degree of inefficiency, poor communication, and lack of relevance, which are associated with the multi-versity, has been made more acute by the nature of existing Federal aid programs.

In prior years, Federal funding of higher education has tended to endorse projects rather than institutions, fields of study rather than educational approaches, individual professors rather than outstanding institutional leadership, research rather than operating needs, and the growth of academic specialties rather than integrated academic programs.

When Federal funds were available to launch a new institute or academic unit, the multi-versity was prepared to add another academic feather. The results are manifest: academic excellence in narrow substantive fields, faculty withdrawal from student contact, and high-cost individual programs which cannot be maintained without extensive public subsidy.

To meet these criticisms, including the inefficiency which results from isolation, the multi-versity is attempting to decentralize without losing administrative control. In virtually every state, branches of the

public universities are being established. In many cases, the branch units incorporate the alleged anachronisms of the multi-versity. There is only limited opportunity for innovation, curricular reform or close interaction between students and faculty. With low tuition levels and excessive enrollment pressures, the purposes of decentralization are being diffused.

As a nation, we are moving in the direction of endorsing the idea that financial circumstances should not be the pivotal factor in determining whether a student can pursue his education beyond high school. To make that concept a viable reality for our young people, we must also endorse the philosophy that higher education, in a variety of forms, will be available to each of them. The public university is prepared to cope with part of the problem, but the private university must also fulfill its responsibilities.

We are aware of the pressures placed on State legislatures to fund public higher education. We respect their efforts to respond, and we realize that because of financial realities, it is extremely difficult for state

governments to allocate resources to private institutions. I suggest that the Federal Government review its priorities in an effort to sustain diverse elements of higher education.

The small, private university needs help. It needs help now to meet the current demands for change. As qualified students have the opportunity, through financial support, to broaden their choice of schools, the private institution must be able to respond.

Traditionally, it has been the responsibility of the private school to innovate and to offer a broad range of academic programs. In recent years, both public and private colleges and universities have shared Federal dollars. Given current pressures, I am concerned that the Federal Government may minimize its commitment to the private institution.

If minimal diversity is to be maintained; if education, in its broadest sense is to be encouraged; if a significant percentage of the projected twelve million college students are to be educated, as well as trained, and if academic standards of excellence are to be supported, the Federal Government must assume the leadership.

If Federal financial support continues, in the traditional format, the heterogeneity of American higher education will be in jeopardy. If the Federal Government does not provide a larger percentage of financial assistance to private institutions per se, rather than treating public and private colleges and universities in parity, the number and diversity of colleges will decline, the large will grow larger, and the remaining private colleges will become havens for the socially and financially elite.

Currently, most private colleges reflect curious mixtures of students from very affluent or from very impoverished circumstances. Unless institutional grants are awarded by the Federal Government, tuition will continue to rise, and students from middle-income families will disappear from private colleges. As costs increase, the private colleges will be unable to maintain the requisite student financial assistance levels for minority and other low income students. If this occurs, the private sphere will no longer offer the wide range of sizes, fields, standards, philosophies and reforms which must be preserved.

Given financial strictures, the Federal Government must consider a combination of institutional grants and direct loans and grants to the individual student; however, unless national higher educational priorities are established, the status quo will be unaffected. A recommended priority incorporates Federal support for private rather than public institutions. If aid were still based on total enrollment, the large private colleges would grow larger and the smaller private colleges would atrophy.

To obviate this development, the Federal Government might consider awarding a basic institutional grant to each accredited private college or university coupled with variable monetary increments reflecting national priorities. In the United States, all colleges and universities were not created equal, even though the Federal Government has treated them equally. At the national level, we should exercise judgment and attempt to assign financial values to stipulated educational objectives. For example, if we feel that the Ph.D. recipient will continue to experience placement difficulties,

7

60-433 O - 71 - pt. 3 - 12

we may wish to award a financial bonus to those private institutions which introduce innovational professional programs, doctorates in more "relevant" fields, or unique terminal degrees stressing the teaching dimension. Several variables exist, and in each case, hard decisions would have to be made concerning the future objectives of higher education. Historically, the Federal Government has been reluctant to discharge this function.

Through the medium of private institutional financial grants, the Federal Government can stimulate academic excellence, innovation, reform, and diversity. In addition to reflecting present values, American higher education should continue to prepare some students for an unknown future.

Senator PELL. Finally, there are two people in the audience who have indicated a desire to come before us. I would like them to limit themselves to 5 minutes. They are two veterans, Robert Tolmer and David Tucker.

You are the end products of this legislation—the ultimate users. Identify yourselves, you home area, and degree of education you have had.

Mr. TOLMER. My name is Robert Tolmer, a junior at Temple University in Philadelphia and a veteran of the U.S. Navy.

Mr. TUCKER. I am David Tucker. I am also a junior at Temple University and a veteran of the U.S. Navy.

STATEMENT OF ROBERT TOLMER, STUDENT, TEMPLE UNIVERSITY, PHILADELPHIA, PA., VETERAN OF U.S. NAVY

Mr. TOLMER. We would like to call to your attention to the need for a college education. You called it a right, we have heard of it as a privilege or a right. It's contended that way one way or the other. Is it a right or a privilege? I would say that today it's a necessity. The average man to raise a family needs a college education. Well, for many of us who have served during the 18th, 19th, and 20th years of our life when we have been in the service, when we get out we depend very much on the GI bill to further our education. But as the costs of education go up, as the cost of books go up, as the cost of living expenses go up, the GI bill has not risen greatly. We feel that we need first an increase in the GI bill and possibly maybe a study or reevaluation of what educational aid the veterans can accomplish for the Nation and for the individual veterans.

That is pretty much what I had to talk about.

STATEMENT OF DAVID TUCKER, STUDENT, TEMPLE UNIVERSITY, PHILADELPHIA, PA., VETERAN OF U.S. NAVY

Mr. TUCKER. Mr. Chairman, we have done a little bit of investigating and we have found out that the World War II, and Korean GI bill paid for full tuition plus $70 a month for a single veteran. Under the present plan we get $175 a month. This, as the gentleman before us said, in the time the average private institution charges $2,600 a year. They are just after paying tuition $800 in the red. I don't know why this group of veterans is so discriminated against. We have had to put up with an unpopular war, we are more unpopular ourselves in many places and have to come back and find we are getting offered less than our fathers were offered before us. Nobody is patting us on the back for what we are doing. I lost a lot of money. I could have been out of the Navy. I lost something. I was getting paid something like $80 a month until awhile back you gentlemen raised our salaries. It comes down to this—why don't we deserve what our fathers got? What didn't we do to put us in this position?

Senator PELL. Thank you very much.

Senator JAVITS. Mr. Chairman, can I just say a word.

It almost breaks my heart to hear you say you are unpopular because it is an unpopular war. Do not feel that way. I do not feel it is true. Whatever may have been your experience, I think every Ameri-

can no matter how bitterly he is opposed to this war has the greatest and most reverend regard for the young people who serve. It is not you. We asked you to do something and we insisted you do it because the discipline of doing it is essential to our future even though this is a bad and wrong war.

You know I am a very much older man than you and in a high office. I think I know your hearts and minds. Please do not feel you are unpopular because it is an unpopular war.

Senator PELL. I think my colleague has expressed very well the views of most of us, who like him have long opposed this war. But I realize what you are facing.

I would also congratulate you for coming down here as veterans. I think this is a most useful exercise. Years ago when some us in the Senate Foreign Relations Committee set forth recommendations to make peace, peace was almost a dirty word, and now it has at least become respectable. The veterans have the cutting edge of public opinion to really impress the Congress. I do not think the President will stop the war so you must impress the Congress to stop this war. Again, thank you, gentlemen. We will see to it that your views are heard in the right quarter.

At this point I order printed all statements of those who could not attend the hearing and other pertinent material submitted for the record.

(The information referred to follows:)

RHODE ISLAND JUNIOR COLLEGE
199 Promenade Street Providence, Rhode Island 02908

March 11, 1971

Rec'd MAR 13 1971
Ans'd.....

Senator Claiborne Pell
United States Senate
Committee on Labor and
Public Welfare
Washington, D. C. 20510

Dear Senator Pell:

Thank you for your answer of March 3 to my inquiries concerning S. 659, "Education Amendments of 1971", and specifically Section 161 and 162, which deals with the extension of authorization of appropriations for the Higher Education Facilities Act of 1963.

I am extremely pleased to find that the bill does extend the program for a five-year period. The Higher Education Facilities Act of 1963 and its amendments have been an extremely important factor in the development of Rhode Island Junior College and the permanent facilities to house the exploding enrollment demands being placed upon us. We at Rhode Island Junior College feel that this portion of the bill is vital in the continued development of the Rhode Island Junior College State System.

I would also like to extend my full support of S. 659 and especially Section 142, which pertains to your new Educational Opportunity Grant Program. I feel that your work towards greater financial assistance to students desiring to enter higher education deserves every acclamation and support. As you no doubt are aware, we at Rhode Island Junior College feel that public higher education should provide an opportunity for open door education at the junior college level. Eliminating the financial barrier is a very important part of this educational plan.

Thank you again for the information regarding the proposed higher education legislation and also for your continued support and goodwill toward Rhode Island Junior College.

Respectfully yours,

R. G. Henderson

Robert G. Henderson
Dean of Administration
and Development Officer

RGH/lm

March 26, 1971

The Honorable Claibourne Pell
United States Senate
Washington, D.C. 20036

Dear Senator Pell

When I was in Washington March 1-3 for the American Association of Junior Colleges conference, I had the privilege of talking with Mr. Stephen Wexler and Mr. Richard Smith concerning the important provisions for student and institutional financial aid in your Bill. I expressed deep appreciation for the increased level of support you propose for higher education and vocational education. Your Bill combined with Senator Harrison Williams' will mark a turning point in our nation's addressing itself effectively to goals and priorities for universal opportunity, improved quality of life, and educational alternatives beyond high school. This is in contrast to the administration's proposed reliance on loan programs and reduction of vocational funding.

On their part, I believe that Messers. Wexler and Smith were deeply impressed with the record and commitment of Alice Lloyd College at Pippa Passes, Kentucky. This rural Appalachian college for nearly fifty years has responded to the needs of its communities for leadership.

'he Commitment and Record of Alice Lloyd College

Since 1923, based primarily on private gift income, Alice Lloyd College has been providing an unusually effective educational program for the first two years of college and has assisted graduates with scholarships or grants in senior and professional colleges so that most of the civic leaders, school administrators, teachers, engineers, doctors, social workers, and business people of our eastern Kentucky mountain area are products of this college. More than 90% have returned to serve the Appalachian region for a significant span of time as citizens and leaders. This is against a tide of out-migration of 60% of the population to urban centers during the last twenty years.

Through the years and currently, 95% of Alice Lloyd College graduates continue in senior college, and 90% complete the baccalaureate degree. This is in spite of an average family income for our total enrollment of $2,200 in 1964 and still under $4,000 in 1970. Half of our college students are the first in their family to finish high school.

Striking sociological benefits show in the larger number of fifth graders completing ninth and twelfth grades, and in the larger number of high school graduates entering colleges in our immediate area than in surrounding Appalachian counties. Alice Lloyd College operates a fine Upward Bound program and special services for the disadvantaged, along with our central leadership education program.

In fifty years Alice Lloyd College has learned a secret - that culture-based disadvantage is no bar to leadership and effective citizenship. Many people throughout the country do not know that leaders and the society grow together and that a leadership of either native or external elitism cannot be arbitrarily imposed. Alice Lloyd College's program and commitment is geared to the cross-section of our society's fabric, and has produced a leadership that is a part of the community and not elitest. This leadership can cope with the severe change, extensions, and inter-relationships of the regional Appalachian community growing into full partnership in the larger America community.

At Alice Lloyd College all students work. Students have dormitory responsibility as house parents and house councils, serve with faculty in institutional governance, engage in forum discussions of goals for leadership and service.

Study exchanges and cooperative work-education programs provide horizons beyond the region. A strong emphasis on the Appalachian community as a laboratory (Sociology of Appalachia, EPDA Institute, crafts, drama, "Voices from Appalachia" choir, NEH oral history and heritage, and community outreach in service) creates a life involvement in the Appalachian region on curricular, co-curricular activities and community service levels.

Alice Lloyd College's rural outreach program, ALCOR, expanded in 1971 to six Appalachian colleges serving 22 counties. It has reached 10,000

children and adults in the most disconnected families of 48 isolated communities in our region, utilizing indigenous college students as bridges of friendship and confidence so that horizons are expanded and professional persons and agencies are having access to those who most greatly need their services. ALCOR is based on years of educating not just individuals - but persons who are community members and leaders.

Investment in Leadership Education Costlier than Students' Classroom "Teaching"

Leadership education of students with culturally-based disadvantage is not a cheap program. Heavier investments in personal contact of teachers and students, guidance, counseling, language laboratory, learning center, cultural programs, special services, staff relating to dormitory governance and community involvement activities, is needed to accomplish the program results described above. These are not luxuries. If Alice Lloyd College were to reduce expenditures to a mere classroom experience with perhaps a heavier student/teacher ratio, it could provide a skimped program at approximately one-half the cost per student. However, it would not thereby serve our society with an effective leadership result.

In measuring of society's need, it is not clear that low cost institutions are always the most useful. Some more costly programs are extremely useful to our society. Perhaps Alice Lloyd College should be encouraged in its investment in strong leadership education beyond classroom experiences,and other colleges should be encouraged also to make these investments.

Accountability

In terms of accountability it has been suggested that institutions should demonstrate their societal contribution in an educational program audit, and that funding should be responsive to such contributions. (See the recommendation of the Carnegie Report, A Chance To Learn, Page 28: "Insofar as higher educational institutions will incur increased costs as they develop the special programs recommended in this report, these costs can be met through reallocation of existing resources and through the cost-of-education supplements recommended in our first report, Quality and Equality. These supplements should be provided to the institutions for each student who qualifies for a student grant. The grants are intended for students from low-income families, and the supplements are designed to enable the institutions to meet the additional costs associated with remedial education and other special efforts to overcome handicaps.")

A Note On Private Junior Colleges

Senator Pell, I serve as Chairman of the Commission on Legislation of the American Association of Junior Colleges this year, and am strongly aware of the public service performance of the large public community colleges which have undertaken commitments, without adequate recognition or support, to meet career and citizenship needs for extremely large enrollments of people in their communities in a wide variety of open programs.

I am also strongly aware of the important public service performance of many independent junior colleges, with enrollments generally limited by financial resources, which extend and commit the total resources they have to programs that respond to particular citizenship and leadership education needs of their communities. In Alice Lloyd College's immediate region, Lees Junior College at Jackson, Kentucky, is a fine example of this public service commitment by a private two-year college, and there are many others.

It is alarming that private two-year colleges have heretofore been neglected in government and foundation funding compared with the private four-year institutions, and the publicly-supported two-year colleges. It is important that this imbalance be corrected for the sake of the valuable community responsiveness and service of these institutions. In common with other private institutions in America, their preservation needs our attention at this time.

The flexibility and creativity that many private colleges provide in our dual system has important synergistic values in the public institutions as well. However, serious weaknesses are resulting from a tuition gap which makes the private colleges noncompetitive. Further widening of this gap would very soon eliminate the viability of the private colleges.

Values of creativity and flexibility will be lost which should have synergistic effect in higher education. Students would be added to public college

enrollments as an additional financial cost to the taxpayer. The remedy for this tuition gap is in the cost of instruction allowances and student assistance grants which will take program cost into account.

Student Financial Aid Funding Levels and Formulae

Senator Pell, all who seek to provide education for the financially needy will deeply appreciate your proposal to increase funding to meaningful levels. Without this increased level of funding, all priorities and formulae break down. May I list four priorities:

1. Support for the most needy is an important recommendation of the Commission on Legislation of the American Association of Junior Colleges. Students in states or regions and especially in institutions of high concentration of low income students, have received federal student aid allocations as little as 25% of amounts they qualify for according to guidelines. Recent administration directives to meet the needs of the most needy first, have improved the situation for the most needy students in institutions of greatest need concentrations, but full funding is the only means whereby the Congress and the administration can make good its purpose for the right of citizens to career and citizenship education.

2. Financial assistance as a matter of right for individuals with financial need who desire to embark on postsecondary educational programs, will only be effectuated by full funding.

3. The first two years of college should be a priority, as compared with upperclass, graduate, or professional programs, since the first goal is an opportunity for every student, young or old, to enroll in the post-secondary personal and career development program of his choice.

4. Availability of student aid to part-time students is a top priority of the American Association of Junior Colleges, extended on a full time equivalent basis, for their continuing entry into the educational system. One million part-time students have already dared to enter postsecondary education, with family and job responsibilities, without the help of federal student assistance. It may be confidentally expected that an additional two or three million part-time students may be encouraged to better themselves in citizenship and career education when appropriate assistance is made available.

Recognizing your real concern for these priorities and for their full funding, I would respectfully urge the following concept: The student's need properly consists of (a) his personal or family financial situation; and (b) the cost of the educational program of his choice. Actually, the formula of student aid developed from the Higher Education Act of 1965 is based on these two factors, (a) and (b). It is sensitive to the variety of family circumstances and educational and personal costs which students have. If fully funded, this formula would best meet the needs

of students attending a variety of institutions of their choice and it can readily be adapted to meet the priorities of the most needy and the part-time student.

Alice Lloyd College's experience with the Higher Education Act of 1965 has been basic. In a time of growing costs, our continued commitment to leadership education for valuable young people of Appalachia who cannot themselves pay the cost, would have forced our particular college out of existence, in spite of our valuable contributions to society, except for these programs of student financial aid.

Our experience has been extensive with 80% of our students having a family income of less than $7,500, and the whole enrollment averaging less than $4,000 as indicated above. If financial aid allocations were made according to the students' financial situation only, with no consideration of program cost in Alice Lloyd College as compared with a tax supported institution, we would be unable to continue.

For a future in which Alice Lloyd College preserves open admissions to students regardless of ability to pay, for a leadership education program of unstinted quality -- your proposed basic and supplemental Education Opportunity Grants at adequate level and the Cost of Instruction Allowances are indispensable.

Cost of Instruction Allowances to Relieve Institutions' Financial Strain

Senator Pell, I strongly support the Cost of Instruction Allowances you describe in Section 40[illegible] of your Bill as I understand their purpose: to relieve the financial strain of the institutions which exists between actual educational program cost, and the student aid grants and other institutional resources available.

A maintenance of local, state, and private efforts can be built in, with corrections where institutions' existing financial strains are too severe. The concept of supplementary grants and cost of instruction allowances based on eligibility of students with financial need is certainly in tune with the Carnegie Commission's recommendations to help institutions meet the special needs of low income students.

However, as I mentioned to Messrs. Wexler and Smith, I am not sure that this formula for Cost of Instruction Allowances as stated will accomplish the purpose you intend. The definition of "tuition charged" needs to be examined.

Our institution would qualify for needed Cost of Instruction Allowances by reason of low income students served, and by reason of the institution's cost in providing a leadership education program overcoming educational and cultural disadvantages. However, the $1,000 less tuition "charged" could eliminate support for colleges with greatest strain, namely those with highest cost of programs available to low income enrollment.

In Alice Lloyd College where a $1600 "tuition" is charged, only five or six students pay the total amount. Many more pay zero and the average tuition paid by students was $251. By far the greater amount of "tuition" was paid by the institution itself on behalf of students who could not pay it themselves. This, plus the additional underwriting of educational program beyond "tuition", results in a tremendous financial strain.

Illustration of Financial Strain

Alice Lloyd College enrollment doubled, 1960-1970, and will double again by 1980 to an optimum of 600. Compared with a $900 cost per student in 1960 when Alice Lloyd College offered a fine program with no cash charges, volunteers as faculty, no plumbing "conveniences" in faculty and student housing - our updating a modern day program for students in a changing society has tripled the cost per student. The larger amount of underwriting comes from private contributions, which is a tremendous strain.

Unlike many institutions, all of our gift income including unrestricted bequests has to be devoted to the underwriting of program costs for a student body which can not pay this. This is not preferred. Unrestricted bequest income, at least, should be available to reduce indebtedness, provide needed facilities, or even a small margin of reserve for the future.

Alice Lloyd College should properly produce $300,000-$400,000 in private funds, annually, to underwrite educational program cost, but as you will see, the amounts required have skyrocketed beyond the larger figure.

Underwriting Educational & General from Private Sources
(Excluding Sponsored Programs)

1960	$ 110,000
1963	134,000
1965	302,000
1967	421,000
1968	456,000
1969	552,000
1970	617,000

Per-student cost will level off, as enrollment of 600 is reached.

To see this institutional underwriting of educational cost in relation to the amounts paid by students and by the federal student assistance programs, a breakdown for 1970 follows:

Institutional Underwriting of Educational Cost As Compared With Student and Federal Payments

		Total Amounts	Per Student
Educational & General Cost Excluding sponsored programs: Title III, Upward Bound, co-op education (federal); community outreach (private)		$ 760,690	$ 2,766
"Tuition" Paid By:			
a. EOG	$ 74,234		$ 269
b. Student Payments (assisted by work & loan programs)	69,141		251
c. ALC Tuition Grants & Scholarships	302,288		1,096
ALC Underwriting E & G Costs Beyond "Tuition"	315,027		1,150
	$ 760,690		$ 2,766

Combining the ALC Tuition Grants and Scholarships and additional institutional underwriting shows the total financial strain in Alice Lloyd College's educational cost not paid by students or federal assistance

ALC Tuition Grants & Scholarships	$ 302,288
ALC Underwriting E & G Costs Beyond "Tuition"	315,027
Total Institutional Underwriting	$ 617,315

60-433 O - 71 - pt. 3 - 13

This is an actual financial strain greater than in many colleges with low program cost and low tuition charges.

A Cost of Instruction Allowance that takes into consideration the institutions' commitment and record in serving societal needs, investment in quality program, and underwriting of costs for low income students -- such a program will identify and relieve the financial strain of providing worthy educational opportunity for students.

I am enclosing copies of this letter for Messrs. Wexler and Smith and would like to discuss this further with them if you permit. I will also ask the views of Senator Cooper and Senator Cook of Kentucky on these issues.

Very sincerely yours,

William S. Hayes

William S. Hayes
President

VERMONT COLLEGE
A two-year college for women
MONTPELIER, VERMONT 05602

OFFICE OF THE PRESIDENT

"TO DEVELOP THAT STRENGTH OF CHARACTER AND RUGGED CITIZENSHIP WHICH HAVE BEEN TYPICAL OF VERMONT"

April 28, 1971

The Honorable Claiborne Pell
The United States Senate
Washington, D. C. 20501

Dear Senator Pell:

As president of the newly organized (1969) National Council of Independent Junior Colleges, I want to congratulate and thank you for putting in the printed hearing record the statement you received from president William S. Hayes of Alice Lloyd College in Pippa Passes, Kentucky, dated March 26, 1971.

I, too, want to express my appreciation to you for including the essential provision for student and institutional financial aid in your bill. I am also a member of the Commission on Legislation of the American Association of Junior Colleges. President Hayes is currently serving very ably as the chairman of this commission.

There is an impressive concensus of concern on the part of the Commission members for both independent and public two-year colleges. It is my conviction today that all effective two-year college presidents, public and independent, believe that we should strive for the full utilization of our educational resources while we insist on the greatest possible management efficiency.

The achievement of these two goals can be realized only when sufficient support from the Federal Government is authorized and appropriated. We are confident that you and most of your colleagues in the Senate realize the importance of the awesome growth of the American community-junior college.

Thank you for your interest in and support of the junior college movement.

Cordially,

William L. Irvine

William L. Irvine

Lees Junior College JACKSON, KENTUCKY 41339
TELEPHONE 606 666-7521

April 26, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D.C.

Dear Senator Pell:

The testimony which I hereby submit is the personal testimony of one man. I am Troy R. Eslinger, president of Lees Junior College, Jackson, Kentucky. However, I also speak as a member of the Executive Committee of the National Council of Independent Junior Colleges, and expressly at the request of the President of that Council, Dr. William Irvine, president of Vermont College, Montpelier, Vermont. There are now over 100 private junior colleges enrolled as members of this Council, and while I do not speak as the charged representative of these colleges, I do nevertheless speak on the behalf of these and all other private junior colleges throughout the United States, who play a very important role in higher education in this land.

These private junior colleges, spread throughout the

country, but mainly concentrated in the central, northeast and southeast sections of the country, have performed yeoman service throughout many years. Many, like Lees Junior College, have been meeting the needs of young people for from 75 to 100 years. Frequently predating the advent of public schools, especially in isolated regions of the country, many have been in the position of offering virtually the sole opportunity for educational experience to a given region. Institutions such as Alice Lloyd College, Sue Bennett College, and Lees, here in the Appalachian region of eastern Kentucky, have provided otherwise unavailable opportunities for development and leadership to vast numbers of people from this relatively isolated region.

Others have been developed and have continued down through the decades, under special and unique mandates for the accomplishment of specifically designed purposes and objectives which add immeasurably to the total spectrum of higher education.

One of the great values of institutions such as these lies in their flexibility, and in the high degree of responsiveness which they show to the special needs of the communities in which they operate. My own institution -- and I am sure there are many others -- was serving the role of the community college, providing stepping stones from poverty to autonomy and financial independence for hundreds

of citizens young and old, long before the term "community college" became popular. It is very important to the nation, and to higher education in particular, that the concept and practice of pluralism in education be maintained. There surely must always be, in a country such as ours, the need for institutions which have the flexibility to be innovative, person-oriented, with agility to change directions when such needs seem indicated by the changing times.

I have read the testimony which was submitted by the American Council on Education, the American Association of Junior Colleges, et al., and I shall therefore not concern myself to repeat the various urgings which they entered, except to say that I concur in them. Thus, adding my voice to their urgings. They have stated the case well, and I hope that the members of Congress will give serious heed to their statements.

But since institutions, like people, have distinctive personalities, it may help for me to say something of the distinct personality of Lees Junior College, as illustrative of the overall value of the private institution in the context of the higher educational effort. This institution, with a history stretching back to 1883, has throughout that history served a geographically-isolated and culturally-different area in the mountains of eastern Kentucky. A predominance of the students in any given year represent

first generation college effort from their families. Through the years, literally millions of dollars from private individuals, church groups, corporations, and foundations have been channeled through this college into the lives of the people of the area bringing educational opportunities that were not being provided by the tax supported institutions.

But as the costs of instruction have mounted higher and higher, the level or private support has become a declining percentage of the total operating budgets. Lees College, from the very beginning of the Higher Education Act of 1965, Title III For Strengthening Developing Institutions, has demonstrated that the teamwork of private and federal support has tremendous potential. With aggressiveness and imaginativeness, the college has moved courageously into such programs as Cooperative Education, the Special Services to Disadvantaged Students, as well as the full gamut of student financial aid under NDSL, College Work Study, and Educational Opportunity Grants. Indeed, at least 75% of our students could not attend college at all without such assistance.

Lees and Alice Lloyd College, both serving the Appalachian area of eastern Kentucky, and members of the Kentucky Junior College Consortium for Title III Programs, have provided exemplary leadership in both the private and public community college sectors of the state of Kentucky. More

recently, Lees College has been awarded a major curriculum grant from the National Endowment For The Humanities, as a result of many years of planning and reaching out for ideas that would enable the institution to serve more effectively the region in which it is located. This grant, in the amount of $250,000 initially, (with a possible supplemental grant of an additional $100,000), will enable the college to restructure its entire curriculum around the theme "Man And His Total Environment, Focus On Southern Appalachia." The presence on campus, within the faculty, of young, creative, aggressive teachers -- a number of whom during the past four or five years have been National Teaching Fellows, under the Title III programs -- has been one of the most significant dimensions of these developments.

Another program, of community service and outreach known as ALCOR, is one that is jointly financed by private and federal funds. Alice Lloyd College, the initiating and leading institution for this program, has expanded it to include not only Lees Junior College, but two of the regional state community colleges and two four-year private colleges in the area. Over two hundred students will be involved during the summer ahead, working in as many as 75 to 80 centers in isolated parts of the hill country, bringing a variety of services to these isolated communities. There will be recreational activities, community development activities,

health screening activities (through the services of SAMA -- Student American Medical Association representatives, and student nurses from all over the country). This program is funded by private foundation and corporation support, as well as the Appalachian Regional Commission. Another evidence of teamwork between federal and private sources.

The point that I am seeking to make is that these institutions could not possibly carry on the level of work which they are doing without the support of federal funds. By the same token, their flexibility as private institutions, having the type of dedicated faculty and staff which they are able to attract by virtue of their uniqueness, puts them in a separate class from the purely public institution. American altruism is thus provided a very distinctive channel through which to flow, in institutions such as those I have been describing. But the magnitude of the task which we have set for ourselves is such that the joining of federal support can dramatically augument the services which these institutions offer.

It seems unquestionably important, therefore, that in the federal legislation which is under consideration at this time, provisions be made not only to continue the well established components of federal aid to education -- such as construction funds, library funds, instructional equipment funds, Developing Institutions funds -- but that the newer

concepts of direct assistance to institutions, both private and public, be added to the effort. It is the people of our country at large who stand to profit most from a stepped-up program of educational opportunities. The federal government surely plays a key role in seeing that multiple options in higher education are available to our citizens and that the means shall exist for each member of society to follow the option best suited to meet his individual needs, and thus to serve more effectively our country itself.

None of the private institutions expect to relent in their efforts to generate continuing private support. We do not presume to turn over to the federal government our private responsibilities. Nor do I see any conflict of interest here, whatsoever -- rather an enhancement of the effort will surely continue to result as federal and private sources join hands.

The Junior College, both private and public, stand at the grassroots level in the spectrum of higher education. Rather than diminishing, their role is increasing in importance especially in the years immediately ahead. I therefore have no hesitancy in urging the members of Congress to take a bold step forward in the funding of expanded educational programs. To falter at this point is almost to deny the efficacy of the expressed philosophy that the American citizen should be given the opportunity to rise to his highest level of achievement.

Thank you for allowing me this privilege of expressing my views on these vital issues.

Sincerely yours,

Troy R. Eslinger

City of Cleveland

CARL B. STOKES
MAYOR

April 1, 1971

My Dear Senator Pell:

It has come to my attention that hearings on Senate Bill 1033, introduced by Senator Harrison A. Williams, Jr., are currently underway before the U. S. Senate Subcommittee on Education. I strongly urge passage of this bill, as I have observed in Cleveland the benefits which accrue to the citizens and communities touched by the comprehensive community college and have read of the impact of these institutions in hundreds of cities throughout the nation. I would like to share some of my observations on the comprehensive community college which have placed me firmly behind this important piece of legislation.

First, and most important, this uniquely American, 20th century concept in higher education extends educational opportunities to a "new breed" of student. This "new" student represents the American goal of universal higher education. His is attracted to the community college with its "open door" admission policy, low or non-existent tuition, proximity, community attunement, flexible yet comprehensive programs of instruction, and adult programs providing the opportunity for continuing education. The "new" student comes from every strata of society. Millions of these "new" students of all ages, representing all racial and ethnic groups, have responded to the concept that the college door should be open to everyone.

The comprehensive community college also plays a critical role in bridging the gap between manpower shortages in nearly all the professions and individuals qualified to fill them. The availability of career offerings in step with our rapidly changing world and the rapidly changing technological and occupational needs of business and industry helps to solve not only the problem of unemployment but also the frustration of underemployment. Cleveland's Cuyahoga Community College, for example, offers 34 two-year programs in the Business, Engineering, Health and Public Service Technologies,

in addition to its traditional arts and sciences offerings. These offerings have enriched the lives of tens of thousands of Greater Clevelanders, enabled many to begin rewarding careers and provided many others with a solid foundation for continuance of their academic endeavors.

In addition to helping solve problems of employment, the comprehensive community college addresses itself to the specific needs of the communities it serves. Among the community service offerings at Cuyahoga Community College are educational and occupational counseling services for adult women, a comprehensive educational counseling center located in Cleveland's inner-city and training programs for the hard-core unemployed.

I regard the community college movement as one of the most hopeful and promising developments on the national scene today -- especially for our complex, troubled urban centers. I believe that the nurturing and expansion of this movement is one of the most important factors in America's quest to find solutions to the many ills which constitute the urban crisis.

Sincerely,

Carl B. Stokes

Honorable Claiborne Pell
Chairman of the Subcommittee on Education
United States Senate

Freed-Hardeman College Henderson, Tennessee 38340

March 16, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D. C.

Dear Senator Pell

I wish to express for Freed-Hardeman College our appreciation for S. 659, your bill to amend the Higher Education Act of 1965, the Vocational Educational Act of 1963, and related Acts. Freed-Hardeman College has benefited greatly from provisions of the Higher Education Act, and especially from grants under Title III--the developing institutions program. Grants under this program have made possible renewal of the college's accreditation, the introduction of occupational programs, and better services for educationally deprived students.

I note that Sec. 302. (a) (3) would make two significant changes in the present program. First, it would broaden eligibility to include new community colleges. Support for the establishment of new public community colleges is certainly desirable and deserving of federal assistance. Their needs for faculty and curriculum development are, however, so comprehensive and overwhelming that there is the danger that the bulk of the available funds would be diverted to these new institutions, so that the established but struggling institutions now serving many educationally deprived students would not be rescued and strengthened. We would suggest, therefore, that consideration be given either to supporting new community colleges under legislation especially designed for them or to increasing the appropriations for Title III and the percentage of the appropriations designated for community or junior colleges to reflect the change in purpose and broadened scope of the program.

The section mentioned above would also have the effect of making ineligible for assistance two-year colleges which might find it desirable or necessary to make the transition to a four-year program. Testimony before Congressional committees has indicated that this is a relatively infrequent occurrence, especially in the case of public institutions. Some non-public institutions, however, have found that with the establishment of new public community colleges in their immediate area they could best serve their clientele and community by adding at least some bachelor's degree programs. Indeed, this may be the only way for them to enroll enough students to utilize their faculty,

facilities, and libraries developed over many decades of existence. Such a decision, of course, must be made by the institution on the basis of its individual situation Sec. 302 (a) (3) would exclude such an institution from assistance for a period of five years. It would be unfortunate if the same provision made eligible institutions beginning to offer the associate degree and made ineligible those beginning to offer the bachelor's degree. Some of the latter would, of course, continue to offer two-year associate degree programs.

We would urge, therefore, that consideration be given to striking the clause "in the case of an institution awarding a bachelor's degree." I should be happy to discuss this with you with your staff or the committee staff.

Sincerely

J. D. Thomas
Academic Dean

A Time of Change

We are pleased to present in the following pages the 1970 annual report of the American Association of Junior Colleges. As the report will indicate, the year was one which emphasized the need for change to meet new challenges, both in American society and beyond the borders of this country.

A report of this nature can only hope to cover the highlights, the more notable achievements — those things that make headlines. It concentrates on the collective actions and efforts of officers, commissions, staff, and member institutions, rather than the contributions of individuals. That would require another book, one which would have to list two and one-half million students, one hundred thousand faculty and staff, and legions of citizens who have supported the community junior college movement during the year. For they, in the final analysis, constitute the junior college movement.

We do want to single out members of the Board of Directors of this organization who set policies and provided direction. And we would be remiss if we did not commend the members of the five Commissions for their participation in planning and development. At a time of tremendous stress and strain on college campuses, they donated time and energy to the task of leadership.

Whatever was finally accomplished during this fiftieth anniversary year we owe to member colleges. Their cooperation and support made it possible.

Charles E. Chapman
President

William G. Shannon
Acting Executive Director

1423

50th Anniversary is Observed

Nineteen hundred and seventy was the year in which the American Association of Junior Colleges experienced its "golden anniversary." The national organization had reached the age of fifty. Attention was called to this fact in speeches, in publications, and at meetings. And the annual convention was labeled the "fiftieth anniversary meeting."

There was not a celebration in the usual sense. Though many achievements could be marked, using the normal measuring sticks of growth, expansion of programs, and involvement of greater numbers of people, 1970 was not a year for complacent contemplation of past and present progress. National events and issues, unrest and resistance, left little room or time for reflection on what had gone before.

If there was any celebration, it was in terms of renewed attempts to make the work and services of the American Association of Junior Colleges more relevant to grave national issues and concerns. In short, staff, officers, and members probed deeply into ways in which the community junior college could do its part in alleviating some of the problems which faced the country. The problems were reflected in single words and phrases that filled newspapers and air waves during the year. War. Unemployment. Recession. Polarity. Pollution. Campus unrest. International confrontations. Inflation. Strikes. And others.

The program of the Association for 1970 took these issues and concerns into account, therefore, rather than concentrating on an observance of its fiftieth anniversary. Policies and organization were reviewed and brought into step with changing times and needs. The annual convention in March of 1970 set the tone for the year by focusing on "change." Certainly no organization representing educational interests could have ignored the cries for change on the part of students at all levels; community junior colleges were no exception. Thus, the program of the annual convention reflected their concerns. By the end of 1970, the voices of the students on two-year college campuses had totaled nearly two and one-half million; the number of colleges had reached 1,070.

So, if the fiftieth anniversary year could be characterized by anything, it would be that of concern on the part of the national organization with constructive change.

1437

1424

1438
1425

Diversity is Key to Change Efforts

The membership of the American Association of Junior Colleges is marked by diversity. The institutions are diverse in size, in the kinds of programs offered, in location, in people served, in financial support. Big city. Suburban. Rural. Public and private. Large and small in terms of enrollments and physical facilities.

Thus, the Association, in the pursuit of desirable change, takes into account the diversity of the institutions it represents. In earlier years, AAJC gave considerable attention to insuring that both private and public institutions were fully represented on boards, commissions, and other arms of the organization. There was concern with proper geographic representation.

These continue to be important considerations for national planning and policy making. At the same time, AAJC has sought to express the diversity of its membership through insuring greater participation in the affairs of the organization by members of minority groups.

Social and economic needs of minorities have long been a concern of the Association, and were spelled out clearly in a policy statement issued in 1968. While there had been concentration on minority problems through publications, articles in the *Junior College Journal,* and in meetings prior to that time, the statement served to provide a more clear-cut guide to the commitment of the

Association in this area. AAJC had early helped to launch outreach projects funded by the Office of Economic Opportunity in several large cities. With support of the Ford Foundation, it conducted a demographic study to determine college-going interests and attitudes of Blacks. A technical report of the study, *People Who Need Colleges,* as well as a summary "reader's version," *Black Student Potential,* were published in 1970.

The Association sought to strengthen its commissions by increasing the numbers of minority representatives—Blacks, Mexican-Americans, and Indians. The president of a predominantly Negro college in Chicago was elected to the Board of Directors of the Association.

An office of Minority Group Programs was established in late 1969. Through workshops, a publications program, and staff contacts with individual colleges, the office has sought to bring about greater awareness of minority needs and to implement that awareness by encouraging solid program innovations at community colleges. Typical of the work was a workshop held in Washington, D. C., which concentrated on bringing about better understanding of ethnic differences as a part of the educational process.

The Association has committed itself to working closely with the staff of Navajo Community College on the Navajo Reservation in Arizona. AAJC will attempt to open national resources, provide consultation, and in every way possible lend encouragement to the development of the institution—the first of its kind. AAJC's Program with Developing Institutions, supported by the U. S. Office of Education, initiated a consortium of border colleges in Texas that serve large numbers of Mexican-American students. The consortium provides opportunity for interaction on curriculum development, staffing, and other aspects of the colleges' programs.

Towards the close of 1970, the Ford Foundation, after consultation and discussions with AAJC staff, launched a $2 million scholarship program to aid associate degree graduates of community and junior colleges in further educational endeavors at four-year colleges and universities. The program is open to Black Americans, Puerto Ricans, Mexican-Americans, and American Indians.

1439

1426

Varied Programs Meet Special Problems

Monticello College in 1970 announced it would cease to exist as an independent, privately supported two-year college. The 135-year-old institution referred in its announcement to continuing difficulty in obtaining the necessary financial support to enable continuance of the college as a private institutior. Significantly, the campus and facilities were immediately acquired by a public junior college district, the Lewis and Clark Community College District.

The story has meaning for the work during 1970 of the American Association of Junior Colleges. There are some 240 privately supported colleges in the membership of AAJC, and the institutions have figured prominently in the 50-year history of the organization.

AAJC's commitment to diversity in types of institutions led to encouragement by the national organization of the establishment, by the institutions themselves, of a council of independently supported two-year colleges. Thus was born in 1969 the National Council of Independent Two-Year Colleges, with an office opened in AAJC headquarters in the spring of 1970.

The Council is engaged in plotting a course for private junior colleges during the 1970's and beyond. The member colleges will seek to open new channels of support, chart new program areas, and study ways in which the institutions

1440

1427

can combine resources in strengthening educational efforts. Issues and concerns have been pinpointed in conferences and workshops that have been held in 1970.

Many of the independent junior colleges, along with a number of public institutions, are also benefiting from the Program with Developing Institutions referred to previously in this report. Coordinated nationally by AAJC, the program is financed by funds from grants to colleges under Title III of the Federal Higher Education Act. The program consists of two main parts, one concerned with general planning and development and the other with faculty and instructional development, with 36 and 40 institutions respectively funded by the U. S. Office of Education. The program also involves several special groups—a Mexican-American border consortium, a Puerto Rican group, and National Teaching Fellow projects at 11 colleges.

Behind this important national program is a concern for providing colleges with unrealized potential the resources to improve their services and instructional programs, to innovate in programming and teaching, and to engage in long-range planning efforts. The national coordinators last year arranged for consultants, published a newsletter and several monographs, and helped to organize workshops and conferences where strategies for change could be worked out.

Again, the emphasis in this program, as with other AAJC efforts in 1970, was on the process of change that would help institutions involved in the program to solve their own problems. A similar but more diversified program is planned for 1971-72, if approved by the Division of College Support of the U. S. Office of Education. A side benefit of the program is that over 350 junior colleges have asked for "associate status" in the program, which brings such fringe benefits as publications and invitations to attend workshops.

AAJC engaged in a specialized program of assistance to still a third category of institutions in 1970: new institutions. Actually, work in 1970 was a continuation of a project started three years ago with support from the Danforth Foundation. The new institutions project was established in recognition of the fact that AAJC could bring national resources to bear on the problems of starting up new colleges. Public institutions were being established at the rate of from 40 to 60 per year. In 1970, 44 opened.

Through the New Institutions Project, AAJC during the year was able to provide written guidelines dealing with various aspects of planning, consulting, and other services to individual colleges, governmental bodies, and citizens groups engaged in planning new colleges. The director

1441

1428

worked closely with some 60 institutions and met with governmental officials in two states considering enabling legislation for development of statewide systems of junior colleges.

Workshops have been conducted for in-service personnel. An experimental conference was held to consider various aspects of operating new colleges, in planning facilities, and in management. The project also gave considerable attention to orientation programs and development of materials to guide college trustees in policy making and planning. The interests and concerns of trustees were reflected in a number of sessions conducted by the project at the Association's annual meeting, and at other meetings in which the director cooperated.

1429

1442

Veterans, Community Needs, Jobs are AAJC Concerns

Veterans figured significantly in the Association's program during 1970—and Vietnam. Jobs, or more accurately, job education, was on the list of priorities. And overall, the Association was concerned with the expansion of community and junior college service to greater numbers of people and in more diverse ways.

Three programs of the Association concentrate in these areas: the Occupational Education Project, the Program for Veterans and Servicemen, and the Community Services Project. These foundation-supported programs recognize special needs in the three areas.

The fiftieth anniversary year marked the conclusion of a wide-ranging five-year-old project to stimulate expansion of occupational education and training programs in two-year colleges. Concentrating on health, industry-engineering, public service, and business-related occupations, the program has succeeded in focusing attention and programming on the community college as a resource for new manpower development by government agencies, trade and professional agencies, city planners, and major industries. At the same time, there is considerable evidence that the project has stimulated community and junior colleges to give occupational education a high priority in meeting institutional objectives.

Typical of the importance attached to the community college as a resource for manpower development is a statement made by the Institute for Local Self-Government: "Projections are that by 1974, state and local governments' manpower requirements will rise 50 per cent above the 1965 level. . . . Where these people will be educated and trained is seldom discussed. The community college is a prime resource in this regard and one which must now be developed."

As the project neared its end in 1970, the staff, with assistance from the field, completed a number of publications. A sampling of subjects covered in publications during the final year were cooperative education, the computer and the junior college, urban planning, recreation programs, careers and the two-year college, agriculture and natural resources, health technology program planning, and resources in health education. A variety of studies were also under way, including a survey of occupational programs offered by two-year colleges, humanities courses offered in connection with occupational education, and health-related programs in junior and community colleges.

A number of conferences and workshops were conducted during the year to consider new developments in various occupational fields and to work out guidelines for additional programs. While the W. K. Kellogg Foundation-supported

14443

1430

project completed its course in 1970, AAJC will continue to give attention to occupational programming as a part of its overall planning activities.

At the 1970 convention of the American Association of Junior Colleges, delegates were urged to consider the two-year college as a community resource, a center for interaction among the people to be served. The concept of the community as the college was introduced as another way of viewing this kind of educational enterprise.

The concept is evident in the program of the Community Services Project at AAJC. Also supported by the Kellogg Foundation, the three-year-old effort has sought to build a solid foundation for expanding the community service dimension of the community junior college. During 1970, the project concentrated on mobilizing those responsible for coordinating and supervising community service programs at two-year colleges into an identifiable national force. The vehicle, growing out of the project, has been the National Council on Community Services. By 1970, the Council membership had grown to 300 from within and outside the junior college movement. National meetings were held at the annual convention of AAJC, where forums on community service were also conducted.

The project staff maintains contact with the field through a newsletter, *Community Service Forum,* which has a circulation exceeding 4,000. The publication concentrates on in-service exchange. Other publications have been developed to provide professional assistance and direction in this growing field. Typical of these are working papers dealing with *Effective Organization and Administrative Practices* and *Mobilizing College and Community Resources.* A basic guide, *Community Service in the Community College* by Gunder Myran, has been issued. *A Directory of Community Services Leadership,* to be updated periodically, has also been published.

The staff is conducting community service workshops and cooperating with other projects and offices of AAJC in meetings and conferences.

During 1970, AAJC implemented a program for veterans and military service personnel begun late in 1969. The program, supported by the Carnegie Corporation of New York, sought (1) to assist and counsel service personnel in regard to career and educational needs prior to separation from the military; (2) to explore the possibility of offering community college type educational programs to personnel while they are still in the services; and (3) to assist community and junior colleges in providing appropriate avenues to needed training and education at the community college level after separation.

1444

1431

During 1970, the project brought about establishment of regional field services throughout the country to bring college personnel together with military separation personnel and Veterans Administration officers in an effort to build better bridges to educational opportunities. In addition, the director worked with national government officers to create a necessary climate of awareness, understanding, and liaison for further development of the AAJC veterans program. The program concentrates particularly on service personnel with limited preservice educational backgrounds and those from minority groups.

In 1970 the project staff went as far as Vietnam to advance the cause of military men and women. At the invitation of General Creighton Abrams, Commander of the U. S. Military Assistance Command in South Vietnam, a junior college team went to the Far East to gather information on educational needs of service people, their interests and concerns, which should be represented in two-year college program planning.

1445

1432

Hearings are Held on Williams Bill

Last fall Senate Bill 1033 was brought up for hearings on Capitol Hill. More commonly known as the Williams Bill, so named because its author is Senator Harrison Williams of New Jersey, this piece of proposed legislation, if enacted into law, would provide federal support across the board for two-year colleges. Major stress would be on the guarantee of comprehensiveness in programming and community service expansion.

The bill now is moving through the Congressional process. But the significance of S. 1033 in regard to the work of AAJC during 1970 is that for the first time in history the mission of the community and junior college is clearly on the record in the halls of Congress. Hearings on the bill, which brought a number of two-year college leaders to Washington to provide testimony, also illustrate another aspect of the program of the Association—its work in federal and other levels of government affairs. The staff of the AAJC Federal Affairs Office provided necessary information upon request of Senator Williams' office, and suggested witnesses for the hearings.

Architects of another important piece of legislation which was signed into law in 1970 also drew on AAJC for information and support. Known as G. I. Bill, Public Law 91-219, the new law made possible for the first time a national, systematically organized effort to involve two-year colleges, other educational institutions, federal agencies, and the military services in advancing education of veterans and servicemen. (Programs under the bill will also relate closely to the AAJC veterans program described earlier in this report.)

In an "extra effort" for the fiftieth anniversary year, the Federal Affairs Office planned fifteen

1433

regional workshops to acquaint junior college leaders with government educational aid programs and to assist them in planning and drafting proposals for support. Some 700 two-year college representatives took part in the workshops. In a related effort, the Association's Commission on Legislation in December conducted a national workshop on federal programs, with attendance surpassing 400. A wide range of topics and programs was considered, with input from government, college, and private organization experts. Some 40 agencies of government brought information to the conference on scores of educational aid programs.

AAJC continued to cooperate with other educational associations in the successful campaign for increased funding of federal programs on the books but for which necessary monies had not been made available. The director of the Federal Affairs Office served on the steering committee for the Emergency Committee for the Full Funding of Education Programs. The Association also cooperated with the American Vocational Association in a spring meeting to consider mutual concerns and interests.

1447

1434

1443

Change Beyond U.S. Gets Attention

Educational and social changes beyond the U.S. boundaries have long been of deep interest to the American Association of Junior Colleges. Over recent years, a bank of information and a roster of contacts in many other countries have been organized by staff and member colleges. Endeavors to find ways to interact internationally on the community junior college idea culminated in 1970 with plans to establish an office of international affairs.

Perhaps the greatest stimulus for creation of such an office and program came earlier in 1970 when the first International Assembly on the Junior College and Manpower Development was held in Honolulu. The meeting, which brought together education and government leaders from 18 Far and Middle Eastern countries with U.S. and Canadian representatives, concentrated on international exchange of ideas and information among the participating countries. There was general agreement among the representatives that the aspect of American junior college programming of most interest was that of middle-level manpower development.

Participants in the Assembly unanimously urged AAJC to establish a clearinghouse for the distribution of information relating to junior and community college-type education. A resolution stated: "A measure of the success of the

1435

Assembly is the desire for some form of continuing collaboration between the participants from all the countries and AAJC to facilitate exchange of information on matters related to the community/junior college concept and education for manpower development."

A second resolution provided a more specific charge for the proposed new office:

To develop correspondence between and among participants of this International Assembly and additional persons and agencies in other countries interested in such an exchange

To circulate to participants and others papers of interest concerning junior colleges and other educational matters

To encourage various approaches to strengthening communications, including visits to the interested countries, exchanges of curricular development materials, the facilitation of joint planning of regional or international projects, and the convening of future assemblies which may assist in the furtherance of the objectives of the 1970 meeting.

Countries represented at the meeting, in addition to Canada and the U.S., included Australia, Ceylon, Republic of China, Hong Kong, India, Indonesia, Iran, Japan, Korea, Lebanon, Pakistan, Philippines, Samoa, Singapore, Thailand, and South Vietnam.

1449 6141

1436

Communications is Key to Change Efforts

In 1970, the American Association of Junior Colleges had a membership of more than 800 institutions. The colleges are located in big cities, in suburbs, in rural areas in every state of the Union. Two-way communication with its far-flung constituents, therefore, was a major emphasis of the national office during the past year. Effective programming for change required additional information about college programs and activities. Thus, it was important to provide opportunity for input from the members on the shape of the AAJC's pursuit of its national objectives. In addition, the Association sought to maintain contact and to create better understanding of the two-year college purpose among many audiences outside the periphery of the membership itself.

Among instrumentalities for communication were workshops and conferences, surveys and studies, a comprehensive publications program, research, cooperation with private and government agencies in the collection and analysis of pertinent data, and continued stress on a public information program. Most importantly, in terms of internal communication, AAJC sought to strengthen the roles of its five Commissions: Legislation, Student Personnel, Administration, Curriculum, and Instruction. The deliberations and considerations of the Commissions are reflected in all aspects of AAJC's programs.

AAJC continued a major research project to determine the student acceptability and learning effectiveness of microform collections in community junior colleges. The project is supported by the U.S. Office of Education. Under a grant from the Esso Education Foundation, AAJC toward the end of the year participated in a survey of student personnel programs in two-year colleges to determine effective models. The program builds on earlier efforts to provide guidelines and direction for student personnel work in two-year institutions of higher education.

With a number of refinements and the collection of new information, AAJC completed work on the 1971 *Junior College Directory*. The Association also cooperated with the American Council on Education in gathering information for the eighth edition of *American Junior Colleges*. And the Association cooperated with the Clearinghouse for Junior College Information at the University of California, Los Angeles, on various research and publication projects.

AAJC engaged in two surveys dealing with occupational education. Under a U.S. Public Health Service grant, the Association surveyed health-related curriculum offerings in junior and community colleges. Results, now being analyzed, will assist in measuring gaps and in stimulating

1437

support for technical education programs in the health fields at the two-year college level. Another survey, conducted in cooperation with Western Illinois University, resulted in a collection of information on all occupational curriculums offered by two-year colleges.

The Facilities Information Service of AAJC, supported by Educational Facilities Laboratories, Inc., brought together representatives of junior and community colleges with facilities planners for communication on various aspects of design and planning. Workshops were held in various parts of the country, and advice and counsel were provided to individual colleges. By the end of the year, plans were being developed for conferences on facilities planning for state directors of two-year college education.

In operation since 1965, the Facilities Information Service was phased out at the end of 1970. The very successful program drew on leading architects and planners for advice and counsel that has been of benefit to scores of two-year colleges. AAJC will continue to cover facilities needs and problems through other programs and services.

AAJC engaged in an ambitious publication program during 1970. Scores of booklets, brochures, and handbooks were published — with curriculum development and planning heading the list of topics. The circulation of the Association magazine, the *Junior College Journal*, reached 50,000 copies per issue. Scores of experts in junior college education and in other areas conveyed ideas and information, facts and figures, to readers of the magazine.

Through its public information office, AAJC gathered and disseminated information on developments in the two-year college field. Articles were prepared for various publications, and information was supplied to national media seeking to cover the junior college story. The information office processed inquiries from hundreds of citizens, researchers, government offices, and high school students and parents of students.

Financial Review for 1970

60-433 O - 71 - pt. 3 - 15

1439

AAJC carries on its program of service through support of member colleges and assistance from foundations, corporations, and government agencies. Contributors to the 1970 program included:

W. K. Kellogg Foundation
United States Steel Foundation, Inc.
Carnegie Corporation of New York
Esso Education Foundation
Danforth Foundation
Shell Companies Foundation Incorporated
Educational Facilities Laboratories, Inc.
Ford Foundation
General Motors Corporation
International Business Machines Corporation
Ford Motor Company Fund
Cities Service Foundation
The JDR 3rd Fund
American Telephone & Telegraph Company
U.S. Office of Education
U.S. Public Health Service
Gulf Oil Corporation
Olin Corporation
Asia Foundation
National Science Foundation

Here is a review of the Association's finances for 1970. Figures were projected prior to the close of the fiscal year. An audited financial report will be available at the 1971 annual convention.

INCOME FOR 1970	
Membership Dues	$ 380,235
Unrestricted Contributions & Grants	45,500
Publications	374,012
Other Income	139,410
Total	$ 939,157
DISBURSEMENTS	
General Fund	$ 524,402
Publications Fund	369,145
Total	$ 893,547
SPECIAL PROJECTS DISBURSEMENT (Restricted Funds)	$1,196,383

Project Focus: Strategies for Change

Perhaps the most significant "change" event that occurred in 1970 was the launching of a national study which cannot help but have far-reaching impact on the state and the future of the American Association of Junior Colleges. The study is called Project Focus: Strategies for Change. It is being led by Edmund J. Gleazer, Jr., executive director of AAJC, who commenced a one-year leave October 1 to direct Project Focus. Also on the study team are David Bushnell, former director of comprehensive and vocational education research for the U.S. Office of Education, and Francis Pray, a management and educational consultant.

Put simply and succinctly, the purpose of Project Focus is to provide a clearer sense of direction — a clearer sense of mission — for the Association in the years immediately ahead. That direction, the architects of the effort believe, can only come out of a better perception of the needs of the field served by AAJC. Where the burgeoning community junior college program in the United States is headed and what student populations it will serve is already being shaped by social and economic forces now in motion.

By probing the views of students, trustees, community leaders, faculty members, and administrators; by assessing population and economic trends; and by synthesizing recent research studies, the Project Focus staff will better understand the interplay of forces influencing the present and future direction of the movement and draw what empirically valid conclusions are warranted. The study was launched in the hope that it will aid those responsible for directing the nation's effort in achieving the unique purposes of this sector of postsecondary education. The extent to which community colleges reach out and involve a broad cross section of students through their open door policies, technical education programs, career guidance procedures, college transfer programs, and community service efforts will be carefully appraised so that desired changes will have been achieved ten years hence.

The project staff will make a first report on the findings of the study in September 1971, concentrating on long-range goals of community and junior colleges. It will suggest alternate strategies for meeting the objectives. And, at the same time, the report will deal with ways in which the American Association of Junior Colleges might alter its programs, services, and operations to better accommodate needs and concerns of the membership. Following the first report, approaches to implementing findings will be explored with a comprehensive plan to be announced in the summer of 1972. While it is

1453

1440

impossible to predict the outcome of the study at this point, there is little question but that the study will bring into clearer focus the picture for the American junior college in the months and years ahead.

URBAN AWARENESS

A TOTAL SERVICE EDUCATIONAL
APPROACH TOWARD PREPARING THE
URBAN COMMUNITY COLLEGE DISTRICT
FOR ITS ROLE IN THE NATION'S FUTURE

AN EDUCATIONAL SERVICES PROPOSAL
PREPARED BY
MARICOPA COUNTY JUNIOR COLLEGE DISTRICT

Education

A constant theme today is that "Education is the answer to our social ills". And yet, education must admit to failure in keeping in step with the needs of all students in an ever-changing technological society. The gap between the cultural and economic disadvantaged, the Nation's Industrial needs, and the higher education process must be re-examined and narrowed.

Might this not be the moment to evaluate the total service educational delivery system of the Community College District and its role in the national future?

PREAMBLE

INTRODUCTION

Today when the national urban crisis demands that more and more minority and disadvantaged persons enter into the educational process of the community college, it is mandatory that the college seek better methods to insure that more students succeed without lowering educational standards necessary to maintain relevant learning experiences for effective work and citizenship.

And yet, the increasing demands of urbanized populations for academic and occupational educations have strained the fabric of the traditional higher education system.

Nowhere is this strain more crucial than in the community college system which must reconcile demands for university parallel programs, vocational-technical, and adult retraining programs for an ever expanding population, which by reason of finances, educational backgrounds, and real or culturally induced aptitudinal deficiencies is unable to meet university standards.

Certainly, the potential of education as a source of positive change cannot be denied. Nevertheless, education must admit to this failure to meet the needs of <u>all</u> students in an ever-changing society.

Part of this failure resides in the lack of close communication - of common understanding - existing among administrators, faculty, and students in our community colleges. There is no question that colleges will not achieve improvement while these three goups remain isolated within the educational system.

It is the purpose of this proposal, therefore, to create a Center for Special Educational Services, which will develop and operate a program of Educational and Urban Awareness.

PRESENT EDUCATIONAL PROBLEM

The present problem in urban areas is caused by a communications breakdown between the three essentials of change - the innovators (education, research units); the coordinators (government, business); and the motivators (local community, urban leaders).

While meetings take place continuously to examine the emerging role of the community college, what has actually been accomplished in moving these colleges away from their traditional university oriented role?

The community college faculty are university trained, and often look to their alma mater as the standard for comparison.

The community college may initiate an "open-door" policy, but as long as the students are selectively retained on a real or imagined university standard, the policy is but a ploy.

How often have faculty with traditional view-points toward the entering students shown a willingness to eliminate those with cultural, social, or economic differences and hang-ups at the first possible opportunity - all in the name of quality education?

Perhaps the problem lies within the apparent inability of the community college to fully define its role, while maintaining the attitudes of the secondary school, with all of the university remoteness that attend it.

This is especially destructive in that meaningful projects are too often implemented without having been "fitted" into the operational philosophy of the total educational program. The obvious result is that there is no necessary "next step" to allow the best opportunity for success.

Therefore, if the pattern of initiating detached projects, each for its own sake, occurs often enough rather than for the impact on the total evaluation of the system, eventually the merit of very meaningful programs is reduced by the hesitation of educators to become involved in another project with

---

the obvious question: "What good did the last one do?"

Specifically, community college needs are to:

A. More fully understand the needs and direction of the community in relation to National Urban Needs, and relate these to the college's capabilities.

B. Develop the "missing link" concept of the community college district as related to:

   a. the junior-senior graduate role of the university, and,

   b. the career skill orientation of agencies such as OEO, HEW, labor, local industry, etc.

C. Make the community college faculty and administration conscious of the urban student's needs and create an atmosphere conducive to meeting these needs.

D. Develop a total-scope "educational delivery system" to maintain close contact with all students through the entire educational process from recruitment to placement, follow-up, and analysis.

E. Involve community and human resource agencies in:

   a. recruiting the "new" student to the community college.

   b. provide the "human" support to the students necessary to increase their opporunity for success.

c. assisting the "new" students in overcoming emotional, cultural, and educational-placement problems.

d. aiding in placement procedure.

e. maintaining adequate follow-up with graduates on the job, and

f. assisting in evolving newer and better methods of instruction.

F. Utilize commercial-industrial-union assistance in:

a. making adequate positions available.

b. counseling prospective employees.

c. making necessary resources, finances, and personnel available to prepare new employees, and

d. planning for future employment needs with corresponding curriculum changes.

G. Develop a greater cooperative effort with the university structure to enable community college transfer students to make a smoother educational transition, and to assist in the identification and direction of "new" students with latent university potential.

H. Develop success-oriented learning opportunities for all potential "new" students in the community.

CENTER

for

SPECIAL EDUCATIONAL SERVICES

While major programs are endeavoring to examine the educational needs of the urban minorities and disadvantaged, little, if anything, has been done to motivate faculty to the changing role of the community college in the Nation's future.

All too often change is not planned but follows the path of least resistance. The human element is ignored in favor of studies examining the material resources.

Community colleges often find their planning efforts focusing upon physical expansion, bond issues, and equipment development. Believing that attitudes and concerns for developing patterns around total educational opportunities for students are equally important to the healthy fulfillment of the community college, this project outlines (as a companion to physical planning) the dimensions for academic and social planning.

The framework for this development within the Maricopa County Junior College District (MCJCD) is the Center for Special Educational Services, which will design and operate an Urban Awareness concept. (See Section "Program Under Preparation").

One major thrust of the Center will be to establish a source for coordinating the educational problems and occupational needs of the community with the three facets of urban change now present, but ineffective: (1) the units of education and research; (2) the business and industrial resources; and (3) local, state, and federal government.

As an action component of the Maricopa County Junior College District's Division of Educational Services, the Center will conduct a multi-phase motivational operation, including; (a) consultative services to the Dis-

trict's five colleges, whereby educational problems will be examined with options and priorities assigned; (b) liaison with the human resource agencies in recruiting and pre-enrollment orientation; (c) coordination of projects with local business and industrial resources; (d) grant design assistance if no local resources are available; (e) changing of faculty-student attitudes and communications through in-service training services and urban awareness workshops; and (f) development of a total-service educational delivery system with individual, inter-locking projects designed to increase success ratios for "new" students.

As an action program, therefore, the Center for Special Educational Services will act at Innovator, Coordinator, and Motivator, as illustrated in the above diagram.

As a research program, the Center will: (a) analyze the educational needs and problems facing the minority and educationally disadvantaged, with the setting of appropriate goals; (b) review alternative ways whereby available resources might be used most effectively; (c) conduct or sponsor pre- and post-evaluations; (d) monitor program activities to determine whether the adopted plan is being followed, whether it is producing the expected results, and whether there is a need to revise the plan and various programs to meet the unforeseen circumstances; (e) up-date and modify plans and programs to keep them in conformance with the realities of constantly emerging problems and opportunities; (f) evaluate the efforts to involve local resources and people, as well as the student-faculty response to the various projects; (g) log the success and failures of the attempts to solve problems and stimulate attitudes and educational change utilizing questionnaires, interviews, data processing equipment, etc.

Hopefully, the final results will include a Manual for Change, which will examine various methods for stimulating the urban community college in its emerging role in the national scene.

CENTER

for

SPECIAL EDUCATIONAL SERVICES

1. To coordinate research with action.
2. Examine economic, social, or cultural problems ranging from individual needs to those of the communities and the region, as they apply to the community college.
3. Act as a vehicle for receiving, polishing, and testing ideas and concepts.
4. Act as a channeling unit to direct people to educational business, or governmental organizations that can assist them with their needs.
5. Act as a grantsman to assist educational units of the District in governmental assistance.
6. Assist with promotional efforts to elevate the image of the community college as a "people's institution".
7. Plan and carry out "people orientated" research in the community college - such as exploring social, cultural, and economic attitudes.
8. Examine the impact of disadvantaged or minority peoples on the community college and the best possible total educational system to insure the greatest success.
9. Act as a sub-level funding agency to "farm-out" its educational program needs to the District's colleges, who would fit their operations into the over-all research and action program of the Center.
10. Conduct forums and symposiums to discuss urban needs and develop ideas for change among the faculty, administration and student body.

MCJCD

A MODEL DISTRICT

Maricopa County, Arizona, and the Maricopa County Junior College District (MCJCD) are relatively unique in their human and physical make-ups - a feature which enhances the District's value in the evaluation and implementation of campus-to-community awareness.

Maricopa County with a population of approximately one million, has within its borders many of the problem areas faced elsewhere in the United States. The county contains a tremenduously expanding population with a projected growth rate of 89,000 per year for the next fifteen years, an Indian Reservation, an emerging inner-city ghetto, a sizable Mexican-American community, an increasing Black population, an impressive number of low-income Caucasians, and approximately 22,000 chronic unemployed.

Likewise the county has the beginnings of over crowding, smog and pollution problems, transportation congestion, drug abuse, etc.

Anticipating these growing problems, The Maricopa County Junior College District has been established in the best possible manner to address itself to these areas as follows:

1. Phoenix College - Total student population of 10,134 - located near the Phoenix inner-city.

2. Scottsdale Community College - Currently being built on the Pima Indian Reservation.

3. Glendale Community College - Total student population of 6,127 - situated in approximation to a Mexican-American residential area.

4. Mesa Community College - Total student population of 6,511 - enrollment of transfer students and ethnically-mixed

vocational trainees.

5. Maricopa Technical College - Total student population of 3,432 - located in the inner-city.

6. District Skill Center - Cooperative inner-city effort with the Employment Security, Bureau of Work, etc.

7. Additional future community colleges in South Phoenix, the Litchfield Industrial area, and the inner-city have been advocated by the Phoenix Forward Task Force on Education to further meet the area's needs.

Physcially, therefore, the Junior College District is ideally situated to apply itself to an examination of the evolving role of a community college district as a full-service, people oriented operation.

Philosophically, the District is already committed to the emerging role of the community college as a primary source of career educational aid for the disadvantaged.

Educationally, the efforts are already concentrated on modifying the attitudes of the 613 faculty and administration from the traditional concept of the junior college as a mini-university interested primarily in the transfer student, toward a total academic-vocational review of the learning process which will include all student areas.

PROGRAM UNDER PREPARATION

A major thrust of the Center will be the following conceptual orchestration of educational delivery services entitled URBAN AWARENESS based upon five (5) major areas of effort:

A. Institutional Preparation:
   1. Faculty Capability Profile
   2. Community Educational Needs Analysis
   3. Secondary School Survey of Minority Disadvantaged Youth

B. Educational Attitude Preparation (In-Reach):
   1. Pre-test Institutional Evaluation: "The Community College & the 'New' Students"
   2. Teacher Attitude Change Techniques (TACT) Program:
      a. Identify and train college change agents
   3. Urban Awareness Forum:
      a. Total faculty examination of the changing urban scene
   4. Ethnic Cultures Seminar for Faculty
   5. Counselor In-Service Training

C. Community Involvement (Out-Reach):
   1. Family Development Center
   2. Inner-City Educational Workshops
   3. Inter-Agency Recruitment Coordination Program
   4. Community Placement Planning Orientation
      a. Cooperative effort with Labor, Industry, Education, Employment Security

D. Institutional Assistance Program (In-House):
   1. Community orientation to college with neighborhood registration
   2. Career Planning Center
   3. Day Care Centers for enrolled parents
   4. Adequate financial assistance
   5. Student Counselor Aides
      a. Secondary School and College
   6. Pre-Enrollment Preparation (PEP) Program
   7. Para-professional Tutoring
   8. Student Transportation Centers in low-income areas
   9. Innovative curricula

E. Graduate Placement, Evaluation and Educational Program Upgrading:
   1. Higher Education Transfer Assistance
   2. Job Placement Assistance
   3. Student follow-up
   4. Educational Program Efficiency Evaluation
   5. Review of Successes and Failures followed by a Manual for Change examining future role of community college in a multicultural society

CHANGE

"In the last analysis the good life can only be realized as men change their minds ... Total commitment to a point of view has been always the way of greatness. There is nothing in our history to contradict this proposition ... The time would seem to be right for significant mutational change ..."*

We firmly believe that this project will produce invaluable insights into the present and future aspects of the community college and will be important to those currently working for growth of the community college from within, as well as those examining the role of the community college in the Nation's future.

*"Leadership and Community Formation", Roy C. Buck, Associate Director of Social Sciences. Center for Continuing Liberal Education, Pennsylvania State University.

CONCLUSION

Senator PELL. This hearing is in recess until 10 a.m., tomorrow.

(Thereupon, at 11 a.m., the hearing recessed to reconvene at 10 a.m., Friday, April 23, 1971.)

EDUCATION AMENDMENTS OF 1971

FRIDAY, APRIL 23, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10 a.m., in room 4232, New Senate Office Building, Senator Claiborne Pell (chairman of the subcommittee) presiding.

Present: Senators Pell and Mondale.

Committee staff members present: Stephen J. Wexler, subcommittee counsel; and Richard D. Smith, associate counsel.

Senator PELL. The Subcommittee on Education hearings on the Education Amendments of 1971 will come to order.

There are two subjects to be discussed today. First a panel of witnesses from Minnesota will discuss higher education about which the Senator from Minnesota is particularly interested. Then we are going to have panels of witnesses testifying on vocational education.

Because both Senator Mondale and I have to be on the floor at 11:35, we must ask everybody to be as brief as possible.

I would like of this very distinguished panel, if possible, to limit itself to 30 or 35 minutes.

Would the Minnesota panel please come forward; Mr. Carlson, Mr. Van Tries, Mr. Hawk, Mr. Helland, Mr. Mitau, and Mr. Smith.

We welcome you here. Before proceeding further, Senator Mondale has a comment.

Senator MONDALE. Mr. Chairman, first of all I wish to thank you for making it possible to have this distinguished panel of Minnesota educators testify before the Education Subcommittee.

I would like to particularly welcome each of you to this committee to help us better understand the problems which higher education faces and the relationship of those problems to the pending legislation.

I am delighted that we have with us Richard Hawk, from the Minnesota Higher Education Coordinating Commission; Robert Van Tries, assistant commissioner of education; Mr. Donald Smith, vice president for administration, University of Minnesota; Phillip Helland, chancellor, State Junior College Board; Theodore Mitau, chancellor of State College Board—and retired professor of political science, who gave up after trying to teach me—and Dr. Edgar Carlson, executive director, Minnesota Private College Council.

I think this hearing and the testimony we will receive will be extremely useful, and I think unique. First, this panel like many panels will provide us with suggestions and recommendations concerning the higher education legislation before us; second, it will give us an

opportunity in one hearing to see how the different segments of our post secondary education structure fit together. It will, in short, give us a chance to see the extent to which the needs of junior colleges, vocational education, State colleges, private colleges, and the major State university are similar and consistent; and finally, by providing a case study of higher education in the State of Minnesota, this hearing will give the committee an opportunity to see how these different segments of higher education structure work together and relate in a single State.

I think this would be unique testimony from that standpoint for this committee to hear.

For the reasons I have mentioned, this hearing will be extremely helpful to our committee, as we consider the higher education legislation before us, and I am deeply grateful to the chairman for making it possible.

Let me also say that Senator Humphrey wishes to express his welcome as well. Unfortunately he is chairing a hearing of the Rural Development Subcommittee this morning and could not be with us.

Senator PELL. Thank you.

May I add that if you gentlemen contribute half as much to the testimony as your Senator contributes to the work of this subcommittee on the broad field of education over the United States, it will be a very generous contribution on your part.

I think he is the most active and strongest Senator on this subject, and he really helps carry the whole load of the work of the subcommittee.

Please proceed as you will.

STATEMENT OF RICHARD C. HAWK, EXECUTIVE DIRECTOR, MINNESOTA HIGHER EDUCATION COORDINATING COMMISSION, ST. PAUL, MINN.; ACCOMPANIED BY EDGAR M. CARLSON, EXECUTIVE DIRECTOR, MINNESOTA PRIVATE COLLEGE COUNCIL, ST. PAUL, MINN.; ROBERT P. VAN TRIES, ASSISTANT COMMISSIONER, DIVISION OF VOCATIONAL-TECHNICAL EDUCATION, MINNESOTA STATE DEPARTMENT OF EDUCATION; PHILLIP C. HELLAND, CHANCELLOR, STATE JUNIOR COLLEGE BOARD; G. THEODORE MITAU, CHANCELLOR, STATE COLLEGE BOARD; AND DONALD K. SMITH, VICE PRESIDENT FOR ADMINISTRATION, UNIVERSITY OF MINNESOTA, MINNEAPOLIS, MINN.

Dr. HAWK. If I may lead off, Mr. Chairman.

Senator PELL. All of the statements will be printed in full in the record at the end of your testimony.

Dr. HAWK. I want to express appreciation, Chairman Pell, and Senator Mondale, for this opportunity to express our views and to suggest that we too are indeed proud to be represented by Senator Mondale and we particularly appreciate his efforts in the area of education.

I would like to say a few words about Minnesota higher education and the implications of the problems which we face for Federal legislation. Each of my colleagues, who represent the several com-

ponents of postsecondary education in Minnesota, will talk about some of these in more detail.

I would like to point out to you, if I may, Mr. Chairman, that Minnesota is a State that attaches high value to higher education. The commitment of the State of Minnesota to postsecondary education is a long one, beginning with the establishment of the University of Minnesota and several of our private institutions prior to the time that Minnesota actually became a State.

Minnesota has four very strong public systems of postsecondary education at the present time, and we are richly endowed with a variety of private institutions, some of the most distinguished in the Nation.

I would be remiss, Mr. Chairman and Senator Mondale, if I did not report that the expansion of postsecondary education in Minnesota to meet the demands for new opportunities has been difficult. It has placed a serious burden on the taxpayer, the capacity of many of our institutions has been seriously strained, and often we have had to sacrifice improvement of quality in the interest of expanding quantitatively.

There is a variety of problems which face postsecondary education in Minnesota as well as the Nation during the next decade. I shall mention just a few.

First of all, we have to make postsecondary education more financially accessible to the residents of our State, if we are to continue the progress in meeting needs.

Second, we need to extend the benefits of postsecondary education more effectively to members of the disadvantaged segments of the Minnesota population.

Third, we need to continue with the expansion of postsecondary education capacity in order that we can accommodate a 43-percent increase in enrollments during the balance of this decade.

Fourth, we need to take steps to utilize more effectively the potential contributions of private colleges and universities.

Fifth, we need to increase the production of professional and paraprofessional personnel in critical areas of short supply, such as medicine and health.

Sixth, we need to improve the quality of postsecondary education and to make up for some of the deficiencies which have occurred during the past decade in which we have been so heavily concerned with quantitative expansion of postsecondary education.

Seventh, we need desperately to engage in a massive effort to improve educational practices, including the testing and implementation of new approaches to providing educational experiences.

In view of the time limitations, Mr. Chairman, I think I shall, with your permission, turn to Dr. Smith, who is vice president of the University of Minnesota.

Dr. SMITH. Mr. Chairman and Senator Mondale, we do appreciate the opportunity to appear before this committee. Let me concentrate my attention on two areas relating to the types of needs that Mr. Hawk has discussed, and do so specifically in relationship to the University of Minnesota.

The university enrolls more than 50,000 students in the entire system. I want to say something about the condition of those students.

About 75 percent of them work in order to finance higher education. Last year we spent about—or we provided about $5½ million in student assistance. I want to emphasize that of that sum, 80 percent took the form of self-help. That is to say it was financing through work, work-study, or loan programs.

Now, the educational opportunities of several thousand Minnesotians, both those who are in school at the present time, and those who wish to enter the higher education stream, is clearly hazarded unless we have a major expansion of our capabilities for providing student assistance. Specifically this means the requirement that we must have additional funding for educational opportunity grants-in-aid, work-study, and improvements in the loan program.

We have a commitment in Minnesota to equal educational opportunity, and we think this is a long-standing national commitment. We think there is no higher item on the national agenda than providing the funding which will make that commitment possible.

We believe that the legislation which you are considering does address itself to this question. We think there are important principles in the legislation that increased funding in educational opportunity grants-in-aid should be provided. There should be provision for reciprocal grants to institutions in relationship to the grant-in-aid program, because part of the problem of providing opportunity is increasing the capability of institutions to bring disadvantaged students into the educational mainstream.

I think there should be attention to the differential costs for students in attending public and private institutions so that the opportunity of the student to choose is increased. Also attention should be paid to the balance of the program, that is to the relationships between grants-in-aid, work-study and loan programs.

Now, the university is also the major center of postbaccalaureate professional and graduate education in Minnesota. It is clear that the great centers of postbaccalaureate education are a national resource. And the developments of these centers was made possible only by the strong commitment of the Federal Government to graduate education and research. I think it is demonstrable that no investment by the National Government in the last two decades for the future of this Nation has paid off more clearly and dramatically than the development of postbaccalaureate educational activities, both in graduate programs and professional areas.

It would be tragic if this investment were not continued and expanded. A move at this time to place a greater burden on the States for the provision of this kind of educational resource has overtones of disaster. It simply is the case that this takes a national resource and attempts to segment it in terms of an already overburdened tax economy.

I think the broad and well conceived rededication which is present in Senator Pell's bill S. 659 recognizes the role of the Federal Government in building postbaccalaureate education and the research capability of this Nation.

I want to say that it does involve things ranging from graduate facility support, research library support, institutional support in critical areas, such as international programs and language studies, and fellowship support linked to institutional support to make the capability of the institution expand also.

I think Senator Mondale's bill 1161, which extends the principal of the opportunity grant, the educational opportunity grants, to post-baccalaureate education is well conceived. Because the entire system of higher education, I think, must be conceived of as a unity.

Now, in my written testimony I have commented on a number of other aspects of the legislation specifically, but because of the limitations of time, I think we should continue on with the next statement.

(The prepared statements of Dr. Hawk and Dr. Smith follow:)

STATEMENT BY RICHARD C. HAWK, EXECUTIVE DIRECTOR
MINNESOTA HIGHER EDUCATION COORDINATING COMMISSION

PREPARED FOR THE UNITED STATES SENATE EDUCATION SUBCOMMITTEE

April 23, 1971

That Minnesota post-secondary education must become more efficient in meeting the state's needs is evident. Even with improved efficiency, it is becoming painfully apparent that the state will have great difficulty increasing its investment in post-secondary education at a rate sufficient to keep pace with expanding needs and rising costs.

Accordingly, I am especially pleased to appear before you at this time. As I understand the purpose of this session, my colleagues and I are to (1) provide you with a kind of "case study" of one state (Minnesota) including an assessment of the status, problems, and current and projected needs of post-secondary education in our state and (2) offer our views on Federal legislation as it may affect post-secondary education in our state.

Since anticipating the future requires understanding of the past and present, I shall begin with a brief description of Minnesota's progress in meeting post-secondary education needs. This will be followed by an enumeration of some of the problems to be faced in the future. Finally, I propose to relate the present status and future needs to issues concerning the role of the Federal government, particularly Federal legislation.

Past Progress

Minnesota has participated fully in the nation's rapid expansion of post-secondary education. During the past decade, student enrollment in Minnesota post-secondary education institutions has more than doubled. While 18 states exceed Minnesota in total population, only 15 states report larger post-secondary enrollments than Minnesota.

The marked expansion of post-secondary education enrollments in Minnesota reflects the rising aspirations of Minnesota residents for advanced education. It also reflects a strong commitment by the state to provide it's residents with adequate post-secondary opportunities.

Minnesota's commitment to post-secondary education has been continuous. The University of Minnesota, which has achieved prominence as one of the nation's outstanding universities, and the first of Minnesota's private colleges were founded before Minnesota became a state. State normal schools, which now have become comprehensive state colleges, were established early in the history of the state. Local junior colleges, which subsequently were integrated into a state junior college system, came next beginning in 1914, and the most recent arrival on the scene, the area vocational-technical school has rounded out the total pattern of post-secondary institutions designed to serve a variety of students and to meet a variety of state needs.

At present, responsibility for post-secondary education is shared by four public systems, private colleges and universities, and private vocational and technical schools. The Twin Cities' campus of the University of Minnesota, which combines great strength in graduate education and research with the service traditions of a land-grant university, has grown to an enrollment of 43,545, and the University system now includes two additional four-year

institutions and two two-year technical colleges, which accommodate an additional 7,702 students. The state college system now includes six comprehensive four-year teaching institutions, which also offer graduate programs leading to master's and specialist's degrees, with a combined enrollment of 39,746. The state junior college system now includes 18 institutions providing convenient initial entry of both terminal and transfer programs for commuting students with a combined enrollment of 19,949. Minnesota's private colleges and universities, which include some of the nation's most distinguished private institutions accommodate 30,089 students. Fall (1970) enrollment in the 28 area vocational-technical schools was 15,969, an increase over the previous year of almost 16 per cent. Thus, a total of 87 post-secondary institutions, of which 54 are public, and 33 are private, accommodate a combined enrollment of 157,000. An additional 4,629 students attend private vocational and trade schools in Minnesota bringing the total of post-secondary enrollments to 161,629.

Of equal significance to the total number of institutions is the rapid rate at which Minnesota has established new institutions in order to meet growing needs. During the last decade, 25 new public post-secondary institutions and one private college opened their doors. Nine additional public post-secondary institutions which already have been authorized will open during the next two years.

The rapid expansion of Minnesota post-secondary education has not been easily accomplished. State appropriations for post-secondary education have more than tripled in ten years.

While part of the necessary growth in state appropriations for post-secondary education is the result of rising costs, much of the increase is

directly attributable to the need for increasing the quantity and variety of post-secondary education opportunities. At one time, the bulk of the state's appropriation for higher education went to the University of Minnesota. As the need for a larger number and greater variety of institutions became apparent, an increasingly higher percentage of the higher education appropriation has gone to the other three public systems.

The problem of providing funds necessary to develop strong systems of state colleges, state junior colleges, and area vocational-technical schools, while attempting to provide an increasing investment necessary to maintain a strong state university, has been difficult. In addition, an increasingly larger proportion of total post-secondary enrollments has had to be accommodated in public institutions. While private colleges and universities have experienced some increase in enrollment, the proportion of total post-secondary enrollments accommodated by private colleges and universities has declined steadily to less than 20 per cent in the fall of 1970.

Increasing the state's investment in post-secondary education has placed a heavy burden on the taxpayer. Moreover, the capacities of some institutions have been severely strained and improvement in quality often has been curtailed in order to provide increased quantity of service.

Rapid expansion in numbers of students accommodated during the past decade has coincided with increased effort to meet the needs of the state and nation for expansion of the research and public service functions of higher education. It is little wonder that higher education has been susceptible to the charge of not devoting enough effort to changing curriculum and improving methods of instruction.

In summary, Minnesota entered the decade of the 1970's with a long history

of commitment to and support for a strong system of post-secondary education and with a rich variety of both public and private institutions. Although continuous improvement has been apparent, the strains of rapid expansion to meet growing needs are visible. That two of Mienesota's most prestigious institutions (University of Minnesota and Carleton College) were cited in the recent Carnegie Commission report titled 'The New Depression in Higher Education" as being headed for financial difficulties reflects the increasing difficulties of providing the investment necessary for quality post-secondary education in Minnesota.

Future Problems and Needs

Among the many complex problems and needs to which larger efforts should be devoted during the remainder of the 1970's are the following:

1. Making post-secondary education financially more accessible to Minnesota residents. Although we take some pride in the fact that 70 per cent of Minnesota high school graduates enter some form of post-secondary education, we are concerned about the 30 per cent who do not receive education beyond the high school. In order to achieve continuing progress toward universal post-secondary education, we have established a goal of increasing the number of students being educated at a rate sufficient that post-secondary enrollments will equal 85 per cent of high school graduates in the 18-21 age group. This is not to suggest that we view post-secondary education as serving only students under 22 years of age. Quite the contrary, we see an increasing need for continuing post-secondary education for adults. Relating post-secondary enrollments to high school graduates in the 18-21 age group simply provides a convenient reference for assessing progress in extending the benefits of post-secondary education to a larger proportion of Minnesota's

population.

Many factors will contribute to our success or failure in achieving the above goal, but making post-secondary education financially more accessible to Minnesota residents is essential to achieving the goal. To this end, the Higher Education Coordinating Commission has requested an appropriation for state scholarships and state grants-in-aid of $11.3 million for next biennium, an increase of more than 400 per cent over the appropriation for the present biennium. I am happy to report that Governor Anderson included the full $11.3 million in the budget recommendations which he presented to the 1971 Legislature and that legislators have been receptive to the proposal in spite of great pressure to hold the line on taxes.

Even with the substantial increase in appropriation for state scholarships and grants-in-aid, we will fall far short of the needs of Minnesota residents for financial assistance to pursue post-secondary education. We conservatively calculate the need of each new high school graduating class to be $24 million per year of attendance in an institution of post-secondary education. The fact that student costs of attending post-secondary institutions continue to rise, having increased 20 per cent during the past two years, probably makes $24 million a definite underestimation.

2. Extending the Benefits of Post-Secondary Education to Minnesota's Disadvantaged Population. Extending post-secondary education to a larger proportion of Minnesota's population represents a significant challenge, since doing so requires that the disadvantaged segments of Minnesota's

60-433 O - 71 - pt. 3 - 17

population be reached and served effectively. While the urban disadvantaged are most easily identified because of their concentration, we are equally concerned about the rural disadvantaged. While disadvantaged students of minority races are most easily identified, we are fully aware that Minnesota's disadvantaged populations includes families from all racial and ethnic origins.

Adequate student financial aid is a prime requisite for meeting the needs of disadvantaged students. Of equal importance, however, is the need for (1) sufficient programs of recruitment and counseling which can stimulate and direct disadvantaged students to the right kinds of institutions and programs, and (2) compensatory and supporting efforts in post-secondary institutions adequate to assure that opportunities for disadvantaged students are opportunities to succeed rather than opportunities to fail. Effectively meeting the needs of Minnesota's disadvantaged population will be a difficult and costly undertaking.

3. Expanding the Capacity of Post-Secondary Education. The above discussion of the numbers of new institutions which have been established during the past decade could lead to the erroneous impression that the job of expanding post-secondary education capacity has been completed. If the need for expansion had been fully met, all efforts could now be focused on improving effectiveness. Such is not the case. Reaching Minnesota's goal of extending the benefits of post-secondary education to an increasingly larger proportion of the population will require the accommodation of 70,000 more students than the 161,629 being educated this year by 1985; an increase of more than 43 per cent. The nine new institutions which

already have been authorized to open their doors during the next two years represents partial, but not complete, response to the need for expanding the capacity of post-secondary education in Minnesota. The Higher Education Coordinating Commission has recommendations before the 1971 Legislature in favor of legislative authorization for four additional state junior colleges and two senior institutions. In addition, we are faced with the need for continuing improvement in the physical plants of existing institutions. While we can anticipate relief from the pressure of increasing enrollments during the 1980's, no such relief will occur during the 1970's.

4. Achieving Greater Utilization of Private Colleges: As indicated above, the proportion of total enrollments which are accommodated in private colleges and universities has declined steadily in recent years and now represents less than 20 per cent of total post-secondary education enrollments in Minnesota. Through a comprehensive study of private higher education in Minnesota conducted during the past year, we have determined that private institutions of higher education have both the capacity and the willingness to accommodate larger numbers of Minnesota residents. We also have determined that financial difficulties comprise the greatest barrier to increased service from private colleges and universities. Accordingly, the Higher Education Coordinating Commission has placed several recommendations for changes in state policy on private colleges before the 1971 Legislature. Perhaps the most significant of these proposals is the one which would authorize the Commission to make payments of $500 per student for each additional Minnesota resident educated by a private college over the number being educated by the college in the autumn of 1970. I am pleased to be able to report that the Minnesota State

House of Representatives Higher Education Committee has passed the bill implementing this recommendation without a dissenting vote and that the State Senate Higher Education Committee will consider the Commission's bill in the near future.

5. Increasing Production of Professional and Para-Professional Personnel in Critical Areas of Short Supply. While the needs of Minnesota residents for improved health care at reasonable cost will require progress on several fronts, increasing the supply of physicians and other health workers is essential. As you may know, the availability of Federal funds facilitated a beginning class of 227 at the University of Minnesota medical school - an increase of about 40 per cent over last year. While this expansion represents a major step toward increasing the production of physicians, it will not be sufficient to meet the needs of Minnesota, the surrounding region and the nation. The projected need for health care services provided the basis for the Higher Education Coordinating Commission's recommendation to the 1971 Legislature for developing sufficient capacity for 315 beginning medical students in the state by 1976. Preliminary steps already have been taken for establishing a new two-year medical school at the Duluth campus of the University of Minnesota with the hope that this school ultimately may be extended to provide a complete program leading to the M.D. degree. In addition, the Commission has recommended that the legislature provide partial support for a new private undergraduate medical school to be operated by the Mayo Clinic and Foundation in Rochester. Proposed legislation, which would provide $8,000 for each

Minnesota resident enrolled in the Mayo medical school, is pending in the 1971 Legislature. Increasing the capacity for medical students will require a corresponding increase in capacity for clinical experience in affiliated hospitals. Increases in the rate of production of physicians will require corresponding increases in production of other health personnel.

6. Improving the Quality of Post-Secondary Education. Although the quality of post-secondary education in Minnesota generally has improved, improvement of quality lags well behind the need. As indicated above, quantitative increases in post-secondary education often has demanded priority over improvement in the quality of post-secondary education services. Continuing deference of qualitative improvement can lead to serious shortcomings and a general weakening of Minnesota post-secondary education.

7. Re-Tooling to Provide Better Approaches to the Instructional Processes. That Minnesota post-secondary education needs to re-tool or gear-up for changes in educational practices, is not to be disputed. However, testing and implementing innovative practices is a costly endeavor for any institution including higher education. There is general acceptance of the proposition that large expenditures by industry for re-tooling to obtain a more favorable cost-benefit ratio through either reduction of production costs or improvement of the product represents a sound investment. Post-secondary education seriously needs a similar kind of massive investment for implementing improved educational practices.

The Federal Role

In keeping with its continuing commitment to meeting post-secondary education needs, the State of Minnesota can be expected to make a concerted effort to provide the resources necessary for effectively addressing attention to the problems enumerated above and to a variety of additional problems. Several significant new steps which the state is taking have been indicated.

Unfortunately, practical considerations severely limit the effort which the state can devote to post-secondary education. Rising costs in other areas of state government services, together with growing resistance to additional state tax increases, are combining to constrict the states ability to increase its investment in post-secondary education rapidly enough to meet needs. The magnitude of post-secondary needs to be met, the complexity of the problems to be resolved and the limitations to be overcome in generating additional tax revenue at the state level indicate critical difficulties for post-secondary education during the remainder of the 1970's.

All relevant projections suggest that federal assistance for post-secondary education has never been more important to continuing progress than it is now. Positive legislation in this committee extending and increasing authorization for federal assistance for post-secondary education is a source of encouragement for us at the state level, and we urge you to continue your efforts to achieve the best possible legislation in this area.

From my perspective federal assistance can be most effective and will have the greatest impact when the following conditions prevail:

1. Continuity and Reasonable Stability. While continuous modification to improve federal programs is necessary, losses in both efficiency and effectiveness occur with frequent abrupt changes in federal policies. Serious dislocations result from shifting federal emphasis among support areas.

2. Sustained Commitment and Advanced Funding. Late funding and fluctuating funding of federal programs create uncertainities at the state and institutional levels of operation and reduce the impact of federal assistance.

3. Flexibility. Federal programs should recognize variations in the patterns of post-secondary education among the states. Program structure designed to fit the organizational pattern of post-secondary education in one state may not be compatible with the pattern of organization in another state. Similarly, the strengths and weaknesses of post-secondary education will vary from one state to another.

4. Coordination With State Planning. Attempting to engage in systematic planning of post-secondary education at the state level without knowing the nature, magnitude, and conditions of federal funds which will be available or to which institutions they will be awarded is something like attempting to put together a jig-saw puzzle in which the shape of a few key pieces is unknown. Lack of coordinated planning at the state and federal levels inhibits the accomplishment of goals of both, and reduces economy of effort. You may wish to seek advice on coordinating federal and state planning for post-secondary education from the Education Commission of the States. Since the states assume the major share of responsibility and funding for post-secondary education, the simplest means of coordinating federal and state planning may be found in contructing federal programs in such a manner as to delegate considerable responsibility for implementation to the states with broad federal guidelines.

5. Balance. Although there are sound reasons for giving special emphasis to student assistance in order to equalize opportunities and to provide acess to post-secondary education for the total population, a reasonable share of federal assistance should be allocated to strengthening post-secondary institutions and programs. Physical plants need to be improved and expanded; the supply of

library resources and instructional equipment must be continuously increased and improved. Support for testing and implementing new educational practices on a broad scale is desperately needed. The potential benefits of continuing adult education and community service activities are far from being achieved. The critical function of extending knowledge through research is expensive, but essential to continuing progress in all areas of human endeavor.

6. Responsibility for National Needs. Generally, the states must assume primary responsibility for planning, conducting, and financing post-secondary education with assistance from the federal government. However, some areas of need are so pervasive and so costly to meet as to require that the federal government assume a larger than usual share of the responsibility. Medical education is a good example. About half of the physicians produced by the University of Minnesota medical school have entered practice in states other than Minnesota during recent years. Minnesota's plans for a second state medical school and state assistance for a new private medical school at the Mayo Clinic and Foundation are discussed above. These efforts will represent a substantial and costly contribution to necessary increases in the supply of physicians regionally and nationally. Hopefully, an increasingly larger share of the responsibility for this contribution can be assumed by the federal government in keeping with the critical national interest in improving health care.

BACKGROUND INFORMATION ON THE

MINNESOTA HIGHER EDUCATION COORDINATING COMMISSION

Richard C. Hawk
Executive Director

Purpose and Primary Responsibility.- The Minnesota Higher Education Coordinating Commission, which was established by the 1965 Minnesota State Legislature, has general responsibility for planning and coordination of post-secondary education, both public and private, in Minnesota. The Commission reports to both the Governor and the Legislature and is concerned primarily with advising the Governor and the Legislature on matters of public policy on higher education and state action necessary for meeting the needs of Minnesota residents for post-secondary education with reasonable economy of effort. Accordingly, the Commission is conducting a systematic program of long-range comprehensive planning. As part of its coordinating function, the Commission reviews proposals for new instructional programs to be established in Minnesota post-secondary institutions and makes a recommendation as to whether or not each proposed program is consistent with the Commission's guidelines for establishing new programs. The Commission also exercises statutory authority for entering into higher education reciprocity agreements with neighboring states.

Secondary Responsibility.- In addition to the primary responsibility for planning and coordination, the Commission has been assigned responsibility for administration of some statewide higher education programs, including (1) a state scholarship program, (2) a state program of grants-in-aid, (3) a state interinstitutional television program, (4) the Federal facilities program under Title I of P.L. 88-204, (5) the Federal Community Services and Continuing Education Program under Title I of P.L. 89-329, and (6) the Federal Instructional Equipment Program under Title VI, Part A, of P.L. 89-329.

Commission Membership. - The Commission consists of 18 members appointed by the Governor: one from each Congressional District, two from each of the four boards which govern public post-secondary institutions, and two private college presidents.

Commission Staff. - The Commission has a professional staff of 14 and an equal number of secretarial and clerical personnel.

Commission Budget. - The Commission's budget for the current fiscal year is $571,744, of which $333,000 was appropriated by the State Legislature, $111,000 was provided by the U. S. Office of Education for administration of Federal programs, and $127,744 came from grants from private foundations and other sources for support of special projects.

Remarks by Donald K. Smith, Vice President, Administration, University of Minnesota

Prepared for the Senate Education Subcommittee, April 23, 1971

Mr. Chairman and Members of the Committee:

Thank you for this opportunity to appear before you this morning. I particularly value the opportunity to discuss briefly some urgent national goals in higher education which could be realized through the various bills before your committee, I shall try to avoid dwelling on the simple but obvious fact that institutions of higher learning are in serious financial straits and that we badly need a massive renewal and extension of federal participation in our problems if we are to keep faith with our students and with this nation's commitment to educational opportunity. Our situation is bleak; the situation of our students is bleak; and the general situation is likely to remain bleak without significant new legislation from Congress.

But I think this general fact is well known, and I want to confine my testimony today to a series of propositions about some national goals which I think should be sought through new legislation. In doing this I shall limit myself primarily to the following topics: student financial assistance, institutional aid related to such assistance; the special problem faced by private institutions with high student costs; and the special concerns of graduate education. I would also like to make a few comments on the importance of the proposals for a National Foundation for Higher Education.

These limitations in my comments do not imply lack of interest in or importance to other provisions of the several bills before you. For example, I think the proposals in Senator Pell's bill, S. 659, for facility construction assistance is of urgent importance, and his Graduate Facility Grant proposal is a serious effort to reaffirm by the Congress the long term national interest in maintaining centers of graduate education and research. Expanded aid for

library development as recommended in his bill also responds to a need to which every college or university administrator or faculty member could testify. But limitations of time suggest that I should focus my comments today on certain urgent new directions charted in the legislation you are considering.

Let me organize my remarks by asserting some six principles which I think should underlie new legislation, and then commenting on the relationship of these principles to our situation in Minnesota, and to certain features of the legislation you are considering.

The first principle is that this nation ought to make good on its long standing commitment to see to it that no student is blocked from access to post high school education, appropriate to his capacities and interests, by reason of economic or educational disadvantage. It should be unthinkable for this nation to continue to impose an economic barrier to higher education for the poor -- or increasingly for students of modest means. It should be equally unthinkable to deny access to those who have accumulated an educational disadvantage by reason of the circumstances to which they were born, and in which they grew up and received their early education.

Removing the economic barrier should be an urgent national goal, but achieving that goal requires a strong infusion of educational opportunity grants-in-aid by the Federal government, joined to improved work-study, and loan programs.

Let me describe very briefly the massive nature of the problem we face at the University of Minnesota. We have more than 50,000 students attending the University. For the most part they do not have available family support sufficient to pay for the costs of their education. Last year, approximately 75% of our students were employed, either on or off campus, in any given quarter.

We provided for these students approximately 5½ million dollars in financial assistance through loans, work-study, and scholarships and grant-in-aid. Of the aid we have provided in the last three years, some 80% has taken the form of self-help by the student -- that is, loans, work, and work-study. Only 20% has been available in the form of grants or scholarships. The average indebtedness of our students has been increasing steadily. We are looking at students carrying heavy and increasing debt loads, seeking self-help through work in the face of inadequate resources for such programs, facing increasing costs for tuition, books, and board and room. And we see no real way of keeping opportunity open for these students without quick and generous participation by the federal government.

We have initiated in recent years a broad spectrum of outreach programs designed to identify and bring into a successful experience in higher education many talented and motivated students facing economic and educational barriers. Our early identification programs, our work with area schools and agencies, and the special guidance and tutorial programs which have been developed have succeeded. Students for whom a university education was once wholly beyond possibility are moving successfully in our programs. But at this moment we face the desperate problem of knowing that simply to maintain our programs for the disadvantaged at their present levels will require an additional 3½ million dollars in the next biennium, the sources of which are not apparent. Maintenance is the lowest goal to which we should aspire, but even this is hazarded unless there is strong federal expansion of educational opportunity grant programs, and work-study programs.

The most important piece of unfinished business before higher education and this nation seems to me that of opening fully the door of equal educational

opportunity to our people, and this I take to be a central emphasis in Senator Mondale's Bill, S. 1161, and a section of Senator Pell's bill, S. 659.

The second principle I would propose is that expanded programs of student assistance should be accompanied by a forthright recognition of the institutional costs associated with efforts to expand educational opportunity. Student tuition and fees do not pay fully the costs of providing education, and if students are to be given assistance in meeting their costs, institutions also need assistance in meeting fully their obligations to their students. The problem of institutional costs becomes particularly acute as more students facing economic and educational disadvantage are brought to our campuses. At the University of Minnesota our work with such students has involved developing additional guidance and tutorial programs, some new curricula, and a new appreciation of the fact that by properly marshalling our resources we could open the door of educational opportunity to students for whom such opportunity was previously unavailable.

Both Senator Pell's bill, and Senator Mondale's bill address the question of institutional aid as a reciprocal of student assistance, and this approach seems to me an enormously important recognition of the expanding costs faced by institutions with a commitment to opening the doors of opportunity. I was also impressed by the principle in Senator Mondale's bill that the proportion of institutional aid should increase in terms of the level of the student's education. This is a significant recognition of the fact that educational costs rise as students progress to more advanced levels of study. The recognition would give healthy impetus to the efforts of colleges and universities to secure better information on the full costs of education at various levels, and in various programs.

A third principle which seems important to me is that of providing aid to students in a form which will broaden the student's capacity to choose among several institutions which might be available to him. Across the board limitations on the aid packages which can be provided for students tend to force students into public institutions where tuition levels are comparatively low. This, in turn, simply increases pressure on these institutions to seek expanded tax support at the State level to meet costs resulting from increasing numbers. Senator Mondale's bill has an interesting and useful approach to this problem by providing a sliding scale of grants related to student costs at a given institution. The formula balances nicely the goal of providing greater support to students who choose higher cost institutions, but providing a decreasing percentage of total cost as the cost of the institution rises. This balance would have the effect, I believe, of increasing the opportunity of students to choose higher cost institutions, while at the same time discouraging a sharp or sudden tendency on the part of students uniformly to prefer high cost institutions.

A fourth principle which should be recognized is that of maintaining a proper balance among grant-in-aid programs, work-study programs, and loan programs in the total approach to student aid.

We do not believe at the University of Minnesota that students should receive the full cost of their education through grants-in-aid. As I indicated earlier, some 80% of the aid now being received by our students is in the form of self-help--work, work-study, or loans. Under optimal conditions of funding we would want that percentage to decline, but we would continue to expect and insist that economically disadvantaged students carry the major share of the costs of their education through self-help.

The best approach to the problem of aid is that of preparing aid packages

for individual students based on a candid appraisal of the package most likely to help the student succeed in his educational objectives, and most likely to motivate him to assume personally as much of the burden of aid as is possible. In general we follow the practice of seeking full aid assistance without loan indebtedness for disadvantaged students starting their educational careers. The student's risk of failure is highest at this point; the psychological commitment he must make is highest; his need to give full and undivided attention to his studies is highest. As the student experiences success, and as the probability that he will fulfill his educational objectives increases, it is appropriate that he carry increasing levels of self-help, through loans, and employment, while grant-in-aid resources are husbanded to help new students enter the educational stream successfully.

At the moment our major problem in maintaining an aid program which is psychologically and educationally wise is hazarded by the absolute shortage of adequate funds for grant-in-aid, and for work-study. Infusions are needed here. But we do not expect these infusions to be so massive as to eliminate the importance of expanding loan programs.

I am intrigued by the possibility that federal legislation dealing fully with the problem of student assistance could recognize the interaction of grant-in-aid, work study, and loan funds, perhaps possibly by specifying the maximum percentage of total support that could be provided through grants-in-aid by the end of the student's second year, or fourth year of undergraduate instruction. Most institutions are managing their aid packages in this way, but recognition of the principle would assure general use of the principle. I should also like to call your attention to a specific section in S. 1123, introduced by Senator Prouty. Section 414 of his bill lifts the 80% limit on federal contribution to work-study programs in the presence of a finding that the limit will block a desirable program. This change is important.

If we are to use the work-study system imaginatively (and our students seek work-study opportunities well beyond our available resources), the 80% will have to be more flexible. The off campus public service jobs which students are seeking, will only be in plentiful enough supply if the 80% ceiling limit is lifted. The University of Minnesota was involved in the early development of the Urban Corps program in Minneapolis and had there been no 80% limit, the city of Minneapolis could have absorbed three times the number of Urban Corps students who in fact worked for the city. There are exciting possibilities for community service work using the work-study mechanism, and I urge you favorable consideration for this change.

A fifth principle I should like to address is that of making adequate provision for maintaining and expanding the strength of our great national centers of graduate education, research, and post baccalaureate professional study. The current fiscal woes of higher education, and the nation, should not be permitted to become the occasion for dismantling the capability of our graduate universities to maintain and expand the supply of highly educated men and women available to this nation. The costs of graduate and post baccalaureate professional education are high. The cost to the nation of depressing the capability and productivity of these institutions would be enormously higher. No one giving serious thought to the matter could assume that this nation will need fewer, rather than more graduate scholars, scientists, and professionals in the next few decades. Yet we shall have fewer, rather than more unless the programs which support students and support the teaching and research capability of our universities are enacted and funded.

Much has been made in the last year of the alleged oversupply of doctoral students in certain academic disciplines, and the plight of highly educated professionals who have found themselves unemployed through dislocations or changes

in priorities in the nation's economy. The larger truth is that unemployment among Ph.D.s in this nation is largely a myth if it is implied that such unemployment is of major proportions, or is general to all fields. For example, the unemployment rate for 1969 doctorates in the natural and social sciences, engineering and mathematics, was 1.1% as compared with 3.5% for the nation's work force generally. The range was from 0.6% in biochemistry, to 1.8% in engineering. The rate undoubtedly increased in 1970 as general unemployment levels went to 6.2% in December, and remained at 6.0% in January of 1971. The point is not that unemployment is non-existent, but that all studies show that today, as in the past, unemployment is lowest for the most highly educated, and least likely to persist for this same group. Moreover, gloomy forecasts concerning the employability of the highly educated typically take no accounting of the rapid expansion of demand for qualified people in the health sciences, and in the multitude of professionals needed for national efforts concerning evironmental defense and improvement.

Support for graduate education and research obviously involves a wide spectrum of federal legislation, agencies, and programs. But in relation to the legislation before this Committee, I was pleased to see the extension of the availability of student opportunity grants, in Senator Mondale's bill, to post baccalaureate students, and the provisions both for graduate fellowships and for institutional costs of instruction grants related to those fellowships. I also noted the far reaching attention given to graduate programs in Senator Pell's bill. This included, support for research libraries, for graduate academic facilities, for continuation of the education professions development authorization, for institutional support in developing stronger and better graduate programs, for graduate fellowships, and for extension of Titles IV and VI of the National Defense Education Act of 1958 and of the International

60-433 O - 71 - pt. 3 - 18

in priorities in the nation's economy. The larger truth is that unemployment among Ph.D.s in this nation is largely a myth if it is implied that such unemployment is of major proportions, or is general to all fields. For example, the unemployment rate for 1969 doctorates in the natural and social sciences, engineering and mathematics, was 1.1% as compared with 3.5% for the nation's work force generally. The range was from 0.6% in biochemistry, to 1.8% in engineering. The rate undoubtedly increased in 1970 as general unemployment levels went to 6.2% in December, and remained at 6.0% in January of 1971. The point is not that unemployment is non-existent, but that all studies show that today, as in the past, unemployment is lowest for the most highly educated, and least likely to persist for this same group. Moreover, gloomy forecasts concerning the employability of the highly educated typically take no accounting of the rapid expansion of demand for qualified people in the health sciences, and in the multitude of professionals needed for national efforts concerning environmental defense and improvement.

I do not wish to minimize the reality of marketplace changes for many of the traditional areas of doctoral study. Allan Cartter's studies indicate the probability that oversupply for some fields may be more than a transient phenomenon. What I am saying is that this phenomenon does not argue for curtailment rather than expansion of post baccalaureate professional and graduate education. The phenomenon does argue the constraint in certain fields, expansion in others, and development of new areas of specialization and competence tuned to the requirements of our society.

Support for graduate education and research obviously involves a wide spectrum of federal legislation, agencies, and programs. But in relation to the legislation before this Committee, I was pleased to see the extension of the availability of student opportunity grants, in Senator Mondale's bill, to post-baccalaureate students, and the provisions both for graduate fellowships and for

institutional costs of instruction grants related to those fellowships. I also noted the far reaching attention given to graduate programs in Senator Pell's bill. This included, support for research libraries, for graduate academic facilities, for continuation of the education professions development authorization, for institutional support in devel oping stronger and better graduate programs, for graduate fellowships, and for extension of Titles IV and VI of the National Defense Education Act of 1958 and of the International

Education Act. This broad spectrum of programs would help ensure continued health for an enterprise which is so clearly national in its purposes and its contributions as to require a focused and judicious concern in federal legislation.

The sixth, and final principle I should like to present is that as we seek to meet the costs of expanding opportunity for students, and maintaining health for our institutions, we should also be adventuresome in our search for new and better ways of providing higher education. Innovations are needed, in curricula, in instructional practice, and in the governance and management of the higher education enterprise. A significant fraction of our effort, therefore, should be in the area of educational research and development for post secondary school education.

The proposals by Senator Pell and Senator Javits for establishing a National Foundation for Higher Education should be confirmed. We face awesome tasks as we seek to reconstruct our educational systems, to bring the fruits of knowledge about learning systems to bear, to extend appropriate opportunity to men and women of all ages and occupations, and to improve our understanding of the costs and consequences of our learning systems with resultant improvements in the efficiency of our work. These tasks will not be performed well or quickly by faculties wholly caught up in the task of maintaining present programs, nor by institutions caught up in a desperate struggle for survival. They will not be performed simply through reliance on the private sector of our economy, despite its important and substantial contributions. We need to build a commitment to educational research and development into the fabric of the federal support system, and this I take to be the objective of the proposed National Foundation.

In this connection you may be interested in the fact that the faculty of the University of Minneosta last year committed itself to investing up to 3% of its instructional budget to educational development projects managed at the departmental and collegiate level. Initiation of this massive program of

self help cannot be quickly achieved with current budgets scarcely adequate to meet current teaching obligations. However, a National Foundation could well provide our institution, and others, with the seed money to build our capability for creative innovation. I mention the action of our faculty only to emphasize that there is a willingness to change, indeed an eagerness to change,now observable in our institutions. We need a national commitment to support the tasks we want to undertake.

UNIVERSITY OF *Minnesota*

OFFICE OF THE VICE PRESIDENT FOR ADMINISTRATION
MORRILL HALL · MINNEAPOLIS, MINNESOTA 55455

April 19, 1971

Witness;

Donald K. Smith, Vice President, Administration
University of Minnesota, 200 Morrill Hall
Minneapolis, Minnesota, 55455
(612) 373-4911

The University of Minnesota is located on five campuses offering a full range of post secondary educational offerings for undergraduate to PhD study.

Its principal campus - the Twin City Campus - is home for 41,000 students and is the largest single campus site in the nation. The University also has a campus in Duluth which is moving towards a full graduate program in addition to its undergraduate offerings. At Morris, the University has a small undergraduate campus which we are building as a model of public undergraduate liberal arts institution.

At Crookston and Waseca we house two year Agricultural Technical Schools preparing people for careers in various agriculturally related professions.

Dr. HAWK. Mr. Chairman and Senator Mondale, with your permission, we would like to turn to Chancellor Mitau of the State College Board.

Dr. MITAU. First of all I would like to be permitted a word of personal tribute to the distinguished senior Senator from Minnesota, Mr. Mondale, a former student of mine who succeeded well and is making a significant contribution to the cause of higher education and the many other areas in which he has shown such competence and imagination.

I would also like to add that I have an additional sense of pride in that the junior Senator from Minnesota was also a colleague of mine at Macalester——

Senator PELL. We call him the senior junior Senator.

Dr. MITAU. Briefly, Mr. Chairman, there is no need for me to go over all the aspects of the testimony so far given on behalf of higher education, but I would like to emphasize a few particular areas.

First, a word about the system that I represent. The Minnesota State College system comprises six institutions, ranging in size from approximately 3,000 students to 15,000 students.

The system originally was a State normal school system. In 1921 it became State teachers colleges and in 1957 our colleges became multipurpose institutions.

Today these institutions with their 40,000 students comprise a very significant aspect of the posthigh school education spectrum in our State.

Nearly 60 percent of the teachers of Minnesota are the products of our institutions. Minnesota, which has the lowest dropout rate in the Nation for its students in the elementary and secondary system, takes some pride in that particular statistic.

I should also indicate that Minnesota, as you already have heard, continues to make a great contribution in terms of its fiscal resources to the cause of higher education; the State ranks 19th in terms of per capita income, but ranks 13th in the Nation in terms of spending for its colleges and universities.

First of all, we wish to stress the need for Federal assistance for our students.

You might be interested to know that 44 percent of the freshmen in our system in 1969 came from families with an annual income of less than $7,500. Sixty-seven percent of our students came from families with an annual income of less than $10,000.

Senator PELL. I think those are wonderful figures. Where do you rank in the United States?

Dr. MITAU. I do not know. Except, Mr. Chairman, let me emphasize that although we may rank comparatively well, our students find it very difficult to continue their education in the face of rising costs for textbooks and tuition and housing.

The feature that I would like to emphasize for the moment is the second major need in our State for Federal assistance, and that is money for innovation improvements in teaching and learning. For all too long education has been somewhat provincial and has tended to ignore the needs of the larger community; also we have often been attacked for not being more innovative and more relevant. Frankly, the financial resources required for such a posture were simply not

available. In State appropriations funds for education and money for innovation for new programs is often given a very low priority. Budgets are based on that which exists rather than upon that which is new.

This leads me to a request to emphasize the need for institutional grants. All too frequently grants grew out of proposals that required an inordinate amount of staff time devoted to their preparation of proposals for a variety of often unrelated projects.

Proposal writers sometimes are unduly influenced by the projects which are popular at a given moment, sometimes actually to the detriment of institutions and even departmental goals and objectives. All too often programs have been oriented to research institutions, and funds have been given for important, but narrow faculty research specialties that neither benefited the teaching nor learning process, and neither were they particularly suitable nor effective to bring about needed educational change.

Indeed the effect has been to reinforce at times the traditional research-oriented academic values of the university at the expense of student oriented and student centered teaching innovations. Moreover, the project approach to Federal funding actually militates against comprehensive institutional planning.

A college is not really free to adapt and change as an institution, because resources are obtained in a fragmented manner without regard to a coordinated plan. Thus, for the purpose of stimulating change and innovation, Mr. Chairman, grants might be more appropriately made to an institution or to a system, not in terms of highly specialized projects, but in response to ideas for a more general and far-reaching dramatic innovation.

In this connection perhaps let me indicate that very often we also find that Federal programs of financial aids to students have a tendency to be excessively rigid. We would like to emphasize the need to provide maximum flexibility to financial aid officers which would enable them to combine various program ingredients—economic opportunity grants, loans, and work study programs—in a way that would best meet the needs of particular students.

A peculiar, and we think very significant innovation in our State colleges has been what we call our Minnesota State College common market approach. In a State which has to be very careful in allocating its fiscal resources under increasingly competitive demands, we have developed a program that will stimulate the sharing of scarce resources. The common market program that we are supporting has three major components. One is a student exchange program where students can avail themselves of the educational opportunities of the entire six-college system.

Second, a program that will heighten the opportunity for student internship opportunities in industry, hospitals, law offices, legislatures, social service agencies, and other private and Public settings of an educational nature.

Third, within our common market program we constantly are seeking new ways of providing opportunities in the metropolitan area for our out-State college students to tap urban and core-city teaching opportunities which colleges in rural Minnesota could not otherwise make available to them.

These types of innovative and stimulating programs, Mr. Chairman, require the kind of funding that is simply not presently available from regular State sources.

To conclude, and time is short, I should reemphasize that higher education at this moment faces a critical phase in its development and history. Much Federal assistance is required if we are to move from the educational needs of an earlier age to meet the challenge of the present and of the future. Money alone will not accomplish the objectives that we must set. Vision, creativity, and imaginative leadership are necessary prerequisites.

The bills before the Senate Committee on Labor and Public Welfare, however, could contribute greatly to assist students to attend college and to make possible new and exciting patterns of education.

This, Mr. Chairman, is absolutely essential as our colleges find themselves presently in a most serious financial squeeze.

Thank you, sir.

(The prepared statement of Dr. Mitau follows:)

1496

Statement by

G. Theodore Mitau
Chancellor
Minnesota State College System

for

The Senate Committee on Labor and Public Welfare

April 23, 1971

1509

As Chancellor of the Minnesota State College System, I welcome the opportunity to share some comments about our system, a few of its programs, and some of its needs.

The Minnesota State College System is composed of six regional colleges ranging in size from 3,100 to 12,488 and located at Bemidji, Mankato, Moorhead, St. Cloud, Winona, and Marshall; total on-campus enrollment in the fall, 1970, was 39,405. The first five colleges (Winona, 1860; Mankato, 1868; St. Cloud, 1869; Moorhead, 1888; and Bemidji, 1919) were created as two-year Normal Schools to prepare elementary school teachers. By 1921 the institutions had become state teachers colleges, authorized to grant the baccalaureate degree in Education, and in 1953 received legislative authorization to offer a fifth year of teacher education leading to a Master of Science degree. The student demand in Minnesota for programs in addition to teacher preparation led, in 1957, to the state colleges becoming multi-purpose institutions. Since that time strong liberal arts programs and additional professional programs – including graduate studies leading to the M.A., M.S., and, in one college, the Specialist degrees – have been developed. In 1967, the newest of the colleges, Southwest State College at Marshall, accepted its first class.

Each college operates, with considerable autonomy, under the supervision of a nine-member Board. The Chancellor serves as the chief executive officer of the System and has the responsibility of leadership and coordination in such areas as curriculum development, campus planning and development, and budget allocations and management systems.

A unique characteristic of the Minnesota State College System is the Common Market Program that seeks to offer students the full resources of all the colleges and to facilitate various educational experiences which can be handled more effectively through cooperative arrangements.

Coordinated in the Office of the Chancellor, the Common Market Program is currently divided into four areas. A Student Exchange Program enables a student to move easily from his home campus to one that might offer a program otherwise unavailable to him or unjustifiably expensive to duplicate at his college. The Internship Program is designed to supplement the classroom by permitting the students to be involved in a work experience related to their academic interests and for which they earn credit. The Urban Clinical Experiences Program supplements the teacher education experience by permitting fifty students per quarter to spend a term in a metropolitan school, thus

affording students from rural areas an opportunity to receive training in an urban setting. The Community Resources for Higher Education Program, developed in cooperation with the St. Paul Council of Arts and Sciences, makes the personnel and resources of theatre companies, art museums, and musical ensembles available to state college students through performances, displays, and short-term workshops. A faculty member, an administrator, and a student from each of the six colleges and two members of the Chancellor's staff comprise an Advisory Council with responsibility for making policy recommendations on the various programs and for maintaining a communications network among the various program directors on each campus, faculty and student senates, the college administrations, the Chancellor's Office, and the Board.

This model for cooperative programs among the colleges and between the colleges and organizations and agencies within government, business, the arts, and the social services is, we feel, the way of the future in higher education. The time is quickly passing – if not already passed – when single institutions can provide, effectively and economically, the variety of learning experiences necessary for the kind of education required by our society.

My remarks will be limited to the two areas which seem most in need of federal assistance – student financial assistance and resources to stimulate and to implement significant innovations in teaching and learning.

Student Financial Assistance

There is a pressing need for financial assistance for students. Within the Minnesota State College System, 44% of the freshmen in the fall of 1969 came from families with an annual income of less than $7,500; 67% were from families with an annual income of less than $10,000. Rising costs, coupled with the difficulty students have in finding jobs, have combined to create a situation where families formerly considered financially comfortable are now having a difficult time providing educational funds for their children. While there must be more aid provided for minorities and the economically disadvantaged, assistance must also be increased for those considered middle-class.

Loan programs are good, but in these times of inflation questions might be raised about requiring students – particularly those from lower economic backgrounds – to borrow large amounts of money with which they are burdened for years after graduation. Grant programs must be available to students in sufficient amounts so they can attend college with a small loan plus that which can be earned during the summer and from part-time jobs during the academic year.

In making funds available, two major revisions in existing programs would be helpful. First, the work-study program, while sound, has limitations that make it less effective than it might be. Income level requirements are so low that many students in need of assistance in these times of inflation cannot qualify. Furthermore, restrictions placed on the type of jobs for which a work-study student is eligible limits the opportunities available and creates a shortage of positions.

Secondly, a forgiveness clause, similar to that for NSDL recipients who go into teaching, might be considered for other occupations. The result would perhaps be to encourage students to enter those areas where there is currently a shortage.

Funds continue to be needed for the purpose of identifying and then preparing talented but disadvantaged students for meaningful education. Furthermore, funds must be available to provide on-going programs. A great injustice is done when students are granted enough assistance to enter college but are then left alone to adjust to a new and alien culture.

Forward funding would immeasureably assist the equitable distribution of aid. For the last few years the financial aid officers in the colleges have not had any idea how much money would be available to them until after the school year had started. If this information could be known six months earlier, colleges would be able to inform students at the time of application whether or not money would be available. Undoubtedly students with great financial need do not even apply when financial aid officers cannot give them any indication about the likely availability of funds.

Resources for Innovations in Teaching and Learning

The second major need of perhaps most educational institutions, and certainly those of the Minnesota State College System, is for money for innovative improvements in teaching and learning. These terms are used in the broadest sense; I am speaking not simply about new ways of teaching traditional material but of a new kind of learning process. For too long all of education has been overly provincial and has tended to ignore both the needs of the larger community as well as its resources. There are unlimited opportunities for partnerships between institutions of higher education and other agencies of society such as business, industry, government, and the arts which could result in more meaningful education and in new services to society.

On the other hand, while education has frequently been attacked for not being more innovative and relevant, the financial resources required are not available. In the

appropriation of funds for education, money for innovation and for new programs has the lowest priority. Budgets are based on that which exists rather than upon what is new. This is particularly true in times of fiscal austerity; state legislatures fund the known and those programs viewed as the "essentials" while cutting requests for the innovative, the different, and the untried.

It is in this area that federal government, through financial assistance and agencies such as the proposed National Foundation for Higher Education, could act to stimulate change and to encourage innovation. It is virtually impossible for a college to make major innovative changes without funds. Often the amount of money required is not substantial, but is beyond that which has been appropriated by the state for operating expenditures. The federal government, through grants for certain kinds of programs, can expand the resources necessary for change.

Care must be taken, however, that federal money is appropriated in a manner that accomplishes this desired end. In the past, federal programs have been created with the best of intentions, but effectiveness has occasionally been lessened because of particular features or because of the manner in which money was allocated. For purposes of illustration, I will comment upon two areas of concern.

Money has most often been appropriated to a particular project in response to a specific application. The problems inherent in this approach are multiple. The new academic activity known as "grantsmanship" has resulted in a variety of difficulties: proposals of questionable value have appeared in voluminous number as a result of the prestige value of obtaining a grant; inordinate amounts of staff time are devoted to preparing proposals for a variety of unrelated projects; proposal writers are sometimes unduly influenced by projects popular at the time, often to the detriment of institutional and even departmental goals and objectives. All too often programs have been oriented to research institutions and funds have been given for important but narrow faculty research specialities and have neither benefited the teaching-learning process nor stimulated change. Indeed, the effect has been to re-enforce the traditional, research-oriented academic values of the university at the expense of student-centered teaching. Moreover, the project approach to federal funding militates against comprehensive institutional planning; a college is not really free to adapt and change as an institution because resources are obtained in a fragmented manner without regard to a coordinated plan. The problem is magnified on a system basis such as in Minnesota. In an effort to avoid duplication and to encourage

cooperative programs a system plan might envision the development of a particular program on only two campuses, but a project is funded on a third. Thus, for the purpose of stimulating change and innovation, grants might more appropriately be made to an institution or to a system, not for a highly specialized project but in response to ideas for more general, far-reaching programmatic innovations. An institution should then be periodically evaluated to determine if resources are being used effectively and in a manner designed to accomplish the stated objectives.

A related concern is that some grants are given only to certain types of institutions without enough consideration to the fact that programs for which the appropriation is intended are not limited to that particular type of school or college. For example, in Minnesota vocational programs are not exclusively found in the area vocational-technical schools. In some geographic areas a state college serves the role of a junior college or a vocational school. Even in some regions where there are vocational schools a state college, through agreement between the two institutions, develops a vocational-technical program. Therefore, I would urge that grants for vocational education be given not by type of institution but according to specific programmatic needs. Thus, funds might be made available for a program located in a vocational-technical school in one area of the state, a junior college in another area, and a state college in a third region. In this manner students in vocational-technical programs are not penalized for attending a particular kind of institution. State plans or agencies – for example, the Minnesota Higher Education Coordinating Commission – can assure that federal funds not be granted for identical vocational programs in the same immediate area, thus avoiding the subsidization of unnecessary duplication.

Assuming that grants for the improvement of teaching and learning could be made to institutions or systems rather than for specific projects, I offer, for purpose of illustration, some examples of programs that could benefit students, institutions of higher education, and, in many cases, the region in which the college is located.

In the fall, 1970, the institutions of higher education in Minnesota and Wisconsin were invited, through the Minnesota State College Common Market Program, to participate in an interstate ecology conference concerning needs and problems related to areas along the boundary waters. Out of this conference there emerged a steering committee charged with the responsibility for identifying needs and proposing studies that could be used

by public agencies in making policy decisions. Funding, however, will be needed to undertake these studies.

This is but one example of the kind of program that has broad and significant implications for education and society. Each of the Minnesota state colleges serves a particular region of the state. While needs and problems vary, all regions face in common the need to respond to the challenges of technological and social change. There exists a great opportunity for cooperative efforts involving institutions of higher education and various other segments of society. The academic resources of the college, including faculty expertise, can be focused upon problems of real relevance for the community. The community benefits as a result of having objective studies upon which to make decisions and practical solutions to critical problems.

A major handicap for colleges in attempting to apply its resources to problems of the community is that of faculty time. There is a recognized need for faculty members to relate their academic disciplines to the problems of society, but there exists, also, the very real restraints caused by limited time and staff. Ideally, faculty members should take leaves from teaching to work in areas complementary to their specialities: a chemist might work on a pollution problem in industry, a political scientist might serve on the staff of a senator or representative, or a management professor might spend a term in a business. In these cases both the professor and the organization in which he takes an internship profits.

The Minnesota State College System is formulating a pilot program called Community Fellowships for Faculty. Developed cooperatively under the Common Market, this program would place faculty members from the six colleges in field experiences related to their teaching areas. The purpose is two-fold: to enrich the faculty member's experience and, hence, make him a more effective teacher, and to make the faculty member's theoretical knowledge available to the practitioners in the field. Because no funds are available, participation is limited to the summer and to those who can afford to be involved in this kind of experience without financial remuneration. Thus, there is a need for funds to use as grants to faculty members so this kind of program can be extended.

Equally important is the involvement of students in off-campus internship programs. Educators are coming to realize that in this society at this time, learning cannot realistically be confined to the classroom and to the campus. The recent Carnegie Commission report, Less Time, More Options, recommends that more service and employment opportunities

be created for "stop-out" periods between high school and college and during the college years so that students may be involved in short-term jobs and apprentice programs. Under the Minnesota State College Common Market, students are placed with various governmental, cultural, business, and social service agencies. Currently various students are spending their spring quarter working in the offices of Senators Mondale and Humphrey, the Defense Contract Administration, the Soil Conservation Service, the St. Paul Arts and Science Center, the Minnesota Historical Society, and mental hospitals, to mention the experiences of only a few. The student's work is coordinated with his academic program so that he receives credit but, more important, acquires insights, sees new relationships, and brings the theoretical and the practical together in a way impossible to achieve on a campus. Presently the student must bear all expenses of relocating and of living in an area that is frequently more expensive than his college community. The absence of a subsidy to defray expenses and to provide a stipend definitely limits this opportunity to those students who come from families with considerable financial resources. At the same time, the office or agency that accepts an intern is required to devote staff time to the supervision of the student, but is not compensated. Many agencies and offices contribute this time gladly, but there is a limit to the number of interns that can be placed with volunteer supervisors. Thus, without funds, a program that contributes immeasureably to the learning process – and one that could not be duplicated at any cost on a campus – is severely restricted. With funds colleges can enter into cooperative arrangements with other institutions of society to provide new and better learning experiences.

Just as it is necessary to bring the resources of education and those of the community together for the mutual benefit of each, it is also imperative that educators improve their own profession and adapt it to the new needs of society. Increasing urbanization has created a demand for a new type of teacher, one who understands the culture of the residents of the inner-city. In an effort to provide better training, the Minnesota State College Common Market Urban Clinical Experiences Program operates in the Minneapolis-St. Paul area for the benefit of students from the oustate colleges. In this program students acquire experience working and studying in various kinds of urban schools. Again, the scope of the program is limited by the amount of funds which each college can contribute to the program.

Related also to teacher education is the need for new programs to train

para-professionals for positions as teacher aids in elementary and secondary schools and for various positions in child day care centers.

Of critical importance is the need to provide funds for the re-training of teachers who find themselves in fields where there is a surplus. The most desirable solution would be to use this period in which teachers are available to redress large student-faculty ratios that have come to be considered "normal." Actually, the term "surplus" is a misnomer. In the absence of funds for this purpose, however, teachers need the opportunity to acquire the additional training necessary to enter some of the areas of education where there is still a serious shortage. These are educated people who need only a little additional specialized training. To do nothing for them is to experience a great waste of talent.

The opportunity for the creation of new career-ladder programs through cooperative efforts between area vocational-technical schools and multipurpose state colleges needs to be developed. Increasing numbers of students are attending the vocational-technical schools, yet many will not desire to terminate their education after two years of technical training. To advance into supervisory and managerial positions, additional education – special and general – will be required. Institutional grants could be used, in part, to develop and to support these cooperative programs.

Another major area into which educational institutions must also invest considerable resources is that of continuing education. Not only are more adults seeking education for self-improvement, but many whose current skills are no longer in demand require re-training in preparation for a career change. To achieve meaningful continuing education will require the development of experiences and curricula for new careers – vocations for which there is no established course of study. This development must occur while present programs are being maintained by existing budgets which leave no monies for such innovation and research.

In the area of graduate education there is a need for the development of new patterns and new programs that respond, at the advanced level, to the realities of modern society. Rather than to traditional research-oriented programs, which have produced an oversupply of graduates, grants should be made available for the development of advanced studies in public service areas. In making money available for this purpose it should not be assumed that the current producers of Ph.D.'s will necessarily be best suited to develop new programs. By tradition and character many of these institutions are oriented to theoretical research rather than to practical application. Care will need to be exercised

to make certain that state master plans do not perpetuate current practice by simply assuming that new patterns of advanced study should be developed by current Ph.D. granting universities. In Minnesota, the six state colleges have not only a long heritage of career-oriented education but, employing the Common Market concept, abundant human resources for offering advanced study for the practitioner. Through the cooperative use of six state college faculties, graduate study in the areas of public service could be economically and effectively developed. However, funds not now available through state appropriations will be required.

In view of the over supply in many areas, the development of new careers and the re-training of adults will be essential. However, students cannot be advised realistically until more sophisticated means of manpower projections are available. There is at this time no really good manpower study; current projections still indicate demand in areas known to be crowded. A real service to students and to colleges would be the development by some national agency, such as the proposed National Institute of Education, of a reliable system of manpower projections.

Higher education is at a critical place in its history; much is required if we are to move from the educational needs of an earlier age to meet the challenge of the present and the future. Money alone will not accomplish the objectives we must set; vision, creativity, and imaginative leadership are necessary prerequisites. The bills before the Senate Committee on Labor and Public Welfare, however, could contribute greatly in assisting students to attend college and in making new, innovative patterns of education possible.

Dr. HAWK. Mr. Chairman, with your permission, we will turn to Dr. Edgar Carlson, executive director, Minnesota Private College Council.

Dr. CARLSON. Mr. Chairman and Senator Mondale, the Private College Council represents sixteen 4-year liberal arts colleges in Minnesota, and in a sense I think I may speak also for a broader private sector.

Four of the 16 colleges received Ford Foundation incentive grants; I think a proportion far above the average.

I have been a college president since 1944. During that time I have had occasion to witness the effect of Federal programs on college education in this country ever since those days—now long gone—when the original, World War II, G.I. bill became a law. I would like to pay tribute to the people who initiated and carried through those programs, the G.I. bills, the housing program, the war surplus, the various loan and grant programs for students, for facilities, the Humanities and Arts Foundation, the National Science Foundation.

Mr. Chairman, you would not have had any occasion to be aware of it, but you and I were together in the White House for the signing of your bill on the National Foundation of the Humanities and the Arts. As a member of the Commission on the Humanities, I had the privilege of participating in the development of that legislation. It must be of great satisfaction to you to see it has developed in the way that it has, and now making a tremendously important contribution to this country.

Senator PELL. Thank you very much. It does give me huge satisfaction, but I cannot resist the opportunity to say how much I regret the White House's inaction—is it a year now—almost a year since Barnaby Keeney was not reappointed as chairman of the National Council of Humanities and the White House has not filled the job. I would hope they would appoint a man to this important post. If anybody from the administration is following these hearings, I hope they would bring our unhappiness in this regard back to the White House.

Dr. CARLSON. Thank you. We share your concern.

One of the reasons the Federal program has been so important to private colleges is that it has tended to concentrate on consumer subsidies, in the form of student assistance such as that provided by the G.I. bill and its successors. It has also provided grants and loans for facilities which have been extremely important. It would be very easy to point out the coincidence between specific Federal programs and the development of education generally, but private higher education particularly.

I must say that in spite of great growth in the sixties, the private colleges are extremely concerned about their present situation and future development.

This grows primarily out of two considerations. One is that the disparity between costs at public and private institutions has become so great as to make it virtually impossible—if not impossible, imprudent—for the student to choose the private institution. I had occasion recently to compare some statistics provided by the American Council on Education for 20 large public universities, over a period of years, with comparable costs in the colleges which I represent.

In 1947–48 it cost $166 a year more to attend one of our institutions than a public institution.

In 1959–60 it cost $283.

In 1967–68 it cost $779 more.

And, in 1969–70 it cost $1,233 more.

So that now it would appear a person must be ready to spend $5,000 more for a college education if he wishes to exercise the option of going to a private college.

This is not because these colleges have become inordinately expensive, but because education has become inordinately expensive. The student must carry, in our institutions, about two-thirds of the cost.

Senator PELL. Not to interrupt, but I am also a product of a private college, and agree with you on the value and merit and need in that system. Yet, is it not the responsibility of the public taxpayer's dollar to provide a floor of education? In secondary schools, the floor is provided through the public high school. But there is no pressure on the Federal Government to support the great private high schools, such as Exeter and Andover, Choate and Groton. Would the same not apply to colleges, the function of the taxpayer's dollar is to support public institutions, to provide the floor?

Dr. CARLSON. One has to remember that when he talks about the taxpayer, he is talking about the same person, whether he is talking at the Federal or State level. Consequently, if you speak of the most economical way of using the Federal tax dollars, and it implies the most expensive way of using State tax dollars, then the conclusion is not necessarily valid, I think. That is the Federal Government and the State government must bear in mind the total cost to the taxpayer. If, by making it possible merely to attend at a minimum cost a public institution, you thereby determine in advance that that is where the student is going to go, and then the State is going to have to carry the cost of $1,000 or $1,500 of whatever the costs may be for that student, plus providing him facilities, then it would seem to be not an economical use of the taxpayer's dollar. It might indeed be more economical to give him $500 more to enable him to attend a private institution where those additional taxpayer dollars would not have to be spent.

The second real concern is our financial viability. Fourteen of the 16 colleges I represent had deficits last year. However, if you take the student aid which they themselves contributed out of their own budgets, it was between two and three times as much as their deficits.

Consequently, the increase in deficits is considerably less than the increase in financial aid. I think the two bills, S. 659 and S. 1161 are both commendable in that they do provide some flexibility in the amount of aid available related to costs, and this we think is extremely desirable.

There are three things I think we must ask that a Federal program do or that some program do if the private college is to continue as a viable part of the total. The public must take over the financial problem of the students. There is no reason why the private dispenser of public services should be saddled with the responsibility of solving the financial problem of its clients any more than any other dispenser of public services. We have doubled our investment in financial aid every 4 years. It is now $4.5 million. Will it be $9 million 4 years from now? Will it be $18 million 8 years from now?

If so, we cannot continue. There must be public provision for the financial problems of the students.

The second is: There must be some way of bringing this widening gap between public and private costs together again—not necessarily by substantial increases in the public sector, but there must be another source of income which will make it unnecessary for the institution to rely to the same degree on student income. Because when a public service is low cost, it can be easily carried by voluntary gifts or by the dedication of the people involved in it. But when it becomes high cost, it cannot be carried that way any more than medical services could be carried by the willingness of dispensers to write off the bills of the indigent or by charity beds in hospitals. There must be some standard and more general provision for it.

The third thing that we are concerned about is the capacity to expand, that is to meet our needs with regard to facilities. We express great satisfaction, Mr. Chairman, that your bill both provides for facilities, grants and loans, and for such very important services as libraries and other activities of the institution.

This has been very helpful to us, and we are happy to endorse it. Thank you.

(The prepared statement of Dr. Carlson follows:)

Testimony before The Education Subcommittee of Labor and Public Welfare
U.S. Senate April 23, 1971

Mr. Chairman and Members of the Sub-committee. I am Edgar M. Carlson, Executive Director of the Minnesota Private College Council. This organization specifically represents the sixteen private four-year fully-accredited liberal arts colleges in the State of Minnesota and more generally represents the needs and interests of the private sector. The Council seeks to foster and implement cooperation among member institutions for the improvement of higher education services and opportunities, to provide a unified voice for independent higher education in the state, and to cooperate with institutions of higher education, governmental agencies and other interested groups in developing policies and programs for the advancement of higher education.

Having been president of one of the member institutions from 1964-1968, it has been my privilege to be closely identified with the problems and the achievements of higher education-particularly as reflected in the experience of the private sector but also in the broader dimensions - since those days when the federal presence on our campuses took the form of V-12 and other military units during World War II. Even though those days now seem far removed, I would like to pay tribute to the national leadership which initiated and has since carried through such far-reaching programs of assistance as the GI Bill, the war-surplus programs, the housing loans, the massive program of student loans in various forms, the academic facilities grants and loans, grants for needy students and the many other programs which have done so much to open the doors of higher education to vastly larger numbers of students and to train the persons and to erect the plants to care for them. Higher education would be much less than it is today if the federal government had not participated at the scale and in the manner which it has — most especially private higher education would be much less than it is today without this federal involvement. Unlike the state appropriations, federal grants have generally been equally available to public and private institutions.

As I review the historical development of higher education in Minnesota I am impressed by the fact that the periods of greatest growth in the private sector have coincided with specific federal programs of assistance. In the period between 1931 and 1939 the proportion of Minnesota students in the private sector increased from

23.2% of the total enrollment to 25.4%. These were the years of the NYA program of financial assistance to students. In the years immediately after WW II the enrollment pattern shifted further toward the private sector. Between 1939 and 1947 the shift nationally was from 47% private to 51% private and private enrollment predominated until 1952; in Minnesota it was from 25.4% private to 30.3%, and it continued to increase as a proportion of the total until 1954 when it reached 34.1%. There is no question that the major factor in opening up the option of attending private institutions was the original GI Bill. The shift in the other direction coincides almost exactly with the change in the GI Bill in 1952 to a blanket grant for all purposes instead of providing a separate amount for tuition and fees plus a subsistance allowance. The effect of this change was dramatized for me recently by comparing the veteran enrollment at the College of St. Thomas in St. Paul now and in 1948. Then 1800 out of about 2000 students were veterans, now 80 out of 2400 students are veterans. There is probably no other member college at present with as many veterans as St. Thomas.

In many respects the 60's were a time of great growth in Minnesota's private colleges, even though the public sector grew at a much faster rate. The Higher Education Coordinating Commission conducted a comprehensive study of these institutions in 1970. It found that between 1960 and 1970 enrollment grew by 60%, representing a total of more than 11,000 additional students, equal to the combined enrollment of three existing state colleges, two and a half University branches, or the total enrollment in metropolitan area junior colleges at the end of the decade. Their total assets increased by more than $200 million, their endowments by $86 million. They expended $120 million for plant during the decade and paid approximately 60% of it in cash. Of the nearly $50 million borrowed, $30 million came from the federal government. It is significant that at the end of the decade these colleges were raising money from private sources for capital purposes at three times the rate (approximately $12 million a year) at which they were raising money at the beginning of the decade. They nearly doubled their library holdings from 1,200,000 to 2,137,954.

Since the Higher Education Facilities Act became operational in 1964 through 1970, 25 projects have been funded at Minnesota's four year private colleges for a total

of $10,502,867 and these colleges have received $661,440 in matching grants under Title VI A of the Higher Education Act of 1965. It is clear that the growth of these institutions in the sixties is in considerable part the consequence of favorable federal policy.

In view of this impressive record in the 60's what are we concerned about?

First, we are concerned that the disparity between public and private costs to the student has now become so great as to effectively remove the option of freely choosing a private college for the vast majority of students and making it a dubious if not imprudent choice even for those who could afford to do so. Tuition charges at Minnesota's private colleges are relatively modest (ranging from $1210 to $2289) but when the average total cost of attendance at these institutions is compared with the average total cost of attendance at twenty large public universities (ACE A Fact Book on Higher Education, 1970) the difference is $1223 a year or nearly $5000 for four years. In 1967-68 the difference was $799; in 1959-60 it was $263; in 1947-48 it was $166. Clearly the student does not now face the same kind of alternative with respect to choices which he did in any one of the earlier years.

Although private college enrollment increased by about 60% during the decade, it is significant that the rate of growth has now dropped to less than 1% a year. In 1968 it was 3%, in 1969 it was 2%, in 1970 it was .6%. Nine of twenty-two four year institutions declined in total enrollment in 1970 and ten declined in freshman enrollment. Since 1954 the colleges of the state have projected their enrollments in five year intervals. The private college projection for 1960 was exceeded by 1500, the projection for 1965 was barely reached, the 1970 projection was missed by about 1000. The colleges have indicated their intention of growing by another 11,000 students by 1980 but under existing state and federal programs it is doubtful that they can expect to do more than hold their own and may need to anticipate actual reductions in number as well as in the proportion of the total enrollment.

In attempting to maintain their enrollments and to provide access to their institutions on the part of persons who could not absorb the increasing differential in costs, the colleges have assumed heavier and heavier responsibility for financial aid to

students. Ten years ago the total of loans, grants and scholarships from all sources was $2,321,572; in 1964-65 it was $4,959,740; in 1969-70 it was $10,964,111. During that time direct appropriations from institutional budgets to financial aid increased from $1,188,822 in 1960-61 to $4,588,021. In the latter year the colleges were investing 10% of their Educational and General Budget in financial aid. The amount was one-fourth the cost of instruction and departmental research, twice as much as library expenditures, and more than plant operation and maintenance. Federal grants in 1969-70 supplemented the institutional efforts by nearly two million dollars and federal loans and work study programs have been a very great factor in enabling the colleges to put together a package of grants, work, and loans which would be realistic for the student. Approximately 50% of the students attending private colleges are receiving some form of financial assistance and for entering classes the ratio is higher than that. For minority students it is very much higher (between 85% and 95%).

The colleges are caught in a dilemma: they want their institutions to be available to all economic and social levels of our population but under existing funding policies they must ask the student to carry the additional cost of attending their kind of institution. If he cannot, someone must provide the means. If no one else does the institution must do so. This means still higher costs for those who can afford to pay and still higher aid grants for those who cannot. The financial aid contribution from college budgets has doubled every four years during the past decade. For these colleges it is now $4.5 million. Will it be $9 million four years from now and $18 million eight years from now? Already financial aid from institutional budgets equals nearly $200 per student enrolled. In other words, without the burden of financial aid, tuitions could now be nearly $200 less than they are.

Second, we are concerned about our financial resources. The figures on financial aid to students may be related to the deficit problems of private institutions. Again, I shall cite findings of the Minnesota private college study.

In 1960-61, five Minnesota colleges ran deficits totalling $101,687 but total revenues in all the private colleges exceeded expenditures by $1,219,163.

In 1964-65, seven Minnesota colleges ran deficits totalling $375,150 but total revenues in all the private colleges exceeded expenditures by $685,265.

In 1968-69, eight Minnesota colleges ran deficits totalling $583,865 but total revenues in all the private colleges exceeded expenditures by $444,610.

In 1969-70, fourteen of sixteen colleges ran deficits totalling $2,641,158 and total expenditures exceeded revenues by $2,608,993. (If one excludes one institution which was atypical both figures are reduced by $1 million)

An examination of these figures reveals clearly that the present crisis has been in the making for some time and can hardly be construed as a temporary miscalculation on the part of erring administrators. However, if one relates it to the financial aid burden which has fallen to the private colleges, not by their own choice but by force of circumstances which they could not control, the college performance appears quite creditable. Even if one takes the larger deficit figure for the last year it is hardly more than half of the financial aid provided out of institutional budgets during that year. Without that burden they would actually have shown a surplus of about $2 million.

Minnesota has now enacted a state scholarship and grant program with modest funding. It is hoped that it will increase to a point where it can become a significant factor in meeting the financial aid needs of Minnesota students. The federal government has been our major ally in meeting this need. We believe that it must continue, in partnership with state and private sources, to meet this growing need.

The private sector in higher education in Minnesota differs from that in many other states in that it has no large private university. To the extent that federal programs have been oriented toward the university and graduate level the private sector in Minnesota has not shared in federal support to the extent that has been the case in many states. However, its colleges could well claim to be better than average in the quality of their programs, facilities, staff, and graduates. Indeed, they include some of the very distinguished liberal arts colleges by any standard of measurement. Four of the sixteen member colleges received the highly coveted Ford Foundation incentive grants, a proportion far above that in the nation as a whole. None of them, at least

those who are members of the Council, are likely to close their doors this year or next year or even the year after that. But they know that the present odds against them will become insuperable at some point in the future, for some sooner than for others, unless ways are found to adapt public policies and programs to the new conditions under which they live and work.

Those new conditions are epitomized in the escalation of college costs, though this is by no means the only change. A public service such as education can be subsidized voluntarily when it is inexpensive -- a few dedicated teachers in simple facilities, and a group of people who believe in what they are doing enough to provide modest gifts. When medical and hospital services were inexpensive it was enough to have doctors willing to forget to bill their poor patients and to have "charity beds" in hospitals. Those days are long gone. A whole range of consumer subsidies (medicare, welfare payments, etc.) along with insurance coverages have enabled both public and private dispensers to exist side by side, and subsidies for buildings and equipment have been available from public sources on approximately equal terms. If public hospitals were charging one-fourth to one-third the cost of their services, while private hospitals charged the full cost less whatever they could raise in gifts, I think it is doubtful whether there would be any private hospitals anywhere.

There are at least three things that must be done if private colleges and universities are to continue as a viable part of this country's program of higher education.

1. The student's financial problem must be solved through public programs. This is as true for the student who wishes to attend a private college as for the student who wishes to attend a public institution. It is no more logical to expect the private college to shoulder the financial problems of its students than it is for the private hospital or any other dispenser of a public service. We are greatly heartened by the apparent agreement among the various proposals before this Committee on the high priority that must be given to financial aid for students. Our colleges have been helped by EOGs

and by work-study programs because a significant number of their students do come from low-income homes. They have, however, had to add very substantial grants from their own resources in order to enable them to attend. We take some pride in the fact that we have proportionately more minority students in these institutions than our share of the total enrollment. In part, it is our desire to make our facilities available to minority and other low-income students which has accelerated our own investment in student aid so rapidly. The provision in S659 for supplementary grants of up to one-half the total aid awarded up to $1000 in addition to the basic grant offers commendable flexibility for those students who qualify, as does the variable but diminishing proportion of costs carried under S1161. To some extent this is true in S1123 but it is regrettable that the student who wishes to attend an institution which does not already have a public subsidy, and where consequently the student must carry a larger share of the cost, must depend on loans only for this additional cost.

In this connection it would be well if both national and state law makers in their concern for the most economical use of the taxpayers money would bear in mind that they are talking about the same taxpayers. Thus, if in order to make federal tax payments go as far as possible they pursue policies which inevitably add to the state's tax burden they are acting with less wisdom and concern than one might reasonably expect of them. If we allow just enough financial aid at the federal level to enable one to attend an institution where three-fourths of the cost must be carried by the state we will certainly not be surprised if that is where he goes, thus assuring that the state will have to pay an additional amount equal to 70-75% of the cost of his education plus buildings and equipment. It does not improve the choice greatly if we tell him that if he will obligate the state in that amount he will get a grant without strings attached, but if he wishes to relieve the state of that obligation he will have to return the difference at a future date. Is it not a better stewardship of tax funds to invest a little more at the federal level if thereby one saves a good deal more at the state level?

2. The second thing that must be done to keep the private sector viable in the years ahead is to halt and indeed reduce the growing disparity in costs to the student

between public and private institutions. Even if student aid programs based on need should be adequate and adequately funded, escalating costs will at some point effectively discourage students who cannot establish need from choosing a private college. Theoretically, we could create a situation where a disproportionate number of affluent students were concentrated in the public sector because students with need could choose private colleges with little or no penalty whereas those without need could not. While there may be some upward movement in public costs, it would be unrealistic to expect the problem to be resolved in this way. Moreover, private college resources would not necessarily increase because public charges were raised. What is needed is another source of income which will make the private college less dependent on student income and hence reduce the pressure toward higher and higher tuition rates.

Two of the bills before this committee have specific provisions for payments to institutions in the form of "cost of instruction allowances" or "cost of education supplements." Since the lowest tuition charged this year among the colleges which are members of the Minnesota Private College Council is $1210, the provision in S659 for $1200 less any tuition charged would regrettably be of no help in its present form. At this point we must be pardoned if we have a distinct preference for the provisions S1161. We welcome also proposals that would reimburse the colleges to a degree for the public service which they perform, assuming in effect a contractual relation between these institutions and government which corresponds to relationships between many other agencies performing public services and the government. This might be either on the basis of enrollment or on the basis of graduates. While we believe that institutional stipends tied to needy students would have an important benefit in the added inducement it gives to seek out such students, we are also aware of the importance of establishing the principle of reimbursement for the public service which we perform independent of such special cases as are represented by a specific group of needy students.

3. The third thing which must be done if private colleges are to continue to make the contribution of which they are capable is to provide a portion of the means needed for facilities and equipment. Facilities grants and loans had an effect on the expansion of facilities during the sixties far beyond the amount which they represented.

It would be too much to claim that the just over $10 million in facilities grants produced the rest of the $71 million raised for capital expansion, but with the $30 million in federal loans it certainly had a very great impact on that growth.

The private college study found that 18.5% of the buildings on our campuses were rated "poor" by the presidents and will need to be replaced in the next few years. It is both an indication of tightening budgets and a warning of future deterioration to learn that estimated deferred maintenance would cost $26 million. Even to provide adequately for their current enrollment the institutions estimated needs of 2 million square feet of new space and to grow as intended more than 3 million.

We therefore commend Senator Pell for including both grants and loans for this purpose. We wish also to acknowledge the importance of the college library program and urge strongly that it be continued along the lines proposed in S659.

We find the proposal of Senator Javits in S1074 for allocations to the states for student aid on the basis of the state's effort to provide student assistance very attractive. It is quite a different matter these days to be operating a college in a state where students bring their own financial aid with them, sometimes in amounts of a half million dollars or more, by virtue of a strong and well-funded state program of financial assistance to students, than it is to be operating a comparable college in a state with little or no financial assistance provided where the college must raise a like amount for its students. It seems to be an entirely appropriate use of federal funds to encourage such state programs through matching arrangements in this field as it has done in many others. It would, moreover, help to equalize educational opportunities throughout the country. There would seem to be no good reason why the same principle could not be followed with regard to any form of general institutional grants whether these are tied to low-income students, total enrollment or number of graduates.

Our colleges concur in the purposes of the National Foundation for Higher Education and the National Institute for Higher Education. We are pleased to note the national concern for new directions and programs and wish to make ourselves available for these purposes in whatever ways are appropriate. We believe firmly in the continuing growth and the increasing importance of the educational enterprise because we believe

in the importance of learning for the present and the future. We must continue to explore and search out and teach in all places and in all ways, but most especially, in the future as in the past, through committed academic communities where men are given the time, the means, and the motives for serious intellectual inquiry and for highly competent training.

Although the above comments focus on the private sector, they are generally applicable to public institutions as well. Financial aid for students, aid to institutions, and the means for growth represent critical needs for both public and private institutions. The public interest is best served when ways of support are devised which enable both public and private institutions as common partners in a joint enterprise to serve students effectively and thus contribute to the well-being of all.

Minnesota Private College Council

Background Information

The Minnesota Private College Council is comprised of the sixteen fully-accredited private four-year liberal arts colleges in the state. The oldest among them was founded in 1854 and the youngest in 1912. Seven are located in the metropolitan area, of which six are in St. Paul. Two are in Winona, two in St. Cloud, two in Northfield, one in Moorhead, one in St. Peter, and one in Duluth. In addition to those institutions which are members of the Council there are sixteen other private institutions of higher education, of which four are theological seminaries, five are junior colleges, three are Bible colleges, two are four year colleges, one is a college of law and one is a college of art and design.

The enrollment in all private institutions in 1970-71 is 30,089; in all four year institutions 27,288, in junior colleges 1,205 and in professional schools 1,596. The smallest of the four-year colleges enrolls 736 students and the largest has an enrollment of 2,674.

The private colleges of Minnesota awarded 5310 degrees in 1970, of which 5036 were Bachelors degrees, 34 were Associate degrees and 240 were Masters degrees. Their physical plant has a book value of $229,752,035 and an estimated replacement value of $325 million; their endowment funds total $86,128,096; their library holdings are in excess of 2 million volumes.

The member colleges have received federal facilities grants of about $10 million and facilities loans of about $30 million. Their students are beneficiaries of approximately $2 million annually in federal grants and work-study stipends and the colleges receive another $1.5 million annually from federal agencies for other operating programs.

Only two of the colleges offer graduate degrees, and these are offered only in limited fields.

60-433 O - 71 - pt. 3 - 20

The Council has been in existence for more than forty years and is the organization through which the member colleges coordinate their activities. It seeks to foster and implement cooperation among member institutions for the improvement of higher education services and opportunities, to provide a unified voice for independent higher education in the state, and to cooperate with institutions of higher education, governmental agencies and other interested groups in developing policies and programs for the advancement of higher education. In 1968 the Council engaged a full-time Executive Director in the person of Dr. Edgar M. Carlson, President of Gustavus Adolphus College from 1944-1968. He serves as a member of the Board of the National Council of Independent Colleges and Universities.

Senator PELL. The State of Minnesota has taken on a very large commitment, it seems to me, in underwriting the total cost of community colleges.

Dr. HAWK. Mr. Chairman, with your permission, we shall call upon Dr. Phillip Helland, chancellor, State junior college board.

Dr. HELLAND. Mr. Chairman and Senator Mondale. Junior colleges, as you know, are generally thought of as local institutions. Minnesota, however, in 1963 moved away from the concept of local institutions and established a system of State-operated junior colleges.

The intent of the system is to operate colleges which are funded by the State, but are responsive to the needs of local communities. This is a difficult assignment.

Senator MONDALE. I drafted that bill when I was attorney general, and I think we got our first money from a tax on oleomargarine. Some progress does come from strange sources.

Dr. HELLAND. We are now operating 18 State junior colleges, six in the Minneapolis-St. Paul metropolitan area and 12 at out-State locations. Two more out-State locations have been authorized by our legislature, and we expect they will open in the fall of 1973.

The State of Minnesota has taken on a very large commitment, it seems to me, in underwriting the total cost of community colleges. I have been chancellor of the system since its inception, and have seen the problem grow from year to year. The number of students is growing rapidly. We now enroll about 17,000. We expect about 20,000 next year, and we expect about 27,000 by 1975.

The Minnesota junior college system enrolls more freshmen than any other system in the State. This is a change—it has happened very suddenly, and obviously is a concern to those of us who are involved with the administration of these institutions.

While the State underwrites the cost of the junior colleges, it does impose upon us the responsibility to charge tuition of the students who enroll in junior colleges. This is not true in all States, as you know. Our commitment to our legislature is that the State will provide about 70 percent of the cost of instruction, and the student will provide about 30 percent of the cost of instruction. We enroll at the present time about three-fourths of our students in programs preparing for baccalaureate degrees and about one-fourth of our students in occupational programs preparing for job entry.

Mr. Van Tries, who will speak next, will describe Minnesota's system of vocational technical education, which enrolls all of its students in occupational programs.

The reason I mention this is that when you combine the students in the junior colleges with the students in the vocational technical schools, you find the percentage of students in Minnesota's 2-year institutions who are enrolled in occupational programs is considerably higher than you would find, I think, in any other State in the Union.

In charging students the fees that we do, we run into certain problems. We have participated in Federal programs as they have been available to us. We do participate in the national defense student loan program. We participate in the guaranteed loan program. We have a small amount of privately donated scholarship money available. I would say, as Don Smith said, most of our students work, and many of them work full time.

I discussed with Senator Mondale on previous occasions, and I would like to comment again now, that while I think the State of Minnesota has done very well by the middle-class group that attends State junior colleges, and provides the opportunity at relatively low cost to them, we are extremely disappointed in the fact that we have not reached more of the disadvantaged population, particularly in our large cities.

I am pleased, Senator Mondale, that one of our bright young men is serving in your office at the present time as an intern.

I should point out that even though our tuition is relatively small, that our students pay about $350 for the academic year, if they are residents of Minnesota. They pay about twice that amount if they are not residents of Minnesota. This charge becomes a serious obstacle to disadvantaged students.

Senator PELL. What does it cost?

Dr. HELLAND. That figure is about 30 percent of the cost of instruction.

Since our system started in 1965, we have erected about $75 million worth of facilities. We have used all the Federal aid available to junior colleges. That represents about 13 percent of the money that has been spent on junior college facilities in Minnesota. That means about $10 million from Federal sources and about $65 million from State sources.

As you know, the percentage from Federal sources has been decreasing, and this puts an increasing burden on our State government. That obviously then is one of our concerns—that Federal money for facilities continues to be available and hopefully at an increased rate from what it has been in the last year or two.

We are concerned as I mentioned earlier about the problem of providing for our disadvantaged students. We are concerned that as our system grows, the underwriting of the institutional costs by the State of Minnesota will become more and more of a problem. We are in a legislative session now where even though we seem to be popular in the legislature, we are facing cuts in appropriations.

So we would favor a system of Federal help which would underwrite us with institutional grants, but beyond that give special concern to problems of the disadvantaged.

We are finding, as Dr. Mitau has pointed out for a State college system, that since out institutions are generally rather small, that we do not have people within our institutions who are able in the area of applying for and receiving Federal or State grants for categorical areas.

We are concerned, since we are one of the later entries in the field of higher education, that Federal funds as made available be tied to some kind of State planning. We are concerned that the dollars that come to Minnesota and are available not be left for argument entirely at the Minnesota level, but there be some decision in Minnesota plans as to what percentage should go to vocational schools, what percentage to junior colleges, and so on.

We are concerned about money for innovation and concerned particularly about money for community services. I have mentioned that our aim is to make our local junior colleges responsive to the needs of their communities.

We have disadvantaged population in Minneapolis and St. Paul, obviously. We also have other areas of the State where we have disadvantaged population. We have some very small colleges in the northern part of our State on the Iron Range which are endeavoring to be of service to communities and helping in community development.

It is very difficult for us to find funds for community service in a line item budget which talks about dollars following credits. We must find ways to support the kind of activity which can build up students in a disadvantaged area so they can take part in our regular programs.

We are concerned about funds that would continue to help us with the development of our libraries. One of the difficulties of a system such as ours is that we are committed to institutions at a large number of geographical locations. It would be much cheaper for the State of Minnesota if it could enroll the same number of students in one, two or three locations, with one exceptionally good library.

We are committed to 18 or 20 libraries. We have profited greatly from the library funds that have been available through the Federal Government. We hope that program can be continued.

I do not think I will repeat the things that others have said. But I would say that the concerns we have are primarily aid for the disadvantaged, continuation of facilities grants, money which is available without the necessity for applying for small grants, with a great deal of administrative effort and so on, money for continuation of the library program, and hopefully funds for innovation.

I am encouraged by the discussion of the National Center for Educational Research. We are a small system. We find it almost impossible to do research on our own. We would be helped greatly by a center that could do this, and with which we could have contact.

Thank you.

(The prepared statement of Dr. Helland follows:)

TESTIMONY BEFORE EDUCATION SUBCOMMITTEE

UNITED STATES SENATE

APRIL 23, 1971, 10:00 A.M.

BY PHILIP C. HELLAND, CHANCELLOR
MINNESOTA STATE JUNIOR COLLEGE SYSTEM

MISTER CHAIRMAN, MEMBERS OF THE COMMITTEE

My name is Philip C. Helland, and I serve as Chancellor of the Minnesota State Junior College System

Minnesota was one of the first states to eliminate the need for local support for its junior colleges and to make them state institutions. We now have a system of eighteen state junior colleges -- six in the Minneapolis-St. Paul metropolitan area and twelve at outstate locations. Two more outstate locations have been authorized and we are planning to open colleges at these locations in the fall of 1973. This year we have about seventeen thousand full-time-equivalent students enrolled with about half of them in the metropolitan area and half of them at outstate locations. Our colleges are operated by a five member State Junior College Board, appointed by the Governor. The mission which we have been assigned by the Minnesota Higher Education Coordinating Commission is as follows:

> "The state junior colleges should continue to provide comprehensive commuting opportunities and to offer two years of work applicable to the baccalaureate degree, technical programs leading to the associate degree, general studies programs leading to the associate degree, vocational programs leading to the vocational certificate, continuing education for adults, and community service programs. Efforts of the state junior colleges should be aimed at providing, within the commuting area of each college, approximately equal distribution between terminal occupational programs (including both those leading to an associate degree and those leading to a certificate) and programs which provide the first two years of study which may be applied to meeting requirements for a baccalaureate degree in a four-year institution.

"As commuter institutions, junior colleges should develop general admissions policies which give priority to high school graduates whose place of residence is within 35 miles of the junior college."

About one-fourth of our students are enrolled in occupational or career programs. Three-fourths are enrolled in programs which will apply toward baccalaureate degrees after transfer.

I have mentioned that the need for local funding has been removed in our system. The state now provides about seventy percent of our operating funds and we raise the remaining thirty percent through tuition charges to students. We do not charge tuition for vocational certificate programs, but we do charge for all associate degree programs, whether occupational or transfer. The charge to a Minnesota resident who is a full-time student for this academic year is $292.50. The charge to a student from outside of Minnesota is twice that amount. The student is also charged an "activity fee" of fifteen dollars per quarter, so the total charge to a Minnesota resident, exclusive of books and incidental expenses, is $337.50 for an academic year.

Our facilities are provided by a combination of state funds and federal funds. We have used all of the federal dollars available to Minnesota since the federal program began in 1965 -- about ten million dollars, and have received about sixty-five million dollars from the State of Minnesota during the same period. This means that federal funds have supplied about thirteen percent of the seventy-five million dollars we have spent on facilities, and state funds have supplied about eighty-seven percent. The number of federal dollars has been decreasing each year, and the number of state dollars has been increasing.

So much for background about our system. If you would like additional information, I will be happy to answer questions later. I would like to turn now to problems which I see ahead and suggest areas in which we need federal help.

Our State legislature has treated us very well. Our budget requests have been met in most instances. I feel that we are doing a good job of providing quality education at relatively low cost for the middle class in Minnesota. I am disappointed in our performance in reaching disadvantaged students and in providing an adequate program of community services.

Our tuition charge, though relatively low, is an obstacle to economically disadvantaged students. We have very little available in the way of student aids. We are using the National Defense Student Loan program, the Guaranteed Loan program, and the Work-Study Program, and we receive money from the state which can be used to employ students to help with clerical and custodial work on our campuses, but we have almost no funds available for direct grants to help disadvantaged students. I concur with the others who are appearing here today in the hope that a high priority in federal legislation will be given to the matter of grants to disadvantaged students.

The appropriation which we receive from the Minnesota legislature is based largely upon the number of college credits that will be generated by courses taught. We need help in the provision of non-credit community services and hope for federal seed money which could be used to stimulate our own legislature in this regard.

We hope that federal money for facilities and equipment, including libraries, will continue to be available. The stimulation of federal funds has helped us in securing state funds for these areas.

Since our institutions are small, we have a hard time finding staff to prepare proposals that will qualify under categorical grants. We would be best served by a combination of direct grants to institutions and additional grants for service to the disadvantaged.

Minnesota's system of state junior colleges is a relatively young system and we are trying to be innovative in our approach to instruction. I am encouraged by the proposals for a national foundation for educational research and hope that they will be supported.

In most states, junior or community colleges now have visibility in state government through a separate board or department and a state director. The state directors as a group have taken the position that desirable federal legislation from the point of view of junior colleges should provide for the establishment of an agency within the Office of Education at the bureau level so that junior colleges could have the same visibility at the federal level.

State directors have taken the position that desirable federal legislation should also require that a comprehensive state plan should be developed by one group representing all concerned agencies in the state. I support this position.

In summary, I would like to state that Minnesota's state junior colleges have already been helped a great deal by federal support and that we appreciate the stimulation federal funds have given to additional state support. We have a tremendous task before us as we endeavor to equalize educational opportunity in Minnesota. We look forward to working with the federal government as partners in this endeavor.

BACKGROUND INFORMATION ON
PUBLIC JUNIOR COLLEGES IN MINNESOTA

Number of institutions in 1970-71 - 18

Number of full-time-equivalent students in 1970-71 - 17,153

General mission of the institutions

"The state junior colleges should continue to provide comprehensive commuting opportunities and to offer two years of work applicable to the baccalaureate degree, technical programs leading to the associate degree, general studies programs leading to the associate degree, vocational programs leading to the vocational certificate, continuing education for adults, and community service programs. Efforts of the state junior colleges should be aimed at providing, within the commuting area of each college, approximately equal distribution between terminal occupational programs (including both those leading to an associate degree and those leading to a certificate) and programs which provide the first two years of study which may be applied to meeting requirements for a baccalaureate degree in a four-year institution. As commuter institutions, junior colleges should develop general admissions policies which give priority to high school graduates whose place of residence is within 35 miles of the junior college." *

History of the State Junior Colleges

The first public junior college in Minnesota was opened in 1914 at Cloquet. Two others, Rochester and Faribault, opened the following year and Rochester is still in operation. It is interesting to note that in 1915-16 Minnesota had three of the nineteen existing public junior colleges in the United States. A later table will list the opening dates of existing colleges. A number of them opened and closed in the past. They were: Cloquet, 1914-18; Faribault, 1915-18; Jackson, 1916-18; Pipestone, 1919-23; Duluth, 1927-50; Tracy, 1936-48; Crosby-Ironton, 1937-48; and Albert Lea, 1938-43.

The establishment of these institutions was originally encouraged by President Vincent of the University of Minnesota, who was instrumental in getting the University Senate to pass regulations in 1914 for accrediting these new colleges and to establish in 1915 a standing committee on "Relations of the University with Other Institutions of Learning" which performed such functions. Permissive legislation allowing the establishment of public junior colleges was not passed by the legislature until 1925, by which time ten junior colleges had already been opened (four of which had already closed).

The junior colleges were operated by the public school districts until 1964. Until 1957, the colleges were supported entirely from local resources and student tuition. The 1957 Legislature provided the first state aid in the amount of $200 per full-time equivalent student. The aid was increased to

*Excerpt from Minnesota Higher Education Coordinating Commission, Proposal for Progress, January, 1969.

$250 in 1959, $300 in 1961, and $350 in 1963. The 1963 Legislature also passed the law establishing the Minnesota Junior College Board and giving it authority to set up a system of State Junior Colleges with complete state support.

As mentioned above, the Minnesota Junior College Board was established in 1963. It is a five member board appointed by the governor for seven year terms of office with the advice and consent of the Senate. The school boards operating the eleven existing junior colleges were given the option under the new law to transfer operation of the colleges to the new State Board by mutual agreement. All junior colleges were so transferred in the summer of 1964. In the case of Eveleth and Virginia, it was understood that the two colleges would eventually be combined in a new facility. The law provided for a total of fifteen colleges, with three to be in the metropolitan area and consideration to be given to the needs of northwestern Minnesota.

The 1965 Legislature approved changes in the law to permit five junior colleges in the metropolitan area and the designation of International Falls as a new site. The first phase of a building program was also approved by the 1965 Legislature.

The 1967 Legislature approved a sixth metropolitan location, in Minneapolis, and allowed for a step-up in the building program.

The 1969 Legislature provided for continued expansion of facilities for existing colleges as well as planning money for two new campuses to be located at Cambridge and Fairmont.

The following summary indicates the activity which has taken place since establishment of the State Junior College System in 1964:

1964-65

* 4,581 Full-Time Equivalent Students Enrolled
* State System Established
* Eleven Colleges Taken Over From Local School Districts
  - Austin State Junior College - Austin
  - Brainerd State Junior College - Brainerd
  - Eveleth State Junior College - Eveleth
  - Fergus Falls State Junior College - Fergus Falls
  - Hibbing State Junior College - Hibbing
  - Itasca State Junior College - Coleraine
  - Rochester State Junior College - Rochester
  - Vermilion State Junior College - Ely
  - Virginia State Junior College - Virginia
  - Willmar State Junior College - Willmar
  - Worthington State Junior College - Worthington
* One New Campus Occupied
  - Brainerd State Junior College - Brainerd

1965-66

* 6,992 Full-Time Equivalent Students Enrolled
* Three New Colleges Opened
  - Anoka-Ramsey State Junior College - Circle Pines
  - Metropolitan State Junior College - Minneapolis
  - Northland State Junior College - Thief River Falls

1966-67

* 8,466 Full-Time Equivalent Students Enrolled
* One New College Opened
  - North Hennepin State Junior College - Osseo
* Three New Campuses Occupied
  - Austin State Junior College - Austin
  - Itasca State Junior College - Grand Rapids
  - Worthington State Junior College - Worthington
* Two Colleges Merged
  - Virginia State Junior College and Eveleth State Junior College became Mesabi State Junior College - Virginia

1967-68

* 10,529 Full-Time Equivalent Students Enrolled
* Two New Colleges Opened
  - Lakewood State Junior College - White Bear Lake
  - Rainy River State Junior College - International Falls
* Two New Campuses Occupied
  - Anoka-Ramsey State Junior College - Coon Rapids
  - Metropolitan State Junior College - Minneapolis

1968-69

* 13,169 Full-Time Equivalent Students Enrolled
* One New College Opened
  - Normandale State Junior College - Bloomington
* Five New Campuses Occupied
  - Fergus Falls State Junior College - Fergus Falls
  - Hibbing State Junior College - Hibbing
  - Mesabi State Junior College - Virginia
  - Normandale State Junior College - Bloomington
  - Rochester State Junior College - Rochester

1969-70

* 15,016 Full-Time Equivalent Students Enrolled
* Three New Campuses Occupied
  - North Hennepin State Junior College - Brooklyn Park
  - Northland State Junior College - Thief River Falls
  - Willmar State Junior College - Willmar

1970-71

* 17,153 Full-Time Equivalent Students Enrolled
* One New College Opened
  Inver Hills State Junior College - Inver Grove Heights
* Three New Campuses Occupied·
  Inver Hills State Junior College - Inver Grove Heights
  Rainy River State Junior College - International Falls
  Vermilion State Junior College - Ely
* System Consists of Eighteen Operating Colleges All On New Campuses

1971-72

* 19,490 Full-Time Equivalent Students Expected
* Programs and Campuses Being Planned for Cambridge and Fairmont

Curriculum

Minnesota junior colleges have had a long history of providing transfer education for those students seeking the baccalaureate degree. In recent years there has been increasing emphasis on the development of general and technical-vocational education programs.

Distribution of students in 1970-71 is approximately as follows:

Foundation Courses	2%
Vocational Certificate Programs	6%
Semi-Professional and A.D. Technical Programs	19%
General Studies and Transfer Programs	73%

*Eveleth and Virginia were combined in 1966 to form Mesabi State Junior College.

Senator PELL. Thank you very much. I think there is one more member of the panel to speak.

Dr. MITAU. With your permission might I add one very brief thought to this, and underscore the need for funds for regional services. The point that the distinguished chancellor of junior colleges has made is that these smaller institutions have to provide service to immediate surrounding, and it is of great significance to our colleges as well. The kinds of services that they are rendering towards problem-solving in matters of pollution control, in the area of improving ecology, small town government, and better community planning are the kinds of services that cannot readily be provided with traditional patterns of resource allocations through line item budgets. Our colleges find very much like junior colleges that the immediate surrounding communities are looking to them increasingly for practical problem-solving kinds of studies, and we would very much like to join them in that emphasis.

Dr. HAWK. Mr. Chairman, the last but not the least, of the components represented today is the area of vocational technical school, represented by Robert Van Tries, assistant commissioner for vocational-technical education.

Mr. VAN TRIES. Mr. Chairman and Senator Mondale, I think I should explain that I am substituting for the commissioner, because there was a very serious accident in his family and he was unable to be here.

The Minnesota area vocational schools take care of about 18,000 full-time, job preparatory students and in excess of 80,000 part-time, adult supplementary students.

The people who make use of these institutions have found that they offer the best choice of training for transition from a formal education situation to the world of work. They also offer front line resources for the retraining of the unemployed and effective support for those in business and labor seeking to continue their education.

Now, we are concerned about the overall educational legislation. We are moving to the point where we are providing educational services from the sand box to the pine box. We think this whole thing has to be coordinated. You cannot necessarily put all segments of it and develop these without relationship to other segments.

In my prepared testimony I pointed out some of our concerns. I would like to review them with you. One thing is the advisory councils. We have had experience with advisory councils through the Vocational Act of 1968, Public Law 90–576. And I am concerned that the Federal Government may be getting into the position of creating so many advisory councils that these advisory councils in and of themselves contribute to the confusion.

I think that any advisory councils that are created have to be coordinated with full understanding of what the others are contributing. They have to be organized with the intent of maximizing the productivity of the councils, and legislation to some of this effect has been introduced in the House by Representative Green and Representative Quie. I think the Congress should ensure the intent of this legislation while protecting the right of the State to deliver those services without laborious reporting procedures. I think this is another problem we have with our present Federal legislature. There is a lot of reporting procedures which we see no reason for.

I think that any education, as mentioned already, should be designed to provide services to the people, not services to institutions.

In my prepared testimony I made reference to planning. I think here Congress itself is open for some criticism. Any legislation requiring planning by the States should provide similar obligations to the Federal offices and to the Congress itself.

In the past, Congress has told the States to plan and then has ignored a similar obligation on its own part. Plans have been massive accumulations of data no one uses.

I think another very serious thing that needs some attention is overview—review of the functions, missions and goals of the U.S. Office of Education. Right now it lacks any definition. There have been so many reorganizations over the past 8 years that even the telephone numbers are uncertain from day to day, and lack of leadership and low moral of the office seems to be designed rather than accidental.

Congress has the responsibility to take a look at the effectiveness of the U.S. Office of Education, because no other organization has authority or the willingness to determine whether it is capable of carrying out the mandates of the people as expressed by the Congress.

I am also concerned about reliance placed on accreditation. A seeming hallmark of a good institution of higher education is its ability to achieve accreditation by regional accreditation agency. I do not want to depreciate the value of accreditation, but I think everyone should be aware of the fact that accreditation does not imply quality programs, and that there are other measurements of quality which may be better than accreditation alone.

The State plan as required by many Federal programs is a good idea. In the case of our plans, they are subject to public hearing, and I would suggest that with education, particularly higher education becoming more and more removed from the people, that public hearings of State plans and yearly plans for operations is reasonable, and one way to get public participation closer to the higher education programs.

From the standpoint of the area vocational schools itself, our biggest single problem is the problem of construction. Over the next few years, 5 years, we could efficiently and effectively spend over $22 million of funds for construction alone. Thirty-nine percent of the graduating seniors have indicated they would seek services from this type of institution, and when graduating seniors from Minnesota attempt to get these services from this type of institutions, they are not going to be served because we do not have the facilities in which to serve them.

(The prepared statement of Dr. Van Tries follows:)

PRESENTATION

TO

SELECT COMMITTEE ON EQUAL EDUCATIONAL OPPORTUNITY

BY

Robert P. Van Tries, Assistant Commissioner
Division of Vocational-Technical Education
Minnesota State Department of Education

April 23, 1971

60-433 O - 71 - pt. 3 - 21

MINNESOTA'S POST SECONDARY SYSTEM -
AREA VOCATIONAL-TECHNICAL SCHOOLS

Minnesota has a comprehensive post secondary system of education consisting of University of Minnesota campuses, state colleges, private colleges, junior colleges and 28 area vocational-technical schools, with 4 additional institutions designated and building.

My concern is that the impact of the 32 area vocational-technical schools, offering programs of two years or less, be considered in any legislation providing assistance to institutions and students. These institutions serve over 18,000 full-time, job preparatory students and in excess of 80,000 part-time, adult supplementary students. For the persons served, these institutions offer their choice of the best training for transition from formal education to careers in the world of work. They also offer a front line resource for the retraining of unemployed, and effective support for those in business and labor seeking continuing education.

These institutions are effectively articulated to provide alternative avenues of education for those students who are motivated by relevant learning experiences. The avenues are open to all individuals regardless of past educational success or economic or social status, thus offering an upward mobility to persons otherwise refused access to, or success in, institutions of higher education.

As a citizen of the state of Minnesota, as well as a representative of the Minnesota State Department of Education, I am concerned that federal legislation take into consideration the same kind of articulation between secondary and post secondary education which currently exists between secondary education, adult, and the operating post secondary area vocational-technical schools. An ultimate goal for priorities may be K - 16. At the present time, however, we believe a more realistic immediate goal is K - 14.

This committee may be primarily concerned with higher education but the orderly educational progression from birth to death without traumatic interludes experienced by dropouts, delays and artificial barriers must be considered in drafting higher education legislation.

Future legislation should not only be directed at the maintenance of an existing educational structure but should also have an impact on the delivery of services to those persons seeking such services.

Minnesota is an interesting study of what students think post secondary experiences should constitute. For over 30 years, the Bureau of Testing at the University of Minnesota has gathered data on the post secondary aspirations of high school students. Until two years ago, a great majority of students planned to attend institutions offering traditional kinds of degree-oriented education. Since 1969, the data collected shows that of those indicating an intention of continuing their learning experience, 36 percent desired to pursue educational opportunities reflecting a career-oriented experience such as that provided in the area vocational-technical schools. From conversations with my counterparts in other states, I am led to believe this development is not peculiar to Minnesota.

Any legislation providing assistance to higher education must be meaningful from the standpoint of student needs rather than the traditional structures of institutions.

Advisory Councils

The vocational acts, dating from 1917, have required advisory councils in varying degrees of sophistication. The 1968 Vocational Amendments (Public Law 90-576) requires planning and public hearings annually. As education, at all levels, becomes further removed from the people, this type of arrangement provides for input from interested and concerned users of the service. Thi has been a strength of that Act.

The formation of additional advisory councils should be clearly defined as to relationship with existing councils, which have responsibilities for all levels of occupational training, with the intent of maximizing the productivity of both groups, such as legislation introduced in the House by Representative Green and Representative Quie.

Congress should insure the intent of legislation while protecting the right of the state to deliver those services without laborious reporting procedures. Congress should not dictate to the states the delivery system to be used.....it should set a goal for providing services to people and leave the nature of attainment of the goal to the state.

Planning

Any legislation requiring planning by the states should provide similar obligation to the federal offices and the Congress itself. In the past, Congress has told the states to plan and then has ignored a similar obligation on its own part. Plans have been massive accumulations of data no one uses, expending resources that could be better used for other purposes. One redeeming feature of the plan required under Public Law 90-576 is that it requires a public hearing and thereby makes provision for participation of the public in the planning process. The fact that this participation has been disappointing does not diminish the advisability of the provision.

Functions, missions and goals of the United States Office of Education itself lack any definition. There have been so many reorganizations over the past eight years that even telephone numbers are uncertain from day to day. The lack of leadership and low morale of the office appear to be by design rather than accidental.

Congress has a responsibility to take a look at the effectiveness of the U. S. Office of Education because no other organization has the authority or willingness to determine whether it is capable of carrying out the mandates of the people as expressed by the Congress.

Accreditation

A seeming hallmark of a good institution of higher education is its ability to achieve accreditation by a regional accreditation agency. I am not sure that federal legislation should give credence to these agencies by building them into the framework of legislation. These agencies have historically perpetuated themselves and the accredited institutions. They become a club. If you belong to the club, everything is fine.....you have a status symbol. That is all you have.....you have very little assurance, if any, that the program is better than a nonaccredited program. Legislation under consideration should be cognizant of the fact that regional institutional accreditation does not guarantee quality, and other quality indicators should be permitted to substitute for such agencies.

The State Plan, as required by many federal programs, indicates efforts and priorities set by state legislatures composed of elected officials, state boards composed of individuals appointed by elected authorities and public hearings at which citizens have an opportunity to express themselves

To interpose regional or national accreditation requirements in federal legislation provides a tool by which the institutional responsibility to respond to people needs can be effectively abdicated.

Construction

If the post secondary delivery system is to serve these heavy demands in the occupational areas, a massive effort must be mounted, and mounted immediately, to provide the bricks and mortar to house such programs. The most critical problem in Minnesota today in area vocational-technical school post secondary education is construction.

Facilities must be provided if students are to be served. Conservatively speaking, Minnesota could efficiently and effectively expend 20 to 22 million dollars per year for the next five years on construction. A large share of these dollars will have to come from sources other than state and local resources. We must look to the federal government for this assistance; therefore, any legislation intended to assist students in their pursuit of post secondary educational opportunities must take this great need into consideration.

Robert P. Van Tries

Robert P. Van Tries, Assistant Commissioner
DIVISION OF VOCATIONAL-TECHNICAL EDUCATION

April 21, 1971

MISSION OF VOCATIONAL-TECHNICAL SCHOOLS

The mission of the Area Vocational-Technical Schools in Minnesota is to provide quality education and training as general orientation, specific preparation, retraining and upgrading. Education and training is provided for employment in occupations in all fields and levels other than the professions or those requiring a baccalaureate degree.

The area vocational-technical schools were established as a part of the Minnesota System of Public Education in 1945 to equalize educational opportunities for the people of the state.

The area vocational schools provide education in trades, industrial and technical occupations, distributive occupations, health occupations, office occupations, agriculture occupations, personal services occupations, and homemaking occupations.

It is the primary concern of Vocational Education that the youth and adults throughout the state of Minnesota will have ready access to vocational-technical education which is of high quality and which is suited to their needs, interests and abilities.

To facilitate the mission of Area Vocational-Technical Schools, state assisted vocational-technical education programs should conform to the following well-established standards and principles if they are to provide efficient and effective training:

> The State Board for Vocational Education shall be the administrative authority for all vocational-technical education in the state of Minnesota. The State Plan for Vocational-Technical Education shall be the instrument through which vocational-technical education programs are defined and structured.
>
> Vocational-technical education shall provide adequate and timely instruction in both preparatory and supplementary training which will reflect occupational trends, meet the changing needs of job requirements and encourage effective citizenship.
>
> The primary purpose of the curriculum shall be to prepare students for occupational entry or advancement, with the exception of those students enrolled in vocational classes in the secondary schools where the training is directed toward competence in useful skills and the knowledge of the world of work.
>
> The content of the curriculum shall be based on the skills and knowledge required in the occupations and will be developed and conducted in consultation with persons actively engaged in the occupations.
>
> The instructional staff shall be composed of persons who are occupationally and professionally competent.

The staff serving vocational-technical programs shall include competent personnel responsible for and capable of insuring a sound program of assistance to students in selection, enrollment, placement and follow-up.

The staff, through proper coordination with industry, shall accept the responsibility for the placement of students.

Instructional facilities and equipment shall be comparable to those acceptable in the occupation.

Senator PELL. Thank you very much indeed.

Before turning the questioning over to the senior Senator from Minnesota, I wanted to be sure I understood the panel correctly. Who is the spokesman for the group?

Dr. HAWK. I will be.

SUPPORT OF COMMITTEE BILL

Senator PELL. Which bill do you support as a group, the administration bill, S. 1123, or the committee bill, S. 659, if you had to chose between the two?

Dr. HAWK. If we have to choose between the two, we would clearly choose the committee bill.

Senator PELL. Thank you very much.

The Senator from Minnesota.

Senator MONDALE. If you could add S. 1161, you would not mind that, would you?

Mr. HAWK. Indeed, Senator Mondale, we would not. I might add in candor, the comprehensive bill introduced by Senator Pell amended to incorporate the very visionary provisions by your bill, Senator Mondale, would provide excellent legislation to this Congress.

Senator PELL. May I add that it is not my bill. It is a composite bill including Senator Mondale's and other Senators' ideas, the eventual choice will probably be somewhere along these lines.

Senator MONDALE. I think in the light of the shortage of time, I will limit myself to one area of questioning.

There seems to be a growing acceptance in this committee that there has to be some kind of new assistance to higher education institutions. The questions are, should we have it, would it be a new feature, and if so, what should be the definition of that kind of cost of educational allowance?

I gather everyone of the panel here speaks in support of that approach, is that correct?

Dr. MITAU. Mr. Chairman and Senator Mondale, what is needed most, aside from additional Federal funding for student aids, are Federal resources which could allow greater program flexibility at the college level—which would enable colleges to innovate more effectively. There has been a tremendous amount of rhetoric about the needed change in higher education. As all of you no doubt realize, it is very difficult to implement changes in higher education without the kind of Federal financing that will provide the college with funds to do its own planning. In order to move ahead toward accelerated academic programs, toward more individualized instruction, wider community service, and new career opportunities for graduates of the vocational schools we need additional resources and there has not been the kind of State funding for the changes that many of us talk about and that nearly everybody would like higher education to consider or adopt.

Senator MONDALE. Would it not be the case, Dr. Smith, that particularly in graduate schools, and I think it is true in higher education generally, that the tremendous—almost cruel—local pressures for revenues are placing tremendous pressures on education institutions, particularly at the graduate school level?

There is growing reluctance on the part of the State legislatures to give adequate support to graduate schools on the grounds that they

are really national schools—that is, the students come—are dispersed nationally.

Dr. SMITH. That is right, Senator Mondale. I think the principles appear in the bills that when you approach the problem of aid to students, you approach simultaneously the fact that a reciprocal grant to the institution is essential. The fact is that there are reciprocal costs involved, and the institutions are not—they do not create the kind of capacity that is needed to really provide educational opportunity for the students unless there is a recognition of the fact that taking on the students involves types of incremental costs and types of innovative developments which ought to be financed at the graduate level.

This is extremely important, it has been recognized in some of the institutional grant relationships, the different fellowships. It is clearly the case that we build centers of excellence in graduate post baccalaureate education as a national commitment.

It would be simply tragic to back away from that commitment at this time, and there will not be funding to fill the void if that occurs.

Senator MONDALE. I would like to ask one final question of Dr. Carlson.

I think there is a growing consensus on the committee that there should be a new cost of education or institutional grant approach. The grant would reflect realistic understanding of the increased cost of quality in private education, because private higher education does not have the State subsidies which State higher educational institutions enjoy.

Would you answer again why you think it is a justified expenditure for the Federal Government to provide for a grant which reflects these higher costs, such as that suggested in my bill?

Dr. CARLSON. Mr. Chairman, it seems to me, as I said before, we are talking about total tax liability, and that for the Federal Government to expend money in ways which obligate or mandate further expenditures on the part of the State seems not to be a wise procedure if it could spend it in ways which would not have that effect. This may be done by increasing the freedom of the student to choose institutions where the State is not required to make comparable additional investments.

I do not believe that any government ought ever to pay private institutions more than the total cost of education at a public institution. I think therefore that the provision for diminishing scales is a very reasonable one.

On the other hand, we will have to be pardoned I think at this point for having very distinct preference with regard to the two proposed cost to education allowances here, for that in S. 1161, which does take into account this variation, $1,200 less tuition, since the lowest tuition in our State, in the private sector is $1,210, would not be helpful to us.

Senator MONDALE. Would you say we are getting at the point where the future role of quality of private education is in jeopardy unless some such support is available—and that we are already at the point where quality private education is beyond the reach of hundreds of thousands of able, but poor students?

Dr. CARLSON. Yes. I think it could be pointed out by the fact that in the 1960's we grew about 60 percent. In 1968 we grew 3 percent; 1969, 2 percent, and this past year six-tenths of 1 percent.

Senator MONDALE. Actually some good schools have vacancies this year?

Dr. CARLSON. There are 5,000 vacancies in private institutions in Minnesota.

Senator MONDALE. Because of the financial variable we are pushing ahead to expand facilities at the public college and vocational level, which we must do, but some of those slots could be taken up even for less money if we would fill the slots available in private colleges——

Dr. CARLSON. I think there is no question about it.

Senator MONDALE. If we look at the cost-benefit ratio, it may be a good bargain.

Mr. Chairman, I wish to express my gratitude to the panel and to you for permitting what is really a unique presentation.

I think this is the first time that this committee has had a panel representative of the full spectrum of post high school education within a State, representing public as well as private, vocational education as well as the other facets of State college systems, central universities, junior colleges and our whole coordinating commission system.

I think it has been a unique presentation. I think it is also eloquent testimony, and I am not sure you could have paneled such a group 10 years ago. It is eloquent testimony, not only the unity shared by our higher education in our State, but the tremendous need and the tremendous unfulfilled role which the Federal Government must assume if we are going to deliver our children decent education.

Senator PELL. Thank you very much indeed, gentlemen, and thank you, Senator Mondale, for bringing such an interesting panel before this subcommittee.

The next panel is a group representing the American Vocational Association: Mr. Burkett, Dr. Olivo, Dr. Crabtree, and Mr. Berryman.

Come forward and introduce yourselves.

STATEMENT OF LOWELL A. BURKETT, EXECUTIVE DIRECTOR, AMERICAN VOCATIONAL ASSOCIATION, WASHINGTON, D.C.; ACCOMPANIED BY DAVID BERRYMAN, DIRECTOR, VOCATIONL AND INDUSTRIAL EDUCATION, SPRINGFIELD PUBLIC SCHOOLS, MISSOURI; DR. MYRNA CRABTREE, DIRECTOR, HOME ECONOMICS AND CONSUMER EDUCATION, NEW JERSEY STATE DEPARTMENT OF EDUCATION; AND C. THOMAS OLIVO, PHILADELPHIA, PA., PRESIDENT, AMERICAN VOCATIONAL ASSOCIATION

Mr. BURKETT. It is indeed a privilege for representatives of the American Vocational Association to come before you this morning. We are here to present to you some of our views in regard to the expansion and extension of the vocational educational amendments of 1968. We believe these amendments have helped to create many outstanding programs of vocational education, and we commend the Congress for having enacted this legislation.

We have with us this morning a panel of three people, Dr. C. Thomas Olivo, president of the American Vocational Association, Dr. Myrna Crabtree from the New Jersey State Department of Education, and Mr. David Berryman, director of vocational education in Springfield, Mo.

Dr. Olivo will be our first witness.

Senator PELL. All statements will be put in the record in full at the end of each testimony.

Dr. OLIVO. The prepared statement for the record reflects the American Vocational Association's appreciation to appear before the subcommittee in support of the provisions of the Vocational Education Act Amendments of 1968, as being a workable vehicle that will accomplish much needed educational reform, provided it is updated and given the adequate tools with which to implement it.

We commend the education subcommittee for S. 659, which strengthens the provisions of sections identified in my written testimony beyond their current expiration to July 1, 1975, to further carry out the intent of equalizing educational opportunity.

Anyone critically analyzing human and societal needs and our educational system and the rate of societal change recognizes there is no one who can predict with any accuracy the date when essential education reform will be accomplished.

The educational systems of the United States, I trust you recognize, are still designed for the elite minority. Curriculums were never developed based on honest analyses and educational hurdles and concepts were and still are dominated by liberal cultural elitists who impose an education for nonoccupational bound youth on the majority of our youth, who do not seek such academic preparation or want, or need it. And this is a sharp contrast with vocational curriculums which are based on occupational analyses, manpower, and human needs for employment bound youth and adults.

You may ask about seed moneys through 54 years of Federal funding and what have they helped to do? Materially they have helped to produce much of this Nation's skills and productive capability and productivity.

Importantly, the Federal dollars and legislation have developed a national manpower training capability through vocational education that reaches most people in all communities throughout the Nation.

In a very few moments Mr. Berryman will relate to the impact of these seed moneys on one of the geographical programs.

Effectiveness of vocational education qualitatively and quantitatively has been restricted by limited dollars, and lack of manpower coordination, Federal leadership, and accountability, organizational structure, among others.

The written testimony that you have for the record suggests that we will never, no, never, achieve equality of educational opportunity until Congress places top priority on maximizing the development of its greatest wealth and resource, which are its people . . . every one in this Nation.

To be specific in relation to S. 659, top priority, means commitment of adequate legislation, adequate accountability, adequate leadership, adequate financial resources, and, importantly, through permanent legislation for part B, which relates to the grants to States, and part C; part D that you have identified as exemplary programs; part E relating

to residential vocation educational facilities. And the written testimony, Mr. Chairman, identifies the need, the significant need, for investment in the residential facilities in each of the States.

Part G you will recognize as cooperative educational programs; part H, the work study for vocational students; and part I, curriculum development in vocational and technical education.

May I caution the committee that safeguards should be provided in (part I) curriculum development activity so that no commissioner may take the money and use it for purposes other than that for which it was intended in vocational and technical education.

Dr. Crabtree will talk with respect to part F on consumer and home economic education.

Mr. Chairman, we recommend that Part F of the Education Professions Development Act be extended to fiscal year 1977 at an authorized level of $50 million to help prepare, in the one area in education that needs more teachers, the 17,000 new teachers (additional teachers) that are needed in the program to provide essential services.

Now, may I return to the top priority of national leadership and accountability. We would suggest that you include in the bill a part which relates to accountability and administrative structure and organization.

Ironically, Congress entrusts the functions of accountability and leadership to the Office of Education, whose activities, organization and commitment have reflected a lack of priority, and who have reduced vocation education and the practical arts to subservient positions to all other forms and levels of general and higher education.

Mr. Chairman, we will never have equality of educational opportunity unless Congress protects the people through safeguards which assure that vocational education and manpower training are equal partners in the total educational enterprise.

We will never have equality of educational opportunity unless Congress creates in legislation an administrative framework with personnel and organizational structure at high enough levels to impact on educational change.

What I am talking about is an educational revolution within HEW, and within OE . . . We see a need, if a complete revolution which requires complete recycling. We see a need, if vocational education is to be relevant, for a higher position as assistant secretary reporting to the Secretary of the Department of Health, Education, and Welfare.

We see a need for a level of position commensurate with deputy commissioner, directly accountable to the commissioner of education, and a bureau with levels of position and depth of positions to truly function and be accountable.

Now, to return the statistics and comparison that are contained in the written testimony—you may want to review these at a time when each may concentrate in depth on what they reveal.

Mr. Chairman, in summary, and very quickly, may I say, that I have talked to the establishment of an accountability unit, created by law, either inside or outside of HEW and OE.

I have talked to the point of financial resources needed to develop occupationally competent teachers that will be needed in an ever-growing program of service to employment bound youth and adults. I have talked to the point of extending the expiration dates in the provisions that you have identified for a long period of investment through permanent extensions.

Mr. Chairman, I would like to thank you for the privilege of sharing these precious moments and to deal in all candor with much needed educational reform so that we may truly serve our youth and our adults.

We stand ready in the American Vocational Association to work with the subcommittee on refining a plan of legislation which will be responsive continuously to the manpower and human needs of our people, and will provide accountability to the Nation.

Thank you.

(The prepared statement of Mr. Olivo follows:)

Statement by C. Thomas Olivo
President, American Vocational Association
BEFORE THE
Subcommittee on Education
Senate Committee on Labor and Public Welfare
Room 4232, New Senate Office Building
April 23, 1971, 10:00 a.m.

Mr. Chairman and Members of the Education Subcommittee:

The American Vocational Association is most appreciative for this opportunity to testify on S. 659, The Education Amendments of 1971. Our Association represents some 47,000 vocational education teachers from many occupational fields, vocational guidance counselors, vocational education administrators, teacher educators and research personnel, vocational advisory council members, manpower specialists, and others. We are a professional association dedicated to the continuing growth of services to youth and adults through vocational and practical arts education.

After years of nurturing, we see evolving in America today a concept in which vocational-technical education, practical arts education, and manpower training and development are being recognized as the mainstream of a total education and training program in which general academic education is an inseparable part. Vocational-technical and practical arts education brings within the grasp of the greatest majority of youth and adults the potential for human fulfillment. Such educational programs are vital to this Nation, for not only do they offer hope to individuals but they also provide assurance for our continuing technological supremacy and national security.

It is for these and other reasons, Mr. Chairman, that we are here to support the provisions of S. 659 that call for renewing the authorization for certain Parts of the Vocational Education Amendments of 1968 (P.L. 90-576) due to expire at the end of the current fiscal year.

At the same time we are here to recommend to this Subcommittee one important change in the existing language of S. 659 and also to urge you to include language relating to the administration of vocational education within the U. S. Office of Education. With your permission, I will speak first to these two recommendations.

Section 201 of S. 659 (Page 101) provides that the authorization for Part B of the Vocational Education Amendments of 1968 terminates at the end of fiscal year 1975. This Section of the Act provides matching grants to the States to fund vocational education programs for youth and adults.

In creating the first statute to provide Federal funding for vocational education more than 50 years ago, Congress recognized the national interest in vocational education by providing funding for State grants on a permanent and continuing basis. With the assurance that vocational education Federal funding would be available, States and local communities have responded by investing their own resources in vocational-technical education programs. In the last fiscal year for which figures are available, the Federal appropriation was approximately $266,000,000; States and local communities matched these funds with some $1,400,000,000. Thus the State and local investment in vocational education is more than 5 times that available from Federal sources. This State and local investment has been possible, in part, by the fact that the Federal government expressed its continuing interest and support for vocational education programs by making permanent the authorization of funds.

Under the existing provisions of P.L. 90-576, Congress has required of the States long-range program plans for vocational education. The Act specifies that planning shall be for a minimum of three years and a maximum of five years. An additional planning feature was incorporated which calls for local comprehensive plans for vocational education. While State plans have always been required under the Federal Acts, for the first time in our history, both the States and local communities have been stimulated to plan for comprehensive programs of vocational education. This fact alone has stimulated growth and development in vocational education and, at the same time, has created a new demand and necessity for programs at all levels.

Therefore, we urge this Subcommittee to delete from S. 659 the provision that would terminate Part B (Grants to the States) at the end of fiscal year 1975. Under existing law this provision is permanent and continuing with an authorization level of some $565,000,000. To retrench from this strong and affirmative support for vocational education at this period of development will, in our judgment, be contrary to the purposes for which Congress enacted P.L. 90-576.

An education program which increases the productive capacity of the Nation and provides a stable socioeconomic environment is important to the Nation as a whole. Vocational education lies at the heart of our national welfare, and we strongly urge this Subcommittee to reject a policy which would give vocational education "temporary" and subservient status at the Federal level. The Federal government has a major accountability to insure that vocational education is efficiently and effectively provided through a coordinated manpower effort. Manpower needs are national in scope and the Nation's national security, economic stability, and human fulfillment of its citizens are served through vocational education.

Administration of Vocational Education at the Federal Level

We turn now to our recommendation for inclusion of language in S. 659 to create an administrative framework and accountability for vocational education at the Federal level.

It is significant to recall that when Congress first enacted legislation for vocational education, it created a strong administrative body at the Federal level. The program of vocational education was administered by the Federal Board for Vocational Education consisting of the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Labor, the Commissioner of Education, and three members appointed by the President and confirmed by the United State Senate. Such a structure provided

for the necessary lines of communication between education and the various occupational areas to the end that people, citizenship development, education, manpower training, and jobs were brought together through the process of vocational education.

In 1933 the Federal Board was dissolved and the administration of vocational education was delegated to the U. S. Office of Education. The program of vocational education has continued to be administered within that structure although it has been subjected to a series of shifts and changes resulting in its virtual disappearance as an effective office for Federal leadership and accountability.

In the allocation of Federal resources, in legislative changes to bring improvement and expansions in vocational education, the United State Congress has taken the leadership. While we are grateful that Congress has continued to respond to the Nation's needs for vocational education, we submit that there are vital leadership and accountability roles that must be accepted and administered by the U. S. Office of Education. Until and unless that occurs, we will continue a system of priorities in education which are in contradiction to the needs of people and to the social and economic well being of the Nation. To illustrate this point, the Federal government now invests $14 in higher education for every $1 that it invests in vocational education. Our Nation spends $4 in remedial manpower programs for every $1 that it invests in vocational education as a source of prevention for unemployment and welfare. It should be a matter of more than a passing interest to note that the total Federal investment in 1970 for the 8.8 million vocational education students was approximately $300 million. At the same time, the Federal government invested through the Department of Labor's various manpower programs more than $1,360,000,000 for an enrollment of 971,000 persons.

With one-fourth as much funding as is provided for the Labor Department programs, vocational education enrolled nine times as many persons as were served in the various manpower programs.

We believe that these priorities are unrealistic and that they reflect judgments made primarily in the executive branch of our government. Without support and commitment from the executive agency, which is in turn reflected in the budgeting process, vocational education will continue to be understaffed and underfinanced at the Federal level without accountability. In short, there must be national leadership for a total program of vocational-technical and practical arts education.

Vocational-technical education is an integral part of the Nation's system of education. Its programs are designed to meet the social needs of all citizens as well as the manpower needs of our economy. The primary mission of vocational education is preparation for work, retraining, and upgrading which bring purpose to the educational process.

Vocational education can and does occur at all levels of education and in many types of institutions. Vocational education has significance at all levels of government--local, State, and national--and each level of government has an important and vital function relating to the purposes of the program.

The National leadership and accountability role for vocational education has consistently declined over the last decade while during the same period of time Congress has enacted major legislation to expand and improve the Nation's capability for providing vocational education opportunities "for all persons of all ages of all communities."[1] The weakest link in the chain of leadership necessary for implementing the goals and purposes of the 1968 Amendments is without doubt at the Federal level.

One method of measuring commitment is to look at the resources allocated to getting a job done. In looking at the administrative structure for vocational education within the U. S. Office of Education, you will find that it is one of three bureaus

---

[1] Statement of Purpose, P.L. 90-576.

under a Deputy Commissioner for School Systems. To place vocational education in this indifferent administrative hierarchy is to overlook the fact that it is a program that cuts across institutional lines and certainly is broader than programs ordinarily conceived as elementary and secondary education. The functions of research and teacher education are delegated to other bureaus and agencies, thus there is no way in which the total program of vocational education can be integrated into all facets of education. Instead it is splintered and fragmented to the point where there is no central focus for vocational education in the U. S. Office of Education.

Aside from an unworkable, inefficient and ineffective administrative structure that cannot provide adequate leadership and accountability, the Office of Education commits virtually no staff to function in vocational education. In January of this year, the American Vocational Association compiled figures showing the existing staffing pattern of the U. S. Office of Education. We include these selected figures for the record, but I would like to point out that of the 69 employees allocated to the Division of Vocational and Technical Education, 39 are identified as professional vocational educators. A few of the staff are exceptionally well qualified. However, the limited experience and expertise of the remaining professional staff with many of the component parts of the total program of vocational education precludes their providing needed leadership for development and program accountability. Thirty of the 69 employees are secretarial and clerical. It is humanly impossible that token staffing of this nature and number can operate a responsible organization which is committed to effectiveness and accountability of services to almost 9 million students. It is, moreso, ridiculous to assume that the same impoverished organization could operate a program whose potential student membership should be tripled.

[1] These figures are selected for purposes of comparison and do not reflect total staffing at the U. S. Office of Education.

For several year the American Vocational Association has been concerned about the lack of leadership for vocational education at the Federal level. We have had many meetings on this subject; our delegate body has passed resolutions; we have conducted field studies to determine the nature and extent of services that should be provided by the U. S. Office of Education in leadership and accountability roles in vocational education. In spite of the new legislation enacted during the last 10 year period, and in spite of the rhetoric coming from officials of the U. S. Office of Education (in both Democratic and Republican administrations) there has been no positive action to strengthen vocational education leadership and accountability at the Federal level. We believe that the time has come for Congress to respond to this need through legislation. Therefore, we urge you to include in S. 659 provisions to establish a bureau for vocational education within the U. S. Office of Education. The head of this bureau should report directly to the U. S. Commissioner of Education and he, or she, must be a person with background and experience in vocational education. The Federal administrative agency for vocational education should be organized and staffed on these broad basic principles:

1. Vocational education programs are often developed in cooperation with other departments and agencies of government; therefore, the policy and decision-making level for vocational education in the U. S. Office of Education must be such that its director can deal directly with his counterparts in other departments and agencies of the government where programs must be developed and conducted cooperatively.

2. Vocational education makes a major and unique contribution to the education of youth and adults through the application of knowledge from the disciplines with skills and practices in business, industry, agriculture, health industries, the home, and other occupational supportive services to prepare people for vocations. Such education contributes to national defense, national security, elimination of poverty, economic well-being, and employability. To achieve these goals the services of a

vocational education program, including research and teacher education, must be maintained as a major and distinct entity in the U. S. Office of Education.

3. Vocational education as the mainstream for the development of citizenship capabilities and occupational competence threading through all levels of education and all programs of education is concerned with, and is an integral part of, secondary education, postsecondary education, adult education, education for youth and adults with special needs, and higher education. Because of these broad concerns, vocational education services within the Office of Education should fall within the same administrative and policy making levels as coordinate services so that effective liaison is possible within the Office of Education and other departments of government.

4. Leaders in vocational education in the U. S. Office of Education must be competent vocational educators with depth of training and experience in vocational education in the area of their major responsibility. Parenthetically, it should be noted that the vocational administrator is a composite of skills in general education administration and in the occupations of the world of work, the latter as a result of direct experience with them.

We strongly urge you to legislate an administrative agency of this nature for vocational education at the Federal level. The creation of such an agency must accomplish the unification of all the various functions relating to vocational education into one administrative unit within the Office of Education; it should increase the number of staff to enable experienced and competent vocational educators from each of the occupational areas to give guidance and direction to the total program; it should give representation to vocational education at the highest policy level within the U. S. Office of Education. Without this administrative focus and bureau responsibility, the efforts of this Subcommittee of Congress to achieve equality in education may be fruitless.

EXTENDING AUTHORIZATIONS FOR P.L. 90-576

The final part of our testimony is concerned with the provisions of S. 659 to extend the authorizations found in Section 102(b), Part D (Exemplary programs), Part E (Residential facilities), Part G (Cooperative programs), Part H (Work-Study), and Part I(Curriculum) of P.L. 90-576. Others here today will speak specifically to the provisions of Part F relating to consumer and homemaking education, but I would also have my testimony reflect our support for the continuation of this important program of vocational education.

We are making no suggestions for change in the existing law other than supporting a simple extension of funding at the levels authorized for the current fiscal year. All sections of the Act are currently funded at less than the levels authorized. The following chart shows the extent to which authorized funds have been appropriated to implement P.L. 90-576 for fiscal year 1972.

FUNDS AUTHORIZED FOR VOCATIONAL EDUCATION
(P.L. 90-576)

PROGRAM	AUTHORIZATIONS	(H.R. 7016) APPROPRIATIONS	BUDGET RECOMMENDATIONS
Grants to States (Sec. 102(a))	$675,000,000*	$377,012,000	$374,302,000
Disadvantaged (Sec. 102(b))	40,000,000	20,000,000	-0-
Work-Study (Part H)	35,000,000	6,000,000	-0-
Exemplary (Part D)	75,000,000	16,000,000	-0-
Cooperative (Part G)	75,000,000	19,500,000	-0-
Demonstration Residential Schools (Part E)	35,000,000	-0-	-0-
Grants to States for Residential Schools	50,000,000	-0-	-0-
Professions Development (Title II)	35,000,000	-0-	-0-
Consumer & Homemaking (Part F)	50,000,000	21,250,000	-0-
Curriculum (Part I)	10,000,000	4,000,000	-0-
TOTAL	$1,080,000,000	$463,762,000	$374,302,000

*Includes 10% set aside for research and training activities.

Vocational, technical, and practical arts education in the United States today is experiencing its greatest period of growth. Since enactment of the 1968 Amendments, vocational education has shown evidence of becoming an increasingly effective and dynamic force throughout the Nation. An analysis of the information received from the state directors of vocational-technical education in annual reports submitted to the U. S. Office of Education reflect the following needs and future projections:

--In fiscal 1970 there were 8,793,960 persons enrolled in vocational education. This was an increase of 10.2 percent of the 7,979,366 enrolled in fiscal year 1969.

--In 1970 there were almost a million disadvantaged and handicapped persons enrolled in vocational education. (Disadvantaged - 805,384; handicapped - 115,219).

--According to projections taken from the state plans for vocational education, graduates from these programs will supply, in 1971, 31 percent of the labor market demands as seen in the United States. In 1975 the projections are that vocational education program graduates will supply only 24 percent of the labor market demands. Enrollments and graduates in vocational programs are and will continue to be on the increase. However, projected labor demands for these growth years have been estimated by the states to be expanding more rapidly than the program output.

--According to follow-up reports from state agencies and the U. S. Office of Education, the average unemployment rate of vocational education graduates between the ages of 18-24 is 5.2 percent. The average unemployment rate of those in the same group who do not have the advantage of vocational education background is at least 24 percent with large variations dependent upon the race and location of the group being studied.

--In 1969, approximately 850,000 students completed their studies, and about 50% of these were available for job placement. Of the total, secondary and post secondary, 76.9% were placed (73.6% of the secondary and 90% of the post secondary) in fields directly related to their education. The average percentage unemployed was 5.2% (5.7% for secondary students, 3% for post secondary). The balance were employed either part time or in unrelated fields. The 5.2% unemployed compares favorably to the general population for these ages in which the unemployment rate approaches in excess of 30%, depending on age and race.

In order to make continued progress, and to move even more forcefully in the directions given by P.L. 90-576 we must have a continued authorization for those programs that are just now getting under way.

We especially urge this Subcommittee to continue support for residential vocational education facilities (Part E). This section of the Act has never been funded. On the basis of established need, every state should have at least one residential vocational education facility. The Federal government has supported the construction of residential facilities for practically every college campus throughout the Nation. Such facilities are also needed at institutions that offer vocational education. We must not continue to discriminate against the student who chooses to enter a field of employment that does not require the baccalaureate degree.

As an appendix to this statement, we are including for the record information concerning vocational education programs funded under the provisions that will expire at the end of the current fiscal year. We believe these are evidence of need as well as evidence of the capability of vocational education to move in new directions to meet social and economic needs of people.

FUNDS FOR TEACHER EDUCATION AND VOCATIONAL PERSONNEL DEVELOPMENT

Our concluding recommendation, Mr. Chairman, concerns the education and preparation of vocational education personnel. Quality teacher education is a basic requirement for quality vocational education. This assumption has been a fundamental premise in vocational education for more than a half century.

Projected expansion of vocational education and manpower development programs draws attention immediately to the need for teacher education and personnel development. During this decade, an increase of from 100% to 150% in the number of teachers is anticipated. Currently there is a reported shortage of some 17,000 vocational education teachers--the only teaching field where such a shortage does exist.

The increased personnel need is accounted for by the expansion of existing vocational education programs, by the introduction of new programs, and by making vocational education available to groups of people not previously served by vocational education.

Although the present programs of vocational teacher education may well become the nucleus for expanded programs, new forms of teacher education must be identified and utilized. A major portion of future expansion will take place in the form of in-service teacher education and short-unit teacher education programs for special groups--teachers for the disadvantaged, the handicapped, and a variety of ethnic groups, and others. Certainly the expansion of teacher education, in quantity, quality, and diversity must match the expansion in vocational education and manpower development.

We recommend that Part F of the Education Professions Development Act (Title II, P.L. 90-576) be extended to fiscal year 1977 at an authorized level of $50 million.

In conclusion, may I again express appreciation for this opportunity to present our views on S. 659. We urge you to take action as soon as possible so that P.L. 90-576 can be extended during this session of Congress. You are well aware of the fact that we are only a few months away from the beginning of the Federal budgeting process for fiscal year 1973. In order for proper planning efficiency to occur, we should have a much lead time as is humanly possible.

We hope you will accept our major recommendations, and we offer our services to you in perfecting the language necessary to implement these recommendations.

Thank you very much.

EXEMPLARY PROGRAMS IN VOCATIONAL EDUCATION
CONDUCTED UNDER PART D (PL 90-576)

Exemplary programs and projects in vocational education have been initiated in every state and territory. There are two hundred (October 1970) projects currently operational across the nation. In addition, one project has been initiated in each state and territory from the Commissioner's share of Part I funds.

The projects launched under the Part D exemplary funding by the States range over a diversity of problem areas, and are targeted on particular problems which each State has identified as having the highest priority in its particular situation. A major thrust across many of the States has been an attempt to begin structuring the educational system around a career development theme. Examples:

Missouri, Moberly School District, an exemplary project designed to activate a career development program for all students in Grades K-12.

New Jersey, Camden City, sponsored a Pilot Occupational Orientation Program in the elementary grades which became a model for a Statewide program which Governor Cahill is now supporting on a broad scale with funds from the New Jersey State Legislature.

Ohio, Dayton City Schools and Cincinnati City Schools, used exemplary program funding to launch career orientation programs for 7th and 8th grade students as well as four other major school districts across the State.

Virginia, the Petersburg Public Schools, have undertaken a project directed to the pre-vocational development of disadvantaged youth in sixth and seventh grades.

Wisconsin, Shawano Schools, are establishing a career development program from kindergarten through the 7th grades.

In addition to these types of activities, which are directed toward development of comprehensive career education programs, attention has been given to a variety of other problem areas. Examples:

California, San Diego County, an exemplary project involves the establishment of a computer-assisted work experience placement service.

Colorado, Jefferson County, the expansion of the secondary occupational information program is being carried out under an exemplary grant.

Michigan, Genesee School District, has established a computer-based guidance and career exploration system under an exemplary project grant.

Texas, an exemplary grant has made possible the planning and development of a systemmatic school-industry training relationship in the construction industry.

Other State projects have been noted which relate to emerging vocational training areas such as hospitality, law enforcement, marine science, agriculture, marketing, natural and environmental science, ornamental horticulture, and transportation occupations. Some projects direct themselves specifically to the disadvantaged and/or handicapped, to work experience programs, to individualize learning systems, to bilingual programs, and to mobile skill training and simulated skill training units.

All of the Federally-administered projects (Commissioner's share of Part D) involve the development and operation of a model career development program which begins with broad occupational orientation at the elementary level, continues through exploratory experiences at the junior high school level, provides cooperative vocational education and other forms of job preparation at the senior high school level, and culminates with the placement of all students when they leave the school system. (Placement to be either on the job or in post-secondary education.)

Increased and continued funding is essential to the life of ongoing exemplary programs and projects for which funds have been, in many cases, committed for a 3-year period beginning in FY 1970. As an example, the projects implementing the structure for the career education concept which are federally administered will by the nature of their comprehensiveness and their complexity require a minimum of three years for full development and maximum impact on educational practice in the Nation.

In addition, demand from the local communities for the kinds of vocational education and career development programs now being demonstrated in these projects indicates that full funding of the originally authorized sum would permit a tremendously accelerated pace enabling school districts to move into programs which now appear to hold the key to educational relevancy in America.

Full funding would also permit the Nation's leadership to move vocational education programs more rapidly into emerging occupational areas; into programs which provide a higher level of partnership with business and industry, including new systems for vocational training; and into the arena of providing retraining and upgrading for young workers who are released from their jobs for the purpose of increasing their educational attainment.

The Exemplary Programs and Projects in Vocational Education are demonstrating what may well be our most effective system for bringing about lasting change within the educational community. The latitude and flexibility built into this part of the 1968 Amendments permits the U.S. Office of Education and the States to move into actual practice those systems, methods, techniques, and thrusts which up to now have, to a great extent, been gathering dust on the shelves of researchers as examples of good ideas.

April 1970

APPENDIX II

AMERICAN VOCATIONAL ASSOCIATION
1510 H Street, N.W.
Washington, D. C. 20005

ENROLLMENT IN VOCATIONAL EDUCATION PROGRAMS

	ENROLLED 1970	ANTICIPATED 1971	*PROJECTED 1972	1975
Special Disadvantaged** Section 102 (b)	80,000	95,000	100,000	140,000
Consumer and Homemaking Part F	2,419,216	2,369,685	2,507,765	2,879,074
Cooperative Vocational Education*** Part G	23,001	166,664	223,352	393,076
Work Study Programs Part H	15,522	89,434	113,581	175,264

*Projections for enrollment made by the State Director of Vocational Education in each state.

**These students are not reported separately in the Annual Report for Vocational Education from the States. It is estimated that nationwide, approximately 10% of the reported disadvantaged students are in the category of special disadvantaged.

Projections shown by the state directors for vocational-technical education indicate an anticipated increase of 45,000 students to be enrolled in special disadvantaged programs by the year 1975. This equates to a need for 3,700 new special disadvantaged programs to be established in the United States prior to 1975 (Class size in a special disadvantaged program will average 12 students). The need for 63 additional programs to serve the special disadvantaged programs per state anticipated by 1975 impresses the importance of continuing support for vocational-technical education programs.

***Cooperative Education--One of the fastest growing forms of vocational education in the United States today has a projected growth of more than almost double student enrollment for the next school year. The emphasis placed upon relevant business and industry oriented training has caused enrollment projections to increase from 23,000 to 393,000 in 1975.

The projected enrollments for post secondary education are reflecting the emphasis being given to this segment of vocational-technical education. Projections are that post secondary institutions will enroll almost twice as many disadvantaged students in 1975 as in 1971, 126,581 in 1971 and 220,859 in 1975. In addition, the cooperative programs at the post secondary level are expected to expand from 12,200 in 1971 to 33,900 in 1975. The emphasis upon target groups mandated by the 1968 Amendments to the Vocational Education Act are having an impact on the programs in the States.

Vocational Guidance Handbook-- "The Outlook for Careers Through Voc-Tech Education."
Guides/Handbooks, such as:

Cooperative Education Programs in Small Schools
(Include employer's role and responsibilities).
Organizing a Consumer and Homemaking Program for out-of-school youth and adults
Updating existing listing of State developed curriculum materials

Miscellaneous

Survey of Curriculum Materials produced in cooperation with other government agencies (including the Department of Defense)

Curriculum Development Projects funded FY 1971

1. Development of curriculum and multi-media materials and industrial personnel in computer sciences relating to data communications networks.

2. The inventory of Air Force vocational course materials for possible adaptation to the civilian school system.

3. Establishment of the Institute for Education and Technology. (Several Bureaus are providing funding to be handled by the Division of Adult Education Programs.)

4. Balance of available funds to be used for development of career education concepts.

Dissemination of Curriculum Efforts

88 curriculum items printed through Government Printing Office during the last 8 years and have been distributed in amounts varying between 5,000 to 10,000 copies each.

8 items have been printed and distributed by non-government sources.

Even with the current appropriation at $4,000,000, the projects involving curriculum development are few and not nearly covering the needs. Funds designed for curriculum development are apparently being diverted to develop the career education concept and specified for use in some of the models being proposed for career development.

In the past some materials developed have not been published and disseminated for budgetary reasons. This raises again the question of management, emphasis, and commitment to vocational education.

April 1971

APPENDIX V

EXAMPLES OF PROGRAMS

FOR DISADVANTAGED STUDENTS

American Vocational Association
1510 H St. N.W.
Washington D.C. 20005

The following are only a few of many examples of programs being conducted for the special disadvantaged segment of our society through vocational education. These examples highlight the total concern for all students shown by vocational educators today.

PENNSYLVANIA

Area Vocational-Technical School, Fayette County

Building Maintenance instruction is offered to boys of limited academic capacity and potential ninth and tenth grade dropouts. Curriculum includes a wide variety of common construction and maintenance skills and related knowledge. Less than one percent fail to graduate.

A summer Work Experience program was conducted for twenty-five boys and girls recruited and paid by the Federal Neighborhood Youth Corps. Student duties included painting decorating, groundkeeping, and general maintenance of school facilities.

FLORIDA

E. Dixie Beggs Educational Center, Pensacola, Escambia County

The school can accommodate six hundred boys and girls aged fourteen to nineteen years. The students are considered potential dropouts because they cannot relate to an academic high school setting due to their low level of social and economic background. Skill training includes power mechanics, woodworking, horticulture, appliance repairs, health occupations, building maintenance, business, and personal services. Girls can also learn sewing, dressmaking, fashion design, and flower arranging. Curriculum is ungraded and includes basic education training in math, communications, and reading. After completion, students enroll in regular high school or the area vocational-technical center, or remain at Beggs to develop employment skills. The waiting list to enroll in the Center is 1,300 students.

60-433 O - 71 - pt. 3 - 23

Duval County

One hundred twenty students who are mentally or emotionally retarded or physically handicapped are taught marketable skills during summer programs at three county high schools. Because they have experienced "social promotion" in an academic setting, their efforts are channeled into the area of their natural interests. Skills taught include automotive body repair, machine shop, general construction, short order cooking, office work, and remedial reading. Special features of the program include a survey of careers, small classes, and individual instruction.

NORTH DAKOTA

Bowman High School, Bowman

One-third of the enrollment of Bowman High School is served by Vocational Agriculture. A special section of the program provides the disadvantaged students with individual help and nongraded instruction. Particular emphasis is placed on off-farm options in business, production, and mechanics.

INDIANA

East Chicago

The Manpower Division of the U.S. Department of Labor and the Vocational Education Division of the State Department of Public Instruction cooperate financially to provide training for sixteen to eighteen year olds considered disadvantaged. Pre-vocational counseling, basic education skills, communication skills, work-adjustment skills, vocation counseling, and on-the-job training are are all included. Traditional authoritarian methodologies rejected by the youth are replaced by tutoring and programmed instruction. After twelve weeks, improvement in speech is noticeable.

GEORGIA

Atlanta Vocational-Technical School, Atlanta

The Learning, Earning Education Program (LEEP) is designed for dropouts between ages sixteen and twenty-one. Designed for twelve weeks, it emphasizes extra-vocational tensions that arise on the job. It also includes skill training for entry level, basic academic instruction, and group counseling.

CALIFORNIA

Bakersfield High School, Bakersfield

The Exploratory Business course for educationally handicapped students employs closed-circuit television for job interview training. Their realistic role playing is accomplished through cooperation with the local telephone company.

Orange Unified School District, Orange

CHEER - Consumer and Homemaking Education Environmental Rehabilitation - provides remedial training in consumer and homemaking education for the adult population of two identified, well-defined boroughs of culturally deprived and economically disadvantaged Mexican-Americans. Instruction includes culture cooking, budgeting systems, principles of buying, advertising propaganda, clothing and home design.

April, 1971

Senator PELL. I can assure you we look forward to working with you. Our associate counsel, Richard Smith, is a specialist in this field.

Mr. BURKETT. Dr. Crabtree.

Dr. CRABTREE. I, too, am genuinely appreciative of the opportunity, Mr. Chairman, to appear before the subcommittee as a representative of the American Vocational Association to support Senate bill S. 659.

My remarks will be directed to part F of the Vocational Education Amendments of 1968 which provides funds for consumer and homemaking education and the need for the continuation of its provision through S. 659.

The unique and vital contribution which part F plays in the total legislative program we are discussing today lies in the fact that its focus drives directly to one of the prevailing challenges of our time, the preservation and stability of the American home.

Our society faces no greater problem in today's world. Providing instruction relevant to family needs in such areas as nutrition and foods, child development, clothing, housing, family relations, and the management of family resources, this program has proved one of the most important factors in American education in assisting individuals and families to improve the quality of family life and home environments. In 1968 consumer education was added as a corollary to vocational education legislation. This union between the broad aspects of home and family life education and consumer education has created a program of comprehensive educational services to the home as an institution and to its individual members as homemakers and consumers.

I would like to provide you with some statistics reflecting the growth in consumer and homemaking education during the past 3 years. In 1968 there were 2,209,541 students, and in 1969, 2,334,302 students. Although complete data are not yet available for 1970, advanced reports indicate enrollment of approximately 2.5 million.

Perhaps more important than the quantitative size of the program is the quality and diversity of the educational services which must now be offered. One of the great revolutions in American society today is the changing pattern of home and family life. Chief among these is the entrance of the housewife into the world of work. Eighteen million married women are now in the labor force. It is estimated that this figure in 1980 will double that of 1950. A different kind of education must now be provided for the married woman to equip her for this dual role of mother and wage earner.

Elementary school children rarely receive any education to be consumers. Neither do they receive education in how to live and work with their peers, family members, and other adults.

Some instruction is provided in nutrition education. All three of these areas are vitally important in the lives of young children. Home economics consultants to work with elementary teachers and with parents of young children could and should be made available by increased funding for consumer-homemaking education.

Other imperative educational needs exist in this area of the vocational program. The so-called generation gap between parent and child is a matter for more effective family life education. The drug problem among the young, their disenchantment with their parents, the growing disrespect for law and order among our people of all

ages, these symptoms of social turbulence that have much of their genesis in the home.

Our newly awakened awareness of the need for consumer education adds another dimension to this phase of the program. Knowledge of unit prices in the marketplace, truth in labeling and packaging, some understanding of the legal rights of the buyer in contractual obligations; all these are areas in which education is now a requisite for survival on the part of the American homemaker.

And, nowhere is this more true than in the homes of the disadvantaged where the dollar must be stretched to its summit potential to meet the onslaught of rising prices.

These are the new facts of life in our times that education must confront to be maximally effective. Our success is a matter of mixed emotion: Pride in the number of new programs that have been made possible by funds under part F of this legislation since 1968; regret that we haven't had sufficient money to do more.

In my own State of New Jersey we are experiencing increases in populations served through centers and programs for youth and adults located in major economically depressed urban areas such as Newark, Camden, Trenton, Plainfield, Atlantic City, and other troubled spots of the State.

Funding has been utilized to expand staffs and services to groups of all age levels in these impact areas. These programs strive to reach out into the community and involve the parents in school and neighborhood centers, day care centers, and housing development projects.

Two key developments in New Jersey made possible by this legislation are the Nutrition Education Center at Montclair State College and the Center for Consumer Education Services in Edison Township. These centers have been set up cooperatively by the division of vocational education in the State education department and the respective local educational agencies in the areas. Their function is to serve the education agencies and other cooperating groups in the planning of more effective programs.

The consumer and homemaking program is beginning to address itself nationally to the needs of youth and adults in the economically depressed urban areas. During fiscal year 1968 there were 43,461 people enrolled in the special needs program and during fiscal year 1969 there were 46,398. During fiscal year 1970, the first year for which funds were available under Part F, the enrollment increased to 272,764. The people engaged in consumer and homemaking education enthusiastically endorse and are implementing the special needs in the consumer and homemaking program.

Federal funds are imperative for the implementation of this aspect of the program because the areas where programs are needed most have the least resources to conduct them.

Other States reflect an increasing number of pilot programs resulting from this legislation. Colorado, New York, and Pennsylvania have set up programs in their major cities, especially designed to serve their economically depressed areas. California reports that in San Diego, high school students who have studied consumer education in their homemaking classes are now teaching it to adults in local shopping centers.

In Los Angeles County similar students are helping to impart their knowledge to the parents of Headstart children. Future Homemakers

of America with its 600,000 members, the largest organization for youth in the secondary schools of the Nation, is now placing more emphasis on preparing their membership for the dual role of parenthood and the world of work. Thus new and innovative programs have been devised and old, traditional ones have been expanded by the funds which have flowed from this legislation.

Mr. Chairman and members of the subcommittee, as we face the future in the contemplation of this legislation, I have three recommendations to offer:

1. That increased funds be appropriated to meet the ever-increasing educational needs that arise in this segment of American life.
2. That these funds be categorically earmarked for homemaking and consumer education as they now are under part F.
3. That no terminal date be attached to the duration of the law.

As I visit programs throughout the State of New Jersey, I am impressed and touched by the frequency with which individuals particularly those in economically depressed areas ask this question:

How long will this program be here? Many of you State and Federal representatives come out to work with us and say you want to help us and then, before the job is finished, you have folded up your tents and gone away.

This question comes from people who have had their hopes rekindled only to end in frustration. I cannot give them the answer to their question. But you gentlemen on this subcommittee do have a measure of power in the formulation of the answer to their inquiry. Let's make it possible to keep this flame of hope, incentive and desire for self-improvement alive, for without these qualities there can be only the decay of the human spirit.

We have been most pleased with the support given through this legislation, and we hope it will continue. Senate bill 659 has helped again that flame of hope and we would like to stay with it and not fold our tents and silently steal away before we have been able to go on and provide the assistance for continuing programing in this area.

(The prepared statement of Dr. Crabtree follows:)

STATEMENT OF DR. MYRNA P. L. CRABTREE, DIRECTOR, HOME ECONOMICS AND CONSUMER EDUCATION, NEW JERSEY STATE DEPARTMENT OF EDUCATION

My name is Myrna P. Crabtree. I am Director of Home Economics and Consumer Education for the New Jersey State Department of Education.

I am genuinely appreciative of the opportunity to appear before the Subcommittee as a representative of the American Vocational Association to support the Senate Bill S. 659. My remarks will be directed to Part F of the Vocational Education Amendments of 1968 which provides funds for Consumer and Homemaking Education and the need for the continuation of its provisions through S. 659.

The unique and vital contribution which Part F plays in the total legislative program we are discussing today lies in the fact that its focus drives directly to one of the prevailing challenges of our time—the preservation and stability of the American home. Our society faces no greater problem in today's world. Providing instruction relevant to family needs in such areas as nutrition and foods, child development, clothing, housing, family relations and the management of family resources, this program has proved one of the most important factors in American education in assisting individuals and families to improve the quality of family life and home environments. In 1968 Consumer Education was added as a corollary to Vocational Education legislation. This union between the broad aspects of home and family life education and consumer education has created a program of comprehensive educational services to the home as an institution and to its individual members as homemakers and consumers.

I would like to provide you with some statistics reflecting the growth in consumer and homemaking education during the past three years. In 1968 there were 2,209,541 students and in 1969, 2,334,302 students. Although complete data are not yet available for 1970, advanced reports indicate enrollment of approximately 2,500,000.

Perhaps more important than the quantitative size of the program is the quality and diversity of the educational services which must now be offered. One of the great revolutions in American society today is the changing pattern of home and family life. Chief among these is the entrance of the housewife into the world of work. Eighteen million married women are now in the labor force. It is estimated that this figure in 1980 will double that of 1950. A different kind of education must now be provided for the married woman to equip her for this dual role of mother and wage earner.

Elementary school children rarely receive any education to be consumers. Neither do they receive education in how to live and work with their peers, family members and other adults. Some instruction is provided in nutrition education. All three of these areas are vitally important in the lives of young children. Home Economics consultants to work with elementary teachers and with parents of young children could and should be made available by increased funding for consumer-homemaking education.

Other imperative educational needs exist in this area of the vocational program. The so-called generation gap between parent and child is a matter for more effective family life education. The drug problem among the young, their disenchantment with their parents, the growing disrespect for law and order among our people of all ages—these are symptoms of social turbulence that have much of their genesis in the home.

Our newly-awakened awareness of the need for consumer education adds another dimension to this phase of the program. Knowledge of unit prices in the marketplace, truth in labeling and packaging, some understanding of the legal rights of the buyer in contractual obligations; all these are areas in which education is now a requisite for survival on the part of the American homemaker. And, nowhere is this more true than in the homes of the disadvantaged where the dollar must be stretched to its summit potential to meet the onslaught of rising prices.

These are the new facts of life in our times that education must confront to be maximally effective. Our success is a matter of mixed emotion, pride in the number of new programs that have been made possible by funds under Part F of this legislation since 1968, regret that we haven't had sufficient money to do more.

In my own State of New Jersey we are experiencing increases in populations served through Centers and programs for youth and adults located in major economically-depressed urban areas such as Newark, Camden, Trenton, Plainfield, Atlantic City and other troubled spots of the State. Funding has been utilized to expand staffs and services to groups of all age levels in these impact areas. These programs strive to reach out into the community and involve the parents in school and neighborhood centers, Day Care Centers, and housing development projects. Two of the key developments in New Jersey made possible by this legislation are the Nutrition Education Center at Montclair State College and the Center for Consumer Education Services in Edison Township. These Centers have been set up cooperatively by the Division of Vocational Education in the State Education Department and the respective local educational agencies in the areas. Their function is to serve the education agencies and other cooperating groups in the planning of more effective programs.

The Consumer and Homemaking program is beginning to address itself nationally to the needs of youth and adults in the economically-depressed urban areas. During FY 1968 there were 43,461 people enrolled in the special needs program and during FY 1969 there were 46,398. During FY 1970, the first year for which funds were available under Part F, the enrollment increased to 272,764. The people engaged in Consumer and Homemaking education enthusiastically endorse and are implementing the special needs in the Consumer and Homemaking program. Federal funds are imperative for the implementation of this aspect of the program because the areas where programs are needed most have the least resources to conduct them.

Other states reflect an increasing number of pilot programs resulting from this legislation. Colorado, New York and Pennsylvania have set up programs in their major cities, especially designed to serve their economically-depressed areas. California reports that in San Diego, high school students who have studied con-

sumer education in their homemaking classes are now teaching it to adults in local shopping centers. In Los Angles County similar students are helping to impart their knowledge to the parents of Head Start children. Future Homemakers of America with its 600,000 members, the largest organization for youth in the secondary schools of the nation, is now placing more emphasis on preparing their membership for the dual role of parenthood and the world of work. Thus new and innovative programs have been devised and old, traditional ones have been expanded by the funds which have flowed from this legislation.

Mr. Chairman and members of the Subcommittee, as we face the future in the contemplation of this legislation, I have three recommendations to offer: (1) that increased funds be appropriated to meet the ever-increasing educational needs that arise in this segment of American life; (2) that these funds be categorically earmarked for Homemaking and Consumer Education as they now are under Part F, and (3) that no terminal date be attached to the duration of the law.

As I visit programs throughout the State of New Jersey, I am impressed and touched by the frequency with which individuals particularly those in economically-depressed areas ask this question: How long will this program be here—many of you state and federal representatives come out to work with us and say you want to help us and then, before the job is finished, you have folded up your tents and gone away.

This question comes from people who have had their hopes rekindled only to end in frustration. I cannot give them the answer to their question. But you gentlemen on this Subcommittee do have a measure of power in the formulation of the answer to their inquiry. Let's make it possible to keep this flame of hope, incentive and desire for self-improvement alive, for without these qualities there can be only the decay of the human spirit.

Senator PELL. Thank you very much.

Mr. BERRYMAN. I am most appreciative of the opportunity to present my views on the gains that have been made in vocational education. Through my testimony, I hope to relate that these gains have been made possible through the continuing authorization of this legislation, which makes long-range planning and implementation possible.

As a vocational educator at the local level where the action is, I have been very gratified with the support of our Congress in the appropriation of funds whereby we might further our efforts to make our youth and adults employable, giving them a marketable skill through which they may make their contribution to our national economy.

I happen to live in a community where there are five colleges, three of which are 4-year colleges, with two offering graduate programs. One would think a vocational program might not be successful in this atmosphere. But the testimony, as you will read, will indicate a great amount of progress during the past three and more explicitly during the past 10 years.

The community is an agricultural center, and it is an industrial community. There are 32 industries which employ approximately 100 people, and five industries employing over 1,000.

Since the passage of the Vocational Act of 1963, six new major industries have come into this community, and they have indicated through press releases that the location of the vocational technical center is the key factor in their choosing this community to locate the plant.

Throughout the testimony we show high increases in enrollment in secondary programs and in secondary student enrollment—enrollment in post-secondary, students with special needs, including disadvantaged and handicapped.

We have also experienced a tremendous increase in adult enrollments where they are attempting to increase their skills and competencies.

We recently completed a 5-year survey of students who were in our secondary program. Not one single graduate was unemployed.

Vocational programs are having an impact at the local level. I would like to quote the vice president of manufacturing for one of the Nation's leading manufacturers, who says:

> Literally thousands of assembly workers, operators, repairmen, testers and middle managers have been subjected to courses of various types in the Graff Area Vocational-Technical Center. The results have been exemplary and the corporation is now blessed in Springfield with one of the finest color television plants in the entire industry.

Similar gains in vocational and technical education are in evidence throughout our State of Missouri as a result of the Vocational Amendments of 1968. We are sorry that Senator Eagleton is not here to hear the progress that has been made in his home State, but he will read this testimony upon his return, and I am aware of his actions.

Senator PELL. He has a very strong interest in this and regrets he cannot be with us.

Mr. BERRYMAN. Senator Eagleton worked with us very closely at the local level in developing this type of education. Having the responsibility for both regular vocational programs and remedial programs for manpower development, I am a firm believer that more emphasis placed on regular vocational programs would greatly reduce the need for remedial training programs.

From my testimony you will see that the development of preventive vocational education as compared to remedial vocational education has involved long-range planning. This is a necessity because not only Federal funds are extended but also State and local funds must be provided. To construct buildings, to provide staff and laboratories, enroll students and prepare curricular requires much thought, deliberation, and planning.

We think that vocational-technical education is making rapid strides to meet the training requirements of our youth and adults, and we feel this is again made possible through congressional legislation with continuing authorization. To place time limits on this type of long-range planning would create chaos in many instances. Though appropriations may change from year to year, we have always known since the Smith-Hughes Act of 1917 a vocational-technical program of some magnitude will be made available to the citizens of this Nation.

Mr. Chairman, I thank the committee for its wholehearted support to vocational education, and may I also express myself in favor of the pending Senate bill 659. My only plea to the committee is that this legislation, like all vocational legislation in the past, be made a continuing authorization. Thank you.

(The prepared statement for Mr. Berryman follows:)

Statement of David Berryman, Director
Vocational, Industrial and Technical Education
Springfield School District R-12
Springfield, Missouri
BEFORE THE
Subcommittee on Education
Senate Committee on Labor and Public Welfare

My name is David Berryman. I am the Director of Vocational, Industrial and Technical Education for the School District of Springfield R-12, Springfield, Missouri. I am most appreciative of the opportunity to present my views on the gains that have been made in vocational education since the passage of the Vocational Education Act of 1963 and more recently the Vocational Amendments of 1968. Throughout my testimony I hope to relate the gains made in vocational and technical education to the continuing authorization of legislation which makes long range planning and implementation possible.

As a vocational educator at the local level, I have been very gratified with the support of our Congress in the appropriation of funds whereby we might further our efforts to make our youth and adults employable, giving them a marketable skill through which they may make their contribution to our national economy.

Springfield, Missouri is a city of 125,000 people located in the Ozarks of Southwest Missouri. In our city there are five colleges, three of which are four-year colleges, with two offering graduate programs. In such an environment of higher education one might have a tendency to think vocational and technical education would not prosper or progress very rapidly.

In the following testimony I will show that progress in this area of education has developed rapidly since the passage of the Vocational Education Act of 1963 and more particularly with the passage of the Vocational Amendments of 1968.

Springfield is an agricultural center and an industrial community. There are 32 industries in Springfield that employ 100 or more people, with 5 industries employing over 1000 workers each. Frisco Railway employs over 2000 workers and Zenith Radio Corporation employs over 3000 workers. It might be interesting to

note that since the passage of the Vocational Act of 1963, six new major industries have located in Springfield, Missouri with most of them crediting the training opportunities provided at the Graff Area Vocational-Technical Center as the key factor in their decision to locate their plant in Springfield.

There are 43 elementary schools, 8 junior high schools, and 5 senior high schools in the Springfield school system serving over 25,000 students. Vocational courses in homemaking, business education, and cooperative part-time education are offered in each of the 5 senior high schools. Vocational and technical education is provided at the Graff Area Vocational-Technical Center located in the center of the city, serving students from the 5 high schools and 10 area schools on a half-day basis. Students are transported from their home school to secure preparatory training in vocational and technical courses. Prior to the passage of the Vocational Education Act of 1963, our Vocational-Technical Center facility contained 28,000 square feet. Courses being offered at that time were Technical Drafting, Electronics, Electricity, Machine Shop, Vocational Agriculture, Welding, Sheet Metal, Cabinet Making, and Auto Mechanics. Through the construction funds available under the new Act, we were able to build an addition to our facility of 24,000 square feet in 1965 and a second addition to our facility of 28,000 square feet in 1967.

These added facilities enabled us to expand our course offerings and to add courses in Electronic Data Processing, Refrigeration and Air Conditioning, Printing, Auto Body Repair, Orientation to Health Occupations, and four non-farm agriculturally related occupational courses within our Vocational Agriculture Department for senior high school students. Since the passage of the Act, we have also expanded our curriculum at the 5 senior high schools to offer three occupational training courses within our home economics department and Vocational Secretarial Practice in business education.

Since 1968 the Springfield School District has purchased 6.8 acres of land to the east and south of the Graff Area Vocational-Technical Center. On a portion of

this land a new 45,300 square foot facility has been constructed for the expansion of secondary and post secondary programs. This facility will enable us to offer four new occupational areas to secondary students and six new occupational areas to post secondary students. New courses for high school students will include Plumbing, Food Management and Service, Merchandising and Sales Management, and Multi-Occupations (for the academically handicapped students). At the post secondary level, the new courses will be Industrial Management Technology, an Associate of Arts Degree in Nursing, Environmental Science Technology, Clerical Science, and Dental Hygiene. The new facility also makes it possible for us to offer post secondary education in both daytime and evening hours.

The Springfield School District has always worked very closely with our associates at the Missouri Employment Office. We have secured their aid in determining employment needs in order that new courses may be developed to meet these needs. The above new courses are being implemented after surveys by the employment service people deemed them essential.

Vocational and technical education is high on the priority list of our local community and our local school administration when it comes to funds for education. The rapid expansion of both facilities and programs reflects millions of dollars of local support to this type of education for our youth and adults. As a result of these efforts, enrollment has increased very rapidly. In 1963 there were 145 secondary students enrolled at the Graff Area Vocational-Technical Center; in 1968 there were 480 students enrolled; and, in 1971, 750 students are enrolled. The present enrollment reflects an increase of 56% since the passage of the Vocational Amendments of 1968.

Salaries of our vocational and technical staff have been increased 36% since the passage of the Vocational Amendments of 1968. A portion of this salary increase is a result of increased vocational education funds which are being channeled to the local school district. With these funds we are better able to attract and hold qualified instructors.

We have been able to upgrade and update our equipment in the vocational-technical programs through additional funds made possible through the Vocational Amendments of 1968. New equipment needs to a total vocational-technical program is a function of our local advisory committees. Every effort is made to provide machinery that will be found in our automated industry by both our youth and adults.

We have been very proud of the improvements that have evolved in our vocational-technical program as a result of the Vocational Education Act of 1963 and the Vocational Amendments of 1968. We are also proud to relate that local industries are accepting our product--youth with a marketable skill. A recent 5 year follow-up study of graduates from the Graff Area Vocational-Technical Center revealed that 40% of these graduates were working in jobs for which they received training while in school, 25% were working in a related job to that for which they were trained at the Center, and the remaining 35% were employed in unrelated occupations, attending college, or in the armed forces. Not one graduate in this follow-up study reported himself as being unemployed.

In 1963 we had 86 students in our post secondary program. These students were enrolled in Mechanical Technology, Electronic Technology, and Practical Nursing. By 1968 the enrollment in post secondary courses had increased to 210 students. The new courses offered were Electronic Data Processing, Surgical Technician, Dental Assistant, Ward Clerk, Auto Mechanics, Auto Body Repair, and Welding. Since 1968, our post secondary enrollment has increased to 325 students, which represents a 54% increase during the past three years. In 1969 and 1970, one major U.S. industry offered employment to all of our graduates in Electronics, Mechanical Technology and Data Processing, with the minimum starting salary of $600 per month.

The adults of our industrial city are becoming more and more interested in improving their competencies. Our evening extension and apprenticeship training enrollments have increased tremendously. Enrollment has grown from 903 adults in 1963 to 2,121 students in 1968; and to 2,772 students in 1971. This represents a 37%

increase in enrollment during the past three years. To quote the vice president of manufacturing for one of the nation's leading manufacturers, "Literally thousands of assembly workers, operators, repairmen, testers and middle managers have been subjected to courses of various types in the Graff Area Vocational-Technical Center. The results have been exemplary and the corporation is now blessed in Springfield with one of the finest color television plants in the entire industry."

As of this date the unadjusted unemployment rate for Springfield, Missouri, is 5.7% as compared to the national unadjusted unemployment rate of 6.6%. We would like to think that the training opportunities in Springfield for youth and adults in vocational and technical courses have attributed to a higher employment rate in this area.

One of the newest program developments since the passage of the Vocational Amendments of 1968 has been our program for the academically handicapped student. These courses are known as Multi-Occupations, and learning experiences are provided in certain semi-skilled and single-skilled occupations such as service station attendant, metal machine operator, wood machine operator, custodian assistant, yard and garden maintenance, and minor landscaping. This program is now being provided for 100 students who are academically handicapped. The new facility, just completed, contains 5 shop and laboratory areas for providing programs for these students with special needs.

Since 1968 we have been able to employ a vocational counselor and placement officer at the Graff Area Vocational-Technical Center. This one addition to the ancillary services of the school has made it possible for more youth to receive guidance and counseling and to assist them in securing employment upon graduation or upon the date they leave school. This Act has also made it possible for us to add one additional assistant director who may devote his attention to the counseling and guidance of adults with special needs and job skill training.

Similar gains in vocational and technical education are in evidence throughout our State of Missouri as a result of the Vocational Amendments of 1968. New programs

have been developed and old ones have been expanded in accord with the new philosophy of vocational-technical education portrayed in the Amendments of 1968 as it relates to programs for secondary students, post secondary students (including those who have dropped out of school), for persons already in the labor market desiring to upgrade or improve their competencies, and for students with special needs and the construction of new area vocational-technical schools, vocational guidance and counseling, and ancillary services, including development of instructional materials to be used in vocational-technical education programs. Since the passage of the Act in 1968, eight new area vocational-technical schools have been constructed plus additions to existing schools with total costs amounting to $17,381,352. Secondary school enrollment has increased from 71,928 students to 97,054 students, representing a 35% gain within the past two years. Post secondary enrollments have increased from 6,190 students to 9,068 students, representing a 46% gain. Adult enrollments in 1968 totaled 31,656 students and in 1970, 38,216 students, representing a gain of 27%. The largest gain in providing vocational-technical education has been in the area of students with special needs, including both the disadvantaged and the handicapped. In 1968, Missouri had 1,198 students enrolled; in 1970, 12,485 students, representing a gain of 942%. During the past two years, $62,000 has been allocated annually to an instructional materials laboratory at the University of Missouri in which ten new curriculum outlines have been developed and five have been revised. This is a service that benefits all students through a better instructional program.

Our vocational education work-study program in Missouri has increased from 4,500 students in 1968 to 7,500 students in 1970. Thirty-five new teacher-coordinators have been prepared for this program in workshops during the past two years with twenty-four new programs having been organized throughout the state since the Amendments of 1968.

Interest in vocational and technical education by educators, industrialists, labor leaders, business men and parents during the past two years has been tremendous. The people in our state are very enthusiastic about the opportunities now being

afforded youth and adults in occupational training opportunities. Vocational educators have gratefully accepted the challenge given them by Congress through the passage of the Vocational Education Act of 1963 and more recently the Vocational Amendments of 1968, and we are most appreciative of this interest and support for vocational and technical education by the Congress.

Having the responsibility for both regular vocational programs and remedial programs for Manpower Development, I am a firm believer that more emphasis placed on regular vocational programs would greatly reduce the need for remedial training programs.

From my testimony you will see that the development of preventive vocational education as compared to remedial vocational education has involved long range planning. This is a necessity because not only federal funds are expended but also state and local funds must be provided. To construct buildings, provide staff and laboratories, enroll students and prepare curricula requires much thought, deliberation and planning. We think that vocational-technical education is making rapid strides to meet the training requirements of our youth and adults, and we feel this has been made possible through Congressional legislation with continuing authorization. To place time limits on this type of long range planning would create chaos in many instances. Though appropriations may change from year to year, we have always known since the Smith-Hughes Act of 1917, a vocational-technical program of some magnitude will be made available to the citizens of this nation.

Mr. Chairman, I thank the committee for its wholehearted support to vocational-technical education, and may I also express myself in favor of the pending Senate Bill 659. My only plea to the Committee is that this legislation, like all vocational legislation in the past, be made a continuing authorization.

Senator PELL. Thank you very much, indeed. This subcommittee has great interest in vocational education programs and believes equal treatment of it important. I wonder if you would care to comment on whether you think the 1968 amendments have lived up to expectations and how satisfied you are with the way the program is operating with the Office of Education?

Dr. OLIVO. Mr. Chairman, my written testimony indicates the grave concern for a professional unit within the Office of Education. I did make some suggestions that there was needed an accountability at the national level, and my verbal statements were to the intent that there should be established positions at high enough levels so that there could be the proper accountability and suffient numbers of persons depth, so that we truly might carry out the mandates of the vocational educational amendment and all of its purposes. My remarks also indicated that whether this unit was located within the Office of Education, the Department of Health, Education, and Welfare or elsewhere, was secondary to the establishment of a vital and accountable body at the Federal level.

We do need Federal accountability and Federal leadership.

Senator PELL. I realize since it was in your testimony and you mentioned it earlier. But to be more specific, if you were the Secretary of HEW, what would you do?

Dr. OLIVO. What would I do? I would carry on an educational revolution that I mentioned before, a peaceful one, a revolution meaning complete turning around. One of the first paragraphs of my testimony indicates that vocational education, not general education, is truly the mainstream of an education and manpower training program. Within that mainstream is general education. And if you analyze the curriculum, the facilities, the staff, the costs, the services, numbers . . . you will only come to one conclusion . . . that vocational education is the focal point and not one that is subservient to general education.

I would change the tenor of the whole administrative setup and start with the establishment of standards for service of commissioners of education within each of the States, who do not truly know what a total educational program is . . . all of the components of education . . . and whose directions and priorities always move away from vocational education.

Senator PELL. What you are saying is that as of now vocational education is treated as a second-class citizen in the Office of Education, but you believe that elementary and secondary education should flow from vocational education?

Dr. OLIVO. Very definitely in terms of these factors that I identified, and I will repeat them. After you analyze the curriculum, the honest curriculum, determined by analysis and not by conjecture or pressure; if you examine the needed facilities, the staffing, the cost, the students . . . you would come to that one conclusion, that it is the mainstream.

Senator PELL. Well, I certainly do agree that it should be blended into the same hole, and I do not think it is presently blended into the same hole.

Dr. OLIVO. As I make that statement, I am talking from a lifetime of experience with at least 8 years working directly with elementary

and secondary curriculum and other periods in dealing with higher education. You will find in my testimony a comparative chart indicating that we have 69 positions relating to services to 8.8 million today which should increase to at least 20 million if we are to truly serve. As you take a look at the structure within the Office of Education, you can only come up to one decision, that the commitment is not toward service to the greater majority of youth. It is still in that elitist elitism and snobbishness we have had in the educational community.

Senator PELL. I admire your enthusiasm.

Dr. OLIVO. My enthusiasm is supported by some facts, sir, and experience.

Senator PELL. Probably more than I have. I have just been chairman of this committee for 3 years.

Dr. OLIVO. I am still learning.

Senator PELL. I think there is room for both, and I agree with you that not enough support has been given to vocational education. I do not agree with you in your criticism insofar as elitists—we could go on that argument for a long time.

Dr. OLIVO. We see within the national level a need for tremendous coordination. We are not talking about increasing the budget. We are talking about the reestablishment of priorities and the reallocation of sums that should be coordinated in the development of manpower. We are talking about the 80 percent of the youth who do not complete a collegiate program, so we are talking about the majority of our people.

Senator PELL. Are you also making it possible for continuing education and development in the skills long after they are out of school?

Dr. OLIVO. This is why we are talking about a continuing appropriation for we have not been able to achieve what you wanted to have achieved in service to youth and adults in the numbers that need it.

Senator PELL. Permanent continuing authorizations in the field of education are questioned. I would personally support them.

Mr. BURKETT. Under part B of this act, it has been continuing—as it has been in all the vocational education acts. This amendment proposes to have the authorization under part B terminate on July 1, 1975, as we read it.

Mr BERRYMAN. I would just like to make one comment regarding Dr. Olivo's statement as to what he would do if he were Secretary of HEW. I would like to be able to have my Senator Eagleton, in conversing with me, to be able to refer to the Bureau of Adult Vocational Technical Education as somewhere besides down the hall from the custodian's office.

Senator PELL. That is a good point. I thank you very much indeed for your testimony.

Our next witness will be Dr. Marjorie East, representing the American Home Economics Association.

Your testimony will be printed in full at the end of your testimony.

STATEMENT OF DR. MARJORIE EAST, DEPARTMENT HEAD, HOME ECONOMICS EDUCATION, PENNSYLVANIA STATE UNIVERSITY, UNIVERSITY PARK, PA.

Dr. EAST. I can say, very briefly, that home economics is an important field in the secondary schools; and that vocational education money helps support it.

I wish to emphasize, very briefly again, that home economics does contribute especially to the poor family and to the families that are on welfare. It is particularly important to these people. Girls who are either poor or of less than average IQ, will surely be taking home economics. We reach all girls and many boys. But we know we are going to work for a longer time with the poor girls.

We can do special things for these girls. We help them understand nutrition. We talk with them about child development. We help them spend money wisely. We help them to understand and to build happy marriages. We are concerned about the very things that keep these families from succeeding in our economy. The subject matter of home economics is important. You know that. I do not have to elaborate.

I do want to support the concept of earmarking funds for consumer and homemaking education. There are particular reasons that we think this is important. Earmarking is the same basic concept on which the vocational acts were developed; the whole idea of vocational education needs some kind of earmarking, some kind of special notice, or it gets lost among the other kinds of pressure. This is true for home economics. If there is not earmarking of funds for home economics, the pressure of business and industry in local communities and in States will squeeze out home economics. You just heard testimony suggesting that a community is more likely to get industry to come there if it has a good vocational school. State and local school boards are more likely to have representatives of local business and industries, than spokesmen for homes and family life. These kinds of pressures are bound to be reflected in the actions of the State and local school boards.

Consequently, we who represent families, who are a majority but treated like a minority, we feel that it is wise to have these earmarked funds established, not at the local level, but on the Federal level.

REVENUE SHARING AND CONSOLIDATION

Senator PELL. Now, this is one of the basic issues between the majority of this committee and the present Administration. I do not think we are going to have much success for earmarking funds for home economics. I would think that the tendency is more toward combining than separation at this time.

Dr. EAST. I understand that, there is such a danger, but we think this would be a mistake.

Senator PELL. I think so too, and yet as one who has studied this philosophical problem, I must say we have a great deal of categorical aid programs, I think it is 128.

Dr. EAST. I am talking about part F, of the Vocational Education Act, the consumer and home making funds, which have been earmarked. We hope that they remain so, as I say, to protect these funds from various kinds of pressures at the local level.

The whole concept of funding of vocational education rests on earmarking money for it, rather than just letting it take its chances within the whole pool for education. It is the same concept that we would hope to continue for the part F funds.

Senator PELL. As you know, under the administration proposal, there would be no earmarking of Federal funds, except for five general

areas, if the so-called revenue sharing is fully worked out—there would be other programs left, but the general programs would be combined.

You should make others around the country aware of your views, and the representatives can be informed of your thinking. You ought to do it quite quickly.

Dr. EAST. We will try to do that. We feel that not only does the earmarking prevent local pressures from swaying the good judgment of the local school boards and the State school boards, but also it allows for some kind of continuity of planning.

You asked some of the other persons who have presented statements about what has happened with the amendments of 1968. After the 1963 bill, it took a long time before we ever got any money. We got promises; we had high hopes and made big plans but the money just did not turn up. In fact we were cut back for a few years after 1963, because there was not enough money. Of course we must assure appropriations as well as authorizations. But nevertheless if consumer and homemaking education does not have some continuous steady funding the programs will surely suffer.

CHOICE ON PENDING LEGISLATION

Senator PELL. For the record, of the two bills before us, the committee bill S. 659 and the Administration bill, which would you prefer?

Dr. EAST. I would much prefer the committee bill, because it retains and extends the same plan we have had.

Senator PELL. Thank you very much. Your testimony will be printed in full in the record, and thank you Dr. East, for being with us today.

Dr. EAST. Thank you.

(The prepared statement of Dr. East follows:)

AMERICAN HOME ECONOMICS ASSOCIATION

2010 Massachusetts Avenue, N.W.
Washington, D.C. 20036
202/833-3100

A STATEMENT

BEFORE THE SUBCOMMITTEE ON EDUCATION,

COMMITTEE ON LABOR AND PUBLIC WELFARE

UNITED STATES SENATE

IN SUPPORT OF S659

BY THE AMERICAN HOME ECONOMICS ASSOCIATION

BY MARJORIE EAST, SECRETARY

I am Marjorie East, Head, Department of Home Economics Education, The Pennsylvania State University, University Park, Pennsylvania, and secretary of the American Home Economics Association.

The American Home Economics Association is glad to express its support of S659, especially Section 204, which would retain the present earmarked status of funds for consumer and homemaking education.

Our Association represents a membership of about 35,000 professional home economists, all of them with baccalaureate or advanced degrees. They are teachers in schools, colleges and universities, and in the Extension Service. They are dietitians and food service managers. They are employed by businesses, industries, and government services. They work in research, finding new knowledge, and they also apply research findings to the most

practical matters, speaking with ordinary people in everyday language. Whatever their special job or special expertise, home economists work for the well-being of individuals and families, the improvement of homes, and the preservation of values significant in family life.

Home economics is the favorite subject of girls according to a recent Educational Testing Service survey. Virtually every girl in the country takes a year or more of home economics instruction, and many of the boys study child development, consumer economics, family life education, or nutrition.

Secondary school vocational home economics teaches specific salable skills to some 115,000[1] students each year preparing them to earn their living in, for example, the food service industry or childcare agencies. It contributes to some 1,700,000[2] students each year information and skills which help them become better homemakers. Each year some 25,000[3] of these boys and girls go on from their junior or senior high school home economics classes into college programs which prepare them to become professional home economists. In addition, there are some 13,000[4] students enrolled in post secondary home economics programs and some 734,283[5] enrolled in adult education home economics programs. In all these ways vocational home economics contributes to the economically productive capacities of our citizens and helps more than two million people each year on their personal career ladders.

Home economics instruction reaches all girls in the public schools, but it is an especially important influence on girls from low income families who often are enrolled for three or four years of home economics before they leave school. These families have not been successful in our economy often because they are unable to plan ahead, to manage and control their meager resources, to maintain stable marriages, to control the numbers of their children, to keep healthy, and to get and keep a job. These are the very skills with which home economics is concerned.

Home economics develops that most important of all national resources, human resources. By teaching nutrition, it helps people to establish eating habits that insure many years of healthy productive life. It teachers consumer consumer education and family financial management to help people cope with the complicated marketing system in this time of the shrinking dollar. By teaching the principles of healthy child development, it helps to break the cycle of lawbreaking emotional cripples who bear and raise more such troubled and troublesome people. Edward Zigler, the Director of the new Office of Child Development, says, "For the total development of the child, we should not start at age three but rather with the potential parent before he or she is married."

Home economics contributes to the "employability" of people. Good workers come from well-managed homes and lead well-ordered lives. Stable family settings seem to contribute peace of mind and a confidence which in turn leads

to better relationships with employers, fellow workers and the public, to less absenteeism, and to quicker advancement.[7] Any employer knows that it takes more than a specific job skill to equip a valuable employee. For both women and men in the labor force, a stable well-managed home life is a necessary base for a maximally productive life.

Only recently are we becoming aware again of something our grandfathers knew perfectly well. Ironically, at the very time that more women than ever before are holding jobs outside the home, we are recognizing that homemakers also contribute economic productivity to the nation.[8] The fact is that if your wife goes across the street to her neighbor's home to work, to cater a company meal, to clean the carpets and upholstery, to act as an executive housekeeper or to be the child's nurse, then her earnings are part of the "gross national product." If she stays home and does the same thing, her efforts do not contribute to the gross national product. Maybe women should trade off: "I'll work in your house for a salary which I will pay back to you if you will work in my house." If a woman with small children were to be paid only the minimum hourly wage for her work in her own home, she would be earning approximately $6000 a year. The foolishness of overlooking the economic value of the homemaker has been noted recently by such economists as Kenneth Boulding,[9] James Morgan,[10] and Ismail Sirageldin.[11] There is talk of establishing social security benefits or other pension arrangements for homemakers. To the extent that the homemaker is trained specifically for the many facets of

her vocation she improves her economic productivity. Beyond the human capital the homemaker represents, her contributions enhance the contributions and the productive potential of her husband and her children.

Earmarking of funds for home economics has been true since the first Smith Hughes Act in 1917, for more than fifty years. This practice is based on the same principle embodied in the whole concept of federal funding of vocational education: to insure the implementation of a vitally important program which might otherwise receive a lower priority.

Within the vocational education budget for a state or a community, priorities are established among the many valuable programs and services. Considering the pressures from businesses and industries for trained employees, and the probabilities that these groups are represented on school boards, it would not be surprising if consumer and homemaking education were overlooked in a period of less than ample resources.

Also, without the assurance which comes from ear-marked funds, local programs are crippled. If lump sums are to be allocated each year by state or local decisions, long terms planning is difficult, promising new programs might be chopped off before results could be measured, and decisions about the budgets would be delayed for local action. Ear-marking of funds gives a steady assurance of basic continuity of support.

To insure the support of this vitally important aspect of the education of our people, we must rely on the long range view and prudence of wise legislators. They are able to use a philosophical position as well as economic and political factors in their planning for the nation. The American Home Economics Association supports the conservation of the earmarked status of funds for consumer and homemaking education.

Senator PELL. Our final witness is Dr. Edward Kabakjian, executive secretary, American Industrial Arts Association.

Dr. KABAKJIAN. We have a printed statement that has been submitted.

Senator PELL. It will be printed in full at the end of your testimony.

STATEMENT OF DR. EDWARD KABAKJIAN, EXECUTIVE SECRETARY, AMERICAN INDUSTRIAL ARTS ASSOCIATION, WASHINGTON, D.C.; ACCOMPANIED BY THOMAS HUGHES, STATE SUPERVISOR, INDUSTRIAL ARTS EDUCATION, VIRGINIA

Dr. KABAKJIAN. Good morning, Senator Pell. I am Edward Kabakjian, and with me is Thomas Hughes. Our association is presently engaged in completing its convention activities in Miami Beach, and it has been my pleasure to leave the convention activities to come before you this morning and express our interest in general education legislation and our concerns about the support that the Senate and agencies of Government are presently giving industrial arts programs.

Before I express the issue and the problem that faces industrial arts in the United States, I wish to give you some background in terms of who we are, and what the industrial arts is.

What I would like to do is to paint a picture of what the issues are with the hope you will have a few questions to raise and establish a dialog.

Senator PELL. The questions will depend entirely on how long a period of time you leave me.

Dr. KABAKJIAN. I understand that.

Industrial arts at the present time has about 51,000 teachers in the junior-senior high schools in the United States. It is estimated that we reach approximately 6 million children. This program is strongly tied to the general education format of the school program in which children of all educational goals and interests enroll in industrial arts, whether college bound or trade oriented. They participate in our program.

Now, there is a problem with the present 1968 vocational educational amendments, in that there is a lack of clarity in terms of the commitment by Congress for the inclusion or exclusion of industrial arts teachers and their students and programs in that particular act.

My constituents have informed me that they have polled their Senators, and it has been reported to them that the intent of Congress was to include industrial arts as a part of the funding of this excellent educational program.

The statement in the act which seems to be raising much of the confusion is one which under the definition of vocational education states that vocational education means, and I quote: "Instruction relating to the occupation or occupations for which the students are in training or instruction necessary for the students to benefit from such training."

We feel that industrial arts does contribute significantly to that intent. I would ask Tom Hughes to make at this time any further comments.

Mr. HUGHES. Senator, we appreciate this opportunity, and we commend those persons responsible for expanding visions to be accomplished in vocational education through the act of 1968.

Industrial arts profession, which we represent, believes that one of the functions of our program is described very clearly in the definition, and it is explained in our testimony. We have 51,000 teachers, professionally prepared, serving 6 million students, facilities and equipment to carry out this purpose.

The industrial arts profession is prepared and qualified to take that charge and see that youngsters, both boys and girls throughout this country, receive the full benefit of the intent of that law.

Senator, we believe the industrial arts profession can make a contribution, and we are willing to cooperate to see this mission accomplished by persons trained, concerned and dedicated to the cause of helping youngsters make occupational choices based upon meaningful experiences.

Thank you.

INDUSTRIAL ARTS—DEFINITION AND EXAMPLE

Senator PELL. Thank you.

As an example of industrial arts, would you cite a few that are working now?

Dr. KABAKJIAN. In our school programs?

Senator PELL. Yes.

Dr. KABAKJIAN. We have data that suggests approximately 77 percent of the junior-senior high schools in the United States offer programs of industrial arts to their students.

Senator PELL. My question is what kind of industrial arts courses are there? Are we talking of machinists, lab technicians, or what? Give me some examples?

Dr. KABAKJIAN. Industrial arts is the broad and general study of technology, which provides the child or student with gestalt of our technologies. One of the program goals is to help him make a better career selection.

Senator PELL. What does this mean exactly.

Dr. KABAKJIAN. For instance, we have programs in woodworking, metalworking, drafting——

Senator PELL. Would these be basically high school?

Dr. KABAKJIAN. Junior high school and senior high school.

Senator PELL. Not higher education?

Dr. KABAKJIAN. Our higher education programs are in the training——

Senator PELL. The teachers?

Dr. KABAKJIAN. Right. And there is serious industrial arts teacher shortage in the Nation today. Our testimony reports that the National Education Association says there is a serious shortage of industrial teachers—one of the few remaining critical areas.

We have approximately 240 teacher training institutions which prepare industrial arts teachers.

We have a two pronged concern here. Number one is that the Vocational Education Act clarifies intent, so that either industrial arts is intended to be included or excluded from the funding programs of that law.

Second, there has been a massive Federal support for the improvement of industrial arts curriculum in the last 10 years, and now that the curriculum has been developed, there is no vehicle for the dissemination of the findings of that research, and in the training of teachers to implement those programs.

What we need now from the Federal Government is support in our educational programs to provide facilities, equipment, and programs to train faculty necessary to prepare teachers for these new programs in the elementary and secondary school.

Senator PELL. In other words, you want much more—to be more specific?

Dr. KABAKJIAN. We want your bill more specifically carried out.

Senator PELL. In other words, at this point you feel yourself in a gray area?

Dr. KABAKJIAN. Very definitely.

Senator PELL. We will take this into account in drafting the bill, and I am struck with the statistics that you mention——

Dr. KABAKJIAN. 51,000 qualified industrial arts teachers.

Senator PELL. The average industrial arts teacher now has what kind of training and education behind him? What is required?

Dr. KABAKJIAN. In 1962 the U.S. Office of Education report indicated that 97 percent of them qualify as teachers, which means the minimum of 4 years of college. I think at that time there was 35 percent or 38 percent with masters degrees. I would suggest that percentage is higher now because of retirements and the recent tenure in education.

Senator PELL. The hope is that some of these young men will find they are particularly interested in one or another aspect of the trades they are learning and will go into it following completion of high school?

Dr. KABAKJIAN. Yes, very definitely.

(The prepared statement of Dr. Kabakjian follows:)

TESTIMONY PRESENTED TO
COMMITTEE ON LABOR AND PUBLIC WELFARE
SUB-COMMITTEE ON EDUCATION
OF THE
UNITED STATES SENATE

April 23, 1971

DR. EDWARD KABAKJIAN, EXECUTIVE SECRETARY
OF THE
AMERCIAN INDUSTRIAL ARTS ASSOCIATION
A Department of the National Education Association
1201 Sixteenth Street, N.W.
Washington, D. C. 20036

Mr. Chairman and Members of the Committee:

I am Edward Kabakjian, Executive Secretary for the American Industrial Arts Association.

I appear before you as a representative of more than 10,000 officers and members of the American Industrial Arts Association. The Association is composed of industrial arts teachers, supervisors, teacher educators and administrators who have a strong feeling for the contributions industrial arts is making and the potential it has in serving the best interests of our nation and the needs of its greatest resource--youth. The positions stated herein have been studied nationally and have been approved by the AIAA Executive Board.

We appreciate this opportunity to come before your committee to share with you our suggestions on how industrial arts contributes to the attainment of some of the educational goals as expressed in the Vocational Education Act of 1963 and the Vocational Education Amendments of 1968 (P. L. 90-576).

A U. S. Office of Education report published in 1965 entitled "Industrial Arts Education--A Survey of Programs, Teachers, Students and Curriculum" indicated that in 1962 there were over 40,000 industrial arts teachers in the public schools of our nation. In 1970 the American Council of Industrial Arts Supervisors reported a significant growth in the nation's total number of industrial arts teachers. They reported that approximately 51,000 industrial arts specialists teach an estimated 6,000,000 children.

Traditionally, these teachers and students have received most of their program support from local and state sources. Industrial arts represents a high cost instructional program which is becoming increasingly more difficult to finance with just local and state funds. It was not until 1966, when Public Law 88-665 (which included Title III of the National Defense Education Act) was modified to include the discipline of industrial arts that industrial arts teachers and students received minimal supplementary support for some programs from the Federal Government. Dollar for dollar Title III of NDEA has been one of the most effective methods of achieving substantive upgrading of the physical facilities, supervision, and quality of program in the subject areas mentioned in the Act. Unfortunately, however, the job is not done. We have a long way to go. We urge the continuance of the programs and funding levels of both the NDEA and ESEA.

Of specific concern here, however, is the confusion in the minds of some over the intent of Congress relative to the inclusion of the subject area of industrial arts in the Vocation

Education Amendments of 1968. We believe that clarification of the intent of Congress is necessary in order to alleviate the confusion resulting from differing interpretations of the law.

Personnel in the U. S. Office of Education have taken a very narrow interpretation of law in question, presumably based on the fact that (1) there is no precedence of inclusion of industrial arts in vocational education legislation and (2) there is no specific mention of the discipline of industrial arts in the present law. Others, however, have recognized a broadening of the educational objectives of vocational education legislation which has departed from the senior high school and adult specific skill development program goals of the original legislation of 1917. New legislation supports a more general program of vocational instruction from kindergarten through adult levels. The broadening of vocational education goals and the downward extension of the program to the elementary school are creating, in principle if not practice, a duplication of educational effort in vocational education and general education. The dual program objectives are a result of funding policies and administrative interpretation, not of educational or philosophic design.

You may be inclined to ask "What is the difference between industrial arts and vocational education?" On paper and to the untrained eye the two programs may appear to be doing similar things in the areas of trade and industry. In reality, they are not.

The youth who is enrolled in vocational education contrasts from those who have enrolled in industrial arts or home economics in that he or she has made a specific commitment to an occupational choice. The program of instruction in the vocational-technical school is designed to teach him the skills and concepts necessary for him to enter the trade of his choice and to facilitate his subsequent growth and development on the job.

Industrial arts holds the following four educational objectives as its unique contribution to the total general education of all children. They include:

1. developing in each student an insight and understanding of industry and its place in our society,
2. discovering and developing student talents in industrial-technical fields,
3. developing problem-solving abilities and consumer knowledge related to the materials, processes and products of industry, and
4. developing in each student, for both vocational and avocational uses, skill in the proficient and safe use of tools and materials.

Industrial arts and home economics are courses selected by the large portion of the student body who either (1) have not made final commitment concerning the direction of their future educational or training goals or (2) feel that the broad general approach to the study of technology will contribute to their success in their chosen destiny. They service the large mass of students in the elementary, middle school and high school who

want to understand the "world of things" and the "origin of things," whether in the home or in industry. Students want to know how the real world operates--what are its forces--what are the opportunities. Exploration of the world of technology with an emphasis on self identity contributes to a child's ability to make a discriminating selection of his best alternatives in life. While both home economics and industrial arts contribute to these understandings, the specific concern here is with industrial arts.

The previously mentioned U. S. Office of Education report substantiates the nationwide acceptance of these four objectives as the major areas of emphasis in industrial arts. That same report indicated that 83 percent of our nation's junior high schools (grades 7, 8 and 9) and 67 percent of its junior-senior high schools (grades 7-12) offer programs in industrial arts while 91 percent of the traditional high schools (grades 9-12) and 66 percent of senior high schools (grades 10-12) offer programs in industrial arts. It is estimated that these percentages are even higher today.

Industrial arts programs are presently available to large numbers of the boys and girls in the elementary, middle school and high school levels. Career information objectives for trade and industrial occupational areas of The Vocational Education Act of 1968 are currently being fulfilled in varying degrees in industrial arts programs. There is no need for the development of duplicated programs of instruction designed to satisfy educational goals presently being fulfilled by industrial arts.

60-433 O - 71 - pt. 3 - 25

There is neither need for nor justification for the dissipation of our limited financial resources for duplicate effort. Career guidance and career information can effectively flow from existing school programs and facilities. Funds are needed to supplement local and state support of industrial arts education to assist it in achieving the career and occupational objectives in a more effective manner.

Industrial arts is a subject matter area whose teachers are charged with the responsibility of teaching young people about that segment of our culture which is not only experiencing a great amount of change but also experiencing a rapid change rate--technology. The in-service preparation (upgrading) of industrial arts teachers is a critical national need. The preparation of new personnel to fill the many vacancies in industrial arts classrooms is also acute. According to a recent National Education Association study on teacher shortages in the United States, industrial arts represented one of the few areas of the school faculty where there was still a serious shortage, while other subject areas were showing a surplus of available manpower.

There is a need for continued Federal support to close the gap between what the profession says it wants to do for youth in America and what it is presently achieving. The 1965 USOE study by Marshall Schmitt reported that "current industrial arts curriculum does not even measure up to the program recommended by the profession 10 to 20 years ago." The conditions are not much different today despite the contributions of the

Education Professions Development Act, which unfortunately made institute programs available to only two percent of our nation's industrial arts teachers between 1967-1969.

State level coordination and supervision of industrial arts programs by trained specialists in the field is still a need in ten or our fifty states. Additional staff is required to complement the efforts of those specialists currently in forty of our state departments of education. States need Federal support to supplement their efforts in this matter, as well as seed money to provide needed impetus where none now exist.

These are but a few of the areas of concern that we have for the educational programs which provide practical experiences and insights for youth to aid their understanding of the technological society in which they will live and work and to which they are expected to make some contributions.

How, then, might we move to resolve some of these problems which affect a large segment of our school population?

One of the phrases in the present law which appears to be creating the greatest amount of confusion is the part of the definition of the term vocational education which means "... instruction related to the occupation or occupations for which the students are in training <u>or instruction necessary for students to benefit from such training</u>." Because industrial arts has not been a part of previous vocational education legislation and it has not been spelled out in name anywhere in the act, the

U. S. Office of Education has accepted a narrow interpretation of the latter portion of this phrase. Their official position is that industrial arts was not intended to be included under the provisions of the Act.

This position is counter to what we have been led to believe was the intent of Congress as reported by many of our constituents who have polled their congressmen. It is our understanding that the public law in question intended to support the development of elementary, middle school and high school programs which would contribute to a child's understanding of the nature of work, perceptions of self in terms of his interests and abilities relating to future occupational opportunities, and instruction which would contribute to future success in job training. As we have already noted, industrial arts already contributes to the attainment of these purposes.

The program goals of industrial arts have always had occupational literacy, development of the tactile senses and motor skills, and understanding of basic concepts of industrial technology among its objectives. Attitude development in the area of safety, craftsmanship and cooperative work habits have been other related program goals upon which industrial arts has set its sights. Consumer knowledge and self-awareness are often recognized as program benefits.

The industrial arts program is a study of the goods producing technology of America is not only essential to our national economy, but also adds great convenience, pleasure and comfort to our lives. The knowledge of technology and the knowledge of self

that each child derives from his or her experiences in an industrial arts laboratory has many applications. Career selection and occupational literacy represent some of those many program benefits.

The American Industrial Arts Association urges your consideration of clarifying your earlier intentions concerning the funding of educational purposes. Specifically, is it your intent to support 51,000 college trained and properly certified teachers of industrial arts and the millions of children they teach or to by-pass them? Is it your intent to support educational programs which already exist or to finance and create duplicate facilities and programs?

American education needs a new and broader Act to include the teaching of our technological culture and local efforts in providing children with quality educational experiences which will contribute to their usefulness and success as citizens in the year 2000. Industrial arts is a key to the solution of some of our educational problems and can contribute significantly to the attainment of our national goals. The United States of America is dependent upon your leadership in identifying our nation's resources and in making wise and efficient use of them. The American Industrial Arts Association looks upon the 51,000 dedicated teachers of industrial arts as a valuable national resource worthy of your recognition and support.

We respectfully submit the following suggestion for modification of the Vocational Education Amendment of 1968 (P. L. 9-575)

as a means of clarifying your intentions regarding industrial arts:

TITLE I - VOCATIONAL EDUCATION

PART A - General Provisions

DEFINITIONS

Sec. 108. For the purpose of this title -

(1) The term "vocational education" means vocational or technical training or retraining...; (and such term include industrial arts programs at the elementary and secondary school level which include skill development and occupational information which facilitate future success in occupational choices and specialized occupational training;) and such term include vocational guidance and counseling...

TITLE I - VOCATIONAL EDUCATION

(Part J - INDUSTRIAL ARTS EDUCATION)

FINDINGS AND PURPOSE

Sec. 201. (a) The Congress finds that industrial arts contributes significantly to the occupational literacy and career orientation of young people. Laboratory instruction in industrial arts provides youth with meaningful experiences that enable them to acquire knowledge, skills, and appropriate attitudes leading to meaningful decision making as it relates to career selection and subsequent training. Such programs remove the artificial barrier between classroom-learned concepts and the world of reality. Problem structured experiences with tools, machines, materials and processes coupled with instructional content on industrial technology provides a broad base understanding of the organization and operation of industries.

Individual goals of self-realization, success, purposeful living, and knowledge of the options available in life are obtained. Interest in the trades and vocations associated with manufacturing, construction and service industries contribute to vocational choices in these areas.

(b) (1) It is the purpose of this part to assist states in providing supplementary support for (A) the improvement of industrial arts curriculum in order to assure each student the opportunity to develop his or her maximum potential through laboratory experiences, (B) in-service education for industrial arts teachers to improve their technical and professional competence, (C) supervision and coordination of local and state level programs of industrial arts, (D) costs incurred by teachers while participating in in-service education, (E) ancillary services, activities and other means of assuring quality in all industrial arts education programs, such as teacher preparation and supervision, curriculum development research, program evaluation, special demonstration and experimental programs, development of instructional materials, provision of equipment, and state administration and leadership.

(2) At least one third of the Federal funds made available under this section shall be used in economically depressed areas or areas with high rates of unemployment of secondary school graduates.

(3) Such funds allocated to industrial arts be administered at the national, state, and local levels by industrial arts personnel.

In conclusion I wish to report that there is widespread national support for greater equity in educational funding as it relates to youth in our elementary and secondary schools. Organized interest for federal support for the improvement of industrial arts is found in official action by the National Association of Manufacturers, American Vocational Association, and the American Industrial Arts Association.

The American Industrial Arts Association took action on a resolution which supports the equitable funding of all subject matter fields on April 7, 1970. It stated:

> "Resolution. WHEREAS, industrial arts is designed to meet the complex and diversified needs of the students in the American school from elementary through secondary levels, and has demonstrated its ability to meet this commitment in the context of general education, and
>
> WHEREAS, the U. S. Office of Education and other Federal agencies are fostering a dualistic approach to the education of our nation's youth, and
>
> WHEREAS, results of recent studies and evaluations show that many of these legislative programs are not meeting the intent of the U. S. Congress and are not fulfilling the requirements of the students in the schools of our nation,
>
> THEREFORE BE IT RESOLVED, that industrial arts teachers, supervisors and teacher educators of the AIAA oppose the support of this dualistic approach to education, and
>
> BE IT FURTHER RESOLVED, that the AIAA support the development of a single program directed toward the relevant problems of students in today's society and
>
> BE IT FURTHER RESOLVED, that the U. S. Congress provide equitable funding for all subject matter fields involved in this single approach to the general education of all of the nation's youth."

The American Vocational Association at its annual meeting in New Orleans on December 9, 1970, adopted the following policy resolution:

"9. Role of Industrial Arts in Career Development

WHEREAS, students in today's schools, especially the disadvantaged and the handicapped, have special need for occupational exploration for understanding the world of work; and

WHEREAS, Industrial Arts programs can make major contributions to occupational exploration by providing hands-on experiences;

THEREFORE, BE IT RESOLVED, that the American Vocational Association continue to support Industrial Arts as contributing to career development through occupational exploration and providing a base for vocational programs; and

BE IT FURTHER RESOLVED, that the American Vocational Association encourage Congress to include Industrial Arts in future legislation relating to the Vocational Education Amendments of 1968."

The National Association of Manufacturers further underlined the need for the improvement of industrial arts programs and the generalizing of vocational education in the educational policy passed by its Board of Directors at its annual meeting on December 2, 1970. The educational policy which directs specific attention to vocational education states:

"The social and economic well-being of large numbers of high school students who seek employment directly upon graduation is largely dependent upon the effectiveness of their elementary and secondary education programs in preparing them for participation in the world of work. Industry believes that many vocational education programs do not adequately meet the occupational training needs of the student or industry's manpower requirements.

To improve the effectiveness of occupational education in providing students with the qualifications needed to get and hold a job, industry believes:

1. All students' learning experience should include general orientation to the world of work beginning with the elementary grades, and industrial arts programs at the intermediate grade levels should be kept up-to-date to reflect advancing technology.

2. Secondary vocational education students can be served better by programs which integrate both academic and occupational training into a total environment education to provide students with the opportunity to develop social and self concepts, proper work attitudes, adequate reading and computational skills, a desire to achieve, as well as general occupational education rather than over-specialized training..."

The American Industrial Arts Association respectfully urges your consideration of clarifying the intent of the Vocational Education Amendments of 1968 as it relates to the question of whether industrial arts education is to be included in the funding of the law.

Senator PELL. Thank you very much indeed.

I thank you all for being here.

At this point I order printed all statements of those who could not attend the hearing and other pertinent material submitted for the record.

May 14, 1971

Honorable Claiborne Pell:

What is the intent of Congress on the inclusion of Industrial Arts in the 1968 Vocational Education Act? We have been preparing students from the 7th grade thru the 12th for too many years in vocational needs and not being properly recognized financially from the Federal Government.

We have all kinds of laws to keep young people in school but no funds to help make them a useful citizen through Industrial Arts Education.

I urge your support of the testimony presented by the American Industrial Arts Assn. on April 23, 1971, to the Labor & Welfare Subcommittee on Education.

Please reply to me as to your position on this matter.

Sincerely,
Charles E Earhart

May 21, 1971

The Honorable Claiborne Pell
U. S. Senate Office Building
Washington, D. C. 20510

Dear Mr. Pell:

As a member of the Education Subcommittee of the Senate Labor and Public Welfare Committee, I am requesting clarification of the intent of Congress regarding the inclusion or exclusion of industrial arts in the 1968 Vocational Act.

It has been impossible to get funding or approval for any new vocational facility for anything which resembles an industrial arts program. In order to offer youth an exploratory experience dealing with industrial practices, the name of the program has to be changed and is controlled by the Division of Vocational Education instead of industrial arts which is under the Division of Secondary Education.

There is a large percentage of students who want vocational experience, but are forced into a strictly academic experience because of block time scheduling needed for a local school system to receive vocational funding.

I am concerned that rigid guidelines are separating our education system more into two avenues; academic and vocational. The guidelines do not give educators the opportunity to study the experience which is needed to fulfill that particular objective for a specific group of students and to work toward that goal. One group might need 40 hours of instruction to fulfill the objective, and another group might need 240 hours, depending upon the intent of the participant. Why should the student who is studying that body of knowledge about industry or the world of work to become familiar with it, be penalized by not having the availability of federal funds to help local school systems with equipment and teachers to do the job? This type of education does require equipment similar to that, or the same as that mandated by the Division of Vocational Education, and we urge that vocational monies be used to support such industrial arts programs.

I would like to recommend that you support the testimony which was presented by the American Industrial Arts Association on April 23, 1971 to the Labor and Welfare Subcommittee on Education.

I will be looking forward to your reply regarding your views on federal funding for industrial arts programs in the elementary and secondary schools.

Sincerely yours,

Jack N. Ford

Jack Ford

May 18, 1971
Jackson, Ohio

Senator Claiborne Pell, Chairman
Education Subcommittee
U. S. Senate Office Building
Washington, D. C. 20510

My Dear Senator:

Congratulations on your role as Chairman of the Education Subcommittee. Your task I'm sure is not easy.

I take this opportunity to solicit your views in relation to clarification of the intent of the Vocational Education Act of 1963 and the 1968 Amendments as they relate to industrial arts. To me, it is imperative that industrial arts be categorically included in the above mentioned act and amendments.

As a citizen of the Appalachin area we are shamefully affected in that we are unable to satisfactorly finance our industrial arts programs with local funds. State funding of industrial arts in Ohio is nil.

I urge you to support the testimony presented by the American Industrial Arts Association on April 23, 1971, to the Labor and Welfare Subcommittee on Education.

It is to everyone's advantage that youth enrolled in industrial arts courses are entitled to receive the best possible program our nation can offer in studying our industrial culture and its technology.

Please respond to this communication relating to your position on this matter and as to your intent to put the proposed changes into law. Thank you.

Very truly yours,

C. Richard Lanier

C. Richard Lanier

CRI:sel

CENTENNIAL 1870 1970

May 12, 1971

The Honorable Claiborne Pell
U.S. Senate Office Bldg.
Washington, D.C. 20510

Dear Senator Pell:

This letter is being written to enlist your support for gaining categorical aid for Industrial Arts Education within the interpretations of the 1968 Amendments to the Vocational Education Act of 1963, as well as in any future amendments to this act or in related new legislation. Also, I urge your support for the testimony submitted to the Senate Labor and Public Welfare Committee on Friday, April 23, 1971. Finally, I urgently request that you send me a statement of your position in regard to the above testimony.

When vocational education included only specific job training, during the period 1917 to 1963, more generalized studies in business, home economics and industrial arts education did not receive specific categorical mention. Only one of these subjects, home economics, received substantial aid for general citizenship education throughout this period.

Throughout the United States, from 1917 to 1963, one could only tell most vocational home economics classes from non-vocational ones by checking in the school office to see which classes were taught by teachers whose salaries were partially reimbursed by federal vocational monies. The principal focus of all home economics courses was and remains general knowledge and skill for home and family living and family cooking and sewing. We males never complained because comparable support, throughout nearly half a century, was never provided for industrial arts classes in which boys learned comparable knowledge and skills for general citizenship purposes.

Now that Congress has broadened its definition of vocational education to include anything that in any way relates to wage-earning occupations, such as kindergarten field trips within the community to see people at work, continued exclusion of support for all business, home economics, and industrial arts is an injustice which cannot be logically defended or morally condoned.

Please review the above-mentioned testimony and let me hear from you whether you can support the position that the four million youth who annually study industrial arts should benefit from vocational funds. Please do lend your support to providing categorical aid for industrial arts within the provisions of the new vocational legislation.

Sincerely yours,

Donald G. Lux

Dear Sir:

For some time I have been deeply concerned regarding the final disposition of the Vocational Education Act of 1968, of which I understand you are the chairman.

I am concerned because I have given over 30 years of my life to teaching in the field of Industrial Arts, which is not even mentioned in your bill. Vocational and Industrial Education vary greatly, although there are great similarities between them.

I urge you sincerely to include the Industrial Art program in this bill, otherwise you will see many good teachers, whose skill, experience and background are needed, leaving the field. I speak for myself.

Please write me concerning your stand on the bill and what you think its outcome may be.

Sincerely,
Lowell McMechan

January 18, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

Enclosed is a resolution recently passed at the convention of the American Vocational Association in New Orleans, Louisiana.

This resolution is particularly significant because it brings to bear a concentration of government support to industrial arts programs which for years have developed an awareness of vocational related skills in youngsters at elementary and junior high school levles. It brings together the two areas of industrial arts and vocational education in a manner very clearly explained in the resolution.

AVID Corporation's interest in this resolution is very clear, since we have led the way in developing Travelab units which provide an industrial arts experience related to occupational exploration at elementary and middle grade levels in several school systems throughout the United States. As you are aware of the work we have done and since your work in the United States Senate is directly involved with programs of this type, I thought you should be aware of the resolution which will be coming to the attention of Congress in the very near future.

I am sending copies of this letter and resolution to the Chancellor of Education for the city of New York, the Director or Industrial Arts for the city of New York, and Senator Javitts, who has also expressed a great interest in this resolution.

Very truly yours,

E. V. Maxwell

Director of Industrial Arts, N.Y.

RESOLUTION

Role of Industrial Arts in Career Development

WHEREAS, students in today's schools, especially the disadvantaged and the handicapped, have special need for occupational exploration for understanding the world of work; and

WHEREAS, Industrial Arts programs can make major contributions to occupational exploration by providing hands-on experience; and

WHEREAS, programs in vocational education will be more effective in developing competencies needed in the world of work if chosen intelligently;

THEREFORE, BE IT RESOLVED, that the American Vocational Association continue to support Industrial Arts as contributing to career development through occupational exploration and providing a base for vocational programs; and

BE IT FURTHER RESOLVED, that the American Vocational Association encourage Congress to include Industrial Arts in future legislation relating to the Vocational Education Act of 1963 and the Vocational Education Amendments of 1968.

May 26, 1971

Dear Mr. Pell,

As chairman of the Senate Committee investigating the appropriation of money for the new vocational education I hope you will strongly support the opinion of making funds available for industrial arts in the new education bill.

Ohio is finding it difficult to support education financially because of the repeated failures of bond issues by the general public. The youth enrolled in industrial arts courses are entitled to receive the best possible program our nation can offer in studying our industrial technology.

I would appreciate knowing your position on this matter and your intent to put the suggested change into law.

Sincerely,

Thomas J. Moore

Supervisor of Industrial Arts

May 18, 1971

Senator Claiborne Pell
U. S. Senate Office Building
Washington, D. C. 20510

Dear Sir:

I am sure that the intent of the Vocational Education Act of 1963 and the amendments of 1968 was not to delete Industrial Arts Education. Yet the state plan in many states, Ohio, for example, does not permit allocation of funds for Industrial Arts Education.

Since Industrial Arts is the very basis for later Vocational Education and in many instances is the only avenue to Vocational preparation the Vocational Education Act should be amended to include this area within the funding.

Industrial Arts Education is not in conflict with Vocational Education. It serves as an adjunct.

The Industrial Arts Division of the American Vocational Association is of long standing and the AVA at the 1970 meeting in New Orleans the House of Delegates adopted Resolution No. 9.

"ROLE OF INDUSTRIAL ARTS IN CAREER DEVELOPMENT

"Whereas, students in today's schools, especially the disadvantaged and the handicapped, have special need for occupational exploration for understanding the world of work; and

"Whereas, Industrial Arts programs can make major contributions to occupational exploration by providing hands-on experience;

"Therefore, be it resolved, that the American Vocational Association continue to support Industrial Arts as contributing to career development through occupational exploration and providing a base for vocational programs; and

"Be it further resolved, that the American Vocational Association encourage Congress to include Industrial Arts in future legislation relating to the Vocational Education Amendments of 1968."

In view of the testimony presented to the Labor and Welfare sub committee on April 23, 1971 by the American Industrial Arts Association, may we urge your support to clarify the language of the Vocational Education Act to include Industrial Arts Education as an integral phase of the total program of Career Education.

Sincerely,

James O. Reynolds

May 16, 1971

The Honorable Claiborne Pell
U. S. Senate Office Building
Washington DC 20510

Dear Senator Pell:

Industrial Arts education has provided vocational training for millions of American youth for many years where programs of vocational education were non-existent. Industrial arts has made dynamic progress in its curriculum during the past decade as it strives to teach all boys and girls learning for living in our industrial and technological society.

With the spotlight focused on vocational education, local and state funding for industrial arts is not being adeqately supported.

I would like clarification as to whether Congress will or will not include industrial arts in the Vocational Education Act of 1968.

Your support for the testimony presented by the American Industrial Arts Association on April 23, 1971 , to the Labor and Welfare Subcomittee on Education will be greatly appreciated.

Would you please respond with your position on this matter and your intention to put these changes into law.

Very truly yours,

Howard R. Schramm

May 18, 1971

Senator Claiborne Pell
U. S. Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

May I express my concern about the youth enrolled in industrial arts courses and that they are entitled to receive the best possible programs our nation can offer in studying our industrial culture and its technology.

As a member of the committee considering the funding or not of monies for Vocational Education; what is your personal intent concerning the inclusion or exclusion of industrial arts in the revision of the 1968 Vocational Education Act?

Through strong efforts of industrial arts teachers and their programs being offered in schools today, they are of the best; but the problem of financing them on the local and state levels continues to become even a larger problem. The industrial arts programs of the past and present are greatly responsible for keeping students in school. The potential "drop-out" has been our problem for ever so many years.

I would urge your support for the testimony presented by the American Industrial Arts Association on April 23, 1971 to the Labor and Welfare Subcommittee on Education.

Would you please respond to me personally concerning your position on this matter and your intent to put the proposed changes into law?

I am a teacher of industrial arts at the present time and have been for over twenty years; so I am concerned for the students and their education for the future.

Sincerely,

William E. Stone

The Honorable Claiborne Pell
U. S. Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

It has come to my attention that there is a possibility that the Vocational Education Act of 1963 and the 1968 Amendments might be amended to include funding for Industrial Arts. For some time I have been very concerned, as an Industrial Arts educator and administrator, that Industrial Arts has been short-changed as far as funding is concerned. Because of the increasingly difficult situation as to state and local funding in general, Industrial Arts again is the program that suffers. I feel that Industrial Arts can and does play a very important role in the general education of our young people today, and I feel also that by not helping wherever possible in promoting these programs, we are hurting the student.

Because of the age of technology in which we live, Industrial Arts is an even more integral part of not only our educational system, but also of our social and economic structure. I would, then, urge you very strongly to support the testimony presented by the American Industrial Arts Association on April 23, 1971, to the Labor and Welfare Subcommittee on Education. Your attention and support to include Industrial Arts funding in the Vocational Education Act of 1963 and the 1968 Amendments would be very much appreciated by all of us in the field of Industrial and Vocational Education, and especially appreciated by the students involved.

Sincerely,

Garton Van Tassel

MS:mm
Enclosures

DECEMBER 10, 1970.

Senator JACOB K. JAVITS,
U.S. Senate,
Committee on Labor and Public Welfare,
Washington, D.C.

MY DEAR SENATOR JAVITS: There is enclosed a copy of my testimony before the Federal Trade Commission Hearings on commercial vocational schools held recently in Washington.

Of grave concern is the fact that schools which claim to be able to train students in medical technology do such a poor job of it. Not only are these schools approved by local departments of education but what is more disconcerting is that they are also accredited by self serving accreditation boards which have the blessings of the U.S. Department of Education.

Since "accredited" schools can have approval for federal funds, some of the enterprising schools are offering hospitals their subsidized graduates on a full or part time basis (see copy of letter attached). The temptation to take on such "cheap" help by hospital laboratories, which are not in a position to improve the student's competence, must be great.

In New York City the *Eastern School for Physicians Aides* has been accredited by the National Association of Technical and Trade Schools (NATTS), for training Medical Laboratory Technicians, as well as technicians in Hematology, Serology, Bacteriology, Clinical Chemistry and Histology. The American Medical Technologists (AMT) has accredited this school in more general terms, "Medical Laboratory Technology." Other schools accredited in New York by NATTS are *Mandl School for Medical and Dental Assistants* (in N.Y.C. and Hempstead), *Manhattan Medical and Dental Assistants School*, and in Newark, Lyons Institute.

It appears quite evident that a close look at the entire accreditation procedure is necessary and that new legislation is needed to protect the students who are paying large sums of money for little in return. And what about the patients whose erroneous laboratory tests can have life threatening consequences?

The new legislation is needed principally to set higher standards for the education and training of personnel upon whose performance the doctor's decision and patient's life so often depends.

There are three major national professional organizations which have, over the years, acquired the knowledge and experience necessary for the development of appropriate standards for technical personnel in the clinical laboratory. One of these is the College of American Pathologists (and American Society of Clinical Pathologists) represented by Careers in the Medical Laboratory, 9650 Rockville Pike, Bethesda, Maryland 20014, Thomas M. Peery, M.D., Chairman. The second is the American Chemical Society (and American Association of Clinical Chemists), 1155 16th Street, N.W., Washington, D.C. 20036, David A. H. Roethel, Executive Director. The third is the American Society forMicrobiology (and the American Academy of Microbiology), 1913 I Street, N.W., Washington, D.C. 20006, Asger F. Langlykke, Ph.D., Executive Director.

I urge that you call upon these organizations for their valued advice on the proper criteria to be established. In addition, I offer my services and those of my staff for any assistance we can provide in this matter.

Sincerely yours,

MORRIS SCHAEFFER, M.D.,
Assistant Commissioner and
General Director of Laboratories.

PREPARED STATEMENT BY MORRIS SCHAEFFER, M.D., PH.D., ASSISTANT COMMISSIONER OF HEALTH, AND GENERAL DIRECTOR, BUREAU OF LABORATORIES, NEW YORK CITY DEPARTMENT OF HEALTH, ON THE QUALITY OF PROPRIETARY MEDICAL LABORATORY SCHOOLS IN NEW YORK

There are three commercial Medical Laboratory schools in New York City. These schools accept students who have little or no background in scientific subjects and the curriculum is too large in scope for the time available for training. The instructors generally lack adequate credentials, the equipment is poor, there is frequently a lack of practical material, so that the students are not exposed to actual clinical situations and a real experience with abnormalities with which they should become familiar.

In New York City, for an individual to receive a certificate of qualification (license) to be employed as a clinical laboratory technician, he must meet one of the following requirements:

(1)(a) He has successfully completed sixty (60) semester hours in an institution accredited by an appropriate agency of the State or by the Association of American Universities or by any other equivalent accrediting agency acceptable to the Department or from an institution which, in the opinion of the Department, maintains standards equivalent to those of an institution accredited as aforesaid and (b) has successfully completed the following courses: general chemistry, one year; mathematics, one year; biology or microbiology, one year; and (c) has been employed as a clinical laboratory technician or trainee for one year in a clinical laboratory acceptable to the Department or has been employed for a period of at least six (6) months immediately prior to February 4, 1963 as a laboratory technician in a clinical laboratory under permit issued by the Commissioner or has been awarded a degree of Associate in Science with a specialty in Medical Technology or an equivalent degree after a two (2) year course in a college accredited by the Middle States Association of Colleges and Secondary Schools, or other similar regional commission for the accreditation of institutions of higher education acceptable to the Department, or

(2) He is a high school graduate and has been employed for a period of at least six (6) months immediately prior to February 4, 1963 as a laboratory technician in a clinical laboratory under permit issued by the Commissioner and had been employed for a period of at least five (5) years as a laboratory technician in a clinical laboratory acceptable to the Department, or

(3) He is a high school graduate and subsequent to graduation has served two (2) years as a technician trainee in a clinical laboratory with a training program approved by the Department, or

(4) He is a high school graduate and has passed a written examination given by the Department. The written examination may be supplemented by such oral or practical examinations as the Department may determine upon the recommendation of the Board of Examiners.

In 1969, 577 individuals filed for examination for the technician's certificate. Of the 157 who failed this examination, 128, or 81%, were those who attended proprietary vocational schools, but had no practical experience in clinical laboratory work. Only 71% of the examinees having only a high school education failed the same examination.

Early in 1970, a minimum of 6 months of experience following the academic training period was included among the requirements for eligibility to take the examination for technician.

Of 182 individuals examined thus far this year, 58 of the 94 who failed, or 62%, came from vocational schools. This 19% improvement is not great, but it clearly illustrates the importance of practical experience.

The following is a statement given us by Dr. Henry Isenberg, Director of the microbiology Laboratory at the Long Island Jewish Hospital in New York.

"Over the last 15 year period, I have provided laboratory training for approximately 50 people with various backgrounds. Of these, about 30 were summer trainees from high school or college programs. All of these went on to complete their formal education and their laboratory exercises, and subsequently got good jobs. Of the 20 which came from commercial training schools, only one had sufficient recognition of his need for further training to progress. The remaining 19 from the proprietary schools were non-utilizable.

"The chief problem with the commercial school students is their lack of background education, so that they fail to grasp the basic elements of laboratory work. Many realized this and begged out of the program. Some took jobs as clerks and one went on to college. By contrast, the Community College graduates are well prepared and make good students in the working laboratory.

"It is a grave injustice to lead a vocational school graduate to think he is prepared for a job or can be a 'physicians assistant' and command a good salary, when in truth he is *not* ready to do reliable work. Such students require the closest of supervision by people with a real professional interest in training them. If they work in physician's offices or in laboratories where they do not have such supervision, they could be a positive hazard to the patient.

"The misleading advertising with which such schools recruit gullible students entices them to spend money and time for totally inadequate training. This is often heart breaking to individuals who cannot get a good job or are unable to demonstrate competence when they do get a job which they cannot hold."

A similar criticism comes from Dr. Frederick Traub, Laboratory Director of the Brooklyn Jewish Hospital.

"During the past 8 years, time and again I have interviewed many students from commercial schools, but never employed any because they were so obviously unsatisfactory. They are uniformly without knowledge as compared to the excellent quality of graduates of Community College programs."

Dozens of other similar disenchantments with the products of commercial schools can be documented.

The point that becomes painfully clear is that graduates of these commercial schools are not passing their licensure examinations, and of those who do, many are found to be unacceptable to discriminating employers of laboratory technicians.

Despite this poor showing, these schools seem to satisfy the criteria established by the State Department of Education. They are also accredited by the Accrediting Bureau of Medical Laboratory Schools (an agency of the American Medical Technologists) and the National Association of Technical and Trade Schools. Both of these accrediting agencies have the approval of the United States Department of Education.

These facts should be the cause of great concern and the entire accreditation procedure of the United States Office of Education must therefore be seriously questioned and thoroughly reviewed

It should be noted that with the rigid licensure and proficiency testing program which we were fortunate enough to have established in New York City, we prevent licensed laboratories from employing unqualified technicians However, the technician in the doctor's office is exempt from such scrutiny. Moreover, most of the states in this country do not have adequate laboratory licensing regulations, and therefore lack the protection such a program can afford. Doctors and clinical laboratories are thus at the mercy of the conscience of the vocational schools and their accrediting agencies.

The extent of danger to life and limb created by this situation is difficult to estimate. But, if our data, indicating errors in laboratory procedures of between 25 to 50%, even in laboratories with more adequately trained technical personnel is accurate, then the potential menace to the public health is great indeed.

WASHINGTON, D.C. 20510

March 8, 1971

Dear Mr. Chairman:

I am gratified to note that the Education Subcommittee has under consideration the bill I introduced to provide funds, under the Vocational Education Act of 1963, for the purpose of constructing student union rooms or buildings for area vocational schools.

An excellent example of the need for this legislation is the situation of the Lake Area Vocational-Technical School in Watertown, South Dakota. Mr. Robert H. Cockle, the Superintendent of Watertown Public Schools, has been in the forefront of the effort to provide suitable student union facilities. His correspondence with me testifies to the belief that the vocational education program in his community and in many others would be considerably improved by the availability of such meeting places on campus. I ask that his letters be included in the printed record of your hearings and I would be grateful to you and the committee for favorable action on S.374.

With every good wish,

Sincerely yours,

George McGovern

Honorable Claiborne Pell

ROBERT H. COCKLE
Superintendent

WATERTOWN PUBLIC SCHOOLS
WATERTOWN, SOUTH DAKOTA 57201

September 22, 1970

Honorable George McGovern
United States Senator
Senate Office Building
Washington, D. C.

Dear George:

As we move onward in education many perplexing problems arise to challenge and to solve.

I am sure this is true of every area of human endeavor but we do have one problem we would like to have you and your office assist us in solving.

Public vocational-technical education at the post-secondary level in South Dakota has gone from nothing to a rather comprehensive program in the past five years as you well know. Our Lake Area Vocational Technical School in Watertown has grown from 25 students in a Manpower Development Training activity to our fall of 1970 enrollment of over 500 one and two year students. Your assistance in providing the impetus to this amazing needed expansion for our State is greatly appreciated by South Dakota, more particularly our area of North-Eastern South Dakota. We now have the following programs:

Health Occupations

1. Licensed Practical Nursing
2. Dental Assistant
3. Dental Lab. Technician
4. Medical Assistant
5. Certified Lab. Assistant
6. Radiology Technician
7. Operating Room Technician

Trade & Technical

1. Agri-Business
2. Auto Mechanics
3. Aviation Mechanics
4. Building Trades Technology
5. Business Machines Technology
6. Cosmetology
7. Drafting Technology
8. Electronics Technology
9. Farm Equipment & Diesel Mechanics
10. Machine Shop Technology
11. Radio & T.V. Servicing

Honorable George McGovern
Page two
September 22, 1970

This is a terrific program, George, and one suited to the needs of the citizens of today and tomorrow. The greatest number of our students live at home and drive to school for the six to eight hours a day of instruction. Others live in private apartments and rooms, of which there is an ample supply. We do not favor dormitories for this type of a school.

However, we have one giant problem. We need a day-Student Union. A place where students can have lunch, a resource-study-lounge area to relax prior to classes, between classes and after classes while waiting for those who share rides. We are not talking of an elaborate recreation type building as needed by a college with a large number of residence students.

A four year college, private or public, finances Student Unions through a program of Federal and State matching funds, and by student Union fees, which pay back loan amounts. We have pursued this course but immediately get the explanation, "Funds for the Student Union type facility are only available to colleges or universities that provide two or more years of transfer of credit training."

This is our problem, George. What you can do to assist us I do not know, but we need help. Every post-secondary institution in South Dakota has participated in a federally financed Student Union Building. Some institutions had less students at the time than we have now.

We have a program that is badly needed, one that has grown from 25 students to 500 students in five years and will continue to serve a national, state and local need for our citizens. We hope you can find time to review our problem and perhaps suggest ways we might proceed to solve our problem.

Sincerely,

Bob

WATERTOWN PUBLIC SCHOOLS
WATERTOWN, SOUTH DAKOTA 57201

March 5, 1971

Senator George McGovern
U.S. Senate Office Building
Washington, D.C.

Dear Senator McGovern:

Thank you for your efforts in introducing legislation for an opportunity to construct day type student union rooms or buildings for the Area Vocational Schools.

We have a very successful program in the Lake Area Vocational-Technical school. Over the past five years we now have a total of 500 students enrolled in 19 separate vocational-technical program.

In South Dakota we find that students travel up to 75 miles per day to go to the classes and that the original movies were exclusively for classroom and shop buildings. Due to the tremendous growth we now feel the need for a day-time student center. Our classes start at 7:00 A.M. and run until 5:00 P.M. which makes necessary waiting areas, lunch facilities and modified recreation areas necessary.

At the present time all assistance for post-secondary student unions through grants, loans or vocational funds do not apply to vocational-technical schools, but only to schools which provide classes for transfer of credit.

Our Vocational school is limited to providing only courses that are vocational technical in nature and for no transfer of credit courses.

We have investigated thoroughly all avenues and come up against a blank wall. Our student body has gone on record as advocating a per-pupil student union charge to finance a portion of a student union but the complete facility is beyond the means of this group.

The one and two year vocational programs are important in the field of post-secondary education and our students do need this type of facility.

The concept of the day student union we have is to provide a quick lunch area, a resource-lounge area and limited recreation spaces. We realize we do not need many of the facilities found on a residential student campus.

Your efforts on the behalf of the Lake Area Vocational-Technical School in making this type of facility available through the vocational-technical Act of 1968 would be greatly appreciated by all students and many similiar schools.

Again, it would serve to take vocational technical education out of the "basement" and put it in the position it has earned.

Sincerely,

Robert H. Cockle
Superintendent.

Hon. Claiborne Pell
Chairman, Education Subcommittee of
Labor & Public Welfare Committee
Washington, D.C.

Dear Mr. Chairman:

Enclosed is a letter from Alaska's Director of Vocational Education setting forth both concerns and recommendations he has for the future of this urgent program. I know that you are deeply involved in weighing the future direction of this program and felt you should have the benefit of Mr. Ridle's experience and recommendations in this regard.

May I also say that I too, strongly object to any cut in Alaska's program level of funding. We are looking into this very closely now to see if indeed this may happen in FY '72 under the current budget.

With best wishes,

Cordially,

Ted Stevens

STATE OF ALASKA

DEPARTMENT OF EDUCATION

WILLIAM A. EGAN, Governor

POUCH F — ALASKA OFFICE BUILDING
JUNEAU 99801

March 9, 1971

The Honorable Ted Stevens
United States Senator
317 New Senate Office
Building
Washington, D. C. 20510

Dear Senator Stevens:

As a courtesy to the State, the American Vocational Association keeps the State Directors posted as to the pending Federal legislation and budgets. It is through this avenue of information that we just received the attached schedule of apportionments for Vocational Education.

We are both distressed and angry to learn that Alaska, with its current serious financial picture, is to receive the largest percentage cut in Federal revenue. Also, on a percentage basis, we are evidentally going to receive less than any other state on the basis of FY-70 apportionments. We cannot understand what sort of logic it is that would take what is already a minuscule apportionment and then reduce it to the extreme noted on the attached.

Vocational Education is extremely crucial to the State's general development at this point in time. A reduction of funds such as this will completely eliminate many critical programs in our smaller schools. We would appreciate your assistance in alleviating this unjustified reduction in the Federal apportionment. Any assistance from your office would be more than greatly appreciated.

The second item I might address myself to: As you are no doubt aware, in the near future the Vocational Education Act of 1963 and the 1968 Amendments will be up for either revision or passage of new legislation. I would like to take this opportunity to request your offices to support continuing the Vocational Education Act of 1963 and the 1968 Amendments and to continue to provide categorical funds for Vocational Education, as such.

Third item: To the best of my knowledge in most all states, Vocational Education comes under the administration of State Boards for Vocational Education and directed and supervised through the State Departments of Education. I would highly recommend for the State of Alaska that this operation continue for the main reason that it provides articulation of Vocational Education programs from kindergarten through grade 14 with the academic program. If Vocational Education should be separated from the State Department of Education, as such, I feel that a tremendous fragmentation of programs would be the result.

Fourth item: As proposed by the administration and Congress during the past session, indications are that the education component under MDTA might be removed from Vocational Education. I would strongly urge, again for the reasons of articulation between high school, post-high school, and adult programs, that MDTA education components remain with the Division of Vocational Education throughout the State system.

Fifth item: In the past some indications have been made that there is a possibility that the administration of the educational components under Manpower programs on the national level may be removed from the Departments of Health, Education, and Welfare, and the U.S. Office of Education. Again, as mentioned in the two previous paragraphs, it would be my feeling that fragmentation of programs would result in overlapping of both programs and facilities that are now being provided by the State Divisions of Vocational Education as well as the U.S. Office of Education.

Sixth item: Over the past years the State Departments of Education have been charged with the responsibility of providing occupational training for secondary, post-secondary, and adult education. Even though the State offices have been charged with this responsibility, very little attention has been given to the funding of such programs. As a result of this, over the years there has been a lack in training that has lead to a number of programs under the Manpower Development Training Act. I will refer to these programs as prevention vs. treatment, prevention being the educational programs in the early years under secondary and post-secondary, and treatment being the programs offered after-the-fact.

During the current year some nine billion dollars has been spent on treatment as opposed to nine hundred million dollars on prevention, under Vocational Education. To make it even simpler, it's like a faucet dripping water. If you do not shut off the drip, the bucket will continue to fill up and run over.

If Congress does not provide more funds under prevention in the secondary and post-secondary levels, my prediction would be that in the years to come the treatment for those persons who have finished school and not had the opportunity for occupational training will continue to grow to the point that unemployment will rise to such a degree that our nation will end up in a tremendous turmoil because of unemployment. For that reason, I would strongly suggest that Congress fund programs on the secondary and post-secondary level to the degree that adequate programs can be provided on those levels and thus reducing the prevention costs in years to come.

In order to provide adequate program on a prevention level, position staffing in the U.S. Office of Education, and particularly in the offices of Vocational Education on a national level, should be increased in order to provide adequate program assistance to the States. In addition to that, I would recommend very strongly that Vocational Education be put in a prominent place in the structure of the U.S. Office of Education.

I realize that I have covered many different areas in this letter; however, I was of the opinion that if our Congressional Delegation was made aware of some of the concerns on the part of the State educational systems that

it might help them in their decision making as they go on with the chore of Federal legislation for the coming year.

If this office can be of any further assistance, please feel free to contact us at any time for additional information.

Thank you very much for your consideration of the previous points.

Sincerely,

Cliff R. Hartman
Commissioner of Education

Enclosure

Senator PELL. The subcommittee is recessed until this coming Tuesday at 10 in the morning.

(Whereupon, at 11:45 a.m., the hearing in the above-entitled matter was recessed, to reconvene at 10 a.m., Tuesday, April 27, 1971.)

EDUCATION AMENDMENTS OF 1971

TUESDAY, APRIL 27, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met at 10 a.m., in room 3110, New Senate Office Building, Senator Claiborne Pell (chairman of the subcommittee) presiding.

Present. Senators Pell and Williams.

Committee Staff Members Present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and and Roy H. Millenson, minority professional staff member.

Senator PELL. The Subcommittee on Education hearing on the Education Amendments of 1971 will come to order.

The first witnesses who will testify as a panel are, Dr. Osborn Fuller, president of Fairleigh Dickinson University, Rutherford, N.J.; Dr. Paul Miller, president of the Rochester Institute of Technology and Dr. Roy Wooldridge, vice president, Northeastern University, Boston, Mass.

Senator WILLIAMS. I do have to apologize that I cannot be here. Of course, we will follow the testimony later, but I have a resolution before another committee, Mr. Chairman, and I am certainly pleased, indeed, our friends from New Jersey are here. It will be most helpful to our committee in the Senate's deliberations.

Senator PELL. I do not know how you would like to proceed. I see your testimony here. I have your remarks, which, if they are not given in full, will be printed into the record. Who is the chairman?

Dr. FULLER. I am J. Osborn Fuller. I think I would like to start, and I would like to make a correction in the record.

STATEMENT OF DR. OSBORN FULLER, PRESIDENT, FAIRLEIGH DICKINSON UNIVERSITY, RUTHERFORD, N.J.; ACCOMPANIED BY DR. PAUL MILLER, PRESIDENT, ROCHESTER INSTITUTE OF TECHNOLOGY, AND DR. ROY WOOLDRIDGE, VICE PRESIDENT, NORTHEASTERN UNIVERSITY

Dr. FULLER. On my left is Roy Wooldridge, of the Northeastern University; he is vice president and dean of the cooperative education program. On my right is Paul Miller, who is president of Rochester Institute of Technology.

These institutions are a little bit offbeat compared to what we normally think of when we are talking about institutions of higher education. They are a development that has come into existence in relatively

recent years and have grown in strength in recent years. I think they have also started to develop their concept of their mission in recent years, and we very much appreciate the opportunity to tell you something about the kind of institutions we are and how we relate to the problems as we see them, the problems your committee faces, and the problems the Government faces.

My slight correction is a change in the agenda which you have presented to us. You have me listed as Farleigh Dickinson; it is Fairleigh Dickinson, and I think there is some distinction. I think we like to preserve the idea of "Fair." We are trying to be very fair with our community constituency.

I appreciate this opportunity to appear before the committee, an invitation which, you know, has been extended by Senator Williams, our State Senator, to share with you my thoughts of a constructive relationship between government and the university.

This is my maiden appearance before a Senate committee, and I hope it will be the first of many because I believe that government, business, and education must work more closely together to solve the many problems which we face today.

Since my ideas, like those of everyone else, are strongly influenced by my past experiences, I think it might be helpful for you to know a bit about my experience in higher education. I went to college and to graduate schools at traditional prestigious eastern colleges, and this means I had the typical private kind of education background. Next, I moved to the land-grant institutions and served as professor at Ohio State University and then West Virginia. After my return to Ohio State, I went into administration, the last 11 years of which were spent as dean of the College of Arts and Sciences, Ohio State University.

In 1967, I became president of Fairleigh Dickinson University. This, then, is one of those institutions I mentioned a moment ago, quite different from the private colleges and universities, and quite different from the land-grant institutions. It is oriented toward serving the needs of the immediate community and has a large part of the student body that is a part-time student body, working in the evenings. It is best classified, then, as an urban university.

You have invited me to give my ideas about how the Federal Government can best exercise its role to the benefit of independent private institutions. In my response, I wish to concentrate on a private urban university as an illustration.

I think I can do this best by describing some of the programs at Fairleigh Dickinson University, which typify the urban university. Then I want to tell you how the urban university relates to the problems of the times and how, in my opinion, the Government can best aid these institutions.

Fairleigh Dickinson has an enrollment of about 20,000 students. It is on three main campuses located in Rutherford, Teaneck, and Madison, N.J. The student population is almost equally divided between day and evening students, with the result that each unit is a relatively small unit. Therefore, contact between the faculty and the students is frequent and understanding is good. The location of the centers encourages interreaction with the communities. The relatively small size of the individual units permits innovation and a flexibility of operation not normally associated with institutions as large as this. Our

multiple campus organization gives us, therefore, many of the advantages of the small colleges and at the same time of the large university.

All of these features are illustrated by the wide range of programs we have developed. For those students who, because of a poor start or slow maturity, have difficulty, we have a number of special programs. At Wayne, N.J., on an old missile site which we acquired from the Government we have a Reading and Study Institute, which was started in 1958 to prepare for college those students who have a poor high school record. In the 12 years since it began, 1,530 students have benefited from this 1-year program. Over 80 percent go on to accredited colleges after completing the program. We also have used this program to assist the disadvantaged.

In 1964, we started a 2-year experimental program for students who had not yet decided on a specific field, or whose performance in high school was below what was their true potential. Utilizing small classes, and to a large extent the tutorial process, 900 have gone on to accredited colleges to earn a degree.

We have also pioneered in specific response to community needs. We began one of the first dental hygiene programs. We also added a pilot program in nursing crisis in the fifties, and graduated some 406 associates in arts as qualified registered nurses. We are now moving into a 4-year program of nursing because the trend seems to be moving this way.

This fall, the college of science and engineering developed a bachelor of science in technology program, with the aid of teachers from the 2-year technical institutes. Transfers from these 2-year programs who have shown promise, can now come to Fairleigh Dickinson and earn a 4-year degree in technology. There is a tremendous demand in industry for these educated and high trained semiprofessionals. Over 200 students registered in the first semester, far exceeding our expectations. Other institutions are now following our lead.

We also developed two exciting programs overseas. There is one at Wroxton, England, where we offer undergraduate and graduate programs in English literature, history and government for American students on a one-semester basis. More than 500 from many colleges have studied at Wroxton since its inception in 1965. At St. Croix, in the Virgin Islands, we are building facilities to operate an undergraduate teaching laboratory in the sciences related to oceanography. When these facilities are completed, which will be sometime this summer, we will be able to expand the oceanography program which we have conducted for three summers in a local hotel. The new laboratories will also be used by other affiliated universities. In the West Indies Laboratory, as we call it, we will have the first oceanographic laboratory built without a large government grant. We were so convinced of the importance of this new field of oceanography that we proceeded with our plans despite the fact that sea grant funds had been exhausted.

At the graduate level, we have also developed innovative programs in response to community needs. We have one of the first master of arts in teaching programs. In 1964, we developed the program of orthodontics. All participants in this program have between 6 to 8 years of training, including 2 years of practice before entering the program.

Next year we have announced a unique program for the degree of doctor of education. It builds on a master's degree regardless of major, gives credit for work experience in any phase of educational service; the program is designed by the student and approved by an intercollege advisory committee, and the courses may be used from any college in the university or from other universities.

Two programs which are a complete departure from the normal collegiate patterns of operation are the Saturday college and the volunteer community service program.

The Saturday college is designed for the adult who wants to upgrade himself, and classes are offered late Friday afternoon and on Saturday. There are no admission requirements and when performance standards are met, full college credit is awarded and is transferable. The response to this concept has been so tremendous that we are expanding our offerings. Two other local colleges are initiating similar programs as a result of our success.

Finally, I want to tell you about the volunteer community service program. At my suggestion, we started this program last fall. The university faculty and administration offer guidance, and help make agency and community contacts for the students who want to contribute volunteer service. With little publicity the program keeps growing. At last count, we had over 400 students who had responded on one campus alone. Students are operating a 24-hour "Hot Line" on two campuses for people undergoing severe personal stress; and tutorial service for preschool Blacks in Newark; Big Brother and Big Sister units in cooperation with the national organizations, and working with a local town council and numerous other projects.

We are pleased that our students, who are of all political persuasions, are actively helping to solve community problems on a volunteer basis. We feel it is an important part of their education.

These examples illustrate why we feel that we are innovative and responsive to community needs. We are not an intellectual island, but a center from which we reach out into the communities to use them as our laboratories, while simultaneously responding to their needs. We are not unique in practicing this philosophy. The urban universities have been the leaders in this movement, although other universities are improving their community involvement.

You will remember that my second purpose today was to tell you how the role of the urban university relates intimately with the problems of the times. From the descriptions of some of the Fairleigh Dickinson University programs and those of the institutions which my colleagues represent, many relationships are immediately obvious. However, I want to paint the picture with a broader brush. To do this, I want to take you back a bit in history. How has the Federal Government helped higher education in the past? From the beginning, higher education has received continuous support from the Federal Government. However, there have been noticeable peaks in the quantity of support.

In the middle of the nineteenth century, there was a clamor for education for more than the elite. There was a cry, too, for a different kind of education. The country's food needs were expanding. Industrial needs were expanding rapidly. The Federal Government responded to these needs, and the land-grant colleges came into existence

in 1861. Low cost education in the "agricultural and mechanical arts" became a reality for a large number of students. The land-grant institution, with its government-supported agricultural and engineering experiment stations, flooded the farmer and industrialist with new ideas and new products. Industry exploited these and a major revolution resulted. An unacknowledged partnership between Government and education and industry rocketed us toward world leadership. We became the first Nation to produce a surplus of food, while simultaneously becoming an industrial Nation.

During the Second World War, the Federal Government again gave significant support to higher education. This time the Government turned to a different group of institutions. The graduate departments and technical schools became the centers for significant research and development, and an unexcelled war machine resulted.

Another peak of Federal support occurred after Sputnik. Again the informal but effective partnership—government, business, and education—responded to produce an unbelievable number of successess in space exploration.

My third purpose is to give you my opinion of how the Government can best aid higher education at this time in history.

Today, our problems are primarily social problems. Is it not time for another peak Federal effort to support higher education? Is it not time for the Federal Government to take that bold step and invest in the search for solutions to the social problems through another partnership with higher education? I believe it is.

The two things the Federal Government must do is broaden the opportunities for higher education of its youth, and directly assist those universities which can best help in solving social problems. The need to develop opportunities for minority groups and expand technical education, especially through the 2-year institutions, is well known and I support the Government's effort to develop such programs.

Less well understood are the problems that are developing for the middle-income group. Rapidly rising tuitions in the private institutions, and the present criteria for obtaining financial aid, are steadily cutting down on the choice of opportunities for the middle-income group. If the present trend continues, the rich and some of the poor will be able to choose their institutions and their role in life, but members of the middle-income group, if they can afford to go to college, will be limited to the low-cost institutions regardless of what educational programs they may wish to pursue. In considering the problem of expanded student financial aid, this middle-income group must not be forgotten. New Jersey has a plan to help. It is called the fee equalization plan, through which grants are made to cover the tuition difference between public and private institutions, so that the student is better able to go to the institution of his choice. The difficulty with the plan is that the income cutoff is so low that it eliminates most middle-income students from qualifying; and, second, insufficient funds for the total program.

I also want to make a special plea for the part-time student. Not many years from now, the importance of continuous upgrading through part-time education will be accepted as a desirable feature in the development of our human resources. At present, the large number

of part-time students who are upgrading themselves, except for veterans, are given no help by the Government. The numbers of working students who would take courses part-time would be greatly increased if there were financial assistance for them.

Broadening opportunities for the youth can be helped by increased direct student aid. However, direct student aid alone is not sufficient. Each institution spends more on educating the student than he pays in tuition and fees. Therefore, there must be aid to institutions in order to keep them viable and innovative. While the simplest way to solve this problem would be direct aid on the basis of head count, I do not believe this is the best way.

Our problems are social problems—urban problems. Therefore, now, as in the past, a major portion of the funds must flow to those institutions which, through experience, show they are capable and willing to do the job. The urban universities, as a group, have the most experience in working with community problems. It is my opinion that through Government support they will be able both to speed up the work they are already doing, and explore new solutions. They will develop the team research necessary to analyze and tackle community problems. They will expand their service as a resource bank, ready to answer the call for expertise from the Government and the community.

The urban universities stand ready to respond to the national need, but they cannot do it alone. They need business—and most importantly—they need Government support.

I hope, gentlemen, that this committee will agree with me and my colleagues and recommend provisions in S. 659 which will provide not only direct aid to students, but will also grant major support to those universities best suited by experience and philosophy to educate and serve in the area of urban problems. Thank you very much.

(The prepared statement of Dr. Fuller follows:)

Remarks by J. Osborn Fuller, President, Fairleigh Dickinson University
Rutherford, New Jersey

10 A.M. - April 27, 1971

Mr. Chairman and members of the Subcommittee on Education of the Labor and Public Welfare Committee. I appreciate the committee's kind invitation, extended so graciously by Senator Williams, to share with you my thoughts concerning a constructive relationship between the government and the university.

This is my maiden appearance before a Senate Committee. I hope it will be the first of many because I believe that government, business and education must work more closely together to solve the many problems which face us today.

Since my ideas, like those of everyone else, are strongly influenced by my past experiences, I think it might be helpful for you to know a bit about my experience in higher education.

I went to college and to graduate school at traditional prestigious eastern colleges - Lehigh and Columbia. Then I taught geology at a small private college in the midwest - Mount Union.

Next, I moved to the land-grant institutions, serving as a professor at Ohio State University and West Virginia University. Shortly after my return to Ohio State, I went into administration and later became Dean of the College of Arts and

Sciences for eleven years.

In 1967, I became President of Fairleigh Dickinson University. This institution is entirely different from the private colleges and universities with which most of us are familiar, and also different from the large land grant universities. It is oriented toward serving the needs of the immediate community and has a large working part-time student body. It is best classified as an urban university.

You have invited me to give my ideas about how the federal government can best exercise its role to the benefit of independent non-profit institutions. In my response, I wish to concentrate on the private urban university as an illustration.

I think I can do this best by describing some of the programs at Fairleigh Dickinson University which typify the urban university. Then I want to tell you how the urban university relates to the problems of the times and how, in my opinion, the government can best aid these institutions.

Fairleigh Dickinson University, with an enrollment of 20,000, is the 9th largest private institution in the country. On the three main campuses, located at Rutherford, Teaneck and Madison, New Jersey, the student population is almost equally divided between day and evening students, with the result that each unit is relatively small. Therefore, contact between students and faculty is frequent and understanding is good. The locations of the centers encourage interreaction with the communities. The relatively small size of the units permits innovation and a flexibility of operation not normally associated with a large institution. Our multi-campus organization gives us many of the advantages of both the small college and the large university.

All of these features are illustrated by the wide range of programs we have developed. For those students who, because of a poor start or slow maturity, have difficulty, we have a number of special programs. At Wayne, New Jersey, we have a Reading and Study Institute which was started in 1958 to prepare for college those students who had a poor high school record. In the twelve years since it began, 1530 students have benefited from this one-year program. Over 80 percent go on to accredited colleges after completing the program. We have also utilized this program to assist the disadvantaged.

In 1964, we started a two-year experimental college for those students who had not yet decided on a specific field, or whose performance in high school was below what we felt was their true potential. Utilizing small classes, and to a large extent the tutorial process, nine hundred have gone on to accredited colleges with full credit transferred.

We have also pioneered in specific response to community needs. We began one of the first programs for dental hygienists, training more than 500 since 1948. We also had one of two pilot programs designed to meet the nursing crisis in the early fifties. From this program, 406 received associate in arts degrees and qualified as registered nurses. Because the demand for nurses having four years of training was increasing, we now have a baccalaureate program. However, we are still providing, on a cooperative basis, the liberal arts courses for the nursing programs run by two local hospitals.

This fall the College of Science and Engineering developed a bachelor of science in technology program, with the aid of teachers from the two-year technical

Institutes. Transfers from their two-year program who have shown promise, can earn a four year degree in technology. There is a tremendous demand in industry for these educated and highly trained semi-professionals. Over 200 students registered in the first semester, far exceeding our expectations. Other institutions are now following our lead.

We have also developed two exciting programs overseas. At Wroxton, England, we offer both undergraduate and graduate programs in English Literature, history and government for American students on a one semester basis. More than 500 have studied at Wroxton College since its inception in 1965.

At St. Croix, Virgin Islands, we are building facilities to operate an undergraduate teaching laboratory in the sciences related to oceanography. When these facilities are completed, we will be able to expand the oceanography program which we have conducted for three summers in a local hotel. The new laboratories will also be used by other affiliated universities. The West Indies Laboratory, as we call it, will be the first laboratory built without a large government grant. We were so convinced of the importance of the new field of oceanography, that we proceeded with our plans despite the fact that Sea Grant funds had been exhausted.

At the graduate level we have also developed innovative programs in response to community needs.

In 1964 we started a Master of Arts in Teaching program with help from the Ford Foundation. Over 300 students have graduated in the program.

In 1964 we initiated an orthodontics degree program. All participants have

between 6 to 8 years of training, including two years of practice before entering this program.

For next year we have announced a unique program for the degree of Doctor of Education. It builds on a master's degree regardless of major, and gives credit for work experience in any phase of educational service. The program is designed by the student and approved by an intercollege advisory committee. Courses may be used from any college in the University or from other universities.

Two programs which are a complete departure from the normal collegiate patterns of operation are the Saturday College and the volunteer community service program.

The Saturday College is designed for the adult who wants to upgrade himself, and classes are offered late Friday afternoon and on Saturday. There are no admission requirements and when performance standards are met, full college credit is awarded and is transferrable. The response to the concept has been so tremendous that we are expanding our offerings. Two other local colleges are initiating similar programs as a result of our success.

Finally, I want to tell you about the volunteer community service program. At my suggestion we started this program last Fall. The University faculty and administration offer guidance, and help make agency and community contacts for students who want to contribute volunteer service. With little publicity the program keeps growing. At last count, over 400 students had responded on one campus alone. Students are operating a 24 hour "Hot Line" on two campuses for people undergoing severe personal stress; a ~~tuitional~~ tutorial service for preschool blacks in Newark; Big

Brother and Big Sister units in cooperation with the national organizations; working with a local town council, and numerous other projects.

We are pleased that our students, who are of all political persuasions, are actively helping to solve community problems on a volunteer basis. We feel it is an important part of their education.

These examples illustrate why we feel we are innovative and responsive to the community needs. We are not an intellectual island, but a center from which we reach out into the communities to use them as our laboratories, while simultaneously responding to their needs.

We are not unique in practicing this philosophy. The urban universities have been the leaders in this movement, although other universities are improving their community involvement.

You will remember that my second purpose today was to tell you how the role of the urban university relates intimately with the problems of the times. From the descriptions of some of the Fairleigh Dickinson University programs and of those at the institutions which my colleagues represent, many relationships are immediately obvious. However, I want to paint the picture with a broader brush. To do this, I want to take you back a bit in history. How has the Federal government helped higher education in the past? Since the beginning, higher education has received continuous support from the Federal government. However, there have been noticeable peaks in the ~~quality~~ quantity of support.

In the middle of the nineteenth century, there was a clamor for education for

more than the elite. There was a cry, too, for a different kind of education. The country's food needs were expanding. Industrial needs were expanding rapidly. The federal government responded to these needs, and the land grant colleges came into existence in 1861. Low cost education in the "agricultural and mechanical arts" became a reality for a large number of students. The land grant institution, with its government supported agricultural and engineering experiment stations, flooded the farmer and industrialist with new ideas and products. Industry exploited these and a major revolution resulted. An unacknowledged partnership between government and education and industry rocketed us toward world leadership. We became the first nation to produce a surplus of food, while simultaneously becoming an industrial nation.

During the second world war, the federal government again gave significant support to higher education. This time the government turned to a different group of institutions. The graduate departments and technical schools became the centers for significant research and development, and - an unexcelled war machine resulted.

Another peak of federal support occurred after Sputnik. Again the informal but effective partnership - government, business and education - responded to produce unbelievable successes in space exploration.

My third purpose is to give you my opinions of how the government can best aid higher education at this time in history.

Today our problems are primarily social problems. Is it not time for another peak federal effort to support higher education? Is it not time for the federal

government to take that bold step and invest in the search for solutions to the social problems through another partnership with higher education? I believe it is.

The two things the federal government must do is broaden the opportunities for higher education of its youth, and directly assist those universities which can best help in solving social problems.

The need to develop opportunities for minority groups and expand technical educati especially through the two-year institutions, is well known and I support the government's effort to develop such programs.

Less well understood are the problems that are developing for the middle income group. Rapidly rising tuitions in the private institutions, and the present criteria for obtaining financial aid, are steadily cutting down on the choice of opportunities for the middle income group. If the present trend continues, the rich and some of the poor will be able to choose their institutions and their role in life, but members of the middle income group, if they can afford to go to college, will be limited to the low cost institutions regardless of what educational programs they may wish to pursue. In considering the problem of expanded student financial aid, this middle income group must not be forgotten. New Jersey has a plan to help. It is called the fee equalization plan, through which grants are made to cover the tuition difference between public and private institutions, so the student is better able to go to the institution of his choice. The difficulty with the plan is that the income cut-off is so low that it eliminates most middle income students from qualifying; and, second, insufficient funds is a further limitation.

I also want to make a special plea for the part-time student. Not many years from now the importance of continuous upgrading through part-time education, will be accepted as a desirable feature in the development of our human resources. At present, the large number of part-time students who are upgrading themselves, except for veterans, are given no help by the government. The numbers of working students who would take courses part-time, would be greatly increased if there were financial assistance for them.

Broadening opportunities for the youth can be helped by increased direct student aid. However, direct student aid alone is not sufficient. Each institution spends more on educating the student than he pays in tuition and fees. Therefore, there must be aid to institutions in order to keep them viable and innovative. While the simplest way to solve this problem would be direct aid on the basis of head count, I do not believe this is the best way.

Our problems are social problems - urban problems. Therefore now, as in the past, a major portion of the funds must flow to those institutions which, through experience, show they are capable and willing to do the job. The urban universities, as a group have the most experience in working with community problems. It is my opinion that with government support they will be able both to speed up the work they are already doing, and explore new solutions. They will develop the team research necessary to analyze and tackle community problems. They will expand their service as a resource bank, ready to answer the call for expertise from the government and the community.

The urban universities stand ready to respond to the national need, but they cannot do it alone. They need business - and most importantly - they need government support.

I hope, gentlemen, that this committee will agree with me and my colleagues and recommend provisions in Bill S659 which will provide not only direct aid to students, but will also grant major support to those universities best suited by experience and philosophy to educate and serve in the area of urban problems.

Thank you very much.

Senator PELL. Thank you very much, Dr. Fuller. Would either of the other two members of the panel care to give their testimony.

Dr. WOOLDRIDGE. Mr. Chairman, I am Roy Wooldridge, Northeastern University. I guess I would like to be next. I would like to take advantage of the offer that you made at the beginning of the meeting to have the entire paper entered into the record and perhaps not read the whole thing.

Senator PELL. That will be done.

Dr. WOOLDRIDGE. I will read from parts of it.

I am Roy L. Wooldridge, vice president of Northeastern University in Boston, Mass., where 47,000 students are enrolled in various educational programs. Of these students, 15,000 are full-time undergraduate students enrolled in cooperative education programs, 20,000 are part-time evening undergraduates, 7,000 are pursuing graduate education, and 5,000 are enrolled in special off-campus courses.

It is a privilege to have this opportunity to express my views on S. 659 and urge your support of a Federal program to give much needed assistance to higher education. My testimony is specifically directed at that portion of the bill that authorizes the extension of Federal support for the expansion and development of cooperative education programs and the portion that authorizes direct Federal subsidy to higher education institutions.

Under the provisions of S. 659, the existing legislation in section IV–D of the 1968 amendments to the Higher Education Act would be extended for another 3 years. This would authorize expenditures of $10 million per year for the expansion and development of cooperative education programs and $750,000 per year for research and training. In my judgment, this is a desirable formula and the amounts of money seem reasonable to meet the need.

The cooperative plan of education is a distinctly American philosophy of higher education and was invented here over 60 years ago. It includes all of the academic requirements of the traditional types of higher education, plus learning while doing, and applying what is being studied while still a student.

Most people admit that "working for an education" is part of an education, but in cooperative education the work experience becomes an important part of the entire educational process in which the student is engaged. The cooperative job assignment is carefully planned. It is not just part-time work or a summer job; it involves a formal sequence of work and study following a freshman year of full-time study. Two students are assigned to a job and are paid the going rate of pay for the job. While one is on the job, the other is at school. At the end of the term they exchange places. This gives the employer full coverage of his job and he looks upon the cooperative plan as a unique partnership between industry and the college in a superior kind of training program. The student gains valuable experience related to his field of study and earns all or a major share of his college expenses. It is called cooperative education because it is dependent upon the cooperation of employers and educators in combining to form a superior total educational program for the students. This program has an interrelated work and study content, carefully planned and supervised to produce optimum educational results for each student involved.

Unfortunately, there has been a great deal of confusion between the Federal work-study program and cooperative education. Under cooperative education, the institution assumes the responsibility for finding assignments which are related to the student's professional objectives and integrates these experiences into the total educational program. The assignments may be with either profit or nonprofit organizations, depending on the circumstances. The Federal work-study program, on the other hand, is essentially a financial-aid program wherein the educational benefit to the student is secondary to the financial benefit.

Many of the distinguished Members of Congress have heard testimony in the past on cooperative education from eminent educators such as Dr. Ralph W. Tyler of the Center for the Advanced Study of the Behavioral Sciences, Dr. Asa S. Knowles, president of Northeastern University, and Dr. John S. Allen, president of the University of South Florida. Their testimony, which was based on the research findings of Dr. Tyler's national study of cooperative education, gave strong support to the expansion of this educational method.

Cooperative education unites jobs and learning and creates highly motivated students. Our research and experience is that these students are more mature. Recently, Congress wisely began a program of aid in expanding cooperative education—a form of higher education that leads to more mature students. Cooperative education also creates greater economic efficiency in the educational institutions because they are able to serve two student bodies. Greater maturity in our college students and greater economic efficiency in the educational process are both highly important developments that merit congressional support at this time. As one Congressman told me, he did not know of any program of expenditures of Federal dollars in higher education that got as great a return on the tax dollars as do the expenditures for cooperative education.

Since 1964 to the present time, 200 institutions of higher education have adopted some form of cooperative education, bringing the current total to over 250 colleges, community colleges, and universities. A significant number of these new entrants have been aided by financial support from either the Federal Government or private foundations. In most cases, the seed money grant covers the conversion costs over the first 3 years of the program. Usually, the cooperative program becomes self-supporting after this initial period. For this reason, it can be looked upon as a good investment which allows the development of a program that can stand on its own feet after the first few years.

In 1968, Congress passed the amendments to the Higher Education Act of 1965. One of these amendments made it possible for higher education institutions to apply for Federal grants to support the establishment and expansion of cooperative programs. Authorization called for $8 million in fiscal 1970 and $10 million in fiscal 1971. In addition, some $750,000 each year was authorized for training and research.

The funds for this program have not been appropriated in the authorized amounts. In both fiscal 1970 and fiscal 1971, the administration and Congress substituted for these needed funds an allocation of 1 percent of the work-study funds for the support of cooperative education programs. This meant $1,540,000 in fiscal 1970 and $1,600,000 in fiscal 1971, with no provision in either year for the training of coordinators or research.

In response to the first general announcement by the Office of Education in the spring of 1970, 194 colleges, community colleges, and universities applied for funds with the requests totaling $8,500,000. Clearly, there was a greater need for funding than could be provided by the available funds. After much sifting, the Office of Education narrowed the list to 74 institutions that received grants totaling $1,540,000.

In fiscal 1971, 345 applications have been received from universities, colleges, and community colleges requesting grants to establish and expand cooperative education programs. These 345 institutions have requested a total of nearly $13 million in grants. I am informed by the Office of Education that one-fourth of these institutions are community colleges, and 45 of them are predominantly black colleges. It is obvious that many institutions have learned of the advantages of successful cooperative education programs and recognize them as responsive to the needs for individualizing education, bringing greater relevancy to education and meeting the rising costs of education.

I would like to point out that the expansion and extension of work-study cooperative education provides an excellent answer to the problem of making higher education available to a wider cross section of capable students, while at the same time enhancing and enriching the educational content of their program. Cooperative education provides the opportunity for many to attend college who would not otherwise be able to do so. Currently, 85,000 students are earning over $200 million this year. It also motivates many to stay in college, because they see the relationship between study and work. It has particular advantages, too, for the culturally deprived and economically underprivileged students who are thoroughly capable of profiting from a college education but cannot afford it.

Institutions of higher education must be encouraged to examine this system through financial assistance for the first 3 years of exploration and transition. I urge you to provide significant support for this worthwhile undertaking as authorized in S. 659.

In closing, I would like to ask respectfully you to support the concept of direct financial aid to colleges and universities as proposed in S. 659.

As an administrator in a large private institution, I am acutely aware of the financial plight facing our institutions of higher education. Furthermore, I have served as a consultant to over 200 colleges and universities from 1965 to the present. I might say parenthetically that the University of Rhode Island in Kingston is one of the 200 universities I have visited in the past year to help them install this cooperative program that I spoke of earlier. In this capacity, I have visited all types of campuses across the length and breadth of this Nation. Everywhere there is distress and alarm about the financial support of our system of higher education. There is serious question whether most of our private institutions will survive through the next decade. It seems to me that we must find a way to continue the pattern of offering our young people either public or private higher education as best suits their needs. A great deal would be lost if we allow the virtual elimination of private education.

Each year, college administrators find themselves caught more and more in the squeeze between rising costs and salaries on one hand, and the need for low-cost education on the other hand. There is a limit on

the amount of tuition that can be charged to the student and his family. This is particularly true in a time when more and more young people are being encouraged to pursue higher education. I see no other solution except direct Federal aid.

My final plea to you is to give careful thought to the development of a suitable formula for the equitable distribution of Federal aid. All too often, formulas are developed to include only full-time students on a given campus. I would like to draw your attention to a large and vital job being done by institutions like my own in the education of adults on a part-time basis. This should be recognized by taking these students into account in the distribution of funds.

Thank you very much.

(The prepared statement of Roy O. Wooldridge follows:)

STATEMENT BY

ROY L. WOOLDRIDGE
Vice President and Dean of Cooperative Education
Northeastern University
Boston, Massachusetts

Before the
Subcommitte on Education
of the
United States Senate

April 27, 1971

Mr. Chairman and Distinguished Members of the Committee:

I am Roy L. Wooldridge, Vice President of Northeastern University in Boston, Massachusetts where 47,000 students are enrolled in various educational programs. Of these students, 15,000 are full-time undergraduate students enrolled in cooperative education programs, 20,000 are part-time evening undergraduates, 7,000 are pursuing graduate education and 5,000 are enrolled in special off-campus courses.

It is a privilege to have this opportunity to express my views on S 659 and urge your support of a federal program to give much needed assistance to higher education. My testimony is specifically directed at that portion of the bill that authorizes the extension of federal support for the expansion and development of cooperative education programs and the portion that authorizes direct federal subsidy to higher education institutions.

Under the provisions of S 659, the existing legislation in Section IV D of the 1968 Amendments to the Higher Education Act would be extended for another three years. This would authorize expenditures of $10,000,000 per year for the expansion and development of cooperative education programs and $750,000 per year for research and training. In my judgment this is a desirable formula and the amounts of money seem reasonable to meet the need.

The cooperative plan of education is a distinctly American philosophy of higher education and was inverted here over sixty years ago. It includes all of the academic

requirements of the traditional types of higher education, plus learning while doing, and applying what is being studied while still a student.

Most people admit that "working for an education" is part of an education, but in cooperative education the work experience becomes an important part of the entire educational process in which the student is engaged. The cooperative job assignment is carefully planned. It is not just part-time work or a summer job, it involves a formal sequence of work and study following a freshman year of full-time study. Two students are assigned to a job and are paid the going rate of pay for the job. While one is on the job, the other is at school. At the end of the term they exchange places. This gives the employer full coverage of his job and he looks upon the cooperative plan as a unique partnership between industry and the college in a superior kind of training program. The student gains valuable experience related to his field of study and earns all or a major share of his college expenses. It is called "cooperative education" because it is dependent upon the cooperation of employers and educators in combining to form a superior total educational program for the students. This program has an interrelated work and study content, carefully planned and supervised to produce optimum educational results for each student involved.

Unfortunately there has been a great deal of confusion between the Federal Work-Study Program and cooperative education. Under cooperative education, the institution assumes the responsibility for finding assignments which are related to the student's professional objectives and integrates these experiences into the total educational program. The assignments may be with either profit or non-profit organizations depending on the circumstances. The Federal Work-Study Program, on the other hand, is essentially a financial aid program wherein the educational benefit to the student is secondary to the financial benefit.

Many of the distinguished members of Congress have heard testimony in the past on cooperative education from eminent educators such as Dr. Ralph W. Tyler of the Center for

Advanced Study of the Behavioral Sciences, Dr. Asa S. Knowles, President of Northeastern University, and Dr. John S. Allen, President of the University of South Florida. Their testimony, which was based on the research findings of Dr. Tyler's national study of cooperative education, gave strong support to the expansion of this educational method.

Cooperative education unites jobs and learning and creates highly motivated students. Our research and experience is that these students are more mature. Recently Congress wisely began a program of aid in expanding cooperative education - a form of higher education that leads to more mature students. Cooperative education also creates greater economic efficiency in the educational institutions because they are able to serve two student bodies. Greater maturity in our college students and greater economic efficiency in the educational process are both highly important developments that merit Congressional support at this time. As one congressman told me, he didn't know of any program of expenditures of federal dollars in higher education that got as great a return on the tax dollars as do the expenditures for cooperative education.

Since 1964 to the present time, 200 institutions of higher education have adopted some form of cooperative education bringing the current total to over 250 colleges, community colleges and universities. A significant number of these new entrants have been aided by financial support from either the federal government or private foundations. In most cases, the seed money grant covers the conversion costs over the first three years of the program. Usually, the cooperative program becomes self-supporting after this initial period. For this reason it can be looked upon as a good investment which allows the development of a program that can stand on its own feet after the first few years.

In 1968, Congress passed the Amendments to the Higher Education Act of 1965. One of these amendments made it possible for higher education institutions to apply for federal grants to support the establishment and expansion of cooperative programs. Authorization

called for $8,000,000 in fiscal '70 and $10,000,000 in fiscal '71. In addition, some $750,000 each year was authorized for training and research.

The funds for this program have not been appropriated in the authorized amounts. In both fiscal '70 and fiscal '71, the Administration and Congress substituted for these needed funds an allocation of 1% of the Work-Study funds for the support of cooperative education programs. This meant $1,540,000 in fiscal '70 and $1,600,000 in fiscal '71 with no provision in either year for the training of coordinators or research.

In response to the first general announcement by the Office of Education in the spring of 1970, 194 colleges, community colleges and universities applied for funds with the requests totalling $8,500,000. Clearly, there was a greater need for funding than could be provided by the available funds. After much sifting, the Office of Education narrowed the list to 74 institutions that received grants totalling $1,540,000.

In fiscal '71, 345 applications have been received from universities, colleges and community colleges requesting grants to establish and expand cooperative education programs. These 345 institutions have requested a total of nearly $13,000,000 in grants. I am informed by the Office of Education that one-fourth of these institutions are community colleges, and 45 of them are predominantly Black colleges. It is obvious that many institutions have learned of the advantages of successful cooperative education programs and recognize them as responsive to the needs for individualizing education, bringing greater relevancy to education and meeting the rising costs of education.

I would like to point out that the expansion and extension of work-study cooperative education provides an excellent answer to the problem of making higher education available to a wider cross-section of capable students, while at the same time enhancing and enriching the educational content of their program. Cooperative education provides the opportunity for many to attend college who would not other wise be able to do so. Currently 85,000 students are earning over 200 million dollars this year. It also motivates many to stay in

college, because they see the relationship between study and work. It has particular advantages, too, for the culturally deprived and economically underprivileged students who are thoroughly capable of profiting from a college education but cannot afford it.

Institutions of higher education must be encouraged to examine this system through financial assistance for the first three years of exploration and transition. I urge you to provide significant support for this worthwhile undertaking as authorized in S 659.

In closing, I would like to respectfully ask you to support the concept of direct financial aid to colleges and universities as proposed in S 659.

As an administrator in a large private institution, I am acutely aware of the financial plight facing our institutions of higher education. Furthermore, I have served as a consultant to over 200 colleges and universities from 1965 to the present. In this capacity I have visited all types of campuses across the length and breadth of this nation. Everywhere there is distress and alarm about the financial support of our system of higher education. There is serious question whether most of our private institutions will survive through the next decade. It seems to me that we must find a way to continue the pattern of offering our young people either public or private higher education as best suits their needs. A great deal would be lost if we allow the virtual elimination of private education.

Each year, college administrators find themselves caught more and more in the squeeze between rising costs and salaries on one hand, and the need for low cost education on the other hand. There is a limit on the amount of tuition that can be charged to the student and his family. This is particularly true in a time when more and more young people are being encouraged to pursue higher education. I see no other solution except direct federal aid.

My final plea to you is to give careful thought to the development of a suitable formula for the equitable distribution of federal aid. All too often, formulas are developed to include only full-time students on a given campus. I would like to draw your attention to a large and vital job being done by institutions like my own in the education of adults on a part-time basis. This should be recognized by taking these students into account in the distribution of funds.

Senator PELL. Thank you very much indeed.

We will now hear from the third member of the panel, Dr. Miller, from the Rochester Institute of Technology.

Dr. MILLER. It is a pleasure joining my colleagues. I, too, have submitted a brief statement for the record, and I will be simply supplementing it and supplementing the remarks of my colleagues.

I think both of them have really made two important points—one that describes some of the character of quite distinctive urban universities in this country, of which the institution I represent, the Rochester Institute of Technology, is one, and Northeastern and Fairleigh Dickinson are among others. I think, secondly, my colleagues have commented to the point of cooperative education as not only an important educational venture, but also an important part of the financing of the students' education and institutions themselves.

I should like to say, to support President Fuller, that not unlike him, my own career has been shaped by public higher education, having served at Michigan State University, the University of West Virginia, the University of North Carolina. It was during service in Washington, from 1966 to 1968, in the Department of Health, Education, and Welfare, that it grew in my mind that the institutions which are being represented here today had an enormous contribution to make to American urban life at this time of our history, and it was that thought which led me to the presidency of the institution which I am representing today.

I think back to the reports made by my colleagues, also contained in my own paper submitted for the record, that in addition to the urban nature of our institutions, in addition to the importance of cooperative education, we are also stressing what one might call the nontraditional student, the part-time, evening, often adult student. As one looks back over the emergence of student aid programs at both State and Federal levels, on the whole, the nontraditional student has been overlooked. We are also subscribing to the principle of interweaving—as they are—these institutions with the communities of which they are part, and by the services which they render, in these days to the disadvantaged, to minority groups, and with reference to other problems now in our cities.

I want to say just a few words taken from my own testimony, again quite informally and given in supplement to the testimony of my colleagues, because it is, in a way, an example of how distinctive institutions come into being and often are overlooked in the community fabric of the country.

The Rochester Institute of Technology really has three traditions in its composition. In 1829, Nathaniel Rochester, who founded the city of Rochester, desirous of bringing music and culture to Rochester, organized the Rochester Athenaeum. In 1885, Mr. Lomb, of Bausch and Lomb, returning from England, worried about the stream of immigrants to places like Rochester, and he helped organize the Mechanics Institute, that would devote itself to upgrading young men and women through education, who came in the immigrant streams from Europe. Those two traditions were fused together into a rather interesting community institute of higher learning, and remained as the Rochester Institute of Technology until it added its third tradition 3 years ago, which is the National Technical Institute for the

Deaf, authorized by the Congress and chartered through the Department of Health, Education, and Welfare.

Here still is another attempt to somehow reach out to the deprived, to the disadvantaged, and build upon the traditions of the past. I can give other details about the institutions which I represent. But it would really not contribute very much to repeat what my colleagues have said in characterizing these institutions. I do want at least to close with the statement of the problem, without getting into technical specifics for the solution.

We have 5,000 full-time students. We have up to 11,000 students at night. Fully 40 to 50 percent of the people of Rochester, in every walk of life, have for over 140 years been touched in some way educationally by their attendance at this institution.

This year, our budget is $25 million; 62 percent of this is paid by the students, including the debt service on a $50 million mortgage on a new campus, onto which we moved some 2 years ago. Ten percent of the budget is drawn from the endowment; 10 percent from local, annual private giving to the institution; 5 percent is made up by grants from the corporations of the city; some 3 percent comes in from Federal research grants. I should make the point—and I think it is true—that the type of institutions represented here, these are institutions which have, over the years, mainly contributed to the teaching of students, and have not, on the whole, stressed research in the sense we have normally come to think of it in American colleges and universities.

If you add all of this up, you will find that this makes about 95 percent, which leads one to say that this institution operates, and has operated for the last several years, at about $1 million a year deficit.

In a sense, we are here today, as many others who appear before you and other committees, to simply say that in these institutions, if it were not for the cooperative education feature, they would be in very, very serious trouble. Our students pay $2,100 a year tuition. The feature of a cooperative education is simply fundamental to the type of institution which I now represent.

So I join with my colleagues in saying that whatever the specifics and the techniques turn out to be, certainly we need soon a threefold kind of Federal aid: To continue the support for the students in ways that we have developed and others that might be derived; second, we do need to introduce an imaginative form of direct aid to the institutions in the way of institutional grants, and, finally, we should continue support to the development of needed facilities on these and other campuses across the land.

Senator PELL. Thank you very much, all three of you.

(The prepared statement of Dr. Miller follows:)

ROCHESTER INSTITUTE OF TECHNOLOGY
ROCHESTER, NEW YORK

THE MEANING OF R.I.T.

The Founding - The Rochester Institute of Technology owes its history to the merging of two Rochester institutions. In response to community needs in 1829, Colonel Nathaniel Rochester and others founded the Rochester Athenaeum to improve the cultural life of a then frontier village through forums, concerts, and lectures. In 1885, under the leadership of Capt. Henry Lomb, Frank Ritter, and other industrialists, the Mechanics Institute began to supplement the labor force with technical training. In 1891 the two institutions merged, and in 1944 the name was changed to the Rochester Institute of Technology.

The Purpose - The Rochester Institute of Technology has always derived its strength from its responsiveness to changing needs. The Institute has continued to be committed to an educational philosophy which asserts that our primary obligation is to prepare our constituents to be constructive members of society. In our view, the effective citizen is a productive one, and hence, R.I.T. places occupational competence first among our educational objectives. But the Institute has always recognized that occupational competence alone is not sufficient in the education of the citizen. The Institute has therefore consistently interwoven in each of its curricula the study of significant human and social values.

The Setting - The Rochester Institute of Technology is a privately endowed, coeducational, accredited college granting associate, bachelors, and masters degrees in business, engineering, engineering technology, fine and applied arts, photography, printing, social work, and the basic sciences. Over 5,000 students are enrolled full-time, and over 10,000 part-time students are enrolled annually in a comprehensive college of continuing education.

R.I.T. has an established metropolitan center on the site of its former campus and an all-new, $65 million, 1300 acre campus on the southern edge of Rochester. The two campuses allow R.I.T. to meet urban needs in the inner city and to serve certain educational needs of our city, state, and nation.

The Programs - The Rochester Institute of Technology has over fifty different curricula which in the main focus upon technical or technological education, general studies, and cooperative work study. Several of our schools are virtually unique in the United States and have national and international reputations. R.I.T. has comprehensive curricula in the School of Photographic Arts and Sciences and the School of Printing, and the School for American Craftsmen has programs in wood, metal, textile, and ceramic design. In curriculum development, our efforts attempt to meet a demonstrated need for graduates and career opportunities thereafter. Unlike most other collegiate programs, R.I.T.'s curricula are designed with an applications or applied emphasis. Since 1912, the Institute has been one of the proponents of the cooperative or work-study plan, whereby students benefit from the reinforcement of concepts and skills in a work environment. R.I.T.'s cooperative plan is the third oldest continuous work-study program in the country.

The National Technical Institute for the Deaf - The Rochester Institute of Technology houses NTID, a challenging experiment in education of the handicapped. Supported by federal funds, NTID is the only post-secondary, technical,

and technological institution for deaf students in the country. NTID offers evidence of the Institute's increasingly national scope. RIT-NTID's chief objectives are to provide technical education programs which prepare post-secondary deaf students for successful employment and to provide special support services which will facilitate and encourage deaf students to achieve a high degree of personal, social, and cultural development.

The Benefitted - The Rochester Institute of Technology, within our resources and sphere of purpose, focuses upon occupational goals. Those benefitted are not limited to the full-time, typical college student. The average R.I.T. student upon entry has a commitment to a particular field of study and an occupational goal in mind. Moreover, our College of Continuing Education is dedicated to serving community needs; hence R.I.T. presents opportunities to all area residents - craftsmen, technicians, businessmen, housewives - to upgrade skills, earn a degree, and explore new academic and cultural horizons. Overall, the Rochester area business, industrial, and scientific communities have benefitted greatly from R.I.T.'s full and part-time programs.

The Benefactors - The Rochester Institute of Technology benefits greatly from its impressive ties to the local community. The greater Rochester area is exemplary among major metropolitan cities in its support of community projects, as has been demonstrated numerous times by Rochester's corporate and individual citizens. Such support was again demonstrated by the success of the New Campus Fund campaign, which exceeded its original goal of $18.8 million. Further, having the support of such firms as Eastman Kodak, Xerox, Gleason Works, Gannett Publishing and Sybron provides a solid base from which the Institute seeks to encourage the support of firms located elsewhere in the nation.

The Future - The Rochester Institute of Technology, like most private colleges and universities, faces an uncertain financial future with some confidence and great determination. With financial support from the citizen and corporate communities already well utilized, we have an urgent need for increased state and federal support. R.I.T. will strive to continue the meeting of our community and society's basic occupational needs.

With the precedent established in NTID, the Rochester Institute of Technology would be an ideal site for a federally sponsored technical institute for our nation's disadvantaged. A national Center for Career Opportunities for the Disadvantaged would serve as a pilot project of federal-private cooperation to fulfill the critical educational needs of disadvantaged people. Training and research would be the central purposes of the center.

Submitted by: Dr. Paul A. Miller
President, Rochester Institute of Technology
April 27, 1971

60-433 O - 71 - pt. 3 - 29

Senator PELL. I think the institutions you represent play a very special role in that they service the urban communities, which is where the majority of our young people are, and also they take into account the special needs of those who are not able to take advantage of the normal—as it is now being called—lockstep approach to education.

NEWMAN REPORT

Speaking of lockstep, I wonder if any of you have any particular thoughts with regard to the Newman Report which is presently being widely discussed.

Dr. MILLER. Not only with the Newman Report, but also other commission reports in the last year or so, the Carnegie Reports. All of them, it seems, are directing our attention to the fact that we have, indeed, made the educational system in this country much more of a lockstep than it ought to be. We do have more students in college involuntarily because it does not fit with their felt stage in the life cycle.

Sponsored by the kinds of institutions we represent this morning, education is viewed as a part of life, continuing education throughout life, the opening of doors to the nontraditional student, increasing of flexibility for students to leave as it may suit their own lives and to return without loss, all of these principles are absolutely fundamental to the purposes of education as it serves the population of this country.

It would be my wish—and I hope led by the kinds of institutions here, because we have been practicing this for decades—that we would discourage the lockstep, increase the flexibility, and have a coming and going for a day, a week, a month, or for 4 years, whatever it might be, of people, young and old, men and women from all walks and stations of life, without loss and with encouragement.

Dr. FULLER. I would simply like to say that it seems to me the Newman Report is putting in nice language—really a beautiful job—what we have been practicing for a great many years. We are extremely pleased to see this kind of stand come out of the Government.

Dr. WOOLDRIDGE. The only thing I would add is that I think there are at least three outstanding reports, of which the Newman Report is one and the Carnegie Report is another, and then the report from the Assembly on the Goals of Higher Education of the American Academy of Arts and Sciences. All point to some form of breaking the lockstep, which to us is a very broad definition of cooperative education, which started as a form of engineering education, very much job related, but has broadened in recent years to include a great many things.

I had the privilege of spending a half-day with the the Newman Committee during the time they were preparing the report and gathering the data. They came up to Boston to see some of us, and I think you will find my particular university was twice cited by name in the Newman Report, once pertaining to the cooperative program, and another time to the rather high level of retention that is allowed in the institution by this kind of education for a given level of students. We have a very high retention rate, and this was cited.

Senator PELL. How many students at Northeastern University come from the Rhode Island area?

Dr. WOOLDRIDGE. I wish I could say.

Senator PELL. It is quite a lot.

Dr. WOOLDRIDGE. The night section is 20,000. It is easy to commute up from the Providence area along the highways, but I guess of the 15,000 students, there might be 1,000 or so. I am just taking a guess. I have no way of knowing. We have quite a number of, as we call it, cooperative firms in the Greater Providence area that employ the students.

Senator PELL. Do you still give any advanced degrees, such as a law degree?

Dr. WOOLDRIDGE. Yes, we have a law school which has a cooperative program. We had a law school years ago. As you may realize, it was closed out in the fifties, and then reopened about 3 years ago as a graduate law school. At one time we had a division in Providence. I do not know whether your memory goes back that far.

Senator PELL. My senior colleague, Senator Pastore, received his law degree from Northeastern.

Turning to Fairleigh Dickinson College, I greatly admire Senator Dickinson. Is he still the Chairman?

Dr. FULLER. Yes, and he sends his regards to you.

Senator PELL. Is he chairman of the board of trustees?

Dr. FULLER. Chairman of the board of trustees, and still takes a very active part in developing the university. These concepts are, as you probably know, that he came up in a quite different way, being a man with what we might call born with a silver spoon in his mouth. He is very much in sympathy with what we are doing and has given us tremendous support as the institution has advanced to try to serve the total community needs.

Senator PELL. How did it start, Fairleigh Dickinson, what year?

Dr. FULLER. 1941.

Senator PELL. As Fairleigh Dickinson from the beginning?

Dr. FULLER. It started out as Fairleigh Dickinson 2-year community college; in other words, a 2-year institution; but it never finished with the 2-year program because the clamor for the students to continue on to a 4-year program was so great. It was a typical trolley car college, commuting students to start with, no dorms, and it has developed then in these some 30 years to this 20,000 enrollment.

Senator PELL. It was started then by Senator Dickinson's father?

Dr. FULLER. Yes.

Senator PELL. I am familiar with the college and also with your West Indies Laboratories. You were kind and asked me to cut the ribbon when it opened. I think Chancellor Martino——

Dr. FULLER. Sammartino, Chancellor Sammartino.

Senator PELL. He is your Chancellor?

Dr. FULLER. That is right.

SEA GRANT PROGRAM

Senator PELL. In the West Indies Laboratory are you trying to move ahead into the Sea Grant college program?

Dr. FULLER. Yes.

Senator PELL. Have you received any grants from them?

Dr. FULLER. We have not gotten any grants up to now. You see, we have been using the hotels for our facilities in the off-season. Senator Dickinson has given us the land and the money to develop the lab and

we are building five buildings down there now and we will develop a year-round program. That year-round program we hope to be using in affiliation with other institutions.

I hasten to add that this is not a program in competition with the typical Woods Hole, Miami and Scripps program. It is a teaching laboratory for the oceanography sciences.

S. 1453

Senator PELL. Dr. Miller, I was just curious in the light of your stress of the part-time students, would you support Senator Javits' bill in particular, S. 1453, which extends the eligibility for educational opportunity grants to include part-time as well as full-time students?

Dr. MILLER. That is right. Senator, I serve as Chairman of the Committee on Higher Continuing Education for the American Council on Education. That Committee would be interested in such a feature. When we speak of greater flexibility, we increase the invitation to develop more nontraditional students. The aid programs have to take this into consideration.

Senator PELL. Basically, this bill of Senator Javits is an excellent idea and we could very easily pull it into either of the bills as an amendment. I think we should. We will iron that out in the executive session. Basically we face a choice between two broad approaches. One is the administration's proposal embodied in S. 1123, and that of the bill that the subcommittee is looking at in particular, S. 659.

CHOICE OF PENDING BILLS

I was wondering if each of you three gentlemen could express a preference for one over the other. Are you familiar with both bills?

Dr. MILLER. I am not personally familiar with all of the comparisons.

Senator PELL. Well, it helps us to have a rather clear statement of "We prefer this one" or "We prefer that one."

Dr. MILLER. Yes, I think my own view offhand, without being competent to really make the judgment, is I understand S. 1123 does include a feature of the direct institutional aid in the way that the other one does not.

Senator PELL. What was that? Would you repeat that?

Dr. MILLER. I am not quite sure that I am able to judge the contrast of provision in the two with reference to institutional aid.

Senator PELL. The administration bill has no institutional aid. The bill that we are working on supports the concept of a grant to the Institution following each student who receives Federal assistance.

Dr. MILLER. Well, my own choice would be on the side of the bill that would add direct institutional aid to the Federal financing assistance of higher education.

Senator PELL. Are you familiar with both of those?

Dr. WOOLDRIDGE. On the two parts that I am concerned with, Senator, I could only second what Dr. Miller just said, that I would favor S. 659 because of the concept of the direct aid to institutions. I am more familiar perhaps with the cooperative education portion of it. The administration bill calls for support of cooperative education but designates 3 percent of work study funds to do it. It does not extend

the previous Higher Education Act provisions for cooperative education but really makes cooperative education part of the work study phase. I think I can certainly say for myself and my colleagues in the field that all strongly prefer the S. 659 approach where it remains a line item and stands on its own feet and looks for its own appropriation.

We think in the long run that is going to best serve the higher education institutions in this country. That is a very definite stand.

Dr. FULLER. The bill that you are talking about, S. 1123, is that the one with the matching concept?

Senator PELL. Matching concept for what?

Dr. FULLER. For the States.

Senator PELL. No. That is another bill of Senator Javits. The two overall bills are S. 1123 and S. 659 which are basically going in the same direction. S. 659 has the approach of helping the students by granting to them the difference between the income tax paid and $1,200 along with a matching grant to the institution. The emphasis in the administration bill is more towards extending the loan program in general, and these are the two different approaches.

Do you have a preference between these two?

Dr. FULLER. Well, I feel very strongly that you have got to have not only the student aid grant to the students—I think this gives them a choice that is necessary—but you also must have direct aid to the institutions. The two cannot be separated and my plea then was to look at the problems at the time that relate to the social problems and support those institutions. I feel I cannot say any more.

Senator PELL. But, in general, then, as I said, the panel supports S. 659 over the other approach?

Dr. FULLER. Yes.

PROBLEMS OF DISADVANTAGE PUPIL

Senator PELL. Now, one final question. Do you find that undergraduates who normally would not be in college but who are now attending, have problems adjusting to the theoretical life and the extra demands that are made on them?

Dr. FULLER. Very definitely, but this is one of the reasons that we have developed a slightly different approach to what the New York City schools have called open admission. We have developed a special program at Wayne where if a young man or woman is not ready for college we can give them this adjustment phase. The same thing is true with our experimental college, the 2-year, and the Edward Williams, and even when we bring the students in to the regular programs we try to be aware of this through our counseling programs.

I think we get more of this kind of student in the urban institutions than is typical of other institutions where the selection is so great. I think where you take the top 10 percent of the high school class you have a different set of programs and problems and maybe more emotional adjustments, but it is not a total cultural adjustment when you have essentially open admission type.

Dr. MILLER. I want to say, Mr. Chairman, having gone to a conventional college, having worked in conventional institutions, I was not prepared for what has happened to institutions which have been

sometimes called shirt-sleeved institutions; and how for so many decades they have worked with young people of disadvantaged groups.

In our place we have something called the Vestibule program introduced by our work with deaf students into which students who are not really prepared for conventional college work are admitted and are given extensive help through educational technology and other features. We have more than the normal college in counseling services and remedial centers. In our metropolitan center we have representatives from minority groups coming there to take remedial work and to conduct seminars on community problems.

I am saying that often we have placed too much emphasis upon rather formal admissions procedures, now challenged by open admissions policies. We should also look at what we know about human learning that can help young men and women who have been deprived, who have been handicapped, who have been retarded in some way from normal learning opportunities; and there is much we can do that we are not doing in American colleges and universities to help young people move into the mainstream of higher education. Cooperative education is also a way that a student can move gradually into formal education.

Dr. WOOLDRIDGE. I would again add my voice to say that I think all of us represent institutions that are very unique and different urban schools that have always catered to working class students or short-sleeve institutions, as Dr. Miller said. I think through the years we have developed techniques in teaching to address ourselves to that problem, and they are very useful today.

I do not think you can just take youngsters who normally would not have gone ahead to higher education and put them in a conventional institution in a typical campus setting and expect them to survive. In many urban institutions we have had this. The cooperative education plan, the alternation of work and study does allow adjustments.

I would like to mention the evening and part-time student again, in that the great tendency on the part of accrediting agencies and Federal agencies, too, is to try to equate the evening student with the day student, and this cannot be done. This is an adult and mature student. His education program has to be set up on a different basis entirely. He is often a young person who has other responsibilities and is struggling to get an education, and I think we have not in the past given due recognition to this in many institutions. All of us are heavily involved in that kind of education as well as cooperative programs and special teaching in the freshman year.

INSTITUTIONAL AID

Senator PELL. Thank you very much. Now, one final question, and this involves assistance to educational institutions. The approach that we have in our bill provides for an amount of $1,000 for each student who receives a basic educational opportunity grant. President Hester of New York University has suggested another approach which would grant for example $100 for each student in the first and second year, $150 for the third and fourth year, $200 for the graduate year.

The amount of money would not be too different. In S. 659 the larger amount would follow those who receive the basic educational oppor-

tunity grants. The Hester approach is to all students but a smaller amount.

Do you have any preferences between these two approaches? Are you familiar with them? If you are not, do not worry, but I was just curious if you had any thoughts about whether assistance should be rendered on the basis of the student or a bloc grant to the university.

Dr. MILLER. I would select the option—and that is embodied I think in the Hester approach—of being as straightforward as possible. I think the efforts can be audited better. I think it leads less to ways to beat the game. From what you said and from what little I know about it—and I have read of President Hester's suggestion on this—I think I would like his option on the basis of what I know about it simply in terms of the straightforward ways for properly accounting and auditing for it. It is, therefore, better public policy.

Dr. FULLER. Saying the same thing in a slightly different way, I think our problem is to get the money wherever it will do the most good as rapidly as possible. The more checks and balances in the way of bureaucracy that are built into the distribution of money, the less money is going to get to the school.

Dr. WOOLDRIDGE. I would tend to agree with what my colleagues have said. I must say I would not wish to pretend to be an expert in this area and I suppose no one is because it is a brand new approach. I think the direct aid based on enrollment at much less per head than is called for in the Senate bill that is under consideration here is probably a better way.

I have some difficulty in understanding S. 659 on the direct aid formula because of the problems of the income tax of the parent of the student and some of the tuition that is paid by the student is subtracted—it is a rather complex formula. As best I can understand it, there might be some penalty to a cooperative education student who works 6 months a year. In other words, our students, because they work hard and go out on job assignments, which is taxable by the Federal Government, might find themselves at a disadvantage in terms of these basic educational grants and, therefore, since the grant in aid to the institution is dependent upon that basic educational grant the institution would be disadvantaged. I am not absolutely sure of that but that is the way I have interpreted it on a quick glance and, therefore, I suppose I would favor the other system of direct grants based on the per head enrollment.

Senator PELL. I see the problem that we have. We have some cleaning up to do on our own drafting to simplify what we are doing and make sure as few abuses could take place as possible. What I have sought to do is make it very simple and to try to help those who most need the assistance. So this is why we opted for the income tax as a measure.

I realize there could be an occasional abuse such as the family whose total holdings are in municipal bonds, but I think that is the exception.

I thank all three of you for coming. This has been a very good panel and you have made a particular contribution representing as you do those institutions serving the urban areas where problems are becoming more and more representative of the United States as a whole. I thank each of you very much.

The next witness will be Mr. Joseph Angland, a student at Massachusetts Institute of Technology.

I would like to express the apologies of Senator Kennedy who sent me a statement that I will read into the record.

I regret not being able to attend the hearing this morning and to personally welcome the representatives of the Coalition for Aid to Private Higher Education. The coalition was organized last year as evidence as the financial crisis of higher education became increasingly apparent to the university community. The rising cost of education to students and their families has been matched with an associate increase in the financial burden on institutions.

As a Senator from Massachusetts and a Member of the Subcommittee on Education, I applaud your concern, your goals, your determination to involve yourself in the struggle to meet those goals.

I believe the bill before you begins to meet the crisis. To the aspiring college student from a poor or lower middle class background, this bill offers a guarantee of financial assistance. It also expands and extends student loans, educational opportunity grants and work-study programs which have already begun to open the doors of our universities to all economic groups. But much more still must be done.

Your testimony here this morning is critically important because you have been bearing the burden of higher tuition costs. Year by year, tuition has climbed at every university, public and private, all but the affluent have had to mortgage their future to pay those costs.

So again, I commend you on your initiative in bringing to the Committee a perspective on the financial crisis in higher education and your views on the impact of current bills on private higher education in this country.

Would you proceed, Mr. Angland.

STATEMENT OF JOSEPH ANGLAND, STUDENT, MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Mr. ANGLAND. My name is Joe Angland and I represent the Coalition for Aid to Private Higher Education. With me today are three other representatives of the coalition: Miss Jane Docktor from Emmanuel College; Fred Anderson of Tufts University; and Michael Grealy of Boston College.

The very basic presumption which underlies the philosophy of our organization is that private education is a worthwhile investment for the Government and that increased funding should be available. Certainly the philosophy of this committee and Congress as demonstrated by the legislation of recent years would demonstrate your position is constant with ours.

The rationale for this increased funding of private higher education devolves from considerations which are both economic and social in nature. Economically, it is obviously more efficient that the Federal Government help subsidize existing private colleges rather than to bear the entire cost of putting those people through college who otherwise would be forced to go to the public universities. Socially, there are strong reasons on the basis of giving options in terms of geography, style and size for having private as well as public education. Present State restrictions make it difficult for a person to go to a public school outside of his own State, while, if anything, the opposite is true of private institutions which tend to seek a wide geographic distribution.

In terms of style it is all too often the case that State schools are under the strict control of a legislature or political board of trustees which tends to enforce a rather narrow range of flexibility in allowing new programs or experiments in education.

In terms of size, it is also obvious that if private schools no longer were available to the majority of students, then they would be left to choose from schools in the 10,000 to 40,000 student enrollment range of the State universities and the consequent lack of interpersonal relationship and form that tend to make the existence of private education a worthwhile supplement.

Public and private education, we feel, must exist as competing systems leading each other into innovation and progressive change. Much like a two-party system of Government, a dual system makes education responsive to the needs of individuals and society.

Without increased aid to private higher education, we risk the destruction of this complementary function between the two systems. The legislation this committee is considering, specifically S. 659, does go a long way toward helping colleges to meet at least their shortrun crises in higher education.

The coalition shall defer comment to many aspects of the bill which are far better dealt with by people who are more familiar with the internal economics of the university and consider, instead, those aspects of the bill that relate directly to students through institutional grants.

The coalition strongly endorses S. 659's extension of Educational Opportunity Grants, Work Study Grants, and other forms of Federal loan subsidies. These programs have contributed substantially to the ability of needy and lower-middle class students to pursue educations in the private universities. To the extent that there are problems with these particular programs, they call for improvements in the program, certainly not their abolition.

We find grossly unacceptable the Administration's proposal to phase out National Defense loans. Such a move would aggravate the already severe problems confronting a student of middle-class background. For example, a student who borrows $2,500 a year for his education may wind up repaying $30,000 by the time the interest stops compounding. In light of such statistics, to say that the student has real freedom of choice is to perpetuate a myth.

Senator PELL. By this, you mean if he borrows $10,000, he has to pay back $30,000?

Mr. ANGLAND. $12,500 over a 5-year program and the figure comes out to $29,000 over a 20-year repayment period. Startling, but true.

The coalition further believes, and very strongly, that in the administration of the several forms of student assistance, the financial aid officers at the individual schools should be given the maximum possible discretion. Implicit in this position is a rejection of the proposal to tie all student assistance to a rigid function of the family's adjusted income. This approach—as advocated by the Administration—drastically oversimplifies some of the complex issues involved.

First of all, adjusted income is a very crude measure of need. Considerations such as family size, number of college-age students, debt structure and the liquidity of assets are of great importance in determining whether or not the need exists, but they are not readily reducible to a formula. Moreover, countless intangibles impinge on any particular student's case. In other words, a Federal formula would have to be condemned as being either grossly simplistic or hopelessly complex.

Our study of existing programs indicated that even the very broad eligibility requirements which exist now can in many cases exclude students who exhibit undeniable need. To extend these requirements to include not only eligibility of the programs but also to let them specify exactly how much a given student could receive would greatly exacerbate the problem that exists today, that is, the mismatch of real need and the availability of assistance.

Our second major complaint about a federally prescribed formula concerns the redistribution of funds from the middle class to the lower class. That the needy require more assistance is undeniable. That these funds can be reasonably obtained at the expense of middle class students is open to serious doubt. This is particularly true when one examines the impact of such a scheme on the private universities. Many middle class families—even with present aid programs—find it very difficult to bear the costs imposed by private higher education. The honorable president of Northeastern University emphasized this this morning when he spoke of the stranglehold upon people in the middle income class.

There can be no doubt that a reduction in Federal aid to the middle class would mean fewer middle class would seek private higher education. At the same time, the needy, even with the incremental Federal assistance that such a formula provides, would in most cases not be able to afford a private higher education. So, while the number of needy enrolled in private schools might increase, the extent would not be very large. In effect, the middle class would be priced out of private higher education and the poor would not yet be priced in. It is unfortunate that 1970 America is characterized by a middle class that can barely afford private education and the poorer class that cannot afford it at all.

However, redistributing funds so that both classes could half-afford private higher education hardly seems to be a realistic solution. Its consequence would be a system of private higher education dominated by the very wealthy—a system which is to be condemned on both educational and social grounds.

So, both in terms of redistribution of funds among income classes and the distribution of funds to specific individuals within income classes, we strongly endorse maximum flexibility for the financial aid officer. The formula proposed by the Administration is simple and uniform. However, the needs and circumstance of the millions of students enrolled in our private universities are not. This calls clearly for more discretion at a lower level.

Beyond the general income requirement, our examination of existing Federal programs have led us to conclude that financial aid officers are often hamstrung by some of the stipulations attached to the programs. The difficulty in the use of work-study grants in the summer and the 15-hour/week limit on such grants are illustrative of the problem. We are of the opinion that Congress should reexamine the wisdom of these constraints. It appears that their main impact at this time has been to make things awkward for financial aid officials and frustrating for applicants.

While current programs of student assistance are, in general, laudable, they are, nonetheless, insufficient. Pleas for increased funding constantly plague this committee, as they do the other committees of the

Congress, but the dimensions of the crisis in private higher education are at this time awesome, and the response should be commensurate.

As students, we tend to view the problems of higher education not in terms of large aggregates, but in terms of the specific problems imposed upon individuals. We perceive the student with nine brothers and sisters who is denied aid because her parents' income of $10,000 is "inadequate" by some formula. We see the recipient of a National Defense loan receiving a maximum of $1,000 per year—the same maximum that was written into the law when it was passed in 1958, even though tuition for him may have tripled since that time. We see 58 percent of those students in the forthcoming fiscal year who can meet the already stringent requirements for educational opportunity grants being denied these grants because the amount of appropriations recently passed by the House of Representatives could finance absolutely no more. Were these examples isolated exceptions, we could perhaps live with them. As it is, the fact that they are so commonplace demands remedial action.

S. 659 is to be commended for extending the magnitude of the Federal Government's commitment to the problems of higher education. The provision for supplemental grants geared to the income tax will provide funds direly needed by the lower and lower-middle class. While we realize the income tax is an imperfect measure of need, it is a plaudable indicator for the lower income brackets to which this provision applies. Again, the mechanism of providing this additional assistance seems less important than the commitment to provide assistance. Perhaps the additional funds could be channeled through existing programs in an equitable manner to achieve the desired result.

As regards the cost-of-education allowances, we have some serious reservations. S. 659 would provide such funds only where the student is charged less than $1,000 tuition. Now, while virtually all State universities would reap the benefits, aid for private schools would be minimal. It appears a drastic misordering of priorities to provide a bonanza for State supported schools where tuition is minimal while denying additional moneys to private universities who are in an even more precarious position. By lowering the incremental cost of a student at a public university, such a proposal can only provide artificial incentives to use public rather than private universities.

The idea of institutional aid is one we sanction; however, this particular mechanism seems ill suited to the problems of our time. It would be relatively easy to restructure the distribution of funds between the public and private sector in an equitable manner. The crisis of private higher education demands as much.

Earlier this morning I heard you mention a proposal, I believe by a gentleman from N.Y.U., Mr. Hester, which perhaps would do that, if I heard the formula correctly. Indeed, a restructuring must be in order to get the correct balance.

By way of conclusion, I should like to emphasize one very important point, a point which was made by the gentleman earlier this morning and a point which is implicit in what I have to say, and I would do so by way of raising a very unpleasant spectre.

We have already established that private higher education is something that should exist. The question then becomes for whom? The spectre I would raise is one where private higher education became

the exclusive province of the wealthy few, and certainly such a situation smacks of elitism which does run against our egalitarian grain; however, it is much more realistic than you might expect. There are suggestions that such a trend is in the workings and some of the mechanisms I have talked about today could aggravate this trend.

Providing money to the public schools rather than the private schools would aggravate this trend. Similarly, starving the middle class and giving money to the poor could drive both groups to the public universities and again the private universities would be left only to the very rich. This would be intolerable.

The coalition believes this committee and the Congress and the entire Nation shares our disdain for such a situation. They will react when the crisis reaches crisis proportions, however, reaction times are often long and reactions after the fact, as we can see by taking a look at poverty programs and a few other areas, oftentimes lead to ad hoc measures, not a coherent plan for solving the basic problems.

The legislation this committee is considering now will shape the nature of the Federal Government's commitment to private higher education for some years to come. However, at this time, time is really of the essence. We strongly urge this committee and the rest of the Congress to not only act today but act tomorrow. It is much better for us to pass legislation which will let us anticipate a crisis of tomorrow rather than not doing so and having to react to it in the future.

Mr. Chairman, that concludes our testimony.

Senator PELL. I thank you very much for your testimony and for your strong support of S. 659.

I would add in this regard that the problem here of the cost of education to help the institutions is overly complicated in this bill and we intend to simplify it so it will be a straight $1,000 grant for each youngster that gets a basic cost of education grant. So the amounts will not be too different between this approach and President Hester's approach.

Mr. ANGLAND. To the extent that occurs, we would probably support it wholeheartedly.

Senator PELL. I am also delighted that Senator Kennedy, whose statement I inserted in the record, also supports this bill.

I have one question I wanted to ask your view on, and that is, do you subscribe to the basic philosophy of the bill which is before us, which is, that there should be a right to an education beyond high school—not necessarily a liberal arts education, it could be vocational education—but a right available to all American people. One provided to them if they can maintain their grades that are necessary and have a desire to do so?

Whether it is a private or public education is not the important point here. The point is that there must be a floor of post-high school education available to all people, just as probably 60, 70, 80 years ago the idea that a high school education would be available to all people was probably rather radical. If you went to high school that was considered a privilege and you had to pay for it. Today, if you want to go to Phillips Exeter Academy, that is a privilege and you pay for it; but you do have high school available to you.

This is what we are trying to get with post-high school education now.

Mr. ANGLAND. The coalition wholeheartedly endorses that sentiment. I was going to use the analogy of high school which you beat me to. It has been a long time now since we first granted people the absolute right to have a high school education. The only constraint upon offering more were financial constraints. If one looks at the wealth available to America now and the wealth available to America then, one would think some could be channeled to extending this opportunity a few grades higher.

Mr. Nixon emphasized this when he wanted to extend it 2 years higher when he proposed the Educational Opportunity Act of 1970. What we questioned is whether he provided the means and about that we have serious reservations.

Senator PELL. Do any of the others of you have any other thoughts you would like to bring out at this time? [No response.]

We are glad you are here. It is a rare privilege for us to hear from the consumers of the education programs. I thank you all.

This subcommittee is now in recess until tomorrow morning at 10:00 a.m.

(Whereupon, at 11:30 a.m., the subcommittee was recessed, to be reconvened at 10 a.m., Wednesday, April 28, 1971.)

EDUCATION AMENDMENTS OF 1971

WEDNESDAY, APRIL 28, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to recess, at 9:30 a.m., in room 4232, New Senate Office Building, Senator Claiborne Pell presiding.

Present: Senators Pell, Kennedy, and Mondale.

Committee staff members present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and Roy H. Millenson, minority professional staff member.

Senator PELL. This morning the subcommittee on Education, of the Senate Committee on Labor and Public Welfare, will hear testimony on the Indian Education Act, Amendment 6 to S. 659, Education Amendments of 1971.

At this point in the hearing record I ask that a copy of the amendment sponsored by Mr. Kennedy, for himself, Messrs. Mondale, Byrd of West Virginia, Cannon, Cranston, Dominick, Eagleton, Gravel, Hart, Hughes, Humphrey, Inouye, Javits, McGovern, Muskie, Pastore, Stevens, and Tunney, be printed.

(The text of the amendment follows:)

92D CONGRESS
1ST SESSION

S. 659

IN THE SENATE OF THE UNITED STATES

FEBRUARY 25 (legislative day, FEBRUARY 17), 1971

Referred to the Committee on Labor and Public Welfare and ordered to be printed

AMENDMENT

Intended to be proposed by Mr. KENNEDY (for himself, Mr. MONDALE, Mr. BYRD of West Virginia, Mr. CANNON, Mr. CRANSTON, Mr. DOMINICK, Mr. EAGLETON, Mr. HART, Mr. HUGHES, Mr. HUMPHREY, Mr. INOUYE, Mr. JAVITS, Mr. MCGOVERN, Mr. MUSKIE, Mr. PASTORE, and Mr. TUNNEY) to S. 659, a bill to amend the Higher Education Act of 1965, the Vocational Education Act of 1963, and related Acts, and for other purposes, viz: On page 120, after line 21, insert the following:

Amdt. No. 6

1 TITLE V—INDIAN EDUCATION

2 PART A—REVISION OF IMPACTED AREAS PROGRAM AS

3 IT RELATES TO INDIAN CHILDREN

4 SEC. 501. (a) The Act of September 30, 1950 (Public

5 Law 874, Eighty-first Congress), is amended by redesig-

6 nating title III as title IV, by redesignating sections 301

7 through 303 and references thereto as sections 401 through

8 403, respectively, and by adding after title II the following

9 new title:

10 "TITLE III—FINANCIAL ASSISTANCE TO LOCAL

11 EDUCATIONAL AGENCIES FOR THE EDUCA-

12 TION OF INDIAN CHILDREN

13 "SHORT TITLE

14 "SEC. 301. This title may be cited as the 'Indian

15 Elementary and Secondary School Assistance Act'.

16 "DECLARATION OF POLICY

17 "SEC. 302. (a) In recognition of the special educational

18 needs of Indian students in the United States, Congress

19 hereby declares it to be the policy of the United States to

20 provide financial assistance to local educational agencies to

21 develop and carry out elementary and secondary school pro-

22 grams specially designed to meet these special educational

23 needs.

24 "(b) During the period beginning June 1, 1972, and

25 ending June 30, 1977, the Commissioner shall, in order to

1 effectuate the policy set forth in subsection (a), carry out a
2 program of making grants to local educational agencies
3 which are entitled to payments under this title and which
4 have submitted, and had approved, applications therefor,
5 in accordance with the provisions of this title.

6 "GRANTS TO LOCAL EDUCATIONAL AGENCIES

7 "SEC. 303. (a) For the purpose of computing the
8 amount to which a local educational agency is entitled under
9 this title for any fiscal year in the period during which grants
10 are to be made, as specified in section 303 (b), the Commis-
11 sioner shall determine the number of Indian children who
12 were enrolled in the schools of a local educational agency,
13 and for whom such agency provided free public education,
14 during such fiscal year.

15 "(b) (1) The amount of the grant to which a local
16 educational agency is entitled under this title for any fiscal
17 year shall be an amount equal to (A) the average per pupil
18 expenditure for such agency (as determined under paragraph
19 (3)) multiplied by (B) the sum of the number of children
20 determined under subsection (a).

21 "(2) A local educational agency shall not be entitled to
22 receive a grant under this title for any fiscal year unless
23 the number of children under subsection (a), with respect
24 to such agency, is at least ten.

25 "(3) For the purposes of this subsection, the average

1 per pupil expenditure for a local educational agency shall
2 be the aggregate current expenditures, during the second
3 fiscal year preceding the fiscal year for which the computa-
4 tion is made, of all of the local educational agencies in the
5 State in which such agency is located, plus any direct cur-
6 rent expenditures by such State for the operation of such
7 agencies (without regard to the sources of funds from which
8 either of such expenditures are made), divided by the aggre-
9 gate number of children who were in average daily en-
10 rollment for whom such agencies provided free public edu-
11 cation during such preceding fiscal year.

12 "(c) In addition to the sums appropriated for any
13 fiscal year for grants to local educational agencies under
14 this title, there is hereby authorized to be appropriated
15 for any fiscal year an amount not in excess of 1 per centum
16 of the amount appropriated for payments on the basis of en-
17 titlements under this section for that fiscal year, for the pur-
18 pose of enabling the Commissioner to provide financial
19 assistance to schools on or near reservations which are not
20 local educational agencies or have not been local educa-
21 tional agencies for more than three years, in accordance with
22 the appropriate provisions of this title.

23 "USES OF FEDERAL FUNDS

24 "SEC. 304. Grants under this title may be used, in ac-
25 cordance with applications approved under section 305,
26 for—

1 "(a) planning for and taking other steps leading to
2 the development of programs specially designed to meet
3 the special educational needs of Indian children, includ-
4 ing pilot projects designed to test the effectiveness of
5 plans so developed; and
6 "(b) the establishment, maintenance, and operation
7 of programs, including, in accordance with special regu-
8 lations of the Commissioner, minor remodeling of class-
9 room or other space used for such programs and acqui-
10 sition of necessary equipment, specially designed to meet
11 the special educational needs of Indian children.
12 "APPLICATION FOR GRANTS; CONDITIONS FOR APPROVAL
13 "SEC. 305. (a) A grant under this title, except as pro-
14 vided in section 303 (b) (3), may be made only to a local
15 educational agency or agencies, but only upon application
16 to the Commissioner at such time or times, in such manner,
17 and containing or accompanied by such information as the
18 Commissioner deems necessary. Such application shall—
19 "(1) provide that the activities and services for
20 which assistance under this title is sought will be ad-
21 ministered by or under the supervision of the applicant;
22 "(2) set forth a program for carrying out the pur-
23 poses of section 304, and provide for such methods
24 of administration as are necessary for the proper and
25 efficient operation of the program;

1 "(3) in the case of an application for payments for
2 planning, provide that (A) the planning was or will be
3 directly related to programs or projects to be carried out
4 under this title and has resulted, or is reasonably likely
5 to result, in a program or project which will be carried
6 out under this title, and (B) the planning funds are
7 needed because of the innovative nature of the program
8 or project or because the local educational agency lacks
9 the resources necessary to plan adequately for programs
10 and projects to be carried out under this title;
11 "(4) provide that effective procedures, including
12 provisions for appropriate objective measurement of
13 educational achievement, will be adopted for evaluating
14 at least annually the effectiveness of the programs and
15 projects in meeting the special educational needs of
16 Indian students;
17 "(5) set forth policies and procedures which assure
18 that Federal funds made available under this title for any
19 fiscal year will be so used as to supplement and, to the
20 extent practical, increase the level of funds that would,
21 in the absence of such Federal funds, be made available
22 by the applicant for the education of Indian children
23 and in no case supplant such funds;
24 "(6) provide for such fiscal control and fund
25 accounting procedures as may be necessary to assure

1 proper disbursement of, and accounting for, Federal
2 funds paid to the applicant under this title; and
3 "(7) provide for making an annual report and such
4 other reports, in such form and containing such infor-
5 mation, as the Commissioner may reasonably require to
6 carry out his functions under this title and to determine
7 the extent to which funds provided under this title have
8 been effective in improving the educational opportunities
9 of Indian students in the area served, and for keeping
10 such records and for affording such access thereto as the
11 Commissioner may find necessary to assure the correct-
12 ness and verification of such reports.
13 "(b) An application by a local educational agency or
14 agencies for a grant under this title may be approved only
15 if it is consistent with the applicable provisions of this title
16 and—
17 "(1) meets the requirements set forth in subsec-
18 tion (a);
19 "(2) provides that the program or project for which
20 application is made—
21 "(A) will utilize the best available talents and
22 resources (including persons from the Indian com-
23 munity) and will substantially increase the educa-
24 tional opportunities of Indian students in the area
25 to be served by the applicant; and

1 "(B) has been developed—

2 "(i) in open consultation with parents of

3 Indian children, teachers, and, where applica-

4 ble, secondary school students, including public

5 hearings at which such persons have had a full

6 opportunity to understand the program for

7 which assistance is being sought and to offer

8 recommendations thereon, and

9 "(ii) with the participation and approval of

10 a committee composed of parents of children

11 participating in the program for which assist-

12 ance is sought, teachers, and, where applicable,

13 secondary school students, of which at least half

14 the members shall be such parents;

15 "(C) sets forth such policies and procedures as

16 will insure that the program for which assistance is

17 sought will be operated in consultation with, and

18 the involvement of, parents of the children and repre-

19 sentatives of the area to be served, including the

20 committee established for the purposes of clause (2)

21 (B) (ii).

22 "(3) has been submitted to the appropriate State

23 educational agency for comment and recommendations.

24 "(c) Amendments of applications shall, except as the

25 Commissioner may otherwise provide by or pursuant to

1 regulations, be subject to approval in the same manner as
2 original applications.

3 "PAYMENTS

4 "SEC. 306. (a) The Commissioner shall, subject to the
5 provisions of section 307, from time to time pay to each local
6 educational agency which has had an application approved
7 under section 305, an amount equal to the amount expended
8 by such agency in carrying out activities under such appli-
9 cation.

10 "(b) (1) No payments shall be made under this title
11 for any fiscal year to any local educational agency in a State
12 which has taken into consideration payments under this title
13 in determining the eligibility of such local educational agency
14 in that State for State aid, or the amount of that aid, with
15 respect to the free public education of children during that
16 year or the preceding fiscal year.

17 "(2) No payments shall be made under this title to
18 any local educational agency for any fiscal year unless the
19 State educational agency finds that the combined fiscal
20 effort (as determined in accordance with regulations of the
21 Commissioner) of that agency and the State with respect to
22 the provision of free public education by that agency for the
23 preceding fiscal year was not less than such combined fiscal
24 effort for that purpose for the second preceding fiscal year.

1 "ADJUSTMENTS WHERE NECESSITATED BY
2 APPROPRIATIONS
3 "SEC. 307. (a) If the sums appropriated for any fiscal
4 year for making payments under this title are not sufficient
5 to pay in full the total amounts which all local educational
6 agencies are eligible to receive under this title for that fiscal
7 year, the maximum amounts which all such agencies are
8 eligible to receive under this title for such fiscal year shall
9 be ratably reduced. In case additional funds become avail-
10 able for making such payments for any fiscal year during
11 which the first sentence of this subsection is applicable, such
12 reduced amounts shall be increased on the same basis as
13 they were reduced.
14 "(b) In the case of any fiscal year in which the maxi-
15 mum amounts for which local educational agencies are eligi-
16 ble have been reduced under the first sentence of subsection
17 (a), and in which additional funds have not been made
18 available to pay in full the total of such maximum amounts
19 under the second sentence of such subsection, the Commis-
20 sioner shall fix dates prior to which each local educational
21 agency shall report to him on the amount of funds available
22 to it, under the terms of section 306 (a) and subsection (a)
23 of this section, which it estimates, in accordance with reg-
24 ulations of the Commissioner, that it will expend under
25 approved applications. The amounts so available to any local

1 educational agency, or any amount which would be available
2 to any other local education agency if it were to submit an
3 approvable application therefor, which the Commissioner
4 determines will not be used for the period of its availability,
5 shall be available for allocation to those local educational
6 agencies, in the manner provided in the second sentence of
7 subsection (a), which the Commissioner determines will
8 need additional funds to carry out approved applications,
9 except that no local educational agency shall receive an
10 amount under this sentence which, when added to the amount
11 available to it under subsection (a), exceeds its entitlement
12 under section 303.

13 "DEFINITION

14 "SEC. 308. As used in this title, the term 'Indian' means
15 any individual who is an enrolled member of a tribe, band,
16 or other organized group of Indians, or who is a descendant
17 of any such enrolled member, or who is considered by the
18 Secretary of the Interior to be an Indian.".

19 (b) (1) Paragraph (1) of section 103 (a) of title I of
20 the Elementary and Secondary Education Act of 1965 is
21 amended—

22 (A) by striking out subparagraph (B), and by
23 striking out "(A)" where it appears after "SEC. 103.
24 (a) (1)";

1 (B) in the fourth sentence thereof, by striking out
2 "and the terms upon which payment shall be made to
3 the Department of Interior"; and
4 (C) by striking out the third sentence thereof.
5 (2) Paragraph (1) of section 303 of the Act of
6 September 30, 1950, is amended—
7 (A) in the second sentence, by striking out "(A)
8 except for the purposes of section 6, real property held
9 in trust by the United States for individual Indians or
10 Indian tribes, and real property held by individual
11 Indians or Indian tribes which is subject to restrictions
12 on alienation imposed by the United States," and by
13 redesignating clauses (B), (C), and (D) therein, and
14 all references thereto, as clauses (A), (B), and (C),
15 respectively; and
16 (B) in the fourth sentence, (i) by inserting before
17 the period at the end thereof the following: ", or (C)
18 Indian reservations, or other property held (i) in trust
19 by the United States for individual Indians or Indian
20 tribes or (ii) held by individual Indians or Indian
21 tribes which is subject to restrictions on alienation im-
22 posed by the United States", and (ii) by striking out
23 "and (B)" and inserting in lieu thereof ", or (B)".

1 PART B—SPECIAL PROGRAMS AND PROJECTS TO IMPROVE
2 EDUCATIONAL OPPORTUNITIES FOR INDIAN CHILDREN
3 AMENDMENT TO TITLE VIII OF THE ELEMENTARY AND
4 SECONDARY EDUCATION ACT OF 1965

5 SEC. 521. (a) Title III of the Elementary and Sec-
6 ondary Education Act of 1965 is amended by adding to the
7 end thereof the following new section:

8 "IMPROVEMENT OF EDUCATIONAL OPPORTUNITIES FOR
9 AMERICAN INDIAN CHILDREN

10 "SEC. 810. (a) The Commissioner shall carry out a
11 program of making grants for the improvement of educa-
12 tional opportunities for American Indian children—

13 "(1) to support planning, pilot, and demonstration
14 projects, in accordance with subsection (b), which are
15 designed to test and demonstrate the effectiveness of
16 programs for improving educational opportunities for
17 American Indian children;

18 "(2) to assist in the establishment and operation of
19 programs, in accordance with subsection (c), which are
20 designed to stimulate (A) the provision of educational
21 services not available to American Indian children in
22 sufficient quantity or quality, and (B) the development
23 and establishment of exemplary educational programs to

1 serve as models for regular school programs in which
2 American Indian children are educated;
3 "(3) to assist in the establishment and operation of
4 preservice and inservice training programs, in accord-
5 ance with subsection (d), for persons serving Indian
6 children as educational personnel; and
7 "(4) to encourage the dissemination of informa-
8 tion and materials relating to, and the evaluation of the
9 effectiveness of, education programs which may offer
10 educational opportunities to American Indian children.
11 In the case of activities of the type described in clause (3),
12 preference shall be given to the training of Indians.
13 "(b) The Commissioner is authorized to make grants
14 to State and local educational agencies and other appropriate
15 public and private educational and research agencies, organi-
16 zations, and institutions (including federally supported ele-
17 mentary and secondary schools for Indian children) to sup-
18 port planning, pilot, and demonstration projects which are
19 designed to plan for, and test and demonstrate the effective-
20 ness of, programs for improving educational opportunities
21 for American Indian children, including—
22 "(1) innovative programs related to the educational
23 needs of educationally deprived children;
24 "(2) bilingual and bicultural education programs
25 and projects;

1 "(3) special health and nutrition services, and other
2 related activities, which meet the special health, social,
3 and psychological problems of Indian children; and
4 "(4) coordinating the operation of other federally
5 assisted programs which may be used to assist in meet-
6 ing the needs of such children.
7 "(c) The Commissioner is also authorized to make
8 grants to State and local educational agencies and to the Na-
9 tional Board of Indian Education to assist and stimulate them
10 in developing and establishing educational services and pro-
11 grams specifically designed to improve educational opportuni-
12 ties for American Indian children. Grants may be used—
13 "(1) to provide educational services not available
14 to such children in sufficient quantity or quality, in-
15 cluding—
16 "(A) remedial and compensatory instruction,
17 school health, physical education, psychological, and
18 other services designed to assist and encourage In-
19 dian children to enter, remain in, or reenter ele-
20 mentary or secondary school;
21 "(B) comprehensive academic and vocational
22 instruction;
23 "(C) instructional materials (such as library
24 books, textbooks, and other printed or published
25 or audiovisual materials) and equipment;

1 "(D) comprehensive guidance, counseling, and
2 testing services;
3 "(E) special education programs for handi-
4 capped and preschool children;
5 "(F) bilingual and bicultural education pro-
6 grams; and
7 "(G) other services which meet the purposes
8 of this subsection; and
9 "(2) for the establishment and operation of exem-
10 plary and innovative educational programs and centers,
11 involving new educational approaches, methods, and
12 techniques designed to enrich programs of elementary
13 and secondary education for Indian children.
14 "(d) The Commissioner is also authorized to make
15 grants to institutions of higher education and to State and
16 local educational agencies, in combination with institutions
17 of higher education, for carrying out programs and projects—
18 "(1) to prepare persons to serve Indian children
19 as teachers, teacher aides, social workers, and ancillary
20 educational personnel; and
21 "(2) to improve the qualifications of such persons
22 who are serving Indian children in such capacities.
23 Grants for the purposes of this subsection may be used for
24 the establishment of fellowship programs leading to an

1 advanced degree, for institutes and, as part of a continuing
2 program, for seminars, symposia, workshops, and conferences.
3 "(e) The Commissioner is also authorized to make
4 grants to, and contracts with, public and private agencies,
5 organizations, and institutions (except that no grant may be
6 made to an agency, organization, or institution other than
7 one which is nonprofit) for—
8 "(1) the dissemination of information concerning
9 education programs, services, and resources available to
10 Indian children, including evaluations thereof; and
11 "(2) the evaluation of the effectiveness of federally
12 assisted programs in which Indian children may partici-
13 pate in achieving the purposes of such programs with
14 respect to such children.
15 "(f) Applications for a grant under this section shall be
16 submitted at such time, in such manner, and shall contain such
17 information, and shall be consistent with such criteria, as may
18 be established as requirements in regulations promulgated
19 by the Commissioner. Such applications shall—
20 "(1) set forth a statement describing the activities
21 for which assistance is sought;
22 "(2) in the case of an application for the purposes
23 of subsection (c), subject to such criteria as the Com-
24 missioner shall prescribe, provide for the use of funds

1 available under this section, and for the coordination of
2 other resources available to the applicant, in order to
3 insure that, within the scope of the purpose of the proj-
4 ect, there will be a comprehensive program to achieve
5 the purposes of this section;
6 "(3) in the case of an application for the purposes
7 of subsection (c), make adequate provision for the
8 training of the personnel participating in the project;
9 and
10 "(4) provide for an evaluation of the effectiveness
11 of the project in achieving its purposes and those of this
12 section.
13 The Commissioner shall not approve an application for a
14 grant under subsection (b) or (c) unless he is satisfied that
15 there has been participation by tribal communities and
16 parents of the children to be served in the planning and
17 development of the project, and that there will be such a
18 participation in the operation and evaluation of the project.
19 In approving applications under subsection (a) or (b), the
20 Commissioner shall not approve an application from non-
21 Indian educational agencies, organizations, and institutions
22 until all approvable applications from Indian educational
23 agencies, organizations, and institutions have been approved.
24 "(g) For the purpose of making grants under this sec-
25 tion there are hereby authorized to be appropriated $25,000,-

1 000 for the fiscal year ending June 30, 1972, and $35,000,-
2 000 for each of the four succeeding fiscal years.".
3 (b) (1) Effective after June 30, 1972, the Elementary
4 and Secondary Education Act of 1965 is amended—
5 (A) in section 202 (a) (1), by striking out "(A)
6 the Secretary of the Interior the amount necessary for
7 such assistance for children and teachers in elementary
8 and secondary schools operated for Indian children by
9 the Department of the Interior, and (B)" and by strik-
10 ing out "Secretary of the Interior and the".
11 (B) in section 302 (a) (1), by striking out "(A)
12 the Secretary of the Interior the amount necessary to
13 provide programs and projects for the purpose of this
14 title for individuals on reservations serviced by elemen-
15 tary and secondary schools operated for Indian children
16 by the Department of the Interior, and (B)" and by
17 striking out "Secretary of the Interior and the".
18 (2) Effective after June 30, 1972, the second sentence
19 of paragraph (1) of section 612 (a) of the Education of the
20 Handicapped Act is amended to read as follows: "The Com-
21 missioner shall allot the amount appropriated pursuant to
22 this paragraph among Puerto Rico, Guam, American
23 Samoa, the Virgin Islands, and the Trust Territory of the
24 Pacific Islands, according to their respective needs.".

1 PART C—SPECIAL PROGRAMS RELATING TO ADULT EDU-
2 CATION FOR AMERICAN INDIANS
3 AMENDMENT TO TITLE III OF THE ELEMENTARY AND
4 SECONDARY EDUCATION ACT OF 1965
5 SEC. 541. Title III of the Elementary and Secondary
6 Education Amendments of 1966 (the Adult Education Act)
7 is amended by redesignating sections 314 and 315, and all
8 references thereto, as sections 315, and 316, respectively, and
9 by adding after section 313 the following new section:
10 "IMPROVEMENT OF EDUCATIONAL OPPORTUNITIES FOR
11 ADULT AMERICAN INDIANS
12 "SEC. 314. (a) The Commissioner shall carry out a pro-
13 gram of making grants to State and local educational agencies
14 and other appropriate public and private educational and
15 research agencies, organizations, and institutions to support
16 planning, pilot, and demonstration projects which are de-
17 signed to plan for, and test and demonstrate the effectiveness
18 of programs for providing adult education for American
19 Indians—
20 "(1) to support planning, pilot, and demonstra-
21 tion projects which are designed to test and demonstrate
22 the effectiveness of programs for improving employment
23 and educational opportunities for adult American In-
24 dians;
25 "(2) to assist in the establishment and operation of

1 programs which are designed to stimulate (A) the pro-
2 vision of basic literacy opportunities to all nonliterate
3 Indian adults, and (B) the provision of opportunities to
4 all Indian adults to qualify for a high school equivalency
5 certificate in the shortest period of time feasible;
6 "(3) to support a major research and development
7 program to develop more innovative and effective tech-
8 niques for achieving the literacy and high school equiv-
9 alency goals;
10 "(4) to provide for basic surveys and evaluations
11 thereof to define accurately the extent of the problems of
12 illiteracy and lack of high school completion on Indian
13 reservations;
14 "(5) to encourage the dissemination of information
15 and materials relating to, and the evaluation of the effec-
16 tiveness of, education programs which may offer educa-
17 tional opportunities to Indian adults.
18 "(b) The Commissioner is also authorized to make
19 grants to, and contracts with, public and private agencies,
20 organizations, or institutions (except that no grant may be
21 made to an agency, organization, or institution other than
22 one which is nonprofit) for—
23 "(1) the dissemination of information concerning
24 educational programs, services, and resources available
25 to Indian adults, including evaluations thereof; and

1 "(2) the evaluation of the effectiveness of federally
2 assisted programs in which Indian adults may participate
3 in achieving the purposes of such programs with respect
4 to such adults.
5 "(c) Applications for a grant under this section shall be
6 submitted at such time, in such manner, and contain such
7 information, and shall be consistent with such criteria, as
8 may be established as requirements in regulations promul-
9 gated by the Commissioner. Such applications shall—
10 "(1) set forth a statement describing the activities
11 for which assistance is sought;
12 "(2) provide for an evaluation of the effectiveness
13 of the project in achieving its purposes and those of
14 this section.
15 The Commissioner shall not approve an application for a
16 grant under subsection (a) unless he is satisfied that there
17 has been participation by tribal communities and individuals
18 to be served in the planning and development of the project,
19 and that there will be such a participation in the operation
20 and evaluation of the project. In approving applications
21 under subsection (a), the Commissioner shall not approve
22 an application from non-Indian educational agencies, or-
23 ganizations, and institutions until all approvable applica-
24 tions from Indian educational agencies, organizations, and
25 institutions have been approved.

1 "(d) For the purpose of making grants under this sec-
2 tion there are hereby authorized to be appropriated $5,-
3 000,000 for the fiscal year ending June 30, 1972, and
4 $8,000,000 for each of the four succeeding fiscal years.".

5 PART D—NATIONAL BOARD OF INDIAN EDUCATION;
6 BUREAU OF INDIAN EDUCATION; MISCELLANEOUS

7 NATIONAL BOARD OF INDIAN EDUCATION

8 SEC. 561. (a) There is hereby established the National
9 Board of Indian Education (referred to in this title as the
10 "National Board"), which shall consist of fifteen members
11 appointed by the President of the United States, with the
12 advice and consent of the Senate. Such appointments shall
13 be made by the President from lists of nominees furnished,
14 from time to time, by Indian tribes and organizations, and
15 shall represent diverse geographic areas of the country.
16 (b) Members of the National Board shall be appointed
17 for terms of three years; except that the terms of office of
18 the members first taking office shall expire, as designated by
19 the President at the time of appointment, five at the end of
20 one year, five at the end of two years, and five at the end
21 of three years. No member shall serve for more than two
22 consecutive terms. Any person appointed to fill a vacancy
23 occurring prior to the expiration of the term for which his
24 predecessor was appointed shall be appointed for the re-
25 mainder of that term. The President shall designate one of

1 the members to serve as Chairman and one to serve as Vice
2 Chairman. The Vice Chairman, during the absence or dis-
3 ability of the Chairman, shall act for, and exercise the powers
4 of, the Chairman. The Vice Chairman shall perform such
5 duties as the Chairman may prescribe from time to time.
6 (c) Members of the National Board shall be com-
7 pensated at the rate prescribed for grade GS–18 of the
8 General Schedule under section 5332 of title 5, United
9 States Code.

10 STAFF OF NATIONAL BOARD

11 SEC. 562. Subject to such rules and regulations as it
12 may adopt, the National Board shall be authorized to—
13 (1) appoint and fix the compensation of an
14 Executive Director, and such additional staff personnel
15 as the Chairman deems necessary, without regard to
16 the provisions of title 5, United States Code, governing
17 appointments in the competitive service, and without
18 regard to the provisions of chapter 51 and subchapter
19 III of chapter 53 of such title relating to classifications
20 and General Schedule pay rates, but at rates not in
21 excess of the maximum rate for grade GS–18 of the
22 General Schedule under section 5332 of such title;
23 (2) appoint and affix the compensation of a
24 Superintendent of Indian Education, without regard to
25 the provisions of title 5, United States Code, governing

1 appointments in competitive service, who shall be
2 compensated at the rate prescribed for grade GS–18 of
3 the General Schedule under section 5332 of such title,
4 and who have such duties as the National Board
5 shall prescribe; and
6 (3) procure temporary and intermittent services
7 to the same extent as is authorized by section 3109 of
8 title 5, United States Code, but at rates not to exceed
9 $100 a day for individuals.
10 POWERS AND DUTIES OF NATIONAL BOARD
11 SEC. 563. The National Board is authorized and
12 directed—
13 (1) to carry out the functions transferred to the
14 National Board pursuant to section 404 of this title;
15 (2) to establish and support local school districts
16 comprising Federal Indian schools over which it has
17 jurisdiction and control;
18 (3) to establish and support local school boards,
19 who shall be selected at the local level in accordance
20 with regulations promulgated by the National Board,
21 having administrative control and direction over Federal
22 Indian schools located within districts established pur-
23 suant to clause (2) of this section;
24 (4) to advise the Commissioner of Education with
25 respect to the administration of any program in which

1 Indian children participate, including title III of the Act
2 of September 30, 1950 (Public Law 874, Eighty-first
3 Congress), as added by this Act, and section 810, title
4 VIII of the Elementary and Secondary Education Act
5 of 1965, as added by this Act; and
6 (5) to submit to the Congress not later than March
7 31 each year a report on its activities, which shall in-
8 clude any recommendations it may deem necessary for
9 the improvement of Federal programs in which Indian
10 children participate.
11 FUNCTIONS OF NATIONAL BOARD
12 SEC. 564. (a) (1) There are hereby vested in the Na-
13 tional Board all functions which were carried out immedi-
14 ately before the effective date of this Act by the head of
15 any agency in the executive branch of the Government,
16 except the Department of Health, Education, and Welfare
17 and the Office of Economic Opportunity, relating to the edu-
18 cation of Indians in any elementary, secondary, or voca-
19 tional school, or any institution of higher education, including
20 all such functions being administered through any agency,
21 service, bureau, office, or other entity of any such agency.
22 (2) All functions of any agency of the United States,
23 except the Office of Education and the Office of Economic
24 Opportunity, relating to the education of Indians in any
25 elementary, secondary, or vocational school, or any institu-

1 tion of higher learning, are hereby transferred to, and vested
2 in, the National Board.
3 (3) All orders, determinations, rules, regulations, per-
4 mits, contracts, grants, certificates, licenses, and privileges—
5 (A) which have been issued, made, granted or al-
6 lowed to become effective in the exercise of functions
7 transferred by this section; and
8 (B) which are in effect at the time this section takes
9 effect,
10 shall continue in effect according to their terms until modi-
11 fied, terminated, superseded, set aside, or repealed by the
12 National Board, by any court of competent jurisdiction, or
13 by operation of law.
14 (4) All personnel, assets, liabilities, contracts, property,
15 and records as are determined by the Director of the Office
16 of Management and Budget to be employed, held, or used
17 primarily in connection with the functions transferred under
18 this section are transferred to the National Board. Person-
19 nel engaged in functions transferred under this section shall
20 be transferred in accordance with applicable laws and regu-
21 lations relating to transfer of functions.
22 (5) As used in this section, the term "functions" in-
23 cludes powers and duties.
24 (b) The National Board is directed—
25 (1) to conduct, in concert with a team of profes-

1 sional consultants competent in areas of personality de-
2 velopment and mental health, a detailed investigation of
3 the off-reservation boarding schools to determine which
4 ones should be converted into therapeutic treatment
5 centers, and to cooperate with the Public Health Service
6 to the extent necessary to bring about such conversion;
7 (2) to examine the present distribution and location
8 of Federal boarding schools and the pattern of student
9 placement, with the view to developing and implement-
10 ing a new rationale and plan with regard to such schools;
11 and
12 (3) to submit to the Congress on or before Jan-
13 uary 1, 1973, a report on its activities under this sub-
14 section.
15 BUREAU OF INDIAN EDUCATION
16 SEC. 565. (a) There is hereby established, in the Office
17 of Education, a bureau to be known as the "Bureau of
18 Indian Education" which, under the direction of the Com-
19 missioner, shall have the responsibility for administering
20 the provisions of title III of the Act of September 30, 1950
21 (Public Law 874, Eighty-first Congress), as added by this
22 Act, section 810 of title VIII of the Elementary and Second-
23 ary Education Act of 1965, as added by this Act, and section
24 314 of title III of the Elementary and Secondary Education
25 Amendments of 1966, as added by this Act. The Bureau shall

1 be headed by a Deputy Commissioner of Indian Education,
2 who shall be appointed by the President of the United States
3 from a list of nominees submitted to him by the National
4 Board of Indian Education.

5 (b) The Deputy Commissioner of Indian Education
6 shall be compensated at the rate prescribed for grade 17 of
7 the General Schedule of the Classification Act of 1949 and
8 shall perform such duties as are delegated or assigned to him
9 by the Commissioner.

10 PART E—MISCELLANEOUS PROVISIONS

11 AMENDMENT TO TITLE V OF HIGHER EDUCATION ACT
12 OF 1965

13 SEC. 581. (a) Section 503 (a) of the Higher Education
14 Act of 1965 is amended (1) by inserting after "and higher
15 education," the following: "including the need to provide
16 such programs and education to Indians," and (2) by in-
17 serting after "the Department of Labor," the following:
18 "the National Board of Indian Education,".

19 (b) Section 504 (a) (1) of such Act is amended by
20 inserting after "secondary schools" the following: "(in-
21 cluding such schools operated by the National Board of In-
22 dian Education or by an agency of an Indian tribe.)".

23 (c) Section 505 of such Act is amended by inserting
24 after "shall consult with" the following: "the Chairman of
25 the National Board of Indian Education,".

1 (d) Subsections (a) and (d) of section 552 of such
2 Act of 1965 are each amended by inserting after "in all
3 the States" a comma and the following: "including such
4 needs in schools operated by the National Board of Indian
5 Education, or by an agency of an Indian tribe.".
6 (e) Section 553 (a) of such Act is amended by insert-
7 ing at the end thereof the following: "The Commissioner
8 may also enter into arrangements with the National Board
9 of Indian Education, or with an agency of an Indian tribe,
10 and use funds appropriated for the purpose of this section,
11 for carrying out the purpose of this section with respect to
12 schools operated by the National Board of Indian Educa-
13 tion, or by an agency of an Indian tribe or tribes.".

14 AMENDMENT TO TITLE III OF HIGHER EDUCATION ACT
15 OF 1965

16 SEC. 582. Section 302 (d) of the Higher Education Act
17 of 1965 is amended by inserting before the semicolon at the
18 end thereof a comma and the following: "except that the
19 Commissioner may waive the five-year requirement of this
20 clause with respect to an institution located on or near an
21 Indian reservation in any case in which he determines that
22 such action will increase the availability of higher education
23 to Indians".

24 INSTITUTE OF AMERICAN INDIAN ARTS

25 SEC. 583. The National Board of Indian Education is
26 directed and authorized to raise the Institute of American

1 Indian Arts at Santa Fe, New Mexico, to the level of a
2 4-year college.

3 COMMUNITY COLLEGES

4 SEC. 584. (a) The National Board of Indian Educa-
5 tion is directed and authorized to provide continuing sup-
6 port for the community colleges in which a substantial num-
7 ber of Indian students are enrolled.

8 (b) The National Board is directed to conduct a study
9 exploring the feasibility of Indian community colleges, to
10 work toward the establishment of such Indian-controlled in-
11 stitutions, and to submit a report respecting such study to
12 the Congress on or before July 1, 1972.

13 AMENDMENT TO THE ELEMENTARY AND SECONDARY
14 EDUCATION ACT OF 1965

15 SEC. 585. Section 706 (a) of the Elementary and Sec-
16 ondary Education Act of 1965 is amended to read as follows:

17 "(a) For the purpose of carrying out programs pursu-
18 ant to this title for individuals on or from reservations serv-
19 iced by elementary and secondary schools operated on or
20 near such reservations for Indian children, a nonprofit insti-
21 tution or organization of the Indian tribe concerned which
22 operates any such school and which is approved by the
23 Commissioner for the purpose of this section, may be con-
24 sidered to be a local educational agency, as such term is
25 used in this title.".

1 On page 3, above line 1, add the following at the end
2 of the table of contents:

TITLE V—INDIAN EDUCATION

PART A—REVISION OF IMPACTED AREAS PROGRAM AS IT RELATES TO INDIAN CHILDREN

Sec. 501. Revision of Public Law 874 provisions relating to Indians.

PART B—SPECIAL PROGRAMS AND PROJECTS TO IMPROVE EDUCATIONAL OPPORTUNITIES FOR INDIAN CHILDREN

Sec. 521. Addition of Indian education program part to title III, ESEA.

PART C—SPECIAL PROGRAMS RELATING TO ADULT EDUCATION FOR AMERICAN INDIANS

Sec. 541. Addition of Indian program part to Adult Education Act.

PART D—NATIONAL BOARD OF INDIAN EDUCATION; BUREAU OF INDIAN EDUCATION; MISCELLANEOUS

Sec. 561. National Board of Indian Education.
Sec. 562. Staff of National Board.
Sec. 563. Powers and duties of National Board.
Sec. 564. Functions of National Board.
Sec. 565. Bureau of Indian Education.

PART E—MISCELLANEOUS PROVISIONS

Sec. 581. Inclusion of Indians in Higher Education Act.
Sec. 582. Waiver of five-year requirement of Higher Education Act for Indian schools.
Sec. 583. Elevation of Institute of American Indian Arts.
Sec. 584. Support and study of Indian community colleges.
Sec. 585. Expansion of Indian eligibility under section 706(a), Elementary and Secondary Education Act.

Senator PELL. I wish to welcome our witnesses, the Honorable Sidney P. Marland, Jr., U.S. Commissioner of Education, Department of Health, Education, and Welfare, and the Honorable Louis R. Bruce, Commissioner of Indian Affairs, Department of Interior.

Before we proceed with the testimony, Senator Kennedy would like to make an opening statement.

Senator KENNEDY. Thank you, Mr. Chairman.

It has been said that the decade of the seventies is the decade of the Native American. Fringes, beads, headbands, and other Indian-inspired fashions abound in the boutiques. Movies about Indians are playing at the theaters around the country, and an Indian was nominated for an academy award. Indians have made the cover of Ramparts, Saturday Review, Look, Time, and other national magazines.

Television networks cannot get enough topical Indian materials. The President sent a special Indian message to Congress last summer; the Vice President's daughter was photographed visiting a pueblo in New Mexico. Indian singers tour the country and appear on talk shows. And a book about Indians is almost assured national reviews.

Yet despite the ruffles and flourishes in the media, Indian children continue to drop out of school, commit suicide, or at best remain undereducated and alienated. Indian illiteracy remains high, housing inadequate, health substandard, employment marginal. Meanwhile, our Government spends less than $300 million annually—probably much less—for the education of American Indians. The administration requested almost five times that much for 1 year's development of the Antiballistic Missile System. The Bureau of Indian Affairs requested $100 million less for Indian education than the Department of Transportation requested for the SST last year. The Defense Department spends annually on public relations about half what the Office of Education allots for Indian programs. I do not need to belabor the point that this Nation has misplaced its priorities. American Indians and Alaska Natives already know this. I am saying, however, that we have before us today an opportunity to examine and reorder our priorities, and I believe that Indian education should come high on the list.

Over 3 years ago a Special Subcommittee on Indian Education opened hearings—in the words of the resolution setting up the subcommittee—"into any and all matters pertaining to the education and related problems of Indian children." My brother, Senator Robert Kennedy, chaired that hearing, and in his opening statement he made the following observations:

> The American vision of itself is of a nation of citizens determining their own destiny; of cultural difference flourishing in an atmosphere of mutual respect; of diverse people shaping their lives and their children's. This subcommittee today begins examination of a major failure in this policy; not in some distant land, but within our own borders here in the United States.
>
> We begin today a look at the education of American Indian children in the United States. We have chosen a course of learning as obvious as it has been ignored: We are going to listen to the Indian people speak for themselves about the problems they confront, and about the changes that must be made in seeking effective education for their children.

The subcommittee spent almost 2 years listening to Indian people, and putting together reports, studies, and evaluations of Indian education programs. The record of its activities, in large part, stands as a

foundation for our hearings today. The subcommittee issued its final report over a year ago, with specific recommendations for administrative and legislative reforms of the structure of Indian education. The legislation we are considering today—Amendment No. 6 to S. 659—reflects the legislative recommendations of that report. I hope that we can get reports from the departmental officials with us today on the implementation of those administrative recommendations.

There have been a number of significant developments since the Indian Education Subcommittee began its activities in 1967. This administration has announced an important shift in emphasis in national policy. Public support for Indian programs and issues has reached a new high. Indians have become more articulate in their demands and have shown an increasing capability to manage their own affairs. The time is now ripe for Congress to undertake the job of providing substance behind its own often-voiced commitment to improving Indian education. That is the reason for this legislation; that is why we are here today.

The work of the Indian Education Subcommittee was, I believe, to some extent responsible for bringing about the shift in emphasis in national policy and in generating public support for Indian issues. The report of the subcommittee characterizing Indian education as a national tragedy and a national challenge was widely distributed and well-received. The seeds for change were planted.

Last summer the President repudiated termination as a national goal and committing his administration to self-determination and local control of Indian programs.

In the fall, Congress generally indicated a new interest and involvement in Indian matters when it settled the 64-year-old claim of the Taos Pueblo to their sacred lands by transferring Blue Lake in trust to the Pueblo.

Over the past few years Indian communities have begun to take over control of their local schools. Community control of Rough Rock, Ramah, and Rocky Boy schools is complete. Local school boards are exercising policy control at Busby and Rock Point schools. Petitions to take over other schools have been filed, from the Micasoukies in Florida to the Eskimo community of Kotzebue in northwestern Alaska.

Indian communities are now looking upon local control of education as a right, not a privilege, and are pressing for more flexibility and wider opportunities and options in the educational process.

Despite the failures of Indian education in the past, it is clear that educational failure is not inherent or built-in for Indian children. But neither is success, without two important elements: Indian control and adequate funding. These two elements must be built into the Federal policies, in every agency, at every level, where Indians are involved. They certainly underlie the legislation we are considering today.

I want to make clear at the outset of these hearings that the amendment before us has been and will continue to be, throughout the hearing process, open to suggestions for revision to accommodate the many unique needs and considerations of Indian education. The complexities and difficulties of coming up with legislation that deals adequately with the educational problems of all native Americans are

not underestimated. Fortunately we have had the advice and assistance of many Indian and Alaska native people so far in shaping and developing the amendment. I have received a number of letters, resolutions, and statements with substantive suggestions and criticisms on the amendment, and I would like for these to be made a part of the hearing record at the appropriate place. These hearings continue the legislative process.

(See additional information at the end of the hearing record.)

Senator KENNEDY. Education American-style has failed the Indian and Alaska native. We must be willing now, indeed we must demand, that federal policies accommodate themselves to Indian education Indian-style. In the hearings today and tomorrow we will be asking native Americans and Government officials what should be done to reverse the failures of the past. What kind of education should Indian education be? Who should run the system and the schools? How should programs be funded? What kind of new programs should be developed? How should old ones be changed?

Over 10 years ago President Kennedy said that "Indians have heard fine words and promises long enough." I am certain that Goveriment officials for decades past have made this same observation. On each occasion, task forces are mounted, commissions appointed, studies contracted for, and finally recommendations made. But the transition from recommendations to policy is not easy. So far, in fact, it has been nonexistent.

If we are to learn from history, we must realize that we cannot expect this transition from reccommendations to policy to occur mechanically. For history has shown us that Government agencies charged with the responsibilities relating to the education of Indian children either cannot, or will not, respond adequately to the educational needs of native Americans. Congress must act now. Indian people have become experts at being patient. We have told their grandparents to wait; we have told their parents to wait. We must not make their children wait.

Senator PELL. Thank you, Senator Kennedy.

I shall now call on our first witness, Honorable Sidney P. Marland, Jr., U.S. Commissioner of Education, Department of Health, Education, and Welfare.

Before you proceed with your testimony, would you please introduce your associates.

Mr. MARLAND. Yes. I have with me this morning Mrs. Helen Schierbeck, Mr. Hays and Mr. Alford.

STATEMENT OF HON. SIDNEY P. MARLAND, JR., U.S. COMMISSIONER OF EDUCATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Mr. MARLAND. Mr. Chairman and members of the subcommittee, I appreciate this opportunity to discuss with you and your committee the problem of Indian education in the United States. As Commissioner of Education I feel a compelling personal responsibility to help redress injustices against the first Americans.

Current estimates indicate that two-thirds of the Indian children of school age are enrolled in the Nation's public schools. The U.S. Office of Education has the prime Federal responsibility for the support of education of Indian children in public schools. Consequently, my formal presentation to the committee will focus on the education problems of public school Indian children.

It is deplorable that in this age of rapidly accelerating sophistication the American Indians often receive an education that is generally inadequate to meet their needs. The statistics documenting this inadequacy are all too convincing. Recent studies tell us that 43 percent of the Indian children in the Western United States will drop out of school between the eighth and twelfth grades, compared to a 27 percent national dropout rate. Less than 10 percent of Indian high school graduates obtain a 4-year college degree. The average level of educational attainment among young Indian people is 8.4 years compared to a national average of 10.4 years.

What are the problems which bring about such appalling statistics? What kinds of solutions are possible in our public schools? The studies of Indian education, such as those completed by the Office of Education, the Special Subcommittee on Indian Education, and the NAACP legal defense and educational fund, clearly indicate the magitude of the problems.

In looking at these problems, we find that one of the most pervasive factors is the lack of Indian control over the programs that affect their children. President Nixon, in his recommendations for Indian policy in July 1970, said that the goal of any new national policy for Indians must be to "strengthen the Indian's sense of autonomy without threatening his sense of community." Parental participation in the development and evaluation of Federally financed programs at the local level should be strongly encouraged.

The uniqueness of the Indian's culture also presents a challenge to our public schools as do other racial and ethnic heritages. It is often the case that the cultural background of the Indian student differs from the cultural assumptions included in the curriculum and values of the public school system, which is primarily created and controlled by persons of the white middle class. A lack of knowledge about local Indian culture on the part of public school personnel too often creates an alien environment for Indians. Schools then become "the enemy" to the child and his parents. This problem is compounded by the multitude of cultural and linguistic differences within the American Indian and Alaska native communities.

We need to develop a multilingual, cross-cultural, approach to teaching Indian children. Teachers and administrators must be given training to help them appreciate the cultural diversity offered by their Indian pupils. The development of culturally sensitive curricula is urgently needed. The Indian child should be given a sense of his rich cultural heritage, and at the same time, given the skills to participate in the dominant society around him to the extent that he may choose.

Unfortunately, a third major problem is administrative in nature. There is a misunderstanding on the part of some administrators about the purposes of compensatory education funds. There are well-known instances of title I funds being used for general aid purposes. Recipi-

ent education agencies must be made clearly aware of the purpose of compensatory education funds.

The legislation now before the committee attempts to meet these problems. The Indian education amendment is laudable for its stated intent to provide for the special education needs of Indian children. While we share the subcommittee's concern, we have serious objections about specific provisions of the bill. We therefore recommend against passage of the Indian education amendment.

The Office of Education is not by any means unconcerned or unresponsive to the problem of Indian education. In fiscal year 1970, $25,660,333 in OE funds went to schools under title I of the Elementary and Secondary Education Act for compensatory programs for educationally disadvantaged Indian children. It is estimated that over $18 million in Public Law 874 impact aid funds were allocated on the basis of Indian children in the same year.

In fiscal year 1969, 2,300 Indian students in institutions of higher education received an estimated $1.8 million in student assistance under the equal opportunity grant, college work-study, and national defense student loan program. In response to Congressional concern, expressed in the Elementary and Secondary Education Amendments of 1969, fiscal year 1971 funds for Indian bilingual education projects have nearly doubled from the previous year to over $2 million.

The Office of Education is participating in some excellent Indian education projects—exciting projects. I would like to share some of these with you:

Some 415 children, three-fourths of them Cherokee-speaking, receive instruction in both Cherokee and English at kindergarten through third grade. In addition, 210 parents are participating in activities designed to encourage interest in their children's progress.

This project has enjoyed the continued support of Northeastern State College, which is currently training 44 staff members from participating schools and developing a program of formal teacher education leading to certification for Cherokee-speaking people. In recognition for this contribution to Cherokee bilingual education, Northeastern State College received second-place honors in the 1971 Distinguished Achievement Award Program of the American Association of Colleges for Teacher Education.

In hogans, church basements, unused school rooms and homes, an adult basic education project is attacking illiteracy on the vast Navajo Reservation. A group of dedicated Navajo teachers are diligently striving to bring older Indians, 18 to 85 years of age, into the Twentieth Century. In fiscal year 1971, a total of $1,060,000 will be obligated for the adult education of Indians.

Two of our most exciting efforts among the American Indians have been teacher corps and the career opportunities programs. These programs have utilized Indian people as aides and teachers in both the BIA and public schools educating Indian children.

Eastern Montana College, in cooperation with communities and local schools, is operating a teacher corps program. During the academic years 1970–71 and 1971–72 Corps members, working for their M.S. degrees, will live, learn, and work in several Indian communities. Sixty percent of their time will be spent in elementary school. Forty

percent of their time will be spent in the community and educational activities.

A career opportunities program is in operation on the Crow and Northern Cheyenne Indian Reservations in southern Montana. The purpose of the program, jointly funded with OEO, is to improve the education of Indian children by increasing the number of Indian teachers who will be eligible for employment in schools serving predominantly Indian populations. Public, private, and BIA schools, including the Headstart programs on both reservations, are participating.

In addition, the Bureau of Education Professions Development has begun a number of efforts which train Indians as educators in counseling and administration. In fiscal year 1972, OE and BIA will continue the sponsorship of programs at the Minnesota, Arizona State, Harvard, and Pennsylvania State universities to train Indian education administrators. This program, funded this year by OEO, will produce approximately 80 American Indians with M.A. degrees.

Senator MONDALE. Would you yield there, please?

Has a decision been made to extend those programs?

Mr. MARLAND. The decision has been made, as I think it will unfold in my testimony, to shift as near as possible within our means, responsibility for raising funds to extend those programs. I count them as urgently needed. I am not prepared to say where the money will come from.

Senator MONDALE. But they will be extended?

Mr. MARLAND. I will answer you this way. We will make every effort to extend.

I have asked OE budget and program administrators to investigate the means of funding this program on a continuing basis starting in fiscal year 1973.

Senator MONDALE. I am glad to see that because it is a good program.

Mr. MARLAND. I believe that. There is some danger of it faltering for lack of money. By that statement, however, I am not evading the question.

Senator MONDALE. I understand.

Mr. MARLAND. Mr. Chairman, given the nature of Federal treatment of Indians, it is fair to question to what extent existing authority will continue to be translated into significant action. I suggest, however, that two very strong determinants, the work of the Special Indian Education Subcommittee and the President's July 1970 Message, constitute powerful guidelines in the use of these authorizations.

In response to these developments, I have convened an Indian education policy task group within the Office of Education to advise me on policy development and the most effective use of OE resources in the pursuit of quality Indian education.

Senator KENNEDY. Is that in operation now?

Mr. MARLAND. It is, sir.

Senator KENNEDY. How long has it been in operation?

Mr. MARLAND. Some months. I have referred to their report which I will refer to in a few minutes.

Senator KENNEDY. I see.

Mr. MARLAND. Consultants from the Indian communities will be brought in to work with the group. Three of these consultants have

already been appointed in the Indian community. They are in the midst of their work. Nevertheless, they offered a preliminary policy outline and an initial OE strategy.

In outline, the proposed strategy recommends that: OE policy distinguish and acknowledge OE's respective responsibilities to Indian children presently served by Federal (BIA) schools and the more than two-thirds of Indian children in public schools.

Regarding present BIA schools that:

OE support BIA in fulfilling the policy of self-determination and community control developed by the President in his July 1970 message.

OE fulfill its national responsibility to promote equal educational opportunity and quality education for all the children of this country.

OE cooperate with BIA in data collection, evaluation, and program development.

OE and BIA engage in joint planning and joint funding in fiscal year 1972, for the pursuit of Indian community control and bicultural education.

Regarding non-BIA Indian students that:

OE improve its knowledge concerning the conditions and particular educational problems of American Indian children living in various parts of the country. This is especially critical since more than two-thirds of the American Indian children attend public schools and an estimated 38 percent or more of the Indian population now resides in urban areas.

OE support the further development of bilingual and bicultural programs, that would enhance the education of non-BIA American Indian children.

OE cooperate in the support of urban Indian education centers as a base for: educational program development in urban areas; developing American Indian participation in local educational affairs; educational program evaluation in urban areas, conducted in conjunction with the regional officers.

OE encourage SEA's and LEA's to incorporate bicultural Indian programs into their educational offerings.

For both BIA and non-BIA Indian children:

OE assist in the development of more Indian educational personnel at all levels.

OE pursue a policy of awarding policy development grants to Indian groups.

Mr. Chairman, this outline is tentative and needs much more specification. Nevertheless, it indicates that our Indian education policy task group is at work.

The strategy envisioned to promote this policy relies, where possible, on our discretionary project grant programs.

Senator KENNEDY. Just a reaction. I haven't had a chance to get into the latter part of your testimony. These recommendations seem sound. They are not unlike the recommendations that were made by the Special Committee on Indian Education. Now, this task force is making recommendations again. We see in your testimony that the outline is tentative and needs more specification. This indicates that your Indian education policy task group is at work. I think the real point is this:

We have seen these same recommendations made time and time again. This is interesting rhetoric, but what is really going to be done?

I believe you have shown a great sincerity in terms of the problems of Indian education. But I think it is fair for us to ask that at sometime in the near future you are going to come back to this subcommittee and report on what steps you have taken on each one of these recommendations and why you implemented some and have been unable to implement others. Otherwise we just go on interminably. Every 2 years we will have these recommendations. You can understand the frustration of the Indian people. They say this is the third or fourth time we have seen these recommendations. And yet when it comes to implementation we see langauge like your: "The strategy envisioned to promote this policy relies, where possible, on our discretionary project grant programs."

So you are going to do the best you can. This doesn't tie down as much as I would like to see tied down. I wonder what your reaction is.

Mr. MARLAND. I hope some of my further testimony will help respond to concerns and express frustrations which you see and of which I am aware as well. I am fully aware of the rhetoric, as you call it, implicit in some of these documented expressions that have been documented before still seem to be unreal.

I think I would answer your question very briefly and then return, if I may, to the prepared testimony.

Senator KENNEDY. Yes.

Mr. MARLAND. Where we have a caveat that says "where possible", we have to acknowledge that the Office of Education has very little real influence under the law or historically, in effecting the local distribution of moneys beyond delivery, and that where I have a caveat that says "where possible" concerning discretionary moneys, I must admit to you, sir, although the name implies considerable freedom, it is in short supply in the Office of Education.

Senator KENNEDY. You are a professional educator of considerable achievement. As the Commissioner of Education, you feel that these recommendations represent the best possible recommendations in terms of meeting the national need, and I would hope that you would recommend to us the best way to insure implementation of them. If you are unable to do it in terms of the restrictions in existing statutes, then I would hope that you would be able to recommend to us how what changes can be made so that they can be implemented.

I think you can understand the frustrations of many of the Indian people, and of us, when you have some sound recommendations and you say they are worthwhile and they are valuable but that you can't carry them out because you haven't got the wherewithal. So the question comes back: How should it be done? All of us are searching for that answer and you are, too. This is no reflection on you, because you just recently assumed your responsibility. I would certainly hope in trying to approach problems and fashion programs which we are attempting to do in our amendment, you would give us the insight with all the resources you have available as to how best this can be done. Otherwise we will just have continued frustration and despair.

Mr. MARLAND. I believe the remainder of my testimony will point to some concrete action.

Senator KENNEDY. I apologize for interrupting. We only received the testimony this morning. When these points come up, I will try to flag them.

Mr. MARLAND. I welcome the interludes of discourse on this, Senator Kennedy.

The strategy envisioned to promote this policy relies, where possible, on our discretionary project grant programs. While these programs do not constitute the major source of Federal educational funds, they do represent OE's most direct and responsive delivery and development capacity. Given the significant and growing number of Indian children who are dispersed within our cities, the need increases to apply flexible funds that can be directed to their problems. If well planned and used in a coordinated manner, these funds, though limited in comparison to formula grant resources, can be equally effective in playing an important catalytic role in furthering Indian self-determination and in developing effective bicultural education programs.

Within the prerogatives afforded the Secretary of Health, Education, and Welfare, we have taken vigorous administrative action to insure that present programs will provide even more substantial benefits to these children. One of the unanimous recommendations of all the studies conducted on Indian education has been the need for increased involvement of Indian parents with the schools. Title I regulations published yesterday in the Federal Register, will insure that for parents whose children receive benefits under present compensatory education programs, parental participation will be a fact.

Senator KENNEDY. Do you state later in the testimony how you are going to set that up?

Mr. MARLAND. I will be pleased.

Senator KENNEDY. I don't know if you do it in the formal testimony.

Mr. MARLAND. Not in the formal testimony, but I will be glad to respond to it if you like. The regulations will require for every local education agency receiving title I funds, there will be required an advisory counsel of parents, guiding the local administration faculty, or board of education, in the use of title I moneys. They will be assisting in the construction of programs, assisting in the evaluation of programs, and giving overall surveillance of programs in title I.

Senator KENNEDY. You know some years ago the President made a statement about turning over Indian education to local control. People might think that if the President of the United States can't effectuate local control of Federal Indian education programs, why should we believe a regulation printed in the Federal Register is going to achieve it?

How would you respond to that?

Mr. MARLAND. I will respond very directly, sir. Consistent with the President's admonition and charge, the Office of Education has proceeded to adopt a very firm regulation that requires the establishment of these councils and failing the establishment of these councils, the money simply will not be delivered and that, I feel, is our hold on the insistence of the establishment of these councils.

Senator KENNEDY. What about other programs administered out of the Office of Education?

Mr. MARLAND. Those regulations apply only to Office of Education title I affairs.

Senator MONDALE. Who picks the council?

Mr. MARLAND. The local board of education is required to name them. We have not mandated a procedure for picking them. We have mandated a criteria as to who they shall be. The normal procedure would be for the board of education to develop with a slight majority of poor and disadvantaged.

Senator MONDALE. This follows in the heels of the amendment in the last extension of the ESEA Act.

Mr. MARLAND. It does and it spells out in detail how that works.

Senator KENNEDY. In the Indian participation under the title programs, research programs, impact programs, do you have any guidelines for local involvement in those other programs that come out of OE?

Mr. MARLAND. The research?

Senator KENNEDY. Yes.

Mr. MARLAND. I would have to ask for help.

Senator KENNEDY. Bilingual, impact assistance, research programs?

Mr. MARLAND. The regulations do not require the existence of a parental advisory council in those cases.

Senator KENNEDY. Do you think it would be useful?

Mr. MARLAND. You now have working in the Office of Education, as I described earlier, the task force concerned with Indian education which will have a very substantial input to the discretionary funds which refers to where they would go.

Senator KENNEDY. Would you address that question to your advisory group, whether they feel that would be useful to have that kind of input? I would be interested in what their reaction and response would be. Maybe they would think about it and advise all of us.

Mr. MARLAND. We could determine that.

Senator KENNEDY. Thank you.

Mr. MARLAND. We could determine that and advise you.

Senator KENNEDY. Thank you very much.

Mr. MARLAND. I will close that paragraph.

These parents will have a strong voice in decisions affecting their children.

The NAACP legal and educational fund and other studies have properly criticized the misuse of compensatory education funds. These funds have often been used for general support purposes because of a lack of understanding about the purposes of compensatory education. The title I ESEA regulations now mandate school comparability within local districts as a condition for receiving funds under this program. There are also now in progress negotiations between the Office of Education and the Bureau of Indian Affairs.

I am happy to advise the subcommittee that Commissioner Bruce and his chief education officer, Mr. James Hawkins, are here participating in this hearing today culminating some weeks of collaboration with the Bureau of Indian Affairs on the subject before us.

This has established a memorandum of understanding between the two agencies to insure proper administration of compensatory education funds transferred to BIA under the set-aside provisions of title I ESEA. Over $11 million in title I funds will serve the Indian children in Federal schools this year.

60-433 O—71—pt. 4——4

The Administration has also moved to protect the rights of school children of American Indian and other ethnic backgrounds, an area which has been shamefully neglected in comparison with the Federal effort toward black boys and girls. The Civil Rights Act makes no distinction between the different ethnic or national groups. Enforcement should proceed accordingly to protect the rights of the country's more than 2 million American Indian, Mexican-American, Puerto Rican, and Cuban children.

HEW's Office of Civil Rights has stipulated to school superintendents that national origin issues are, henceforth, part of all compliance reviews and the Department has asked the districts to take affirmative action to equalize access of non-English speaking youngsters to all education programs. This would include testing of non-English-speaking children in their own language rather than English, and interpreting tests with techniques that compensate for cultural differences. This will also prove of inestimable value to the Office of Education in identifying Indian children in public schools and assessing the impact of OE funds on the education of these students.

American Indians, as well as other minority groups, also have a strong and respected voice in the Office of Education through the newly created Office of Special Concerns, headed by Assistant Commissioner Dick Hays. Mr. Hays and Helen Scheirbeck, of the Office of American Indian Affairs, work hard to develop and coordinate OE program resources relevant to Indian education.

That office has been in establishment only the past 3½ months.

They also serve to educate and sensitize Office of Education personnel concerning the needs and aspirations of the Indian people.

Earlier, Mr. Chairman, I outlined a tentative policy offered by our Indian education policy task group. Suggestions of the type they have offered constitute a policy inasmuch as they relate to actions which the Office of Education can initiate and for which it can be responsible. In addition to such program elements, however, this Administration is proposing a number of legislative measures which can incorporate and augment a policy approach such as the one offered by the policy task group. Briefly, I will summarize these measures and their conceivable benefits to Indian education.

On July 8, 1970, President Nixon delivered a strong message favoring the concepts of local control and self-determination. He stated that "every Indian community wishing to do so should be able to control its own Indian schools. This control would be exercised by school board selected by Indians and functioning much like other school boards throughout the Nation." The Vice President, Chairman of the National Council of Indian Opportunity, has established a special education subcommittee of that Council, with which my office works closely. The subcommittee will provide technical assistance to Indian communities wishing to establish school boards as well as conduct a nationwide review of the educational status of Indian school children in whatever school they may be attending. The subcommittee will also evaluate and report to the President annually on the status of Indian education, including the extent of local control.

The legislative proposals being sponsored through the Department of Interior are yet another manifestation of the President's Indian policy being translated into a tangible program. These bills provide for improved programs and greater effectiveness in the coordination of Federal services on the reservations.

Proposed revision of the Johnson-O'Mally Act, and a bill to provide for the assumption of control and operation of certain Federal programs by the local Indian communities, seem particularly important in applying the President's concern specifically to Indian education.

S. 1123, the Higher Education Opportunity Act, sponsored by Senator Prouty, proposes far-reaching revisions in the structure of student financial aid. Many Indians cannot attend college due to lack of financial resources. Others although accepted cannot attend the college of their choice. Passage of S. 1123 would guarantee that no qualified student, including any Indian student, would be denied access to a post-secondary education due to lack of financial resources. Under this act, financial aid would go first, and in the largest amounts, to the neediest students, in order to give them a chance equal to that of the students from higher income families.

Two additional provisions of S. 1123 are especially revelant to Indian education. Navajo Community College would benefit from the provision to allow the Commissioner to make available support to developing institutions for 2-year institutions which have been in existence for fewer than 5 years. The other provision is an amendment to the Education Professors Development Act to make BIA teachers eligible for teacher training programs.

Under the Emergency School Assistance and Quality Integrated Education Act passed by the Senate, those funds not reserved for special activities are apportioned among the States on the basis of their relative proportions of minority group children, including American Indians. School districts with Indian children in racially isolated schools would be eligible to apply for assistance in a wide variety of activities related to desegregation and the elimination, reduction, and prevention of racial isolation.

Senator MONDALE. Would you yield there, sir?

Mr. MARLAND. Yes, sir.

Senator MONDALE. I am pleased to see that statement because one of the key concepts in the bill just passed the other day is that it should include all minorities and, of course, there are special difficulties where the minority has a different language and a different culture. I am glad to see this statement, and I am hopeful that proper concern will be shown to this part of the effort.

Now, we have the same inability to somehow see that other minorities have problems, too. Not enough is being done for the black community in my opinion, but in any event, I don't know of any Justice Department action that has been brought as to other minorities. I am not just talking about this administration. This is traditionally true. I think it is increasingly important that we focus on all minorities, that we have an even-handed national strategy in trying to assist. That is the first observation I make.

The other point: Would you prepare a table for us showing the estimated number of Indians in each of the school districts of our country or some other table which would give us an idea of the percentage in school, the numbers? We had a table you prepared for us in the school desegregation case, but it would be helpful if we had a table breaking this down.

Mr. MARLAND. Let me respond to both of your observations, Senator Mondale.

On the first count, the relationship between the ESAQI bill and the Indian children, I hope very much through your leadership and the companionship of the Office of Education and the Department knowing of your great concern for that legislation, there can be included in the legislative history a concern for the Indian children. The issue will be one of determining under the law the rightness of dealing with Indian boys and girls who may at the moment be in racial isolation and who may for the moment have to go through a period, whether it be bilingual, whether it be cultural, whether it be very basic educational services, where they are in remote locations, incapable at that time under any kind of administration of being in a literally integrated environment, still receiving the services of the ESAQI bill that will enable them to move up to an integrated environment. We hope the law, if it passes, will give us the freedom to support that kind of initiative.

The second part of your question, as to the table, in the present state of the art, the exact data both in the Bureau of Indian Affairs and our office leaves much to be desired as to where Indian children are. We will give you the best information we have. In many isolated areas and in urban situations where the Indian person may be absorbed in the local culture, it is difficult for us to give you the exact data. We will give you the best we have.

(The document requested, "Directory of Public Elementary and Secondary Schools in Selected Districts: Enrollment and Staff by Racial/Ethnic Group," was transmitted to Senator Mondale on May 19, 1971 by the Department of Health, Education, and Welfare.)

Senator KENNEDY. This is why part of your earlier testimony raises so many questions in my own mind. It is difficult for you to indicate where title I funds are going or where bilingual programs are going or whether they are actually affecting the Indian children. You can do it mathematically and say there are so many children in the school district, and so much funds go into title I, and since there are 45 percent Indians in that district and they are getting this amount of money, therefore this amount of money must be going to help Indians. I don't think that kind of information is valuable.

Mr. MARLAND. We don't make that statement for the very reason you suggest, Senator Kennedy, it would be stretching the exactness of our reporting, because there is a prorata population and prorata dollar, those ratios are compatible. We can't say it with integrity.

Senator KENNEDY. In your prepared statement you say:

> In fiscal year 1970, $25,660,333 in OE funds went to schools under title I of the Elementary and Secondary Education Act for compensatory programs for educationally disadvantaged Indian children.

How much of those funds are directed toward the needs of Indians?

Mr. MARLAND. That is our best estimate.

Senator KENNEDY. This is just what——

Mr. MARLAND. Well, let me see. I am being deliberately cautious and not giving you assertions that I cannot prove. I am giving you conservative estimates based upon the best wisdom we have. For example, we know that virtually all children served on reservations are indeed Indian children. Eleven million of those dollars go through the Bureau of Indian Affairs to serve directly the children on reservations, so that is unquestionably a sound figure. We know that of the remaining dollars, some 16 million, that they are indeed going to concentra-

tions of Indian children but, undoubtedly, there are other children in a given schoolhouse, hopefully integrated, also poor, always living perhaps as Mexican-Americans, living as other minorities or as poor Caucasian children and we cannot truly say because States do not always report by race the distribution of those children.

Now, as I have stated earlier, the establishment of our task force, with Helen Scheirbeck as one of our principal leaders, will endeavor to pin down the numbers and locations of all such children and see to it that the delivery of dollars is going to be compatible with the law.

Senator KENNEDY. This would be enormously helpful. In the information you provided earlier to my office on funds for the education of Indian children, this is DSAC 1967 to 1970, you have the caveat at the bottom that these estimates are based on the portion of the elementary and secondary school population which is Indian. (See appendices.) I am not saying there is a need to distinguish between poor Chicanos and poor whites and all the rest, but we want to know where the funds for Indians are going. We are convinced from earlier field hearings, reports, and other comments that have been made, that funds are not getting to the Indian children. If we are going to devise a program to meet the needs, we have got to know the dimension. I think it is terribly important.

Mr. MARLAND. We concur completely in your counsel and direction. As you raise other points beyond title I such as bilingual, such as title III, such as other discretionary programs, we can give you exact data.

Senator KENNEDY. Take bilingual. Will you get into your testimony later on that? Do you want to make a comment now?

Mr. MARLAND. I will be glad to answer a question now.

Senator KENNEDY. How many bilingual programs do you have?

Mr. MARLAND. I would have to ask Helen Scheirbeck for that advice.

Mrs. SCHEIRBECK. Last year we had 10 bilingual programs. The program has been doubled this year. However, those projects are in the process of being funded. They are being read and reviewed by OE right now.

Senator KENNEDY. What are those 10? They are school districts which are a heavy——

Mr. MARLAND. While Mrs. Scheirbeck is searching for those specific data, let me amplify, again, we believe very strongly in the bilingual program. We are doubling the resources to Indian children in 1972 over 1971. As noted earlier, the resources of the ESAQI bill will give us very substantial opportunity for increasing that. We are building on what has been a relatively modest start.

Mrs. SCHEIRBECK. Shall I read the names of the projects?

Senator KENNEDY. You can put those in the record. I don't question that there are bilingual programs taking place in a variety of school districts which have a heavy concentration of Indians, but if they had a heavy concentration of Indians, a heavy concentration of Chicanos and other poor, I would like to see if you could describe these and tell in what languages these programs are.

Mr. MARLAND. Certainly we will submit this for the record, Senator Kennedy.

Senator KENNEDY. What language are these programs in? Are they in the Indian language? If you could run down the list, you could

say such and such a district is Indian and how many are being served, if you give that now and then put in the broader description later.

Mrs. SCHEIRBECK. I do not have with me the number of participants, but I can give you the area and the languages: Grants, N. Mex., Spanish and Navajo; Ukiah, Calif., Spanish and Pomo; Tahlequah, Okla., Cherokee; Monticello, Utah, Navajo and English; Idabel, Okla., Choctaw; Chinle, Ariz., Navajo; Cortez, Colo., Spanish, Ute, and Navajo; Hardin, Mont., Crow, Northern Cheyenne, and Cree; and Anchorage, Alaska, Yuk Eskimo.

Senator KENNEDY. When Spanish is included in it, how does that work? It that a part of the program? They teach Spanish, English, and then another language?

It sounds to me as if we have trilingual and bilingual.

Mrs. SCHEIRBECK. I think it is because the environment in which these children are growing up. This is an experiment to see what we can do in the areas like the southwest where we have the trilingual situation in terms of oral language.

Senator KENNEDY. In terms of the number of children included, do you have that?

Mrs. SCHEIRBECK. We can submit these for the record.

(The information subsequently supplied follows:)

AMERICAN INDIAN AND ESKIMO PROJECTS FUNDED UNDER TITLE VII, ESEA, THE BILINGUAL EDUCATION ACT

	Fiscal year 1969	Fiscal year 1970
1. Number of projects serving Indian children	5	9
2. Number of children (Indian, not total project participants)	432	1,209
3. Funds, ESEA title VII	$275,461	$908,591
4. Languages (10): Cheyenne (northern), Cherokee, Choctaw, Cree, Crow, Keresan, Navajo, Pomo, Ute, and Yuk Eskimo.		

The number of children is necessarily low in relation to funds for Indian projects due to the need to develop materials before programs can become fully operational with a large number of children.

AMERICAN INDIAN AND ESKIMO PROJECTS FUNDED UNDER TITLE VII, ESEA, THE BILINGUAL EDUCATION ACT

Language(s)	1st year of funding	Name and address of LEA	Director
1. Yuk (Eskimo)	1970	State Operated Schools, District I, 650 International Airport Rd., Anchorage, Alaska.	Mr. James Henry.
2. Navajo	1970	DINE, Inc., Rough Rock Demonstration School, Chinle, Ariz.	Dr. E. Roby Leighton.
3. Spanish, Pomo [1]	1969	Ukiah Unified School District, School and Henry Sts., Ukiah, Calif.	Mr. Jose de la Pena.
4. Ute, Navajo, Spanish	1970	Montezuma-Dolores Board of Cooperative Services, 121 E st 1st St., Post Office Drawer 1420, Cortez, Colo.	Mr. Robert L. Werner.
5. Crow, Cree, Northern Cheyenne	1970	Hardin Public Schools, District 17-H, 522 North Center Ave., Hardin, Mont.	Mr. John Dracon.
6. Spanish, Keresian, Navajo	1969	Grants Municipal Schools, Post Office Box 8, Grants, N. Mex.	Mr. Arturo Mendez.
7. Choctaw	1970	McCurtain County, Superintendent of Schools, Idabel, Okla.	Mr. Gene Wilson.
8. Cherokee	1969	Cherokee County, Superintendent of Schools, Tahlequah, Okla.	Mr. Herbert Bacon.
9. Navajo	1969	San Juan School District, Post Office Box 218, Montecello, Utah.	Mr. Lynn Lee.

[1] Pomo Indian children participate in a bicultural program.

Senator MONDALE. These are children who are monolingual other than English, Mrs. Scheirbeck?

Mrs. SCHEIRBECK. Yes.

Senator MONDALE. Do you have any studies as to languages which are in disuse but under which children would gain greater pride?

Mrs. SCHEIRBECK. Under our Bureau of Educational Personnel Development we had about four projects last year, we will be expanding this year, which are doing that, writing it, getting the phonetic sound, the Indian language and developing dictionaries on this subject.

Senator MONDALE. You are not using bilingual funds for this?

Mr. SCHEIRBECK. No.

Senator MONDALE. With limited funds, I can understand that. I would like to see us move toward restoration of many of these languages and the cultures they imply restored. I don't think we have asked you to do that. Our bilingual educational bills don't call for that, I would like to see us do that.

Mr. MARLAND. It would be in keeping with our belief of emphasizing the many cultures of many people of Indian origins, and various different origins. The preservation of their language would be consistent with that by all means. I might add, as Mrs. Scheirbeck has cited, in the beginning of our activities in bilingual education for boys and girls, one of our serious problems is bilingual teachers who speak both of the languages and can be moved into the classroom to teach. The emphasis is particularly strong on our teacher development, as distinguished from building on weak foundations more bilingual programs that have a name only.

Senator KENNEDY. You have a Bureau of Education and Development. You have some training for teachers, administrators, and counselors?

Mr. MARLAND. Yes.

Senator KENNEDY. Can you tell us how many Indians are being trained?

Mr. MARLAND. Our Bureau of Educational Personnel Development takes this new thrust of our policy concern for development of a number of Indian aspects of their program quite seriously. In 1970, for example, in the teacher corps, $427,800,000 was expended in behalf of Indian education. This is for the development of people, either Indian or non-Indian personnel, to work with Indian children.

Senator KENNEDY. Do you know how many of those actually are Indian?

Mr. MARLAND. I can't say. Under some of the other areas, I can give you 100 percent accuracy. I would suspect—I may have said $427 million, it is $427 thousand. I am so accustomed to millions in this business, I didn't know we dealt in smaller figures.

Now, $427,800 in the teacher corps in 1970. We do not have complete figures for 1971, but most of those people would be Indians or paraprofessional Indian personnel coming up through the teacher corps.

Senator KENNEDY. Could you at a later time give us those figures?

Mr. MARLAND. We will. But continuing, $471,000 for attracting and qualifying teachers, $1 million for teacher trainers for Indians, $256,000 for early childhood education training for Indian teachers. Teacher training for special education or handicapped Indian chil-

dren, $326,000. These are commitments now being made out of our Bureau of Education Personnel Development which, in the course of the next year, will continue to be increased. We feel that we might strike at the development of staff, administration and faculty. I hope to continue the programs in Harvard, Minnesota, Arizona State, and other sites for development of school principals, counselors, teachers and others.

Continuing with the prepared testimony, supportable activities would include development and use of new curricula and instructional methods, including instruction in the language and cultural heritage of minority groups; remedial services designed to promote mutual understanding among minority group and non-minority group parents, children, and teachers; community activities; recruiting, hiring, and training of teacher aides, with preference being given to parents of children attending schools affected by the Act; and in-service teacher training. Under the Senate bill, 4 percent of the funds appropriated are earmarked for programs to meet the needs of minority group children who are from an environment in which a dominant language is other than English and who, because of language barriers and cultural differences do not have equality of educational opportunity. Programs under this authority could be conducted and curricula developed to meet the needs of Indian children and their classmates to understand the history and cultural background of American Indians.

The House of Representatives has not yet acted on similar legislation now before the Committee on Education and Labor, now having passed this committee. Yet both the Administration bill, H.R. 2266, and the Quality Integrated Education Act, H.R. 4847, contain authorizations of activities similar to those of S. 1557. Therefore, we can expect that passage of this legislation will be of significant importance to Indian education

Creation of a National Institute of Education as a vigorous national force in educational research and development would offer new opportunities to explore the problems and promises of education for the Indian child. Under the President's proposal to establish the new agency in fiscal year 1972, outstanding scholars, educators, and public officials would work together to design comprehensive research and development strategies for tackling our pressing educational problems.

We need better understanding of the learning styles and needs of Indian children, and to try new educational methods appropriate to those styles and needs. With its broad responsibilities, NIE could look at the needs of Indian education both in terms of its commonality with the education needs of all disadvantaged groups, and the needs unique to Indians and Alaska Natives. A comprehensive research and development program concentrating on education of the disadvantaged would certainly have extremely high priority for support under NIE's projected first year operational budget of $150–$200 million in fiscal year 1973.

The education revenue sharing bill would provide over $1.5 billion for education of the disadvantaged to be passed through to local educational agencies who are in compliance with comparability and parental participation standards.

Indian children would experience increased benefit from impact aid under education revenue sharing. Under present P.L. 874 provisions, the parents of an Indian child must both work and live on Federal property to earn full entitlement as an A category child. Education revenue sharing requires only that the parents live on Federal property for the child to earn full entitlement as an A category child. This means that local education agencies will receive 60 percent of the national average per pupil expenditure for all Indian children whose parents live on reservations.

Senator KENNEDY. Mr. Commissioner, what kind of assurances do you give to us that under the prospective revenue sharing program, that money is actually going to get passed through the local agencies? I think the history is quite clear, perhaps with Alaska and Minnesota being notable exceptions. When these moneys are made available to State educational agencies, the money goes to groups other than Indians. Here the administration proposes that a much higher percentage of resources will be made available to States. You state in your statement as long as they comply with parental participating standards, it will actually go to help Indian children. The record is clear to the contrary. What possible kinds of assurances can you give us that you are going to change this? I am thinking in terms of the NAACP report that talks about the failure of responsible Federal and State officials to: administer resources in the interests of Indian children, require that supplementary funds be truly compensatory, support innovative programs without demeaning Indian children, or to involve Indian communities in real decision-making.

I think the conclusions made by that report substantiate the findings of the Indian Education Subcommittee. Since you suggest we provide additional resources to the State, how can we give assurance that this won't happen again?

Mr. MARLAND. It is a fair question and I will try to answer it briefly and very directly. As you know, the President's philosophy underlying revenue sharing speaks for the issue of returning to the people discretion on the use of Federal funds. Yet, in spite of that very substantial overriding philosophy, he has declared in this bill that funds for the disadvantaged shall pass through directly and not go to the States. This is one proviso that is clearly established in the bill calling for education revenue sharing.

Senator KENNEDY. Directly to whom? Will it be the mayors or local governments? How far down the line are you prepared to pass it through?

Mr. MARLAND. To the local education agency.

Senator KENNEDY. Does that meet any of the objections? In terms of school districts, they have used money which has been intended for Indian education but diverted to other children, and so——

Mr. MARLAND. I understand the question. You will recall, I believe, that I answered it on two counts, now established in the Federal Register to be enforced by this office—comparability and parental participation. Even at the LEA level, let us take a given community, even a quite small community, perhaps half of the schools are eligible for title I, the other half are not. The comparability regulation will insist that those children in the disadvantaged neighborhood shall receive first the average cost per pupil for that entire community in terms of

delegated funds and support, as measured by teachers' salaries and cost of equipment and supplies. On top of that, first the base line or par having been determined by the community average cost per child, all funds coming under the disadvantaged category shall be added to the community. Funds will be withheld if that is not maintained. In addition to that, the establishment of the local parental council is the best possible action to assure and discipline the concurrence and compliance with those conditions to guarantee the delivery of moneys where they have not been totally delivered by law as intended in Congress. I feel we are in a strong position to improve greatly the delivery of disadvantaged money to the children for whom it is intended.

Senator KENNEDY. You don't think you will get a situation like the Gallup-McKinley School District where, according to the Legal Defense Fund report, Indian children bring in twice as much money as the other children and yet within the district the Indian school is inferior to the school attended by non-Indian students?

Mr. MARLAND. It would be impossible for schools to get that money unless they earn it under the law.

Senator KENNEDY. This has been a problem.

Mr. MARLAND. Yes; we have had enforcement actions around the country. There are actions that have escaped us that should be taken. We believe these safeguards now being built in will correct these conditions.

The work of the Senate special Indian education subcommittee and its probing report have refocused attention on a people and their problems which the Nation periodically forgets. Mr. Chairman, I sincerely believe that the President's message of July 1970 is consistent with and strengthens the basic intent of the subcommittee's 1969 report. Both efforts clearly challenge the termination period of the post-World War II 40's and 50's.

But as forceful as these two expressions are, the repudiation of termination and the faith which Indian people have in that repudiation are still delicate. And well they might be, for the history here is long and the record of Federal promises kept is shameful. I suggest, Mr. Chairman, that the fundamental task at this time is to solidify the national policy which is implicit in the work of this subcommittee and in the President's message. We intend to implement our policy. The authorizations that exist are adequate. They are strengthened by the administration bills now before Congress. Further, I suggest that to shuffle Federal responsibilities in the area of education at this time could detract from the most important need of delivering existing resources to a specific problem now. If we can begin to deliver Federal assistance in a manner which steadily enables Indian communities to develop the education that touches their children, and if we can develop educational approaches which build on rather than ignore the cultural strength of our Indian children, we will have demonstrated our real commitment to a new Indian education policy.

I would now like to turn to the specificc topical provisions of the bill. Part A proposes a new title III in Public Law 874 for meeting the special education needs of Indian children. If this title requires a separate authorization and appropriation for that provision, I must seriously question its wisdom. I believe that the proposed change aims

at difficulties which Indians face with regard to the local distribution of Public Law 874 funds.

These problems have been raised most pointedly by the NAACP legal defense fund study, "An Even Chance." We must address those problems, but I am not convinced that a separate authorization is the answer. I would rather approach those problems within the scope of OE's commitment to equal educational opportunity.

Parts B and C would authorize a broad range of flexible, discretionary grants for elementary and secondary education (part B) and adult education (part C). I suggest that the capacity here would not differ significantly from our present ability under cooperative research, bilingual education, EPDA, and curriculum development.

These authorizations enable us to direct assistance to particular areas with flexibility and precision. We can address ourselves to data needs, to personnel development, and to curriculum needs. And while it may be some time before all these needs are met, the Office of Education is working to use existing authorizations to strike at the multiple problems that beset Indian education.

Part D proposes a Bureau of Indian Education within OE that would administer the provisions of S. 659. It also establishes a National Board of Indian Education that would absorb all of the educational functions now exercised by BIA. While I acknowledge a need to make our agency more informed regarding Indian education needs, I am opposed to a legislated bureau to meet this need. I do not think that legislating administrative structures within the executive branch best serves the needs for comprehensive planning and flexibility to cope with changes in priorities and responses over time.

In addition, it is the policy of the Nixon administration to reduce, rather than expand, categorical authorities. We favor the concept of consolidation of authorities under existing programs wherever possible. But we favor consolidation on a vastly more comprehensive scale. In the narrow view, the consolidation of Indian education authorities may make the task of delivering funds to Indian children in public schools easier and more effective.

However, unlike our colleagues from the Bureau of Indian Affairs, the Office of Education is responsible for disadvantaged students of all racial and ethnic backgrounds, of which Indians are a relatively small percentage.

Earmarking funds for the disadvantaged by narrow ethnic differences will make meeting the greater commonality of need among the disadvantaged even, virtually impossible for State and local administrators.

Senator KENNEDY. I note that in the earlier part of your testimony you said:

> The Administration has also moved to protect the rights of school children of American Indian and other ethnic backgrounds, an area which has been shamefully neglected in comparison with the Federal effort toward black boys and girls.

We have certainly found that. It has been in light of that that the legislation which comes out of this committee has earmarking for Indians. The record has been disgraceful. Yet you point out: "Earmarking funds for the disadvantaged by narrow ethnic differences will make meeting the greater commonality of need among the disadvantaged even, virtually impossible for State and local administrators."

Unless you earmark, the record has been so bad in the past that the Indian interests are not going to be protected. What kind of assurances can you give us that this isn't going to happen again in the future, other than just good intentions. I am convinced of the sincerity of your and others. It just seems that the record has been so bad in this area, that this appeared to be the only way we could insure that there was going to be adequate recognition for this problem. Yet you dismiss it in your testimony.

I would like you to respond.

Mr. MARLAND. I certainly don't mean to dismiss it. I hold the mandate of this Congress, including the report of the subcommittee, I hold very high the mandate of the President as to the preeminence of this responsibility in the Office of Education. I do add one or two features that I will again state. I think the voices of other minorities have been heard more systematically and indeed more vigorously because of the presence of active and recognized groups of people engaged in the education process speaking for those minorities. It has been especially true of the black minority boys and girls, and there has been a response as you have cited. We are thinking about parallel structures for disadvantaged Indian boys and girls. This will be comparable to the recent history of other minorities.

I would add that the Office of Education, given the advantages, particularly implicit in special revenue sharing will now, I hope—and perhaps I am departing from the essential theme of this hearing at this time, but I think it is important for the Senators to hear—will now be able to depart from what has been largely a fund-administering agency in a system of delivering program support, to a system of delivering educational leadership, and persons now. I would add that creative and talented persons in the Office of Education, instead of managing papers, will be able to move out in the area of educational need in high priority concern, and work with local districts, local superintendents, work with State agencies and have a people-relationship as distinct from a paper or benevolent relationship out of this aspect. This is a new aspect that we call technical assistance out of our office where we see a lively role with respect to Indian boys and girls.

Local response to local needs is already hampered by burdensom and confusing Federal red tape. For the sake of all educationally disadvantaged children we can't afford to make the burden worse.

Other provisions of the amendment, such as the inclusion of BIA teachers under Education Professions Development Act programs, are already included in Administration proposal S. 1123 now before this committee.

Mr. Chairman, I think that the eyes of the Indian communities are on all of us. They are watching us to see if we will turn their problems into an issue among ourselves within the Federal Government or whether we will take this occasion to solidify a new policy and begin delivering real educational resources that meet concrete problems.

In sum, Mr. Chairman and members of the committee, we agree that there are crucial needs in Indian education, but we seem to disagree over the means to meet those needs.

I have tried to point out the new thrusts instituted by this Administration and the directions I would like to pursue as Commis-

sioner of Education. It is not enough for any of us to deplore the inadequacy of past efforts. In pledging to seek augmented and alternative responses for the future, it is my desire to work with the committee, and with our present and proposed legislation. The Office of Education shares wholly with you the goal of insuring that the First Americans are indeed given an even chance through education.

That completes my prepared testimony, Senator Kennedy and Senator Mondale.

Senator KENNEDY. Thank you very much, Mr. Commissioner.

As I understand, there have been a number of applications for experimental program in Indian education. Are you familiar with these experimental Indian education programs, and have any of these been funded?

Mr. MARLAND. Giving you the latest report I have, which is within two weeks, the substance of our progress in establishing experimental schools is as follows: We established the office formally in December of 1970. The office now consists of some 12 individuals headed by Dr. Binswanger as you say. They have published invitations to the Nation to create a first phase of immediate attention to experimental school models. Five hundred responses were received to those first invitations which went out in January and were reviewed in March. Those 500 first invitations are a response to the first phase of what I would call a relatively short and immediate approach to experimental schools, and not yet in the scope and frame of revolutionary change that is implicit in the experimental schools model.

Phase 2 is now starting to establish criteria and invitations are to be received next September or October. But in the first 500, I know of no Indian education experimental school cited, but I would add of these 500, only five are now being considered seriously for funding and, of those, probably less than the total five will be funded for next September. They are not yet of the order of revolutionary scale and we expect we will have to continue to press for more creative and responsive solutions.

Senator KENNEDY. I don't know what the revolutionary scale is if we have 500 applications and not one Indian request; it seems as if someone is not doing his job. You have got a recognized area of need in the country and everyone is talking about it. The President is talking about it, the Vice President is talking about it. This committee has recognized it. You stated it—yet in terms of the development of a program, out of 500 not even one of those is Indian—it seems to me that someone is falling down on the job.

Mr. MARLAND. Yes, I did not know of any specific Indian proposals a few weeks ago. I can add out of the advice of Mr. Hays——

Senator KENNEDY. A couple just came in?

Mr. MARLAND. No, they were not reported as Indian or any other set of circumstances. I should have filled myself in for this hearing, Mr. Hays did. There were eight of the 500 that were indeed specifically related to Indian situations.

Senator KENNEDY. Do you see affirmative responsibility in the terms of your department trying to work with these eight applicants or others interested in Indian education to try to insure that a substantial percentage of the resources which are available will go to Indians? Because you see, Mr. Commissioner, this is exactly the problem that

we have seen over the time. We find these programs are always general programs and Indians are always left out. You come up here and testify against allocation of percentages of the program for Indians and say "we don't need that." "We are interested in providing some help and assistance to the Indians." Then you have an experimental program and you get a very small percentage of Indian applicants, say eight of the 500. You talk about the inadequacies of the program and you are still moving ahead trying to develop programs. If we had been able to tie something in—a percent of those funds ought to be allocated to Indians, then you would have to take affirmative action to comply with the Congress and its mandate. We want to know if your organization is affirmatively going to try to stimulate Indian programs? I generally recognize this is an additional burden, but are you prepared to do that?

Mr. MARLAND. My testimony does assure you that I am prepared to give maximum attention to the Indian children, Senator Kennedy. I am not at all sure at this moment that the experimental schools operation is such as to give primary emphasis to Indian education. It is intended to turn education around in the United States including the education of the Indian boys and girls.

Senator KENNEDY. Can you think of any part of the educational system that has to be turned around more?

Mr. MARLAND. No.

Senator KENNEDY. Shouldn't you be prepared to indicate that some parts of those programs should be funded?

Mr. MARLAND. Some parts of our education should be turned around assuming they will include advantages to Indian boys and girls, such as discovering ways of teaching the disadvantaged how to read, how to bring them into the world with a proud skill. This cut across the entire spectrum.

Senator KENNEDY. Are you going to consider all disadvantaged?

I am just wondering whether Indian children are just going to be included in general programs for he disadvantaged—which they have been over a period of time, which are woefully inadequate, but they have been and this is part of the problem. Do you recognize a positive responsibility to develop special educational experimental programs for Indians? Do you see that as a responsibility or don't you?

Mr. MARLAND. I do. I do see the need of focusing on experimental——

Senator KENNEDY. Experimental programs?

Mr. MARLAND. Yes, indeed, broadly. Let me cite some figures. In fiscal 1970, we spent $25,660,000 in compensatory education for Indian boys and girls, this year it is $27 million, it is up considerably.

Library resources, $160,000, up more than double in 1971, at $333,000.

Supplemental education centers, that has to do with title III, strictly experimental, $564,000 in 1970 and $631,655 in 1971. NDEA, title III, guidance and counselling, $115,000 in 1970 and $184,000 in 1971.

Senator KENNEDY. We have been over this route.

Mr. MARLAND. We have not.

Senator KENNEDY. Knowing how much Indians are affected by these programs.

Mr. MARLAND. That was a small part of your question where you were dealing with the Bureau of Educational Personnel Development. I have been citing the more experimental type programs as being ways we have been substantially increasing our investment in Indian boys and girls in 1971 and 1972. I would go on, but I will submit it for the record. Bilingual education, double, I will submit it for the record if you wish in more detail.

Senator KENNEDY. I wish you would. I would like to get to the areas of school construction, to Public Law 815. Could you tell us what funds have been allocated for school construction to the Indian schools over recent years? What sort of requests have you had and what actually has been allocated?

Mr. MARLAND. I will have to ask for help on that as to details from my associates. While they are searching for that data, let me say first, under school construction authority, implicit in the SAPA legislation, in 1970, we afforded $934,000 for the construction of Indian schools, in 1971, that leaped over five times to five and one-half million dollars under the SAFA program for schools serving Indian children.

I think that the Senator should know that broadly speaking.

Senator KENNEDY. That would build a high school in Massachusetts. That is what they are costing now, one high school, so we get a sense of the dimension of the problems.

Mr. MARLAND. I realize that the scale is small. I would add, however, this is out of a total of $15 million available to this office for this purpose. I would add, it has been necessarily the posture of this administration to put its money into programs directly serving people as distinct from school construction.

Senator KENNEDY. What requests do you have for that?

Mr. HAYS. In a very general sense in the past year, we received requests for $11 million that would be related to school construction for Indians.

Senator KENNEDY. What about the backlog from previous years?

Mr. HAYS. We just haven't had much money, in terms of order of priorities as expressed in that legislation, the first priority goes to emergency assistance, disaster areas. Secondly, it has been to those construction needs for military bases.

Senator KENNEDY. The Congress brought Indians up to the first category?

Mr. HAYS. Right.

Mr. MARLAND. This has been treated by giving a third of this money to Indian schools. We have a backlog, I am advised now by Mr. Alford, of a quarter of a billion dollars in requests under this program on that, a quarter of a billion.

Senator KENNEDY. $250 million?

Have you just reached an arbitrary figure of a third even with that kind of backlog?

Mr. MARLAND. No, we have attempted to evaluate the need and distribute the money with emphasis on Indian children.

Senator KENNEDY. If you have a quarter of a billion dollars in terms of backlog——

Mr. MARLAND. No, it is the total United States.

Senator KENNEDY. What is it in terms of Indians?

Mr. MARLAND. We don't have it. It can be furnished to you.

(The information subsequently supplied follows:)

BACKLOG IN SCHOOL DISTRICT PROPOSALS

According to the Division of School Assistance in Federally Affected Areas there is a total backlog of $34,855,000 in proposals from school districts serving American Indian children. Due to limited appropriations under P.L. 81-815 the total amount of funded projects for Sections 14a and 14b was only $5 million. A conservative estimate therefore, is that $29 million in construction needs remains. It must be emphasized that this figure is based only on applications received by the Office of Education.

Senator KENNEDY. In considering disasters, there is perhaps nothing that is more a disaster than what we have done in terms of Indian education in the past. I am glad it is moved up to the five and a half. I realize the limitations of the total budget being $15 million. I think we realize what the needs are, what five and a half million purchases today in construction. I would certainly hope that would be increased.

Mr. Commissioner, I unfortunately have to leave. I would like to be able to submit some additional questions for you for the record and hope that those will be included in the record. I want to personally thank you very much for yor appearance here today.

Mr. MARLAND. Thank you. We will respond to your questions in the record.

Secretary MONDALE. Mr. Commissioner, I think the key issue here is one of philosophy. Hearing reports of the late 20's, the message by President Johnson in 1967, the basic finding of the Indian Education Subcommittee, and the message of President Nixon all seem to be saying that Indian education has been a tragic failure because we have not trusted Indians to control their own systems of education. The criticism has gone beyond the manner in which we have delivered this or that service, or the funding levels for this or that program, to a far more fundamental criticism, which I think says that the 130 years of white-dominated, white-controlled, parternalistic educational system delivered to the Indian has failed and will continue to fail.

Now, you point out that the work of the special Indian Education Subcommittee has refocused attention on the problem; that is correct, but that has been the story of Indian education. Every once in awhile we arouse ourselves, the white middle class; we go out and look at the Indian. We are appalled; everybody clucks their tongues and says, "My, isn't that awful."

A few things happen and we go back to sleep, because the attention we give to it is sort of spasmodic, periodic, erratic attention because they aren't our children.

There is one group that will continue to focus attention on the problems of their Indian children, and that is the Indian children and their parents because they live there. I visited Navajo for 3 days and thought the educational system was awful, but I haven't been back, and I probably never will. But those parents are still there, and those children are still going to that boarding school. We were in Alaska where Eskimo children are flown 500 miles to a desert school where they remain for 9 months. That appalls. I haven't focused as much on that problem as the Eskimo parents (who don't see their children for 9 months a year) and won't. We have got to understand for all of our best intentions, for all of the best speculations that the white man can muster, it is not going to be much different. That is the philosophy underlying this Kennedy bill.

Let us begin with the system which the Indian himself controls, and trust him to know what is best for his children. We should try to deliver the technical assistance and the funds that will permit him to do the job that is needed, in a way that is culturally sensitive, that responds to language problems and, above all, has in it the pride and self-esteem that comes once again of being in charge of your own life. I don't for a moment underestimate the degree of resistance we will meet. In '67 when President Johnson ordered all Federal Indian schools to be turned over to elective school boards to be run by the Indians themselves, I think I am right that one school elected one board. That only happened because OEO came along and gave them some money. President Nixon said the same thing. I applauded his message. I saw in it acceptance of the philosophy of local control.

I see there is one school in Ramah, New Mexico; maybe there is another one—I don't know. Not even the President of the United States seems to be powerful enough to pursue a policy which gives to the Indian the same thing that the white man has had and demanded from the beginning of education in America: control over the lives and education of his own children. I deeply respect you, Commissioner, for the work that you are doing and the commitment that you have for this issue. But I think it can be characterized as a more sophisticated effort to help the Indian, and what I think we need to do is permit the Indians to help themselves—by restructuring the power—control of the system. Unless we do that, you will be gone, I will be gone, and a new set of students will be studying this, a new set of experts will be aboard. You know, I would say if the Indian would list his No. 1 problem, it is the number of white men who come to study them. Last year on one reservation in South Dakota there were 64 federally funded studies of the Indians going on. If we turned over to the Indians on that reservation the money that was used studying them, they would be among the richest people in America, and they would be studying us.

This is what we found wherever we went with the Indian Education Subcommittee. A BIA school in the middle of the frozen tundra that wouldn't let the local citizens draw fresh water from the public school because this is "education water." Then the Public Health Service came trying to cure a tremendous amount of disease caused by drinking filthy water. If the Eskimos had something to say about their life, they would have done the obvious thing, used the fresh water from that tap.

I don't know. It doesn't seem to stop. I commend you for your work. I commend the comparability requirement. I commend the requirement of local committees because I think that is a step forward; but I think now is the time for all to, in effect, cut the cord, admit failure, and through the National Indian Education Board, through local control, permit, in a dramatic move, the Indians to control their own lives. Would you respond to that?

Mr. MARLAND. I couldn't agree with you more on the expression of, and frustration and dismay which you hold toward our record, Senator Mondale. I share it. I would say that if you characterize the position of the Office of Education at this time in your words as merely again helping the Indian, I would have to say that I differ with you there. We do not see the thrust of my message helping the Indian, we no longer believe that that is the solution, that is appropriate to

60-433 O—71—pt. 4——5

the dignity of these citizens, nor do I think it would work. It hasn't. The major components which we move on at this time are three, you have cited two of them. One component is to demand the participation of local councils in the affairs of education. We think that is not helping the Indian. We think that is recognizing his freedom to concern himself with his own educational destiny and we have mandated it.

The second component is to mandate comparability so that the money does go where those to whom it is directed will have access to it and will apply it to those children.

The third factor, I ask that you hear me when I speak of the leadership that I expect to exert in the Office of Education, technical assistance, good men and women, like Mrs. Scheirbeck, Dick Hays, and others driving me to push others, to move into the field with counsel and help and support for States and local boards of education, to turn them around, to realize these needs—help them, yes, but not help Indians. Free the Indians to create their own educational destiny. That is the message of this paper.

Senator MONDALE. Those are encouraging words but, you know, even the committees we set up under title I are selected by the very power structure that has been doing these things or not doing them.

I think it is important that they be set up and I commend you for following through on it. I don't wish to deemphasize my support, but I will bet the reality in most of these school districts will be that the Indian would be a token member of those committees. After all, today the big problem in our bigger cities is whether the board of education is going to have anything to say about education. This is an advisory committee to the board of education, which may or may not have some Indians on it. In any event, Indians picked by the people asking for advice, are going to pick some pretty careful Indians, I think. I think it is still an advisory role to the power structure. We want power in the hands of the Indians themselves. It is a new step, it is one which I think runs against the grain of all—all of our historic efforts toward educating Indians because it assumes that the Indian parents know more about what their children need and indeed are far more deeply committed to the education of their children than we are or could be. I think that is the problem. I think that is the difficulty and the fundamental philosophical question that we have to deal with in this proposal.

You have been very kind, we have kept you here for nearly 2 hours and, characteristically, you have given us a fine statement, and we are most grateful. I am most grateful to Helen and her work and the work of her office with the Indian Education Subcommittee; in no way do I wish to do anything but express my admiration for her work.

Senator Kennedy had to leave. As I understand it, the best way to proceed is to reconvene at 3 o'clock.

Is Commissioner Bruce here? Commissioner, could you be here at 3?

Mr. BRUCE. Yes.

Senator MONDALE. Very well, I think that might be better, and Senator Kennedy could be back at that time. So if there are no objections, and I hear none from the committee, we will resume our committee meeting at 3 o'clock this afternoon.

(Whereupon, at 11:20 a.m., the subcommittee was recessed to reconvene at 3 p.m.)

AFTERNOON SESSION

Senator KENNEDY. The subcommittee will come to order.

The witness this afternoon is Commissioner Louis R. Bruce, Commissioner of Indian Affairs. We want to welcome you. We want to welcome your comments on this legislation. We appreciate your adjusting your schedule to accommodate us.

STATEMENT OF HON. LOUIS R. BRUCE, COMMISSIONER OF INDIAN AFFAIRS, DEPARTMENT OF THE INTERIOR; ACCOMPANIED BY JAMES E. HAWKINS, DIRECTOR OF EDUCATION; VICTOR E. HILL, CHIEF, PROGRAM DEVELOPMENT STAFF (LEGISLATION); MRS. BERNESE B. CROW, ACTING CHIEF, PROGRAM PLANNING AND ANALYSIS FOR EDUCATION; BILL KING, COMMUNITY DEVELOPMENT STAFF; HERSCHEL SAHMAUNT, DIRECTOR, LEGISLATIVE AND TRIBAL RELATIONS

Mr. BRUCE. Senator Kennedy, Senator Mondale, before I start with my statement, I would like to introduce the witnesses at the table with me. First, I would like to introduce you to our new Director of Education Programs, James E. Hawkins. He has his B.S. from Penn State, M.A. from Penn State, Education, advanced work at Stanford, and the University of Minnesota. He has had a great career in the field of education, starting with Alaska, and he was area director for the Bureau of Indian Affairs in Minneapolis. We are pleased and happy to have such an experienced person on our staff as Director of Education Programs.

Senator KENNEDY. I want to welcome particularly, Mr. Sahmaunt, who was on the minority staff of the Subcommittee on Indian Education. He was very helpful to all of us.

Mr. BRUCE. Mrs. Bernese B. Crow, acting chief for Program Planning and Analysis for Education.

On my right is Victor E. Hill, chief of the Program Development Staff, Legislation, and, of course, Herschel Sahmaunt, director of Legislative and Tribal Relations.

We are very happy to be here. I am pleased to testify before you on Indian education and the recent steps we have taken to bring these Indian people the benefits of the best America has to offer in this important field. Needless to say, I, as an American Indian, have a deep and abiding commitment to this ideal.

At the present time, the Bureau of Indian Affairs has direct educational responsibility for some 55,000 Indian children from kindergarten through high school. In addition, the Bureau supplies partial funding for approximately 85,000 children in public schools through the authority of the Johnson-O'Malley Act.

There is no need for me to emphasize the statistics of Indian education which this subcommittee reviewed in the report published in 1969, after hearings throughout the country. The report provided extensive information and made many significant recommendations.

In 1970, President Nixon sent to Congress the most important Indian message in this century. In it he provided a mandate for new directions in Indian affairs and, especially, Indian education.

The legislation, which we are reviewing today, seeks to remedy some of the ills affecting Indian education. We support the objectives of the proposed amendment. However, we would like to bring to your attention some recent events in Indian affairs and share with you some thought concerning the legislation.

I call to your attention some recent organizational changes in both the Department of the Interior and in the Bureau of Indian Affairs. These changes will extend to Indian people a wide range of increased opportunity.

Secretary Morton recently stated that Indians and people of the Territories will be a direct concern of his office. This emphasis on Secretarial leadership is now giving top priority to Indian needs. The change was made in recognition of the many special needs of Indian people, and, incidentally, closely follows the intent of recommendation No. 15 of the Special Indian Education Subcommittee's report to the 91st Congress, 1st Session.

Senator KENNEDY. I was just wondering, Mr. Commissioner, in light of President Nixon's sending to the Congress the most important Indian message in this century, what progress has been made. I thought there were many features of that message which were commendable in terms of supporting local control in education, a number of other features which I subscribe to and which I think the Special Committee on Indian Education subscribed to. What has happened since that message to Congress in terms of implementing the President's recommendations?

Mr. BRUCE. This is the message of July 8, this last year. I would like to go down through a few of these. We have emphasized, in the Bureau, more authority at the agency level with our superintendents working closer with the tribes at that level. We have reviewed the redelegation of authority at the intermediate level and 2 weeks ago in a meeting with the superintendents and the area directors we have passed some of the redelegation authorities from the area offices to the superintendent. The primary reason for this is because we feel that the superintendent working closely with the tribe ought to have more authority to make decisions at that level and so we have reviewed this and met with the area diretcors and we will come back again to review it and make changes as we move along.

Senator KENNEDY. Can you be any more specific as to what is being done to follow up the President's message? Perhaps you could submit for us, taking the message as a blue print for action, what has been done?

You mentioned the reorganization. How has this affected Indian education?

Mr. BRUCE. We have made some changes there. Of course, we have had a National Indian Education Advisory Committee which has submitted some recommendations to the Commissioner. We made some changes in education and if it is satisfactory to you, I would like to call on Mr. Hawkins.

Senator KENNEDY. Fine.

Mr. HAWKINS. We certainly have been moving in recent months to give more authority to the National Indian Education Advisory Committee which the Commissioner has appointed. They are moving in program review. They are making a special study of the off-reservation

boarding schools which you noted in your subcommittee report; they are examining the problems involved there and are preparing to make recommendations to us for change.

Senator KENNEDY. Have they made any recommendations to date in written form?

Mr. HAWKINS. Mr. Hill, have they made recommendations yet?

Mr. HILL. Yes, they have specifically made organizational recommendations which were a part of the Commissioner's redelegation of authority outline of authority to the field.

Senator KENNEDY. Pardon?

Mr. HILL. They have made redelegation of authority recommendations which the Commissioner referred to.

Senator KENNEDY. Is there any memoranum from their meeting? It would be useful.

Mr. HILL. We would be glad to submit it for the record.

Senator KENNEDY. Do you have the kind of recommendations they make?

Mr. HAWKINS. We do not have it handy in terms of something written.

Senator KENNEDY. Could you submit that to us?

Mr. HAWKINS. Indeed we can.

Senator KENNEDY. I would be interested in what recommendations were made and how you value the recommendations, what was able to be implemented, what was not implemented, and the reasons therefor.

Mr. HAWKINS. I can give you a specific recommendation. The committee recommended that they be consulted and be permitted to assist us in setting priorities for the 1973 budget submission. We are consulting with them. They will have a significant input in the 1973 budget submission to the Office of Management and Budget.

Senator KENNEDY. I heard that a Mrs. Jones had responsibility for assigning tasks for the various advisory board committees. Could you comment on that?

Mr. HAWKINS. No, sir. I have the responsibility and I am assuming that responsibility. I think perhaps during the time before I was appointed she certainly was the liaison with the committee and it may have seemed because she wrote letters to them at the behest of the acting director, that she was making appointments when in fact I do not believe she was.

Senator KENNEDY. What sort of autonomy does this group have? Do they wait until you ask them to convene to make recommendations? Can they convene themselves to make recommendations?

Mr. HAWKINS. They convene themselves.

Senator KENNEDY. Do they have a budget?

Mr. HAWKINS. They have an allocation within our budget.

Senator KENNEDY. What dimension is that?

Mr. HAWKINS. At the present time, $40,000 a year. They make their program reviews on their own. They decide which of the off-reservation boarding schools they wish to review. In the past 2 years they have conducted and staffed school board training programs on a National basis and this has been entirely their own initiative. I think in many ways they are assuming a great deal of autonomy and we expect them to assume more in the near future.

Senator KENNEDY. How were they selected? I probably ought to know that, but I don't know.

Mr. HAWKINS. They were selected and appointed by the Commissioner. I have a complete list of their names and where they are from, which I can submit for the record. They were appointed to serve at the pleasure of the Commissioner and what has happened, of course, over the years some have dropped out and have not been interested. They recommended at their last meeting that a rotation should be set up so they can serve over staggered periods of time a maximum of 4 years.

Senator KENNEDY. As I remember, and I am just reaching into the past, wasn't there a question whether they ought to be appointed or be able themselves to elect replacements? What generally is your feeling on this? Maybe they are happy with the current procedure. I would be interested in whether this thought had come up and whether they had considered it.

Mr. BRUCE. There has been some discussion by the committee as to how new members should be selected and even to the point of having recommendations from the tribes, maybe on an area level, region or area, whatever, selected by them. I might say that recently—the two new members added to the committee are young people who are in college today, and it was their feeling that they ought to have some representation on that committee.

Senator KENNEDY. Could you ask them how they would like to continue in terms of perpetuation of their committee? I would be interested in their reaction. Maybe they are very happy. Maybe they feel it would be worthwhile for certain groups to elect certain ones when the vacancy comes up. Maybe they think they ought to have an opportunity to elect some. Maybe they would welcome the continued appointments by the Commissioner. It would be useful to have their recommendations.

Mr. HAWKINS. They have made recommendations concerning their present membership terminating at certain staggered dates over the next 4 years and at an early meeting, probably the one in June, this is a matter which they have indicated that they would like to take up in terms of how new members would be selected. We can provide you with copies of their recommendations and we want to follow their recommendations.

Senator KENNEDY. Is there any way where they make a record of new ideas and suggestions as they submit them to you, or is it done over the phone? What is the procedure by which they make their views known?

Mr. BRUCE. They make their views known and their recommendations known to me in writing. I have had occasion to meet with them and talk with them. I welcome their suggestions and recommendations. I believe this committee is 3 or 4 years old and some of the same people who have had experience here are still serving on that. I wanted to continue this because it seemed to be representative of Indians across the country.

Mr. HAWKINS. One of the subcommittees of this committee is a subcommittee on legislation and they have been meeting within the last couple of weeks to consider the bill we are talking about today, and Mr. Frank Ducheneau, the former chairman of the Sioux Tribe is

coming in and would greatly appreciate the opportunity to testify at some point before the committee.

Mr. BRUCE. To continue with my statement: In the Bureau, we have recently taken action to redelegate many authorities to the operating level at the reservation. This action will permit Indians to obtain faster action on problems as well as provide an opportunity for increased tribal decisionmaking. This, of course, bears directly on recommendation No. 18 of the subcommittee report.

I would like to note that many of the subcommittee's recommendations were administrative in nature and have helped form the guidelines for action taken subsequently by this Bureau. I will comment on those which have special relevance to this amendment. Indian involvement at all levels of policymaking and execution is the policy of this Bureau and we are proceeding to implement this policy in every area. Indian school boards are individually and collectively becoming more and more involved in policy and program decisions at each school. They are consistently making recommendations concerning the hiring and retention of personnel. Boards are shifting from advisory to operating responsibility.

Senator MONDALE. Would you yield there?

Mr. BRUCE. Yes.

Senator MONDALE. How many locally elected school boards run Federal schools?

Mr. BRUCE. Total of four, Ramah, Rough Rock, Blackwater Day School, and Stefan High School in South Dakota are operated by eletced school boards.

Senator MONDALE. That is all you have in the whole Federal system? How many students are in those four schools?

Mr. BRUCE. About 650 altogether.

Senator MONDALE. Out of how many?

Mr. BRUCE. 55,000 students.

Senator MONDALE. When the President of the United States in 1967 ordered that these boards be turned over to the elected school boards, why are there only four in the entire system which are run the way the President ordered?

Mr. BRUCE. There are 200 advisory school boards.

Senator MONDALE. I know the distinction. I am talking about boards that the Indians pick, not the civil service.

Mr. BRUCE. We are negotiating at the present time with six schools.

Senator MONDALE. Where are they?

Mr. BRUCE. Miccosukees in Florida, Rock Point Boarding School, Arizona, Busby School in Montana, Wind River High School, Kotzebue, and Unalakleet in Alaska; those are six.

Senator MONDALE. Why is it the President of the United States cannot get this done?

Mr. HILL. Senator, if I may——

Senator MONDALE. I am talking to the Commissioner.

Mr. HILL. Excuse me.

Mr. BRUCE. We are moving rapidly in this area, but I want to point out that the Indian people themselves are a little bit hesitant to move as rapidly in this area, the whole area of contracting and taking and assuming responsibility is one which causes some of the tribes to hesitate to assume this kind of responsibility. I think it takes time to assume this kind of responsibility.

Senator MONDALE. Is it your testimony that the Indians do not want elected school boards to run their schools?

Mr. BRUCE. No, no, I am not saying that at all. I think in the general area of involvement, where we have offered tribes contracts and services which are rendered by BIA now, in road building or whatever it is, I think some of them hesitate to contract for these services. Some of them are moving. We are very much involved in discussing and in negotiating with them at the present time, but I think——

Senator MONDALE. We appropriated a little money, I think, a year or two ago, to help train Indian school board members, did we not?

Mr. HAWKINS. Yes.

Mr. BRUCE. Yes.

Senator MONDALE. What happened to that money?

Mr. BRUCE. May he respond?

Senator MONDALE. Yes.

Mr. HAWKINS. This year a considerable amount of that money together with adult education money is being used to train and give experience to a number of school boards which are currently attempting to make the decision whether they wish to contract for the operation of their schools or not.

Senator MONDALE. Last year, we appropriated $203,000, I believe, to help train Indian school board members. I am not sure they need it, but we appropriated it anyway. Was that spent for that purpose?

Mr. HAWKINS. No, sir; it was not spent for that purpose.

Senator MONDALE. I don't find that a very energetic pursuit of the President's orders.

Senator KENNEDY. How many petitions are there for local school boards now before the BIA?

Mr. BRUCE. Six.

Senator KENNEDY. Are you familiar with the Miccosukee petition to take over the school?

Mr. BRUCE. Yes.

Senator KENNEDY. They want local control?

Mr. BRUCE. Yes.

Senator KENNEDY. You want local control, do you not?

Mr. BRUCE. Yes.

Senator KENNEDY. Why can't they get it?

Mr. BRUCE. They are going to get it. We are working on the contract at the present time.

Senator KENNEDY. How long has it been in?

Mr. BRUCE. January of this year.

Senator KENNEDY. It is now almost the first of May. Does it take that long? Will every community have to wait so long?

Mr. BRUCE. We had some contracting problems. I hope it won't take that long.

Senator KENNEDY. They will get the control?

Mr. BRUCE. Yes.

Senator KENNEDY. What kind of affirmative action is the BIA taking to make these 200 communities with Federal schools aware of the possibilities and encouraging them toward local control? What program do you have to bring the possibilities of local control to the local communities?

Mr. HAWKINS. May I respond, Senator Kennedy?

Senator KENNEDY. Yes.

Mr. HAWKINS. Through our National Indian Education Advisory Committee, we have conducted two national workshops on school board training and a number of regional workshops for school board training. It is through these sorts of training programs that word about the possibility of contracting and the actions which a school board must take in order to contract have gotten spread throughout the country, as well as meetings that have been held on a number of reservations and by word of mouth and working with the school board by our superintendents on the reservations.

We do not press it, but we make it available as an alternative for their consideration.

Senator KENNEDY. In terms of achieving local control, it seems as if most of the initiative has been outside the BIA. There was Robert Roessel who set up Rough Rock, the DNA lawyer, Gross, and Don Olson organized the Ramah community. Mr. Gross, as I understood, is now at Wind River. Dave Robinson spent a year working at Rocky Boy. I just wonder why so much effort and energy has to be developed outside the BIA and why you haven't got a more active program with results within the BIA?

Mr. BRUCE. We have tried to encourage our employees, our directors, and superintendents to discuss these plans for getting involved in their own activities, but not to press them, not to push them and when Indians are ready to do it, we want to help them in every way possible. They are just not moving that fast, but we and our employees will help them in any way possible. We are trying to be a service organization and this is taking some time, but we are accomplishing things as we go along.

I would like to continue: The Bureau is, every instance possible, providing Indian people a major voice about programs affecting them. This was clearly evident at the March meeting of Indian leaders in Kansas City. The meeting was composed of some 200 tribal chairmen, approximately 200 additional council members and representatives of special Indian interest groups including the host, the National Congress of American Indians, the National Council of Indian Opportunity, and many others.

An important question discussed at this meeting concerned the role which the Bureau of Indian Affairs should play regarding urban Indians. The recommendation, after lengthy discussions, was one overwhelmingly in favor of the Bureau funding no urban programs but to continue its advocacy role.

Mr. Chairman, we cite this meeting as one of the most representative gatherings of Indian leaders in this decade. It can truly be said that they were speaking for their Indian constituency. At this meeting fears were expressed by many speakers that the momentum, so long lacking but recently achieved, would be lost if new administrative designs were thrust upon them.

Indian people feel strongly that they need adequate time to think and talk about proposed changes.

We see this amendment——

Senator KENNEDY. What do you think in terms of time? The subcommittee recommendations have been out almost 18 months. You mention that many people feel strongly they need adequate time to

talk about proposed changes. How much more time do you think is going to be necessary?

Mr. BRUCE. I would say we are gradually moving along. Last weekend a meeting was held of tribal chairmen in Pierre where some 37 tribal chairmen were represented and they set up a tribal chairmen's association. This I feel is the beginning of a structure which might make it possible for the Commissioner and for other Federal agencies to get tribal chairmen involved in making decisions. As a result of this meeting and this association, later on, I am sure, we will have an opportunity to meet with them and discuss plans affecting their lives and the programs and they can take this back to their own tribes, discuss it, and then we meet with them later to give them a chance to be involved and express their desires as far as programs are concerned.

I think I also want to make it very clear that our people are concerned about termination. I think every move that is made, any change that is made, concerns them very much as far as self-determination is concerned and this may be a reason for delay in moving ahead.

We see this amendment as tending to give validity to these expressed concerns since it will further fragment Indian education.

Senator KENNEDY. Since you mention the question of termination, there is nothing further from the thought of myself, and I am sure from Senator Mondale and members of this committee. I know that there have been those who have tried to create scare tactics among many of the different Indian groups in trying to suggest it. But there is nothing further from the thinking of the proponents of this legislation, so I am not sure we do a service in trying to put those words into anyone's mouth. The thrust and purpose of our amendment would be to try and keep the already fragmented Indian education programs together under the National Board and if we can think of a better and more effective way of doing it, we are delighted and open to suggestions until the time we pass this legislation through the Senate.

Senator MONDALE. I am sure the Commissioner is aware of recommendation 10: The Federal Government shall not terminate Federal responsibility in the services and education field to an Indian tribe unless such termination is agreed to by such tribal nation. We are not only opposed to termination, but we make recommendations to protect the tribes against what the committee found to be absolutely cruel and arbitrary termination efforts by the BIA; one example is a tribe in Iowa; one day they were told it was all over. Our thrust is the reverse.

It has been the history that BIA personnel are swiftly sent to the tribes to raise the banner "Termination" and scare the gizzard out of them. Why was the word "termination" brought up in this testimony today?

Mr. BRUCE. Senator Mondale, I want to commend you and Senator Kennedy for your support against termination. I have been following this. I am very pleased about the position you have taken. I don't raise this issue because it is a part of education, except that everything we try to do is viewed with suspicion, as to what the ultimate goal might be, and that is why I just mentioned this. I think it has something to do with how fast we move in the area of encouraging Indians in taking over our BIA programs. What is to happen to BIA? Are we to put it out of business or what? We all want to offer and do the best for American Indians as other people have.

The education of Indian children must always be viewed as an important component of a number of interrelated functions performed by the Bureau of Indian Affairs with and for Indian people. To place Indian education under another level of bureaucracy—however well intended—will disrupt the program and make comprehensive development planning difficult.

We do want, however, to support the recognition that Indian children do have extraordinary needs which will cost far more than State averages, if opportunities unattained to date are provided and remedies become realities.

Mr. Chairman, the legislation requires a review of the off reservation boarding schools in order to determine which of them "should be converted into therapeutic treatment centers." We feel that this is not the best approach to the problem of mental health in the Bureau's off reservation boarding schools.

It is true that a number of the students are in boarding schools because of the failure of public schools to cope with their learning problems. There are also a number of students in these schools because no high school exists close to home. There is much that normal students can teach those who are disturbed and we prefer to think of the off reservation boarding schools as educational treatment centers. They do not now have adequate staff or facilities but we are moving to remedy this as quickly as funds are appropriated.

The Bureau feels that the more effective approach is to attack the root of the problem in the communities from which the students come by mobilizing all resources—teachers, parents, professionals, and paraprofessionals to identify and attack specific mental health problems.

We think the new definition of an Indian proposed in this amendment, for purposes of Public Law 874, will need considerable modification. While this concern is one primarily of the U.S. Office of Education, entitlement of funds based on such a definition of an Indian would be confusing.

We want to make special comment on parts D and E of this amendment.

Senator KENNEDY. Before you do, do you have any suggestions on what our definition should be?

Mr. BRUCE. We use in the Bureau the one-quarter or more degree of Indian blood for services of BIA on or near the reservations. It doesn't seem that this, in some cases, is broad enough in scope——

Senator KENNEDY. Is it satisfactory to the Indians, do you know?

Mr. BRUCE. In some cases it is.

Senator KENNEDY. In some cases it isn't?

Mr. BRUCE. Yes, I would say that.

Senator KENNEDY. Could you elaborate a little bit?

Mr. BRUCE. Well, there are some election situations and also judgments where Indian tribes are attempting to define the way they wish to have these settlements made and, in some cases, they talk about descendency and in some cases they want to specify that it be one-quarter or more Indian blood.

Senator KENNEDY. Well, it is a real problem. We are looking for some guidance on this. We want some constructive help on it in addressing ourselves to this. I was hoping you might be able to add what you could to our understanding.

Mr. BRUCE. Our off-reservation Indians would like to see the definition liberalized, I am sure.

We want to make special comment on parts D and E of this amendment. The earlier comments on changing the organization from one bureaucracy to another are certainly relevant to the role of the National Board of Indian Education and to the powers placed in this board. We feel that many of the duties and charges vested in the National Board of Indian Education are such that they can be accomplished within our present organization with a minimum of confusion and a maximum of effectiveness. The legislation ignores the presently existing National Indian Education Advisory Committee, which is responsible to me and is now assuming a more active role in advising me with regard to my responsibility for Indian education.

There is certainly some desirable help in part E through the amendment to the training provided by the Education Professions Development Act, the amendments to ESEA, and titles IV and V of the Higher Education Act. Each is designed to reflect improved services to Indian children and better meet the educational personnel needs of Indian children and schools. However, we point out that most of these provisions are already reflected in Administration proposals already before Congress.

We believe the other miscellaneous provisions of part E can be dealt with administratively and within existing BIA legislative authority. We should point out that important new relations are now being developed between the Office of Education, BIA, and the U.S. Office of Education, HEW. A "Memorandum of Understanding" relating to title I, ESEA has been developed and signed and will bring increased effectiveness in the administration of this program. This cooperation is resulting in more relevant programs in Indian schools.

Senator KENNEDY. Who signed this?

Mr. BRUCE. I am sorry, it has not been signed. It will be signed.

Senator KENNEDY. That was our information. As of 2:30 this afternoon, it hasn't been.

Mr. HAWKINS. It is due to be signed as quickly as OE lawyers take a look at it.

Senator KENNEDY. How long is that? That is not terribly reassuring.

Mr. HAWKINS. We hope it will be within a day of 2.

Senator MONDALE. Could we have a copy for the record?

Mr. HAWKINS. Yes. Commissioner Marland and I went over this for 2 hours. As far as administrative detail is concerned, there is no problem, but you know how lawyers are.

Senator KENNEDY. That is what causes some concern to us. Would you notify us when this is signed? But you expect it would be within the next day and a half?

Mr. HAWKINS. Within the next several days. We will convey to Commissioner Marland your desire to have it signed by tomorrow.

Senator KENNEDY. We will convey that as well.

Mr. BRUCE. We suggest, that with the known sympathy of this body for the special needs of Indian children, we be given time to consolidate our gains. Recently developed communication bridges which are new to so many Indian people need time to be strengthened. New relationships are developing between Indian people and the Federal Government and new responsibilities are being vested in Indian communities.

It is important that these new developments be tested and perfected and given time to mature with as little disruption as possible. It seems to us that disruption would be inevitable if the amendment is passed.

Mr. Chairman, we concur completely with your desire for a better and more effective thrust in Indian education. However, we think that the intent of Amendment 6 to S. 659 can be effectively carried out under existing authority.

The Bureau, together with the U.S. Office of Education, is providing for increasingly effective Indian education programs with more and more real power being vested in Indian communities. We still have much to do, but with the support of this committee and other congressional committees concerned with Indian education, an exemplary program can be developed by the Bureau for Indian children.

In closing, I would ask that the committee exert every effort to listen to the voices of the governing bodies of Indian tribes with respect to this proposed legislation. No one can deny that legislation such as this has a serious effect on the lives of the Indian children. Many recent comments from Indian leaders indicate that they feel that they have not been properly consulted with respect to this legislation.

Thank you.

As a proof of this concern, I offer a resolution passed at the National Tribal Chairmen's Council in Pierre, S. Dak., this last Saturday. I would like to submit this for the record.

(The resolution referred to follows:)

RESOLUTION #7

(Adopted April 24, 1971 by
the National Chairmen's Association)

WHEREAS, The responsibility for the education of American Indians has been entrusted to the Federal Government by Treaty, and,

WHEREAS, The Education of American Indian Students has been overstudied, underfunded, and subjected to an inordinate amount of local and national political considerations, and,

WHEREAS, The Education Subcommittee of the Labor and Public Welfare Committee in the United States Senate is now proposing a bill pertaining to Indian Education, and,

WHEREAS, The Education Subcommittee Bill includes many meritorious provisions, including an unprecedented level of support for public schools serving Indians, support for community colleges on or near Reservations, additional programs for Indian Adult Education, and cites local Indian control as its intent, and,

WHEREAS, A prominent feature of the Subcommittee Bill effects a transfer of all Indian Education Programs from the Bureau of Indian Affairs to another part of the Executive Department, and,

WHEREAS, Provisions for local control of Indian Education by Tribal Governments have been advanced and implemented by the Bureau of Indian Affairs to the satisfaction of many Tribes, and,

WHEREAS, The Education Programs in the Bureau of Indian Affairs has been the victim of outdated authorities, low administrative priorities, and small budgets,

NOW THEREFORE BE IT RESOLVED, That the National Chairmen's Association support Amendment 6 to Senate Bill 659, the Kennedy-Mondale Amendment, with the following Recommendations:

#1. That the Amendment be changed to keep the existing Education Programs within the Bureau of Indian Affairs.

#2. That the amendment adds a new mandate for a refined structure for Educational Programs in the Bureau of Indian Affairs that will support self-determination, local control, and will be approved by an All Indian Commission on BIA Reorganization.

#3. That the amendment provides for the defederalization of teachers of Indian students, replaced by individual Teacher Contracts with the Tribes.

#4. That the amendment adds new and increased monies for planning, basic support, demonstration projects, construction, and evaluation of locally-controlled Indian schools.

E IT FURTHER RESOLVED, That the Education Subcommittee provide for additional Hearings in the Reservation Areas to discuss the implications of the Amendment on our Tribes.

WE DO HEREBY CERTIFY, That this foregoing Resolution was duly adopted on April 24, 1971, at Pierre, South Dakota, with a Governor present.

Webster Two Hawk Conference Chairman	Peter MacDonald General Assembly Chairman

Senator KENNEDY. I would like to mention I have written personally to all the tribal chairmen, using the mailing list of the BIA, sending out more than 500 copies of the legislation over a month ago. We have tried to incorporate suggestions in the legislation so far. As I mentioned in my opening statement this morning, in the formulation and development of this legislation, we are wide open to recommendations. Nothing is final other than our will and determination to solve some of the problems we are confronted with.

Senator MONDALE. Senator, will you yield?

Senator KENNEDY. Yes.

Senator MONDALE. One of our suggestions was a White House conference to work on this. That has fallen on deaf ears. We have done everything we can. This committee traveled many thousands of miles. We took something like 80,000 pages of testimony. We went everywhere. We asked if there was someone we didn't hear who wanted to be heard from. We are very anxious not to have a paternalistic measure here. We sent out inquiries to any person we could find on the list. We consulted widely with their leadership. In addition we wanted a White House conference which could use these recommendations as a beginning for an analysis, for response to what Indians wanted. If there is something we haven't done to hear and listen, I don't know what it is.

Senator KENNEDY. As I mentioned, I am sure we are open. We continue to be, this committee does, and I am speaking for myself and I am sure for Senator Mondale. We are open to observations and recommendations. The one thing that all of us are very much aware of, we found out in the final few meetings of our committee as we traveled around the country, almost the first person who would stand up and speak would say: We have had enough study and what we need is action. We have enough experts on Indian affairs and what we need is Indian experts. Hopefully, we can do it by getting some development of Indian education legislation.

I noticed in your comments you mentioned the boarding school situation. The subcommittee report observed a year and a half ago that "A strong case can be made that the boarding schools contribute to the students' mental health problems."

And then last year the National Indian Youth Council charged the Intermountain School, for example, with discrimination against Indian employees, discrimination against native religious practices, repression of native languages and culture, brutality against Indian students.

A few months later the Intermountain School Chapter of Amerind, Inc., called Intermountain "a bed for illicit practices," alleging discrimination against Indian students and employees; harassment of Indian employees; mismanagement; and mistreatment of students.

At long last the Bureau took a look for itself. A review of Intermountain was conducted in January of this year, and the investigators of the BIA found, and I quote: "Hostilities are high, factions among the staff have sharpened, the atmosphere is tense, and all in all, the least amount of provocation or continued 'do nothing about the conditions' kind of inaction could ignite and convert the situation into an embarrassing, unnecessary, and unfortunate one, to say the least."

"Once again," the review continues, "it seems that minimum and unenthusiastic token attempts have been made to treat the symptoms of a serious problem which has been allowed to brew for too long."

Commissioner Bruce, how long—how long must the destruction of the morale and integrity of the students and some employees of Intermountain continue before the Bureau does something?

Mr. BRUCE. As far as Intermountain School is concerned, one of the problems that we face there is that we have not had a superintendent for 3 or 4 months, more than that I believe, and we are about to select one who will work on this problem. I, for one, am not pleased with the delay in handling these situations, I think we ought to be in a position to move rapidly, more rapidly than we are now, and than we have in the past. As far as discrimination is concerned, we are facing a different situation as a result of encouraging Indians to be in higher levels and in higher positions of responsibility in the Bureau at this point, in some cases non-Indians are talking to me about discrimination against them, which is a new turn, but it is time we gave some consideration to Indian people for the jobs in working with our own and this is the direction we want to move in, although we are not eliminating non-Indians.

We have many dedicated non-Indians, but our Indian people are being trained and we ought to have an opportunity to let them make some decisions in this Indian matter, but I believe that I can say, I am sure, that the Intermountain situation will be corrected in the near future.

Senator KENNEDY. What happened to the former superintendent?

Miss VICTOR. I am right here.

Mr. BRUCE. We brought her, Wilma Victor, a Choctaw, who is now a special assistant to Secretary Morton.

Senator KENNEDY. You would think, now that she has gone up in the power structure, that these abuses would be more readily remedied.

Mr. BRUCE. Let me say this, she has only been on the job for a week, not more than 2 weeks, and she is bringing pressure on us now to correct that situation.

Senator KENNEDY. Is that what it really takes?

Mr. BRUCE. No. I personally want these things to be corrected.

Senator KENNEDY. What about some of the others? Take Intermountain, there we have an example where it appears that something is going to be done; how about Chemwa and so forth?

Mr. BRUCE. Would you like to answer that?

Mr. HAWKINS. It is clear to me from my recent return to the Bureau, and I certainly had this feeling before I left the Bureau, that the off-reservation boarding schools are probably the single most serious problems we face. I intend, through the National Advisory Committee and their review of the off-reservation boarding schools and through our own study of the situation, to move rapidly to attempt to make these the best schools possible within the limits of the funding we have. I personally am committed to a rapid change in most of our boarding schools that will provide——

Senator KENNEDY. What is "rapid" change?

Mr. HAWKINS. Hopefully by the end of the next school year, we will have a complete review and recommendations regarding change and will implement them on every single off-reservation boarding school.

60-433 O—71—pt. 4——6

I would frankly like to close down a good many of them and move the kids closer to home. That really is the only answer.

Senator KENNEDY. I would certainly subscribe to that. You know, it seems that there must be people who say, "Well, Senator, you are having the hearing now, we have read the subcommittee report, heard this language going back to the Meriam report in 1928, same kind of report, same kind of advice. And still this situation continues and goes along basically unchanged." I suppose you can understand the cynicism of those who are most directly affected—the parents, the young people themselves—and all Americans.

Senator MONDALE. Would you yield?

Senator KENNEDY. Yes, I would.

Senator MONDALE. I believe in 1968 or 1969 the Bureau funded several outside studies of off-reservation boarding schools. They came back with reports which were absolutely devastating. This was done by the BIA and I think we received several reports and incorporated them in our educational statements. Now, I see we are going to have another study. I guess the kids that were getting banged up have graduated or run away. Now, we have a new batch.

I respect you, you were the best area director we had in Minnesota. I know you mean what you say. But in the few years I have been involved, we are constantly treating this with a study and a survey followed by implementation.

Mr. HAWKINS. I concur completely. I did not mean study. These will be implementation actions. We are going to try to take all the recommendations that have been made in the past including the subcommittee recommendations and try to apply them school by school and the solution may vary from school to school.

Senator MONDALE. There were nine series of surveys made; when was it?

Mr. HAWKINS. 1967, 1968.

Senator MONDALE. Those have been with the BIA for 2 years. What followed? I remember reading some of them. They were just absolutely heartbreaking. What happened after that?

Mr. HAWKINS. I can't respond adequately, Mr. Mondale. Mr. Hill has longer experience recently. Could I ask him to respond?

Senator MONDALE. Yes.

Mr. HILL. The reports of the very nature and certainly those that referred to local conditions, physical problems within the school, there was immediate action taken to look at it. In every instance you don't always solve the issues, quite often you do. Changes in personnel were made and along with this came a political change. Leadership changed in the Bureau and there were some new directions, so much of the momentum that could have been generated possibly to follow this thing through did not occur.

Mr. HAWKINS. I am not sure that other Members of Congress, apart from this subcommittee, have really understood the nature and problems of dealing with the Bureau's boarding schools. A number of people in Congress and out regard them as similar to elite boarding schools in the East but they are poles apart, of course. We seem to have been unable, to date, to translate both to our own people in terms of the budget process, as well as to Congress, the very special needs that these boarding schools have.

Senator MONDALE. We have such terrible problems. I went out there and went through those boarding schools. I am no expert. The BIA takes the position: "We challenge you, to see if you ask the right questions." We ought to be working together to cure the wrong.

I went out there and spent 3 days crawling through those boarding schools. When I came back I gave a speech on the Senate floor that 5-year-old children were taken from their families and put in these barracks, away from their homes for months, and then I referred to Dr. Menninger's statement that the anxiety level of these children was the highest he had seen.

The following winter two students died from exposure. The action of the area director was that he wrote me a bitter letter. "Senators have a duty to tell the truth. There are no 5-year-olds in this institution, and you do a great disservice to the public and the institutions by so stating." I wrote back and said, "Tell me how old they are."

I wrote again 2 months later. I said, "Inadvertently you failed to answer my letter."

Two weeks later a letter came back, "It is true we have 5-year-olds."

I am no area director, but the kids are being ruined. We go through this year after year. The BIA asks if we are smart enough to ask the right questions. But those kids are out there and it is still the same thing Dr. Menninger testified to. The kids are being ruined. The Indians are not being given any control over the lives of their own children. That is where it begins. Unless we solve this, we are going to have another 100 years of repetition—civil service people, most of them white, noneducators, doing what they think is best in a very rigid, pyramided, arbitrary civil service bureaucracy. It is just more of the same. I am not being critical of you. We are all at fault here. I just have the feeling, here we go again. The BIA says we don't like your bill.

What should we do? What can we do to overcome this monstrously inhuman destruction we are visiting upon the Indian schoolchildren. Our answer is simple. Do for them what we do for our own kids. Let the parents have something to say about their education. If that isn't the way to go about it, tell us what we should do. Tell us what we should do.

[Applause.]

Mr. HAWKINS. I agree with you completely, Senator Mondale. The Rock Point School is a case in point which is a boarding school, with the parents preparing now to take over the school, under contract with the Bureau in order to better administer that particular program. That may well turn out to be a model throughout the reservation, as well as the Rough Rock School, of course.

Senator KENNEDY. Mr. Commissioner, can you explain why there are so many key education positions in the Bureau that are vacant, including the associate commissioner for education and the deputy associate commissioner of education—I understand the Director has been in for a little over a month and he is a non-Indian.

Mr. BRUCE. Why that is vacant?

Senator KENNEDY. That is right.

Mr. BRUCE. We have been trying since the months I have been the chief to find people for that job and for other jobs in the Bureau. Some have not wished to be considered. Some have not been able to

qualify under civil service. We have constantly been searching for people for those positions and that is the best explanation I can make. I wanted strong Indian people.

Senator KENNEDY. Are we supposed to gather from your testimony that you cannot find qualified, interested people who are competent to serve in those capacities?

Mr. BRUCE. No, no. Some do not qualify. Some are not cleared, some are not interested. We are constantly looking for people for those jobs. We haven't been able to find them.

Senator KENNEDY. I realize the problems, there are always problems in the selection of qualified candidates for any responsible position. I am full of wonder why we haven't been able to fill those extremely important positions when you have indicated your own strong commitment to this whole kind of problem. I can't for the life of me understand why you are unable to find competent, qualified, interested Indians to fill those positions.

Mr. BRUCE. I have had an acting associate, Mr. Lincoln, a Navajo, who has been a deputy, serving as a deputy and as acting associate commissioner. He is to be appointed as area director for the Navajo and now I am continuing to look for a person for that position.

Senator KENNEDY. It just seems in our visits and travels around the country, we have seen and listened to some of the most eloquent and impassioned testimony by Indians in all parts of our Nation, you know, who perhaps don't have blue ribbon degrees, but in ability and concern and knowledge, they are well qualified. I can't believe that you cannot be sufficiently persuasive to the Civil Service, having some understanding of the background. I find when the President wants to get somebody in there, he can get them in there. I can't believe that if you speak to the Secretary or recommend to the President that appointees don't somehow fit the criteria, that they don't have ways of getting the job done. Still we find these vacancies, in spite of the observations that you have made that you have a full commitment to do the job. Still these vacancies still stare us in the face. I am just hopeful that you can do better, that the Department can do better.

The Central Office of Education's staff is almost entirely non-Indian, 14 out of 72 are non-Indian.

Mr. HAWKINS. I believe that is correct, although the deputy director is Indian.

Senator KENNEDY. Even with the Indian preference statute, you can't do better?

Mr. HAWKINS. I would certainly intend to do much better. I would invite you a year from now to take a look at the staff, Senator Kennedy.

Senator KENNEDY. You are aware of Congressman Olsen's report on personnal distribution in the Bureau. He found 75 percent of Indians employed in the Bureau were grade levels of 6 or less, and of non-Indians, 60 percent have grade levels above 6.

Mr. BRUCE. Yes.

Senator KENNEDY. Can we get your commitment on improving that?

Mr. HAWKINS. Many of the jobs available on reservations are at lower levels for which, of course, non-Indians either do not apply or are not nearby, but I would certainly, as far as education is concerned, say you could get my commitment to move more Indians into positions of authority, particularly in turning over schools to Indians to run

themselves, and I quite frankly would like to have an Indian replace me in a couple of years.

Senator KENNEDY. You can't make that statement, Commissioner?

Mr. BRUCE. No.

[Laughter.]

Senator KENNEDY. What kind of assurances can you give us, Commissioner, in terms of the Bureau itself? Where will we be in 6 months or a year in terms of employment?

Mr. BRUCE. I think you know this is a primary goal as far as I am concerned to do as much as possible to place Indians in key positions of responsibility. I feel that we have made some progress. We do have 15 out of 20 in the central office in the higher levels who are Indian, in higher grades for the first time. We have a Navajo who is an area director, will be, we have an area director in Alaska, Morris Thompson, we have a Sioux who is area director in Aberdeen. We are looking at this constantly and it is a priority thing as far as I am concerned. And I think you will see some progress in the next year.

Senator KENNEDY. I would like to submit some questions on the subject of employment so we can get some answers later on.

On another subject, I understand that $1.6 million of education-allocated funds were returned to the Treasury last year unexpended, is that true?

Mr. BRUCE. No funds were turned back to the Treasury last year.

Senator KENNEDY. Were there Indian education funds that weren't used for education, but were rechanneled for something else, that you know about?

Mr. BRUCE. Not to my knowledge.

Senator KENNEDY. I thought the Senate Appropriations Committee mentioned something on this matter, that there were funds that were allocated for education and were unexpended at least for the purposes of education. Perhaps you could fill us in, if you know something of it.

Mr. HAWKINS. I don't know personally, but I can certainly check into it and let you know.

Senator KENNEDY. A little earlier, we talked about contracting, as a block, to community groups to take over BIA schools. What does the BIA ask of parents, for example, before these contracts put control in the Community? Do you visit or consult or talk with the parents prior to the time that you make a contract?

Mr. HAWKINS. May I respond to that, Mr. Chairman? Our policy is to deal at the present time through a recognized, incorporated body which represents the tribe, and we insist on two things when a group comes to us wishing to contract for the operation of a school. One is an expression from the tribal government itself that it would support that group and, No. 2, an expression, and this could be reflected in a number of ways, from the parents of the children who will be involved in that school that they too support that group and the idea of the school as it is being presented. This may not have been true a year ago but, from now on, this will be the policy.

Senator KENNEDY. Are these in the new regulations?

Mr. HAWKINS. These are the new regulations which have just been developed in the last few weeks.

Senator KENNEDY. Did you have an input from parents in the development of these regulations?

Mr. HAWKINS. Yes; experience from Ramah and Rough Rock helped to shape these regulations—well, they are guidelines, not regulations.

Senator KENNEDY. Are you familiar with the ABT associates' report on Indian education?

Mr. BRUCE. Yes.

Senator KENNEDY. As I understand, this report was done under contract with the Bureau in 1969. That talked about the curricula of Bureau schools being generally inappropriate to the experience and need of the students; counseling offered to Indian students is inadequate; morale remains low.

This is just one of the many studies with numerous recommendations for reform. Can you tell us here what you have done to respond to those recommendations?

Mr. HAWKINS. May I respond again, Senator Kennedy?

Senator KENNEDY. Yes.

Mr. HAWKINS. Many of their recommendations as you read them off and as you realize, of course, were reflected in the recommendations made by the subcommittee in their report and I think we have moved and are moving quite far in the direction of implementing those recommendations. As an example, the recommendation that culturally, relevant materials be developed for use in Indian schools is a major priority as far as I am concerned and has been for the Commissioner. We now have a cultural materials development unit and will vastly expand that in the near future, another typical example.

Senator KENNEDY. Have you been able to get anything out into the field yet?

Mr. HAWKINS. Yes, sir, on the Navajo, readers are being developed which take the experience of Navajo children and turn them into the kind of reading materials that——

Senator KENNEDY. Wasn't that at Rough Rock?

Mr. HAWKINS. Those developed at Rough Rock and Window Rock at the area office.

Senator KENNEDY. They have been going for some time?

Mr. HAWKINS. Yes.

Senator KENNEDY. I am somewhat familiar with what happened at Rough Rock. They have done admirably well. We have had difficulty getting continued support for that kind of program. I am interested in some of these other situations. I thought you might be able to tell us about them.

Mr. HAWKINS. In curriculum development?

Senator KENNEDY. Yes.

Mr. HAWKINS. We are now developing histories for a number of tribal groups. We are contracting with universities that have already made contracts with the tribes or with tribal groups themselves to develop a history of that tribe which can then be used in schools for those tribal children. We would like to develop this sort of relevant material for each one of the tribes where we have major concentrations of school children. In Alaska, there is the Alaska rural school project which is developing a large number of relevant materials and if you would like I would like to send you materials which have been developed there which I think are exceedingly relevant to the development of Indian children in school. This is funded by the Ford Foundation and the Bureau of Indian Affairs. I can indeed send you considerably more on this.

Senator KENNEDY. Could you? Because this was a subject of great interest to the members of the committee. We saw in a variety of areas what the problems were, particularly in Alaska, the Dick and Jane readers and additional problems.

Mr. HAWKINS. Yes, sir. In the language department we have begun the development of a bilingual project on the Navajo and in conjunction with the Institute of American Indian Arts which is going to train within the next 4 years some 200 bilingual Indian teachers who will be teaching in the elementary schools in true bilingual programs. They will get their degrees 4 years from now, but they will be intern teachers between now and then.

Senator KENNEDY. Can we go to the hiring of teachers? Is that carried out from Washington or each area level?

Mr. HAWKINS. It is centralized, Mr. Chairman, out of Washington, but the office is physically located in Albuquerque, N. Mex.

Senator KENNEDY. What is your reaction to that?

Mr. HAWKINS. I haven't had time personally to study that particular operation. I am informed that for the first time, this year, we have a much larger number—and I would have to get the exact numbers of Indian applications for teaching positions—than we have ever had before, which is an exceedingly encouraging sign.

Senator KENNEDY. What kind of input, for example, does a local community have in terms of the selection of their teachers? Do they have any? Do you think they should?

Mr. HAWKINS. At the present time I don't believe they have. I think the ideal is that they should have a hand in selecting their own teachers. As more and more Indians apply, this will be true because people will know them. It seems somewhat difficult, however, to provide for the kind of interviewing and the kind of real input in a remote community of Alaska where teachers are going to have to be hired from outside Alaska. We certainly could send and I would recommend sending the resumes of the teachers to the community school board and asking them to review them.

Senator KENNEDY. Do you think it would be useful to suspend civil service to get schoolteachers who might be more acceptable to local parent groups, local community interests? Do you have any feeling about this?

Mr. BRUCE. Yes, tribes are requesting this and I am interested in this, also.

Senator KENNEDY. I know you are interested. Do you think it is a good idea?

Mr. BRUCE. Yes, I do.

Senator KENNEDY. Will you support at least some movement in this direction?

Mr. BRUCE. Yes, I would. I think I would.

Mr. HAWKINS. May I interject a moment. I was in the Trust Territory of the Pacific Islands as Commissioner of Education. When we first went out there, a new push was going in the direction of education. We found that the civil service regulations that governed the hiring of those teachers were so restrictive and it was so difficult to obtain the teachers we wanted that we asked the Civil Service Commission to suspend the civil service regulations concerned as far as teachers for the trust territory were concerned. We then hired them under personal

service contract which provided more flexibility and we got many more of the kinds of teachers we wanted from the United States. I personally believe, if I can mention a personal opinion, that many of the problems of Indian education will not be solved until we defederalize much of the personnel in that operation.

Senator MONDALE. This was one of the things that always came up, of course, that teachers for a particular school were hired from a national Civil Service roster. They show up at some Navajo school, never having been there before in their lives, cannot speak the language, and unfamiliar with the culture. Many of them come to save the Navajos. No self-respecting school administrator would try to work without control of personnel. The whole issue of personnel is central to the school system. I believe the reason many more people are excited about teaching in Indian Federal schools is that there are thousands of unemployed teachers in the last year looking for jobs.

The significant thing, and I believe I am correct on this—there are more Navajo teachers with degrees teaching in Rough Rock than the rest of the BIA Navajo schools put together. Why did they suddenly come back and teach in that school system? I think because they saw a system that was true to the culture and language and pride of the Navajo. You are not going to get a gifted young teacher, a Navajo, to be part of a system that he doesn't feel has that central core of integrity. In order to get sensitive, committed, culturally attuned teachers they must trust the system, and the only kind they will trust is one which they themselves run. I think that returns us to the heart of this bill, local control.

Senator KENNEDY. Any reaction? Is there anything in that that you disagree with, Mr. Commissioner.

Mr. BRUCE. Not at all. I commend him for that statement.

Senator KENNEDY. In terms of these teachers, do they get any specialized training before they go into the Federal schools?

Mr. HAWKINS. I believe some of the areas, and this is chiefly up to the area, give teacher orientation. In Alaska they do. In other areas there is not much orientation given.

Senator KENNEDY. It is up to the areas. The area can rechannel funds away from education on the basis of orientation, can't they?

Mr. HAWKINS. Not without reprograming. We have got to maintain integrity of funds. This might have happened, but I am not aware of it, since I have been on board. Mrs. Crow, would you know of this?

Mrs. CROW. No; I don't know of any situation where this has been done in the past.

Senator KENNEDY. Do you know where the money goes when it goes into these respective areas?

Mrs. CROW. Yes.

Senator KENNEDY. Do you know what school they go to?

Mrs. CROW. Yes; the accounting system setup for the area shows expenditures by unit as well as purpose.

Senator KENNEDY. You can tell if it goes to a particular school and then you can track it as to how it is utilized, say if a certain school has a certain number of Indians, it is entitled to a certain amount of money that goes into that school actually is going to be used to benefit the education of Indians and you can be assured of that kind of integrity

rather than its being diverted to educate other students or to other programs?

Mrs. CROW. You are speaking about funds paid to the school district under the Johnson-O'Malley program?

Senator KENNEDY. In part. You don't have this kind of control, do you?

Mr. HAWKINS. No, sir, except that the States do submit the contract which—I am sorry, a State plan which narrows down pretty specifically where those go. I must admit we have not followed the expenditure of those funds nearly as closely as we should.

Senator KENNEDY. Do you have evaluation for bureau schools at the local levels, so they can determine their own needs?

Mr. HAWKINS. We have program reviews of education programs primarily in the off-reservation boarding schools at the present time. One of the things that we should develop immediately is an evaluation capability. We must develop that immediately.

Senator KENNEDY. There is real need for that.

Mr. HAWKINS. Yes.

Senator KENNEDY. We have heard so many stories about diversion of funds and it is so difficult, once again, to have much confidence in this kind of system. Indians find out they are entitled to funds, believe they are going to get them for quality education, and see them diverted for other purposes. In the presentations before the Congress, we find out that the generalized statistics are reached on a ratio or proportion level and really fail to reflect what is going where.

Mr. HAWKINS. I feel that one of the things we ought to develop is an annual report to Indian parents, you might call it a corporation report, if you will, that really gives the details of how the funds were spent for their children. This is one of the things that I would like to set myself to.

Senator KENNEDY. You are really going to be quite busy.

Mr. HAWKINS. I have got some good people, though.

Senator KENNEDY. I understand there is a good deal of attention being paid to the Bureau reorganization. Can you reorganize the education programs?

Mr. HAWKINS. I have a task force that has come in, they started 2 weeks ago, and they are to give me a report on Friday of this week regarding the reorganization of our central office functions. It became fairly clear to me soon after I came back to the Bureau that we were not responding adequately, we were not organized to respond adequately to Indian people around the country, and I think that we will, within another 60 days, begin a rather major reorganization of the Office of Education.

Senator KENNEDY. In that reorganization, are you going to have some input from the parents of students in your schools?

Mr. HAWKINS. Indeed, we will. You do understand, of course, this is a central office reorganization. It ought to be carried out all the way through. As we carry that out, we will be consulting with Indian parents.

Senator KENNEDY. As I understand, Mr. Commissioner, there is a position of Associate Commissioner for Education and Deputy Commissioner for Education still not filled, is that correct?

Mr. BRUCE. The Deputy Associate Commissioner for Education is still filled and will be until Mr. Lincoln is officially transferred as area director for the Navajo. The associate commissioner's job is still open.

Senator KENNEDY. You are making every effort, can you give us assurances that you will redouble your efforts to try to fill those jobs?

Mr. BRUCE. Yes; I can assure you we will move on it.

Senator MONDALE. Mr. Commissioner, as I understand your testimony today, you are opposed to the Kennedy proposal. In light of the fact that we are marking up a higher education bill which could carry many reforms to deal with the problems which we have discussed today, are there any such reforms that you wish to recommend, whether it is restructuring, involving Indians more than they are, funding levels? We all agree it is a tragic situation. You are against this proposal. Could you tell us what you would like us to do?

Mr. BRUCE. Senator Mondale, I would like some time to review this in the next couple of days and submit some recommendations to you. Would that be all right?

Senator MONDALE. We want to know what to do.

Mr. BRUCE. I am thinking through this whole area of Indian involvement. Let me say I am concerned about the fact that we do have 200 Indian advisory committee school boards. I wish they had more authority and power to do more and we are moving in that direction.

Senator MONDALE. But once again, they are there at the sufferance of the establishment, they are picked by the establishment, the agendas are shaped by them. They don't have any power as to staff, teacher selection and curriculum. I don't think that helps them. The highest item on the agenda is whether dogs should be permitted on the playgrounds. I think the Indians know when they are part of something and when they are not. The traditional white school board runs the show except in major cities, I am not sure who runs those—but they hire faculty, principals, superintendents, they have control over curriculum, they have funding authority. I have seen the advisory committees, and I am more inclined to think they were a response to head off local control. I don't think that answers what we want. But in any event, if you could submit for the record what you think we ought to do, I think we would be grateful to have it.

Mr. BRUCE. I would like to do that.

Senator MONDALE. The head man in your office of education bears what title?

Mr. BRUCE. Director of Education programs.

Senator MONDALE. Over the last 4 years, how many such directors have there been?

Mr. BRUCE. I have been there 20 months, but three, I am told.

Senator MONDALE. In those 20 months, how many months was the office vacant?

Mr. BRUCE. Fourteen.

Senator MONDALE. Well, you see, that is what it is all about. Meanwhile, those kids are out in those schools. You know, I have gotten so many letters from BIA—acting this, acting that, you get the idea it is a department of the theater. There is something awfully wrong, yet the traditional response is to not do anything now, because later we are going to do it better. There is something wrong with the power structures and incentives which explains the situation.

Now, one of our key recommendations, and it is nonpartisan, recommends establishment of an Indian education board, run by Indians, which would have operational control of the national program. Wouldn't that be helpful?

Mr. BRUCE. As I recall, it was set up to be responsible to the President, is that correct?

Senator MONDALE. We left that open. But we wanted an Indian education board in charge of Federal schools. We would be open to suggestions on that, but we wanted the Indians running the system.

Mr. BRUCE. That is one of the areas of consideration. Perhaps it is advisable for our own advisory committee to in some way fill that role.

Senator MONDALE. I asked a very gifted young teacher in the Navajo: "Suppose you have a recommendation for reform in your school, what is the chain of command?" As I recall, it went something like this: He talked to his principal who, in turn, talked to the assistant superintendent, who, in turn, would talk to the assistant area director for education, who, in turn, cleared all recommendations with the area director who was not an educator, but who would go to Washington and get to the assistant commissioner of education; if he liked it, he would recommend to the Commissioner of the Bureau of Indian Affairs who would then report immediately to the Assistant Secretary for the Bureau of Land Management, who would in turn report to the Secretary of Interior who, if he was really powerful at the moment, might be able to get it through the Bureau of the Budget. Is that the way it works?

Mr. BRUCE. I am afraid so. [Laughter.]

The authority is delegated to the lower level. [Laughter.]

Senator MONDALE. What about funding levels? Do you favor substantial increase of funding for these programs?

Mr. BRUCE. Yes.

Senator MONDALE. We might incorporate your suggestions.

Mr. BRUCE. Yes, we have allied the tribal councils through the agencies to have more of an involvement in discussing the budget and so forth.

Senator MONDALE. But you are arguing about a pretty small pot. We found out that the average U.S. boarding school spends $3,500 a year per capita, and I think $1,200 a year is the spending level of the Navajo school, which is little more than custodial cost. We feel strongly that we should have a substantial improvement of funding levels.

Then we have the funding which excludes urban Indians. Two-thirds of the children are in public schools. In Minnesota several years ago, all Federal schools were stopped. Federal schools were closed and all the children go to public schools. Because of that distinction, we have some 12,000 students, kindergarten through the 12th grade and only 2,000 of them get help through BIA programs, so that 10,000 are beyond the attention and support, that is the financial support of Indian education programs administered by your department. Our bill tries to sweep aside those "on or near reservations" distinctions and support Indian children wherever they are found. All the children need help desperately, but those who need it most are the families who have moved into big cities from reservations; they are facing not only the cultural crisis that any Indian child faces in a white-dominated school, but for the first time trying to cope with the ghetto, urban

society, after having grown up in a rural reservation society. To those children we say: I am sorry, there is no financial help.

As far as my State is concerned, and Minneapolis has the highest percentage of urban Indians, we find the attitude that "those children can't receive help" somewhat inadequate. Wouldn't you agree that our idea of having the money following the Indian rather than the Indian trying to follow the money would be better?

Mr. BRUCE. I think many of you have heard me speak out on this subject. Personally, I feel very strongly that from where I sit as a commissioner, I ought to be an advocate for Indians regardless of where they are, on or off reservations, I feel that the Bureau of Indian Affairs ought to be an advocate for Indians, whether they are on or off or wherever they are. And so, I would agree with yout there, except that we do not have the funds or the authority, I don't, but I think that ought to be expanded.

Senator MONDALE. We would like to broaden the authority so it runs to Indian children without arbitrary distinction and, secondly, get the funding levels up where they make a difference. Then we should try to get the use of those funds in a way that will be sensitive to a child's needs. The interesting thing is that in a budget of $250 million, we cannot find these funds. That is another speech. But if we stand behind Indian children the way we stand behind Thieu and Ky, we could save several million and do a good job. It is what we feel is important. This is a small program, I am embarrassed to be for such a small program, 30 million. We would all agree there is a long overdue bill to be paid here by American society and a crash program needed to undo the damage of over 130 years of destruction. I believe there is great public support for this money; I believe the Government is following the American people on this one. Every issue we have taken out on the Senate floor for Indian education, we have won. I think American people want justice done, and done now, and I think they would be behind these programs. So we look forward to your recommendations, and I would hope that you would help us in that effort. You have been here long enough. Senator Kennedy had to leave. We are most grateful to you and Mr. Hawkins and the other members of your staff.

At this point I order printed all statements of those who could not attend the hearing, and other pertinent material submitted for the record.

Senator KENNEDY. We stand in recess until 9:30 tomorrow.

(Whereupon, at 4:45 p.m., the subcommittee was recessed to reconvene at 9:30 a.m., Thursday, April 29, 1971.)

EDUCATION AMENDMENTS OF 1971

THURSDAY, APRIL 29, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to recess, at 9:30 a.m., in room 6226, New Senate Office Building, Senator Claiborne Pell, presiding.

Present: Senators Pell, Kennedy, and Mondale.

Staff present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and Roy H. Millenson, minority professional staff member.

Senator PELL. The Education Subcommittee hearing on the Education Amendments of 1971 will come to order.

The first witness is the president of the National Indian Education Association, from Stillwater, Minn., Mr. William Antell.

Senator MONDALE. Mr. Chairman——

Senator KENNEDY. Just before yielding to the distinguished senator from Minnesota, I want to express my very deep sense of appreciation for the scheduling of these hearings yesterday and today. You have indicated that we could continue these hearings on next Thursday, May 6th, to provide an opportunity for those who may not have the chance today and for others who have indicated a strong interest in making a comment about this legislation to do so.

If other time is necessary, I know you have indicated a willingness to schedule additional time. This is consistent with, I know, your policy on this committee to provide for the greatest range of comment that is possible on this legislation. Hopefully, the results of yesterday's, today's and next week's statements will allow us responsibly to shape this legislation into the kind of meaningful law that we are all interested in.

I want to express my personal appreciation to the Chairman.

Senator PELL. I am delighted. As you suggested, this should give everyone an opportunity to testify.

Senator MONDALE. I take great pride in introducing our first witness today. He is the president of the National Indian Education Association.

In addition to that, he serves as education director in the Minnesota State Department of Education. He has appeared before the Special Subcommittee on Indian Education before and was one of our best witnesses.

I take pride in the fact that out of our State Department of Education, we have had an advanced effort to try to do something about improving the education of our Indian children in public schools, and

1780

Will deserves an enormous amount of credit for that, as well as for his leadership in this newly created and highly impressive organization called National Indian Education Association.

I am very pleased to have him here. Of course, he has been instrumental in helping us develop the proposal we are now hearing.

STATEMENT OF WILL ANTELL, PRESIDENT, NATIONAL INDIAN EDUCATION ASSOCIATION

Mr. ANTELL. Mr. Chairman, and members of the committee, I am a Chippewa and I would like to express my sincere appreciation and gratitude to Senators Kennedy and Mondale, in particular, for this determined effort they have made to change the status of Indian education which the Senate and the subcommittee undertook as a major task during the last several years.

The committee is to be commended for their work and hopefully a viable bill affecting the education of Indian children will come forth from this hearing.

It is my privilege to represent the National Indian Education Association, an organization which was formed in Minneapolis in August 1970. The National Indian Education Association is governed by 17 leading Indian educators from across the Nation. Our major objective as an association is to provide service to institutions having responsibility for the education of Indian children.

That, we are committed to with vigor and determination and we are pleased that the U.S. Senate has requested our imput regarding Amendment No. 6 of S. 659.

In addition to being a privilege for me to be appearing before you today, it is even more important because I feel it is my obligation as an Indian educator. This Nation has never been more aware of needs of American Indians. I believe in part, the major reason for this is because the American Indian has come forth with regained pride and dignity to lead the Nation in setting the course of action which must be taken to provide Indian citizens with a meaningful and productive life. I consider this a mandate as an Indian educator and a challenge for our association to carry forth.

The National Indian Education Association believes there are two crucial issues of amendment No. 6, Senate 659. First, the bill addresses itself to Indian control of educational programs for Indian children. Secondly, the much debated issue of nonreservation Indians is appropriately considered.

The Association feels the critical concern of Indian people regarding Indian education focuses on Indian control of their schools. We believe many of the problems facing Indian children in the public or Federal schools can best be solved by Indian people themselves.

The National board made up of Indians vested with proper authority and responsibility can achieve this goal within the boarding school systems. It is our understanding the National board will have this authority and must delegate complete authority to local boards in governing Federal school systems.

We cannot accept the use of advisory committees because we all know the inadequacies and failures of these committees to be a viable force. The question of the National board's jurisdiction is a constant

debate and does little if anything to accomplish intended goals and objectives. Advisory committees are to give advice and make recommendations. Indian people need authority and given that authority will accept the responsibility with enthusiasm and dedication.

The question of control within the public school system is much more difficult to achieve. The problems of geographic location, and population factors raise serious challenges in achieving Indian control. Certain sections of the country have public schools with large Indian enrollment but represent low percentages of the school population, make it next to impossible for Indian people to be elected to local boards of education.

Within State systems of elementary and secondary education these boards are vested with authority to run their schools.

It would appear this system would be impossible to change for it would challenge dramatically the history of public education in our country.

However, amendment No. 6 illustrates, there are ways Indian people can control significant elements within the public school system; that is for Indian people to control programs financed by the Federal Government.

We believe Indian tribal committees and Indian parents should be the final voice in determining special programs and budgets under provisions of parts a, b and c of the bill. The complexities of local control can be overcome if the Congress will provide Indian people with this kind of jurisdiction.

This Nation is undergoing severe tests within the framework of elementary and secondary education. For the Indian student whether it be on the reservation or off, we must reorganize the needs which may be different from other students.

One of the major strengths of the bill addresses itself to the off-reservation Indian. The National Indian Education Association is pleased to support this effort in serving Indian children wherever they live. It is the first real attempt on the part of the Federal Government to recognize a relationship which must truly be acknowledged and recognized with action.

We commend this committee for addressing itself to an unmet need of urgent action. Many of us who work with Indian education, are continuously frustrated because we cannot respond to the needs of nonreservation Indians.

For example, in the State of Minnesota two-thirds of Indian students enrolled in public schools do not qualify for service under programs within the Department of the Interior. This bill will erase that problem and we look at this provision with excitment and enthusiasm.

Senator MONDALE. Would you yield there?

Mr. Chairman, I would like to point this out.

Many years ago, Minnesotans closed down the Federal schools, discontinued any relationship with them at the request of the BIA, and all of our Indian children go to public schools.

But, because of the present standards of the Interior Department assistance, only 2,000 out of 12,000 Indian students get assistance from the Bureau of Indian Affairs to the school systems to help educate them.

Is that correct?

Mr. ANTELL. About 3,000 and 8,000.

Senator MONDALE. Because the BIA recognizes no responsibility for children going to schools which are not near or on a reservation. So most of the children are off the reservation. One of the difficult points here is whether that distinction has any validity. Those kids moving to a big city like Minneapolis for the first time need more help because of the difficulties they are going through.

Mr. ANTELL. As you recall during the hearings in 1969, it was documented that one Indian student had moved 13 times within 1 year in the Minneapolis public school system.

This was extraordinary, but it was not an exception. There were many of these students having that kind of mobility problem.

Senator MONDALE. This bill tries to deal with Indian children wherever they are from.

Mr. ANTELL. Yes.

The city of Minneapolis, which is not receiving money specifically for Indian children would receive 1.3 million dollars under the provisions of part A.

Aside from the major issues of the bill, there are some observations we would like to be considered.

In part A, the amount of resources available to local educational agencies will increase very substantially. We are estimating it will double the entitlement currently available under Public Law 874 and add schools enrolling Indian students who previously didn't qualify. Our major concern is for the reservation schools in that resources may be cut for a variety of purposes. Should local education agencies not be able to use the resources for operational costs, it could have a serious effect on the existence of a school on the reservation. Currently Public Law 874 is strictly an entitlement program and is used for basic operational costs.

I would like to point out in reservation schools, it is necessary to use the basic operational cost. However, in many schools which qualify under Public Law 874, there is an attempt by many districts to keep the local tax situation down, and I believe the bill is getting at that particular point.

However, it does have the implications I have stated before for the reservation school.

Located on reservations, schools must rely heavily on State aid and Federal assistance because there is a low tax base to operate from.

By making resources available for special programs, it could seriously affect the ability of those schools to operate a basic program. We urge the committee to reconsider the language as to how the money should be used under part A of this bill.

The creation of and location organizationally of the National Board of Education is indeed a difficult undertaking. Our board of directors cannot make a recommendation on the manner in which members are selected and in what Federal department it should operate from. There is a fear that by dismantling the Bureau of Indian Affairs Indian education programs and placing it in other departments, Indians will lose their identity and place them at the bottom of the totem pole in securing services.

While the Association supports a National board, we cannot offer a specific recommendation where the board should be located. We

are confident the hearings will provide the committee with additional advice on this matter.

Senator KENNEDY. This is one of our problems because we want to support whatever the feeling is of where that board ought to be. I think we are reasonably flexible in trying to follow the guidelines of the Indian people on this. I am wondering what help you can give us in trying to make that determination, perhaps not so much speaking now for your Association, but perhaps your own insights into it.

Mr. ANTELL. I believe there are several alternatives here. I believe initially, there was a concern that the national board would operate out of HEW and later on out of the Office of Education. There have been suggestions that the board operate as an executive part of the President's Office. Another consideration that had a lot of discussion within our board was perhaps if it was structured properly, it could operate in the Department of Interior, those seem to be the considerations that have the strongest concern.

Senator KENNEDY. But you still are not prepared to make a recommendation as to where that might be?

Mr. ANTELL. I am not prepared to do it as the president of the Association. I have some strong thoughts on it myself. I would like to see a very strong national board set up within the Department of Interior that is not under any jurisdiction of the Commissioner or any assistant secretary for land management, but we do feel that a national board that is responsible to Indian people would be a very attractive arrangement.

Senator MONDALE. In other words, you think that maybe the best of the three alternatives is within the Interior Department, but only if the board is clearly the governing power on Indian education and accountable directly to the school system and the parents?

Mr. ANTELL. That is correct.

Senator KENNEDY. And accountable to the parents, but I imagine it would have to be primarily accountable to the Secretary of Interior.

Mr. ANTELL. We believe the hearings today will provide the committee with additional advice on this matter.

The composition of the national board and appointment by the President raises a number of questions. Will the members appointed come from a variety of backgrounds? Geographical locations? Tribal governments? Indian organizations? In spite of these difficult questions, we believe the board should be appointed, should come from a variety of backgrounds and reflect as many geographic locations of the Nation as possible.

In conclusion, let me say, that some of my statements made today may not find favor with some of my Indian colleagues. However, when we who are surrounded with the tragedies of Indian education cannot stand up and be counted, we are only inviting others to make decisions for us. For if Indians are not willing to vigorously fight for what we believe in, we have no right to criticize when there is more rhetoric and no action.

Indian educational reforms are long overdue. The National Indian Education Association will be an advocate of changes which will benefit the lives of Indian boys and girls.

The board of directors who I represent today will not be recorded in history as people who sat by and did nothing to overcome the prob-

lems American Indians have in formal education today. We no doubt have many inadequacies but we have determination, fortitude and optimism. We are confident this great institution, the United States Congress, will come with same characteristics. The time for action is now and we are convinced Senators Kennedy and Mondale will continue to press for action on behalf of Indian education.

Senator PELL. If I can interrupt, I would like to say these two Senators have taken more of an interest in the "Americans" and I use that word advisedly, the early Americans, the real Americans, than any member of the Senate.

Mr. ANTELL. This concludes my testimony.

Senator KENNEDY. I want to thank the Chairman for his gracious remarks. I was just trying to get some feel as to why you believe in retaining jurisdiction within the Interior Department. Is it your feeling that a board that really has teeth and the power to determine policy for the educational interests of Indians can be maintained within the Interior Department?

Mr. ANTELL. I think there are several questions on this. The largest and perhaps most enormous concern that our Association has gotten from this membership and by talking to various people throughout the country, is that there is a reluctance to sever any kind of relationship with the Bureau of Indian Affairs.

Whereas, from a practical sense, we may be able to administer Indian education programs much better in another kind of arrangement, but it seem to me that the emotional climate during the last 3 years continues to emphasize that the vast majority of Indians do not want to sever that relationship.

Based upon that premise, we feel compelled to say that with that particular rationale.

Senator KENNEDY. You mentioned about reconsidering some of the language under part A. Do you have some specific language you could submit to us later on?

Mr. ANTELL. Yes, we would be happy to do that.

Senator KENNEDY. I want to thank you for the work you have done and help you have given us generally to understand the problems of Indian education. I can well remember your statement before the Indian Education Subcommittee about your experiences in Minnesota. You contributed enormously when you testified 2 or 3 years ago. You have been a source of great help to the Committee and I want to thank you very much.

Mr. ANTELL. Thank you, very much.

Senator MONDALE. Also, I believe your testimony and the position of your organization is unique. This is a new organization of American Indians, a unique young group of Indian educators who are in the frontlines of this problem, who have chosen education as their career, and who are involved in the education of Indians.

I think it is correct to say that your oragnization does represent most of the young Indian educators in the country, does it not?

Mr. ANTELL. Being a new organization, Senator Mondale, we have not had a chance to solicit all the membership that we would like. I think definitely we have in our general membership practically all Indian educators.

Senator MONDALE. You have representatives from reservation schools?

Mr. ANTELL. Yes.

Senator MONDALE. From Federal schools?

Mr. ANTELL. Yes.

Senator MONDALE. From public schools?

Mr. ANTELL. Yes.

Senator MONDALE. And Indian educators who are in graduate schools taking advanced degrees for teaching in college?

Mr. ANTELL. That is right.

Senator MONDALE. Student counselors and educators who are in Alaska representing different aspects of the Indian education problem; is that correct?

Mr. ANTELL. Yes. I believe the outgrowth of the Conference we held in Minneapolis in 1956 illustrated you just can't put a conference on and let the issues fade away.

We had to have some way to keep these issues alive and the group of people that you have identified have been very instrumental in putting things together that we have been able to use, not only in the Midwest but in other parts of the country, so we are very pleased with the role that the National Association is taking.

We think it is just the very beginning. We are in the planning stages of having a National Council in the Southwest. Dillon Platers is chairman of the conference and we expect to have 900 or 1,000 people in attendance, which demonstrates the interest the American people have in regard to Indian education.

Senator MONDALE. I have one question I would like to ask.

You are an education director in the State Department of Education. Our bill is silent on what the role of the State departments ought to be. Could you comment on that question and how you think the State departments of education ought to become involved: What kind of role they should play, and where this legislation ought to go to engage them responsibly in this effort?

Mr. ANTELL. Senator Mondale, from information we have, Minnesota is somewhat unique in the fact that they have made Indian education as one of their top three priorities. They have reorganized it within the department to vest it with a great deal of responsibility and authority.

However, we don't see this evidence in other States. We see the beginning of State departments beginning to take this on as a responsibility and putting it on a priority list. We hope that the bill can spell this out, exactly what the expectations are of State departments of education.

We would not want to see the State departments or the States that are moving ahead locally to be altered by any kind of potential legislation that could come out as a result of other States having difficult problems.

Senator MONDALE. If you have some suggestions as to how that might be done and language on how to accomplish it, maybe you can submit it to us in the form of a letter for the record. We would like to know that.

I am ambivalent. I have seen the wonderful work that has come out of your office in Minnesota. I wonder what would happen if we strengthened John Bell Williams' powers or Governor Reagan's?

Maybe you can help us grapple with that.

Mr. ANTELL. We would be happy to.

Senator MONDALE. Thank you very much.

Senator PELL. Our next scheduled witness was Mrs. Fred Harris, but she is sick today, so cannot present her statement. It will be presented later. So we come to Mr. Donald Morrison, vice president of the NEA.

I welcome you all, I see several familiar faces from the NEA. I am glad you are here. I hope you will introduce yourselves for the record.

STATEMENT OF DONALD E. MORRISON, VICE PRESIDENT, THE NATIONAL EDUCATION ASSOCIATION

Mr. MORRISON. I am Donald E. Morrison, vice president and president-elect of the National Education Association. My term as president of NEA begins July 2, 1971.

I have with me Mr. Stanley McFarland and Mrs. Mary Guereau from my office of legislation and citizenship.

Senator PELL. The people you have with you were working with this committee long before I was ever chairman, and we have had a long and good relationship.

Mr. MORRISON. Yes, I felt I would be introducing them more to the audience than to the committee and there is one you may not know who is Mr. Lance Lujan, who is with our Center for Human Relations and is working mostly in the western half of the United States, but has responsibilities for coordination of Indian relations as it relates to our Center for Indian Relations.

Before I present my remarks that have been submitted to you for the record, I would like to briefly describe my introduction to Indian education.

Each year the president of NEA has a sum of money which he can apply to a special project and I chose to supply mine to Indian education. But when I was invited, I thought I was hearing Indian educators, and I was invited to a meeting in Gallup, N. Mex., where I was to speak to the group that I had given assistance to and I was quite disappointed to walk into a meeting of teachers teaching Indian children and out of the entire room of perhaps 150, I believe, there were only one or two Indians.

I shared my disappointment with them and told them, however, I would not be disappointed if they would take the money that we gave them and help to insure that there would be an identification, an attraction of young Indians into teaching so that this situation would not continue.

We have reviewed Amendment 6 with great interest, as the NEA has long had a deep concern for improving the educational opportunities of Indian children and adults. At the 1970 NEA convention in San Francisco, the following resolution was adopted:

RESOLUTION

70-15. American Indian Education: The National Education Association recognizes that an adequate and equal program of Indian education can no longer be postponed. The complex nature and diversity of educational needs of Indians, based on the multiplicity of tribal organizations, geographical location, and limited economic status, requires that the Association support the development of meaningful educational programs with deep involvement of Reservation

Indian leaders, recognized groups, and other Indian groups off the Reservation. Such programs should preserve the rich heritage of Indian culture.

The Association is directed to provide Indian leaders with facilities to determine the educational needs and hopes of Indian groups.

The Association insists that federal funding for Indian education be continued until such time as Indian groups are able to meet their specific needs. Federal participation in the meantime should emphasize significant improvements in educational services to provide a quality program.

The Association supports the efforts of the National Council of Bureau of Indian Affairs Educators to achieve quality education for Indian children and urges a change in BIA policies to effect the following:

a. A professional civil service classification to BIA teachers.

b. A salary, length of school year, and school day commensurate with that of educators in public schools.

c. Adequate remuneration to accrue with the completion of advanced studies.

d. Improved facilities and working conditions for the comfort and convenience of teachers and students.

e. Written personnel policies including provisions for sabbatical leave, advance study, and for the right to professional released time without loss of salary.

f. The hiring of only professionally qualified teachers and administrators, the providing of adequate training in Indian cultures, and assignment only to their areas of competency.

g. The hiring of teachers and substitutes to adequately meet Indian student needs and not to exceed a maximum pupil-teacher ratio of 20 to 1.

h. The active involvement of BIA teachers in curriculum planning and formulation of school policies.

The association will provide consultant services to implement, through Executive Order 11,491, negotiations by BIA teachers to achieve the above policies and other needs of Indian educators.

The association directs its staff to report annually at the NEA convention on the implementation of this resolution.

Thus, the National Education Association clearly states that Indian education of all types is one of our major concerns.

However, we wish it clearly understood that NEA does not support this legislation in whole or in part, unless it is acceptable to the majority of the Indian people. We have been told by some Indian leaders that they have grave concerns about the bill in its present form and do not support it. If this attitude is widespread, as we believe it may be, then NEA also opposes the bill.

Furthermore, the bill as drafted would be a disaster to schools with large segments of tax exempt school lands. These schools depend on Public Law 874 funds for the major support of their program. The problem can best be illustrated by the situation at Rocky Boy, Mont.

Rocky Boy school is a public school, with an all Indian school board elected by the Chippewa-Cree people. The district boundaries include the entire reservation. There is no local tax base. Over 60 percent of the funds for day-to-day operating expenses come from Public Law 874. The State, of course, pays the balance, the maximum amount permitted by State law to provide an adequate program.

Amendment 6 would eliminate these Public Law 874 funds and substitute a new entitlement based on the number of Indian children, without regard to a district's tax base. The new funds are to be used for special supplementary programs. Thus, Rocky Boy will lose 60 percent of its present revenue for basic school costs, and instead receive an amount of money, depending on the appropriation, identical to that to be received by schools educating Indian children who are not now covered by Public Law 874.

Thus, Los Angeles, for example, would receive funds under this act, in addition to its regular revenues from local, State, and other Federal funds, for special programs for Indian children, while schools like Rocky Boy will lose a large percentage of their regular budget, and receive only the same amount of money per pupil which schools with nonreservation Indians receive for supplementary Indian education funds. The proposal therefore reduces aid to reservation schools.

The NEA cannot support this part of amendment 6 unless it is revised. We recommend that the present coverage under Public Law 874 for Indian reservation schools be maintained, and that a new provision to provide additional funds for a program of the type outlined in part A of amendment 6 be added.

Senator MONDALE. Would you yield there, please?

We hadn't intended to work it out that way. In no sense did we wish to reduce funding in any school. We must take into account the very valid point that you made, that such independent schools have no independent tax base, the need for funds for operational expenses and the rest.

We accept that; we are going to have an amendment to do that.

Mr. MORRISON. Thank you.

(The prepared statement of Mr. Morrison with a memorandum follows:)

Statement of
The National Education Association
presented by
Donald E. Morrison, Vice President,
on
Amendment 6 to S 659,
The Indian Education Act,
before the
Senate Subcommittee on Education
April 29, 1971

Mr. Chairman and Members of the Committee:

I am Donald E. Morrison, vice president and president-elect of the National Education Association. My term as President of NEA begins July 2, 1971.

We have reviewed Amendment 6 with great interest, as the NEA has long had a deep concern for improving the educational opportunities of Indian children and adults. At the 1970 NEA convention in San Francisco, the following resolution was adopted:

"70-15. American Indian Education

"The National Education Association recognizes that an adequate and equal program of Indian education can no longer be postponed. The complex nature and diversity of educational needs of Indians, based on the multiplicity of tribal organizations, geographical location, and limited economic status, requires that the Association support the development of meaningful educational programs with deep involvement of Reservation, Indian leaders, recognized groups, and other Indian groups off the Reservation. Such programs should preserve the rich heritage of Indian culture.

"The Association is directed to provide Indian leaders with facilities to determine the educational needs and hopes of Indian groups.

"The Association insists that federal funding for Indian education be continued until such time as Indian groups are able to meet their specific needs. Federal participation in the meantime should emphasize significant improvements in educational services to provide a quality program.

"The Association supports the efforts of the National Council of Bureau of Indian Affairs Educators to achieve quality education for Indian children and urges a change in BIA policies to effect the following:

"a. A professional civil service classification to BIA teachers

"b. A salary, length of school year, and school day commensurate with that of educ tors in public schools

"c. Adequate remuneration to accrue with the completion of advanced studies

"d. Improved facilities and working conditions for the comfort and convenience of teachers and students

"e. Written personnel policies including provisions for sabbatical leave, advanced study, and for the right to professional released time without loss of salary

"f. The hiring of only professionally qualified teachers and administrators, the providing of adequate training in Indian cultures, and assignment only to their areas of competency

"g. The hiring of teachers and substitutes to adequately meet Indian student needs and not to exceed a maximum pupil-teacher ratio of 20 to 1

"h. The active involvement of BIA teachers in curriculum planning and formulation of school policies.

"The Association will provide consultant services to implement, through Executive Order 11,491, negotiations by BIA teachers to achieve the above policies and other needs of Indian educators.

"The Association directs its staff to report annually at the NEA convention on the implementation of this resolution."

Thus, the National Education Association clearly states that Indian education of all types is one of our major concerns.

However, we wish it clearly understood that NEA does not support this legislation in whole or in part, unless it is acceptable to the majority of the Indian people. We have been told by some Indian leaders that they have grave concerns about the bill in its present form and do not support it. If this attitude is widespread, as we believe it may be, then NEA also opposes the bill.

Furthermore, the bill as drafted would be a disaster to schools with large segments of tax exempt school lands. These schools depend on PL 874 funds for the major support of their program. The problem can best be illustrated by the situation at Rocky Boy, Montana.

Rocky Boy school is a public school, with an all Indian school board elected by the Chippewa-Cree people. The district boundaries include the entire reservation.

There is no local tax base. Over 60% of the funds for day to day operating expenses come from PL 874. The state, of course, pays the balance, the maximum amount permitted by state law to provide an adequate program.

Amendment 6 would eliminate these PL 874 funds and substitute a new entitlement based on the number of Indian children, without regard to a district's tax base. The new funds are to be used for special supplementary programs. Thus, Rocky Boy will lose 60% of its present revenue for basic school costs, and instead receive an amount of money, depending on the appropriation, identical to that to be received by schools educating Indian children who are not now covered by PL 874. Thus, Los Angeles, for example, would receive funds under this Act, in addition to its regular revenues from local, state, and other federal funds, for special programs for Indian children, while schools like Rocky Boy will lose a large percentage of their regular budget, and receive only the same amount of money per pupil which schools with non-reservation Indians receive for supplementary Indian education funds. The proposal therefore reduces aid to reservation schools and substantially increases aid to non-reservation schools.

The NEA cannot support this part of Amendment 6 unless it is revised. We recommend that the present coverage under PL 874 for Indian reservation schools be maintained, and that a new provision to provide additional funds for a program of the type outlined in Part A of Amendment 6 be added

Attached to our statement is a memorandum from the Rocky Boy School Board in Montana. We urge the Subcommittee to provide an opportunity for spokesmen from the Rocky Boy School Board and from other similar school systems to testify on this very serious issue.

Sec. 303(a)(2) provides that schools must enroll at least ten Indian children to be eligible under this Act. Thus, an isolated school of 15 children, 9 of whom are Indians, could not qualify. And there are such situations. The only alternative

is boarding schools. Since there are of necessity some very isolated rural schools with very small enrollments on some reservations, we suggest that Sec. 303(a)(2) be amended to read:

"A local educational agency shall not be entitled to receive a grant under this title unless the number of children under subsection (a), with respect to such agency, is at least ten, or constitutes 50% of the local education agency's enrollment."

We also believe that Sec. 303(c) is unrealistic in authorizing an appropriation equal to 1% of the appropriation for Sec. 303(a). We anticipate that more new Indian controlled school systems will develop than the 1% figure can adequately fund. We suggest the authorization be not in excess of 5%.

We believe the term "Indian" is too loosely defined in Sec. 308. We suggest that the definition be amended to read "...or who is a descendant of any such enrolled member in the first or second generation..." Otherwise, a child who happened to have one Indian great-great-great grandparent but whose other grandparents were all non-Indian would presumably be eligible, even though the child lives in affluence in, for example, Fairfax County, Virginia. I can anticipate thousands of school systems becoming involved in genealogical research on their pupils, hoping to scrounge up at least ten with some trace of Indian ancestry in order to qualify under this Act.

It should be noted that some tribes recognize the children of Indian-Caucasion unions as enrolled members of the tribe, but do not extend the same consideration to the children of Indian-Negro unions. However, we believe the provision recognizing descendants of enrolled members should include all children as defined above regardless of the tribe's policy on racial mixture of parents.

We believe that it is essential that an additional title to provide construction funds for schools located on or near reservations must be provided by the Congress. The problem of constructing or expanding school facilities and providing

faculty housing on Indian reservations is overwhelming. There are entitlements for these schools under PL 815--but no appropriation. It is a travesty to hold out hope for Indian control of their schools unless construction funds are provided.

We also believe that the law should require that all schools aided under this Act must be open to non-Indian as well as Indian children and must not discriminate against children and faculty of non-Indian descent. The NEA has always opposed racial and ethnic segregation of any kind and dimension and is committed to racial integration of student bodies and faculty. We also recognize that this is the law of the land.

Part B--Special Programs and Projects to Improve Educational Opportunities for Indian Children.

We approve of this part of Amendment 6 with one minor exception: Sec. 810(b) on institutions eligible for grants under this Act should be amended by inserting the words "nonprofit and nonsectarian" after the word "private." We also urge that the state education agency in the state in which a project is to be carried out under Sec. 810 be given the opportunity to review and make recommendations before the grant is made.

Part C--Special Programs Relating to Adult Education for American Indians.

We approve of this part of Amendment 6 except that again the words "nonprofit and nonsectarian" should be inserted before the word "private" and the state agency should review and make recommendations before a project grant is made.

Part D--National Board of Indian Education; Bureau of Indian Education; Miscellaneous.

If the majority of Indian people support the establishment of a National Board of Indian Education to take over the education function of the Bureau of Indian Affairs, the NEA pledges its support to the creation of such a board.

Assuming, for purposes of discussion, that the Indian people do approve, we wish to make several points.

We believe a board of 15 members, appointed from lists nominated by the tribes and Indian organizations should be located in the Office of Education, which we hope soon will be raised to Cabinet status. Amendment 6 does not place this board any place in the federal structure.

We believe that paying 15 members of the board annual salaries of at least $37,624, for a total of $564,360, is unrealistic. This money could be better spent on programs. Board members should be reimbursed for actual expenses plus consultant fees of $100 or $200 per day while in session or conducting official business. The Director and Superintendent of Indian Education should, of course, be full time salaried personnel, with an appropriate staff of professionals to carry out the policies of the National Board. The Board should be a policy-making body, and should not be expected to administer programs. Undoubtedly in the first year the Board will meet very often, but as the program develops their fulltime service will not be required.

Amendment 6 vests in the National Board all programs in any federal agency which are related to Indian education, except those in the U.S. Office of Education and those in the Office of Economic Opportunity. Since OEO, by law, is not permitted to engage in curricular or general education services, we believe they should not be identified as exempt under this provision. The fact that they have circumvented existing law in this respect should not be legitimized indirectly under this Act.

We approve of the establishment of a Bureau of Indian Affairs in the Office of Education, but question the propriety of having the appointment of the head of the Bureau made by the President. The appointment should be made by the Commissioner of Education.

Part E--Miscellaneous Provisions.

We believe that the necessary technical amendments to existing education programs as covered in Sections 581 and 582, and Sections 583 and 584 (on the Institute of American Indian arts and community colleges) are proper. We have questions relative

to Sec. 585. We understand the purpose of the amendment is to facilitate the establishment of Indian controlled education programs such as the Rough School operated by the Navajo people. We support that objective. However, the language of Sec. 585 could be interpreted to mean that schools operated by a religious organization could also be considered local education agencies under this definition. If that is the intent, we strongly oppose the amendment. We urge the words "nonprofit institution" be stricken from the proposal.

We believe the bill should specifically provide for appropriate amendments to the School Lunch and School Milk programs to assure that schools operated by the National Board of Indian Education are included along with the 50 states and territories.

We are concerned over the future of the teachers currently employed in BIA schools, many of whom are our members. Sec. 564(a)(4) of Amendment 6 provides that "all personnel, assets, liabilities (etc.)" of, presumably, the BIA education function, are to be transferred to the National Board. What will happen to these teachers if the local boards created by NBIE decide they do not want them? We believe that the illusion of local control will not satisfy the local Indian school boards. They will want to hire their own teachers, just as other local boards do. Indeed, they should have this right if their control is to be actual. We suggest the bill provide that presently employed BIA teachers, if they are not employed by the local Indian school boards, must be guaranteed federal employment for which they are professionally qualified, be given the option of retraining at federal expense, including maintenance and full salary while in training for other federal employment of equal grade to that now held and guaranteed no loss of Civil Service retirement and other fringe benefits if they leave the federal service. The same protection should be provided to other personnel in BIA schools such as dormitory supervisors, administrative personnel, and paraprofessionals. A specific authorization for this program should be included in the bill.

In summary, we commend the sponsors of this bill for their sincerity in seeking to develop a broad program to correct current abuses in Indian education. However, we have serious concerns about some of the specific proposals in Amendment 6 to S 659. We will be happy to make the technical resources of NEA, particularly in the area of school finance and human relations, available to the Subcommittee in drafting legislation which is acceptable to the Indian people. We pledge that, when such legislation is developed, it will have our active support.

Attached to our statement is a memorandum from the Rocky Boy School in Montana. We urge the subcommittee to provide an opportunity for spokesmen from the Rocky Boy School Board and from other similar school systems to testify on this very serious issue.

(The memorandum referred to is as follows:)

MEMORANDUM

Part A Of S.659, The Proposed Indian Education Act, As It Would Affect Public Schools On Indian Reservations.

INTRODUCTION.

S.659, the proposed Indian Education Act, is a hopeful response to the vexing problems of Indian education. The major thrusts of the bill—toward increasing Indian self-determination in education and meeting the special educational needs of all Indian children—represent a positive and long overdue approach to meeting important needs. However, the draft of Part A of the Bill, as it is presently being circulated by staff members, would have, if enacted, disastrous effects on the education of Indians in public schools on Reservations. Because the Bill does not take into account the rather complex questions involving funding patterns and local resources, the Bill, while attempting to meet the challenge of Indian education, threatens to deepen its tragedy.

Perhaps the problems can best be understood within the context of the specific needs of the Reservation school at Rocky Boy, Montana. Last year, the Chippewa-Cree Indians of Rocky Boy broke away from the larger, white-controlled Havre school district, of which they were a part. Distressed with the inadequate education their children were receiving and frustrated with their own poverlessness, they petitioned state school officials to redraw school district lines, creating a new independent elementary school district with boundaries roughly the same as the boundaries of their Reservation. Since July, 1970, the school on the Reservation has been controlled by an Indian school board, elected in accordance with state law. The success of the Rocky Boy people has encouraged Indian groups in other communities to begin planning similar initiatives.

The Rocky Boy district contains no taxable land. It is thus entirely dependent on state and federal aid for its basic operating budget. Over sixty per cent of the funds for day-to-day operating expenses are received under P.L. 874, the impacted areas program. Rocky Boy is not alone in its dependence on federal funds to the exclusion of local tax revenues. The Fort Belknap and Browning districts in Montana, for example, contain over 90% non-taxable Indian land.

TEST
1796 B

The Red Lake (Chippewa) district in Minnesota contains no taxable land. Many other school districts in the West and Southwest contain large percentages of non-taxable Indian land. In all of these Reservation districts, where schools are operating already under tight budgetary ceilings, any significant reduction in the impact funds they are now receiving will have tragic consequences. Part A of the Bill, as presently drafted, threatens severe reductions in those funds.

II. THE ELIGIBILITY FORMULA OF PART A COULD RESULT IN UNDERFUNDING OF RESERVATION SCHOOLS BECAUSE IT DOES NOT TAKE INTO ACCOUNT THE DIFFERING FINANCIAL RESOURCES OF SCHOOL DISTRICTS WITH A TAX BASE AND THOSE WITHOUT A TAX BASE.

Presently, public school districts containing non-taxable Indian land receive payments under P.L. 874 in lieu of taxes. Districts containing large amounts of Indian land depend heavily on P.L. 874 funds for their operating budgets. At Rocky Boy, for example, aid from the state of Montana (based on the number of pupils in attendance) amounts to $90,000, approximately 40% of the basic operating budget of the school. The state aid formula does not discriminate against Indian schools. The same basic formula applies to every school district in the state. In most districts, local property taxes are levied to make up the difference between the state aid available and the cost of running the school. The Reservation schools must depend on 874 funds to cover expenses normally covered by local taxes. Thus at Rocky Boy, nearly all of the 874 funds must be used for basic expenses like salaries, school bus maintenance, gasoline, and depreciation, text books, and the like. Present 874 entitlements and funding levels provide funds for an adequate program, but not for a program significantly more costly than other Montana schools can provide with local tax revenues.

Part A of the Bill would replace the existing 874 program. Unlike the present program, it provides that each district educating Indian children will receive the same per capita entitlement —without regard to the size of the local district's tax base. For the urban schools, the funds would be received in addition to local tax revenues and could be used exclusively for special, supplementary programs. The Reservation schools will rely on funds under this title for basic operating expenses, with little or nothing left over for special programs.

The disparity suggested above is inequitable—but it might be tolerable to the Reservation schools—assuming entitlements no smaller than those under present law, and assuming full funding levels.

However, entitlements will be smaller than those under present law (see below), and it is doubtful that full funding will be available. Furthermore, the Bill states (section 307(a)) that in the event appropriations are inadequate to fund fully all entitlements, the amounts to be received by each district will be ratably reduced. Again, the critical distinction between schools with a full tax base and those with none (or an inadequate tax base) is ignored. A reduction in the aid received by a Reservation school would require a curtailment of the basic operating program of the school. A similar cut in aid to a school with a full tax base would require only a reduction in "supplemental" services. Given the recent history of appropriations for social bills of all kinds, including education bills, it seems doubtful at best that every year the full amounts authorized by this Bill will be appropriated. At a minimum the Bill should provide that entitlements for Indians living on non-taxable land should be fully funded before any funds are distributed to schools with a full tax base. A better, more equitable, approach, would be to leave the present 874 program unaltered—thus preserving the distinction between schools with an inadequate tax base and those with a full tax base—and then to provide additional, supplemental funding for special programs for all schools educating Indians.

III. THE NEW ALLOCATION FORMULA INTRODUCED BY THE BILL WILL RESULT IN A SUBSTANTIAL REDUCTION IN THE AMOUNT OF AID NOW GOING TO THE RESERVATION SCHOOLS.

Under the present P.L. 874 program, the per-pupil entitlement of eligible school districts is based on per pupil costs of five comparable school districts in the state. For each "double-connected" student (e.g. 90% of the enrollment at Rocky Boy and most Reservation schools), the district's entitlement is equal to the full average per pupil costs of those districts. (By administrative interpretation, in the case of an Indian Reservation, a "double-connected" student is one who lives on the Reservation and whose parents are employed on the Reservation or are unemployed and living on the Reservation. Thus, most Indian students are double-connected.) "Single-connected" students are funded at one-half the rate of funding for double-connected students. The importance of calculating entitlements on the basis of costs of comparable districts is that entitlements for Reservation

schools reflect fully the higher per pupil costs of small, rural school systems.

Unaccountably, the draftsmen of the Bill have substituted for this flexible entitlement formula the arbitrary standard that each eligible district is entitled to a per capita payment equal to the state-wide average per pupil costs. This formula will mean substantial reductions for the rural (Reservation) schools. It will mean considerably higher entitlements for the urban schools, which are not now relying on these federal funds and where the need for this assistance is much less pressing. (See discussion under II above.)

The significance of the existing flexible formula can be concretely illustrated by the Rocky Boy experience. As a part of the large (2000 students) Havre district, the Rocky Boy school was entitled to receive $334 for each "double-connected" child in 1969-70. As a smaller (220 students) district with higher per-pupil costs, Rocky Boy's entitlement as an independent district that year would have been 65% higher ($545), a difference of $40,000 in a total budget of $215,000.

Even now, Reservation schools are not fully funded in relation to their special needs. The Bill's entitlement formula would guarantee that the Reservation schools receive even less revenue than would be required to run a program with costs and a quality comparable to that of non-Reservation schools of equivalent size.

Note: A so-called "hold harmless" provision would not remedy the problem suggested above. In an era of permanent inflation, what is needed is not an arbitrary absolute floor under entitlements, but a flexible formula which will permit entitlements to rise with rising costs. The present "five comparable districts" formula of P.L. 874 accomplishes this objective.

IV. BY REMOVING RESERVATION SCHOOLS FROM THE GENERAL CATEGORY OF DISTRICTS RECEIVING IMPACT AID, THE BILL WOULD DESTROY THE POLITICAL BASE FOR FINANCIAL SUPPORT OF RESERVATION SCHOOLS.

As outlined above (part II), P.L. 874 funds are the life blood of Reservation schools. To date, P.L. 874 has been a remarkably stable source of funding. Funding has been stable because impact aid, going to school districts in 375 Congressional Districts, has a powerful constituency and strong political appeal. The funding of the Reservation schools is relatively secure because—and probably only because—each Congressman and Senator, in voting the interests of his own constituents, at the same time, perhaps unwittingly, votes the interests of the Reservations. As a tiny minority of the population, the Indian people have insignificant power by themselves in the Congress as a whole. If the aid to

Reservation schools is taken out of the general impact aid formula, as Part A of the Bill would do, the appeal of the Reservations for funds will have to be made to most Congressmen--particularly those from the East and the South--on the basis of altruism and "concern for the Indian" alone. If the Indian people must choose between an alliance based on self-interest and one based on altruism, is there any doubt as to which will be the more stable alliance? It is not hard to imagine a political climate in the future when aid to minority groups will be in disfavor politically and when adequate appropriations under the Bill will be unobtainable. Furthermore, the annual battle for appropriations would have to be fought each year by the Indian tribes, which are by and large poorly organized and without articulate and effective lobbyists. The Indian tribes would be left without the formidable support of the massive lobby enlisted each year in the fight for impact aid funds.

This isolation of Indian schools from the broader political base they now form a part of would further introduce a dangerous degree of instability and unpredictability in appropriations--and hence in school planning. This instability is particularly distressing when it is recalled that, in Montana, for example, school budgets must be planned and approved in the Spring for the school year beginning the following fall, and teachers' contracts must be let in the Spring. HEW appropriations bills, on the other hand, may not be approved and signed by the President until school begins in September, if then. At present, school administrators are distressed at the problems involved in planning for a school year before they know what funds will be made available by Congress; they are able to live with the situation, however, because the political strength of P.L. 874 permits them to estimate with some accuracy the funds which will be made available to them.

Before seeking to form their own school district, the Rocky Boy people sought to assure themselves that the funding for their school would be sufficient--and stable and reliable into the forseeable future. Based on the political strength of P.L. 874, they decided they could safely detach their school from the tax base of Havre. Without that assurance of political strength, they would not have taken the move they did, with the resulting dependence on annual Congressional appropriations to operate their school.

The creation of a new Bureau of Indian Education to administer the Bill only serves to red-flag the isolation of the Indian schools from their allies

in the annual appropriations battle.

In the past, this country's concern for the treatment of the American Indian has oscillated like the swing of a pendulum. There is no reason to believe the pendulum has stopped swinging. The friends of the American Indian will do him no favor by lifting support for Indian schools out of the broader cloak of funding for the politically popular impact aid program. Political wisdom and discretion reinforce the suggestion already made—that the better course is to leave the present P.L. 874 program undisturbed and to enact supplemental funding programs for the special needs of Indian children.

V. THE BILL'S REQUIREMENT THAT GRANTS BE USED FOR SPECIAL PROGRAMS DOES NOT TAKE ADEQUATELY INTO ACCOUNT THE NEEDS OF RESERVATION SCHOOLS FOR FUNDS IN LIEU OF TAXES FOR BASIC OPERATING COSTS.

As discussed in Part II above, school districts containing large proportions of Indian land must depend upon impact aid in lieu of local property taxes. While there are certainly instances of school districts with relatively small percentages of Indian students using impact funds to educate non-Indians and to reduce local taxes, it is equally true that there are districts like Rocky Boy and Red Lake, Minnesota which have no other source of revenue with which to pay the normal costs of operation. In between, are many districts with varying proportions of Indian land and Indian enrollment which must depend to varying degrees on impact aid for day-to-day operating expenses.

The Bill's requirement that funds cannot be used in the general fund budget of the school but must instead be used for programs "specially designed to meet the special educational needs of Indian children" (section 304), simply ignores the hard fact that in many districts there will be no other source of funds to pay the janitor's salary or to buy tires for the school busses.

At Rocky Boy, as already noted, less than 40% of the basic operating expenses can be met by state aid. The rest must come from the federal impact program. In many other districts, landowners will resent—often with justification—paying school taxes to support all of the operating expenses of a school which educates substantial numbers of Reservation Indians, while impact aid moneys, which once contributed to meeting those expenses, must be redirected to meet special needs of Indian children. Such resentment could contain the makings of an explosive

educational—and political—situation. There is a need to meet the special requirements of Indian children, but there is also a need to compensate local school districts for the inadequacy of their tax base.

These considerations again suggest that P.L. 874 not be altered but that new money for special programs instead be made available.

VI. THE BILL MAY HAVE THE UNDESIRED EFFECT OF REDUCING THE EDUCATIONAL CHOICES OF INDIAN CHILDREN.

A problem less far-reaching than those already discussed but still significant for those directly affected is that the Bill may have the effect of reducing the educational choices of Indian children.

At present, Reservation Indians are free to enroll in public schools off the Reservation and outside their own school district. Neighboring schools may be more than happy to accept them because the schools then become eligible for impact aid. While it is tempting to be cynical about the schools' motives for accepting them, the fact is that the Indian children may benefit by being able to seek out the school in an area which is best for them.

The people of Rocky Boy are well aware of the advantages resulting from this mobility. For ten years, they have been—and still are—in the Havre High School district. During those ten years, the dropout rate for Indian students from Havre high school has been almost 100%. In recent years, Rocky Boy children have been enrolling instead in the nearby Box Elder high school, which is more aware of their needs, provides a welcoming rather than a hostile environment, and from which they graduate in large numbers.

The Bill, if enacted, would probably mean that they would no longer be accepted in large numbers by the Box Elder school because (1) 874 payments could no longer be used to meet their share of the school's day-to-day operating costs, and (2) the need to make special application and to design special programs would be a burden the small school's one-man administration would probably be unwilling to bear when an Indian child's attendance no longer results in revenue to be used in the general fund of the school.

A number of educators today are discussing the concept of giving tuition grants to low income children to allow them to attend school outside their own school district. In effect, P.L. 874 gives a limited form of tuition grant to the Indian child. The freedom it gives him should not be discarded lightly.

VII. ADVANCE PAYMENTS SHOULD BE PERMITTED.

If Part A is retained in the Bill, section 306 (a) should be amended to permit payment by the Office of Education of funds prior to the actual disbursement of funds by the school district. The section as now worded appears to permit only reimbursement of funds actually expended. This payment provision would be workable for districts with independent tax bases. However, it would be unworkable for schools with no other adequate source of revenue for operating expenses, unless the schools had built up substantial reserve funds.

VIII. CONCLUSION.

In sum, Part A of the Act (1) ignores the critical distinction between the revenue needs of urban and Reservation schools, (2) sets out an eligibility formula which will result in the redirection of funds away from already tightly-budgeted Reservation schools, (3) does not appear to take adequately into account the need of the Reservation schools for funds to use in the general fund budget, and (4) perhaps most importantly, isolates the Indian school from the politically powerful general impact aid constituency. These considerations, singly and combined, suggest that the almost inevitable result of Part A of the Bill will be a loss of revenue to Reservation schools which is likely to reach tragic proportions. For this reason, it is imperative that the Bill not be passed in its present form. The conclusion of this memorandum, which is also the conclusion reached by the Rocky Boy school board and administrators, reached reluctantly because of a recognition of the positive thrusts of the Bill, is that unless Part A is revised to meet these problems or abandoned altogether, the interests of the Indian people will not be served by enactment of the Bill.

Rocky Boy School Board
Rocky Boy, Montana 59521

Mr. Bert Corcoran, Superintendent

Mr. MORRISON. Sec. 303(a)(2) provides that schools must enroll at least 10 Indian children to be eligible under this act. Thus, an isolated school of 15 children, nine of whom are Indians, could not qualify. And there are such situations. The only alternative is boarding schools. Since there are of necessity some very isolated rural schools with very small enrollments on some reservations, we suggest that sec. 303(a)(2) be amended to read:

A local educational agency shall not be entitled to receive a grant under this title unless the number of children under subsection (a) with respect to such agency, is at least ten, or constitutes 50% of the local education agency's enrollment.

We also believe that sec. 303(c) is unrealistic in authorizing an appropriation equal to 1% of the approriation for sec. 303(a). We anticipate that more new Indian controlled school systems will develop than the 1% figure can adequately fund. We suggest the authorization be not in excess of 5%.

We believe the term "Indian" is too loosely defined in sec. 308. We suggest that the definition be amended to read "* * * or who is a descendant of any such enrolled member in the first or second generation * * *", otherwise, a child who happened to have one Indian great-great-great grandparent but whose other grandparents were all non-Indian would presumably be eligible, even though the child lives in affluence in, for example, Fairfax County, Va.

I can anticipate thousands of school systems becoming involved in genealogical research on their pupils, hoping to scrounge up at least 10 with some trace of Indian ancestry in order to qualify under this act.

It should be noted that some tribes recognize the children of Indian-Caucasion unions as enrolled members of the tribe, but do not extend the same consideration to the children of Indian-Negro unions. However, we believe the provision recognizing descendants of enrolled members should include all children as defined above regardless of the tribe's policy on racial mixture of parents.

We believe that it is essential that an additional title to provide construction funds for schools located on or near reservations must be provided by the Congress. The problem of constructing or expanding school facilities and providing faculty housing on Indian reservations is overwhelming. There are entitlements for these schools under Public Law 815—but no appropriation. It is a travesty to hold out hope for Indian control of their schools unless construction funds are provided.

We also believe that the law should require that all schools aided under this Act must be open to non-Indian as well as Indian children and must not discriminate against children and faculty of non-Indian descent. The NEA has always opposed racial and ethnic segregation of any kind and dimension and is committed to racial integration of student bodies and faculty. We also recognize this is the law of the land.

Part B. Special programs and Projects to Improve Educational Opportunities for Indian Children.

We approve of this part of Amendment 6 with one minor exception: Sec. 810(b) on institutions eligible for grants under this Act should be amended by inserting the words "nonprofit and nonsectarian"

after the word "private." We also urge that the state education agency in the state in which a project is to be carried out under Sec. 810 be given the opportunity to review and make recommendations before the grant is made.

Senator PELL. What is the purpose of adding the words "nonprofit and nonsectarian"?

Mr. MORRISON. I think, Senator Pell, we are concerned about contract, performance contracting with profitmaking organizations which we have a policy of opposing unless it meets a number of criteria.

Senator PELL. Give me an example of an institution that you think should be knocked out and would be knocked out?

Mr. MORRISON. I would like to have Mrs. Guereau answer.

Mrs. GUEREAU. I think we are thinking of the famous Westinghouse contract with the Office of Education to do a project with the Menominee Tribe. It involved thousands of dollars. Somebody sold somebody a bill of goods. We are not convinced that this couldn't happen again, that the Indian tribe might sell out to somebody and lose all their money in a way that is not in their interests.

Of course the nonsectarian point is clear. We are on record as not supporting church-related educational programs, so we are suggesting that at this point in the bill, if you have the copy before you, which says the grants can be made to public and private agencies that the words inserted would make it read "Grants can be made to public and private, non-profit and non-sectarian agencies."

Senator PELL. For example, if a Lutheran school was teaching Indians, you do not think it should get benefits under the bill?

Mrs. GUEREAU. Not directly. The tribe may want to get money, but the sectarian part should not be aided with public funds.

Senator PELL. I am not sure I agree with you, but thank you.

Mrs. GUEREAU. That is the intent.

Senator PELL. Proceed.

Mr. MORRISON. Part C. Special Programs Relating to Adult Education for American Indians.

We approve of this part of amendment 6 except that again the words "nonprofit and nonsectarian" should be inserted before the word "private" and the State agency should review and make recommendations before a project grant is made.

Part D. National Board of Indian Education; Bureau of Indian Education; Miscellaneous.

If the majority of Indian people support the establishment of a National Board of Indian Education to take over the education function of the Bureau of Indian Affairs, the NEA pledges its support to the creation of such a board.

Assuming, for the purposes of discussion, that the Indian people do approve, we wish to make several points.

We believe a board of 15 members, appointed from lists nominated by the tribes and Indian organizations should be located in the Office of Education, which we hope soon will be raised to Cabinet status. Amendment 6 does not place this board any place in the Federal structure.

We believe that paying 15 members of the board annual salaries of at least $37,624 for a total of $564,360 is unrealistic. This money could be better spent on programs. Board members should be reimbursed for

actual expenses plus consultant fees of $100 or $200 per day while in session or conducting official business. The Director and Superintendent of Indian Education should, of course, be full time salaried personnel, with an appropriate staff of professionals to carry out the policies of the National Board.

The Board should be a policymaking body, and should not be expected to administer programs. Undoubtedly in the first year the Board will meet very often, but as the program develops their full-time service will not be required.

Amendment 6 vests in the National Board all programs in a Federal agency which are related to Indian education, except those in the U.S. Office of Education and those in the Office of Economic Opportunity. Since OEO, by law, is not permitted to engage in curricular or general education services, we believe they should not be identified as exempt under this provision. The fact that they have circumvented existing law in this respect should not be legitimized indirectly under this act.

We approve of the establishment of a Bureau of Indian Affairs in the Office of Education, but question the propriety of having the appointment of the head of the Bureau made by the President. The appointment should be made by the Commissioner of Education.

Part E. Miscellaneous Provisions.

We believe that the necessary technical amendments to existing education programs as covered in Sections 581 and 582, and Sections 583 and 584 (on the Institute of American Indian arts and community colleges) are proper. We have questions relative to Sec. 585. We understand the purpose of the amendment is to facilitate the establishment of Indian controlled education programs such as the Ramah School operated by the Navajo people. We support that objective. However, the language of Sec. 585 could be interpreted to mean that schools operated by a religious organization could also be considered local education agencies under this definition. If that is the intent, we strongly oppose the amendment. We urge the words "Nonprofit institution" be stricken from the proposal.

We believe the bill should specifically provide for the appropriate amendments to the School Lunch and School Milk programs to assure that schools operated by the National Board of Indian Education are included along with the 50 states and territories.

We are concerned over the future of the teachers currently employed in BIA schools, many of whom are our members. Sec. 564(a)(4) of Amendment 6 provides that "all personnel, assets, liabilities (etc.)" of, presumably, the BIA education function, are to be transferred to the National Board. What will happen to these teachers if the local boards created by NBIE decide they do not want them? We believe that the illusion of local control will not satisfy the local Indian school boards. They will want to hire their own teachers, just as other local boards do. Indeed, they should have this right if their control is to be actual. We suggest the bill provide that presently employed BIA teachers, if they are not employed by the local Indian school boards, must be guaranteed Federal employment for which they are professionally qualified, be given the option of retraining at Federal expense, including maintenance and full salary while in training for other Federal employment of equal grade to that now held and

guaranteed no loss of civil service retirement and other fringe benefits if they leave the Federal service.

The same protection should be provided to other personnel in BIA schools such as dormitory supervisors, administrative personnel, and paraprofessionals. A specific authorization for this program should be included in the bill.

In summary, we commend the sponsors of this bill for their sincerity in seeking to develop a broad program to correct current abuses in Indian education. However, we have serious concerns about some of the specific proposals in amendment 6 to S. 659.

We will be happy to make the technical resources of NEA, particularly in the area of school finance and human relations, available to the subcommittee in drafting legislation which is acceptable to the Indian people. We pledge that, when such legislation is developed, it will have our active support.

Senator PELL. Thank you very much. I share your views about the 15 members of the board becoming a sort of a presidium. The administration shares your view. The administration is going to the opposite tack, trying to conglomerate the mammouth into bigger mammouth.

As official representatives of the NEA, do you come in and go back to fulltime teaching or are you fulltime employees of NEA?

Mr. MORRISON. That differs. Mrs. Koontz joined the Women's Bureau on the Department of Labor. Mr. Fisher has chosen to do work that is educationally related, but not in the school system, and Mrs. Baine has 2 months to decide what she is going to do.

Senator PELL. But basically you are in for a term and then you go out, but you all come from the ranks of teachers, basically?

Mr. MORRISON. That is correct.

Senator PELL. What percentage of Indian teachers are members of the NEA and how many are members of the National Indian Association?

Mr. LUJAN. We have no statistics at present.

Mrs. GUEREAU. On our membership cards, there is no designation for race or ethnic background. If you run into "pretty", you know it is an Indian, but if you run into Lujan, you wouldn't know.

Senator PELL. You do know how many blacks are in the group. Don't you know how many Indians are in the group?

Mrs. GUEREAU. The statistics on blacks come about because there was a national organization of black teachers and they merged with NEA and their members came in so we know that many came in. We can't give you an exact number. We have a general idea. We don't have the number of Indians, but I am sure it is very minor, there aren't very many Indian teachers.

Mr. MORRISON. Before the year is over, we hope to identify each of our members who is a member of a minority group. If that information is helpful, we will be glad to share it with you.

Senator PELL. Do you have any members of both the national Indian association and NEA?

Mr. LUJAN. Some.

Senator PELL. What are the NEA dues?

Mr. LUJAN. $25 a year.

Senator PELL. Do you happen to know what the NIEA dues are?

Mr. LUJAN. $10 a year.

Senator PELL. Thank you very much.

Senator MONDALE. Thank you very much for your testimony. I think it helps point up some of the technical difficulties we must grapple with. That is the reason for hearings, to take a generalized proposal which has a certain broad objective and then help associations such as yours make the adjustments necessary so that it works.

Your testimony is most helpful in setting forth some of those difficulties. I think the key issue in terms of funding, the one about 874 has got to be taken care of.

We all agree with that. We don't want to diminish support. We want to expand support. Funding levels are poor throughout education, as your organization has pointed out time and time again, but particularly tragic in many of these Indian schools. We want to be sure that is corrected. Many of the other points you make are certainly worthy of serious consideration. If those concerns are dealt with and if the Indian community supports the bill, I gather the position of NEA is that you do, too?

Mr. MORRISON. That is correct.

Senator MONDALE. How do we find out what the Indian community wants?

Mr. LUJAN. This is a very difficult thing. I have no present thoughts in mind.

Senator MONDALE. It would be in very poor grace after the harsh criticisms we made about paternalism regarded relations between white and reds to impose our own paternalism. We are anxious not to do that. We traveled thousands of miles. We had 9- or 10 thousand pages of testimony. We have consulted with all the Indian sources that we can find. In addition to that, in the recommendations of the Indian Education Subcommittee, we strongly recommended the immediate invocation of a White House conference on Indian Affairs, which would be broadly based and representative of Indians, so they can grapple with OE versus BIA, a National Indian Board. We wanted a broadly based White Conference with high visibility.

That is the only thing we can think of that would take us further toward this objective of learning what the Indian community wants.

As in every other community, conviction depends on who you are and what your problems are and what your interests are. We are anxious to consider all views.

If you will trust us as to what the Indian community wants, I will announce NEA support right now.

Mr. MORRISON. We have an annual delegate assembly which has 7,000 delegates. That is one sort of input we get. These 7,000 persons, teachers, are leaders of teacher from across the nation and they will be asking Indian leaders and others with whom they come in contact how they feel.

We have 11 regional offices and 500 other local staff people out in the field, so I feel when the time comes that we will have a pretty good feeling for what a vast majority of the Indian people want.

Senator MONDALE. Thank you very much.

Senator PELL. Thank you very much.

The next witness is Mr. Leo W. Vocu, the executive director of the National Congress of American Indians.

Would you introduce yourself and your colleagues?

STATEMENT OF JOHN C. RAINER, VICE PRESIDENT, NATIONAL CONGRESS OF AMERICAN INDIANS

Mr. RAINER. My name is John C. Rainer, I am a Pueblo Indian. To my left is Mr. Leo W. Vocu, Oglala Sioux from Pine Ridge, S. Dak. He is executive director of the National Congress of American Indians.

The National Congress of American Indians appreciates very much the concern shown by Senator Kennedy, Senator Mondale, and other sponsors of the bill under consideration today.

We thank Senator Kennedy for his continuing interest in American Indian affairs, and we hope, therefore, that these two days of hearings on S. 659 will be only a beginning in a long process which is needed if the diverse Indian tribes and groups are to have meaningful involvement in legislation as sweeping as this bill proposes.

I speak today for the National Congress of American Indians, as its vice president. As Senator Kennedy knows from having been our honored guest and speaker in Albuquerque, NCAI is the only all-Indian honored guest and speaker in Albuquerque, NCAI is the only all-Indian national organization.

Although I speak as its vice president, I do not presume to speak for all Indians or for all sections of Indian country. This is so because there are so many tribes. My testimony is based on the resolutions which have passed in 27 conventions and many conferences sponsored by NCAI over the past years; it is based on concerns expressed to NCAI by the various tribes at the smaller meetings; and it is based on my own personal experience in Indian affairs.

Traditionally, Indian tribal leaders have been and are opposed to moves that would fragment the Federal responsibilities of Indian affairs by transfers. They are jealous of their special and unique trust status and relationship with the U.S. Government.

The National Congress of American Indians continues to take this position. At the executive council meeting of the NCAI in 1969 in Albuquerque, N. Mex., a position paper was adopted and said;

> If the Bureau of Indian Affairs is abolished or its services fragmented it will again jeopardize, and in many cases it will terminate the present services of the Federal Government.
>
> It will be termination in disguise. Indian people have never been successful in competing for services through other Government agencies, and the services received from these agencies have been very small or practically nil except for the excellent services now received from the Economic Development Administration and the Office of Economic Opportunity.
>
> Politically and socially it is almost impossible for the Indian to compete for services among other Federal agencies. With the huge backlog of services and development needing to be accomplished, at best, the parceling out of Bureau of Indian Affairs services to other Federal agencies would only be an injustice to these agencies because of their already insurmountable work load.
>
> A revamped and revitalized Bureau of Indian Affairs with sufficient funds can and will do a better job.

Therefore, in line with this stand, we are opposed to transferring education from BIA to HEW or to the U.S. Office of Education.

Concerning the creation of the National Board of Education, the National Congress of American Indians proposes that this national board should not be limited to advisory capacity but have authority over the education division within the Bureau of Indian Affairs.

Another point of concern, is that the legislation should clearly state that funds such as the Johnson-O'Malley and Public Law 874 be in the control of the Indian people at the local level. We strongly urge that the legislation be more specific on this point, particularly with regard to the committee that is to be established in each community to oversee the expenditure of Public Law 874 funds for special education programs for Indian children.

We fail to see at any point in the bill that there is a guarantee that Indian input will be heeded. This must be corrected. Presently, some tribes are seeking control of the expenditures of the JOM funds. We fail to see any assurance in the bill that these tribes can have this control.

President Nixon stated last July that, "The time has come to break decisively with the past and to create the conditions for a new era in which the Indian future is determined by Indian acts and Indian decisions." At this point we see no reason why this policy statement cannot become a reality.

The revisions proposed in amendment 6 affecting Public Law 874 also causes the National Congress of American Indians concern. As the legislation is presently written, those school districts on or near Indian reservations may lose the entire portion of their operating budget that comes from Public Law 874 now. This needs to be changed so that a portion of this Public Law 874 money can go for general operating expenses.

A case in point, is an analysis made by Mr. David Robinson of the Rocky Boy school finances:

> While there are certainly instances of school districts with relatively small percentages of Indian students using impact funds to educate non-Indians and to reduce local taxes, it is equally true that there are districts like Rocky Boy and Red Lake, Minn., which have no other source of revenue with which to pay the normal costs of operation.
>
> In between, are many districts with varying proportions of Indian land and Indian enrollment which must depend to a varying degree on impact aid for day-to-day operating expenses.

The bill's requirement that the funds cannot be used in the general fund budget of the school but must instead be used for programs especially designed to meet the special educational needs of Indian children (section 304) simply ignores the hard fact that in many districts there will be no other source of funds to pay the janitor's salary or to buy tires for the school buses. At Rocky Boy, as already noted, less than 40 percent of the basic operating expense can be met by State aid. The rest must come from the Federal impact program.

The bill needs to be amended to assure operation and maintenance funds for those schools which are affected by the bill.

Senator MONDALE. We agree with that criticism to recognize the school districts short of funds. We will correct the bill to see that that does not occur. It was a point that we had not intended. Your criticism is correct.

Mr. RAINIER. Thank you.

With the misuse of title I and JOM funds that has recently been disclosed, we at the National Congress of American Indians would like to see this committee include in this amendment strong language that would preclude this type of misuse from occurring again. This requirement can best be met by funding Indian tribes directly. Another point needs to be raised at this time, too.

The amendment provides for a 4-year college at the Institute of American Indian Arts in Sante Fe, N. Mex. While the proposal warrants support eventually, the idea is premature at this time. There is a greater need for a junior college set up than for a 4-year college.

Although I have tried to cover most of the major considerations that have been raised to the National Congress of American Indians regarding this bill, I must again state that I do not presume to relate the concerns, desires or needs of all of the Indian communities.

I am sure witnesses from these regions and areas will furnish your committee information peculiar to them. For this reason, the National Congress of American Indians feels that it is essential for this subcommittee to hold additional hearings on this legislation in the field or hold a White House conference on Indian education before it is reported to the full committee.

The National Congress of American Indians has long opposed the adoption of legislation affecting the lives and welfare of Indians without consultation and their consent. I quote from an NCAI Resolution No. 8, 1968: "This was a principle which the Founding Fathers of the Nation strongly voiced in their relations with the British Parliament." We feel that the tribes need to be given every opportunity to be heard on this issue, which will affect the lives of their children. To quote a policy statement at an NCAI annual convention held in Omaha:

> Federal policy has suffered extreme pendulum swings from overpaternalism to threatened and real termination of Federal protection. Indian people have never had an opportunity to key their own efforts to stable, secure and predictable Federal programs.

Additional hearings for the tribes would be a major step in this direction.

The National Congress of American Indians has repeatedly pleaded with the Congress to inform it and the various tribes of its actions and intentions. Resolutions have been passed and forwarded to the Congress requesting that we be informed of pending legislation. To the best of our knowledge the tribes were not informed of this bill by its sponsors. We know of no tribes invited to testify on this bill—a major attempt to revise Indian education policy.

Senator MONDALE. First of all I think the tribes by all means should testify, but there seems to be some factual difference here. As I understand it, copies of this proposal and explanations went to every tribal chairman, the Indian peoples, local and national organizations, people who testified before the Indian Education Committee, and as you know, we heard from hundreds of witnesses and from everyone we could think of.

In addition to that, we held repeated meetings and sent staff people wherever they were asked to consult, and as I understand it, on April 24, 1971, there was a national chairman's meeting in Pierre, S. Dak., which I am told is the most representative meeting.

They had full knowledge of this bill and adopted a resolution supporting it. When you maintain that no one is informed, someone has to be wrong. I couldn't agree with you more that we have no right to stuff a bill down an Indian's throat. We want a bill that, as far as possible, suits and serves the purposes of the American Indian, above all—a program of integrity which the parents and Indians run themselves.

That is what we want. That is what I understand the NCAI wants. That is what we are trying to do.

As far as the White House conference is concerned, I don't know who has influence with this administration. The Indian Education Committee pleaded with them to set up the conference. They haven't done so. I am not trying to be difficult, but we have tried very hard to consult and we want to hear the people who are most concerned. Would you respond to that?

Mr. RAINER. Yes, just last week, for example, there was a meeting of 19 district Pueblos at Albuquerque. No one in the group was informed of this hearing nor invited, as I was told, so we mimeographed the bill that Senator Kennedy had sent out to one of the former commissioners out there, and gave the information to the governors of the Pueblos and that is why I say we were not informed and we were not invited.

I didn't know about that hearings until just a few days ago myself.

Senator MONDALE. Were you invited to testify?

Mr. RAINER. Our organization was invited to testify. We asked for permission to testify.

Senator MONDALE. Have you served in any other capacity federally?

Mr. RAINER. I am a member of the National Council on Indian Opportunity.

Senator MONDALE. Under whose chairmanship?

Mr. RAINER. Vice President Agnew.

Senator MONDALE. Who appointed you?

Mr. RAINER. It is a Presidential appointment.

Senator MONDALE. OK.

Mr. RAINER. I am not a Republican. [Laughter.]

Senator MONDALE. I would like to include Resolution No. 7 propounded by the National Chairman's Association in support of amendment 6 to Senate bill 659, in the record.

Senator PELL. Without objection.

(The resolution referred to may be found on p. 1748.)

Senator MONDALE. You mentioned opposition to moving the educational functions from BIA to HEW or OEO; what is your feeling about moving those functions into the Executive Office of the President?

Mr. RAINER. The National Council of American Indians throughout its existence has passed something like 30 resolutions on education, which I will submit as an affidavit, taking the stand that because of our special trust relationship with the Federal Government we insist on keeping education and other services within the Bureau of Indian Affairs.

Senator MONDALE. Now, if it were kept within the bureau, housed there, you have no objection, but I gather you would support the

creation of a national board of Indian education provided it is kept in the BIA?

Mr. RAINER. Yes.

Senator MONDALE. And, of course, we share deeply your concern about termination. The whole thrust of the bill is not to terminate, but to expand Federal funding and assistance and control to the American Indian.

In no sense do we wish to back off from what I think is a very clear legal and moral responsibility by American society to do something about that issue.

You make a point about the misuse of JOM funds and title I funds recently documented in a legal defense fund study which shows outrageous abuses. Maybe this would be a good point for setting aside moneys for attorneys' fees, Mr. Chairman.

Senator PELL. Perhaps.

Senator MONDALE. But this is a curse in every one of these programs to help powerless people. Moneys do get diverted and wasted and twisted. No further questions.

Senator PELL. Thank you very much.

Senator KENNEDY. I wanted to welcome you. I didn't have a chance to hear your testimony, but I look forward to reading it.

Mr. RAINER. Thank you.

(The prepared statement of Mr. Rainer and resolutions submitted follow:)

Statement of John C. Rainer, Vice-President

NATIONAL CONGRESS OF AMERICAN INDIANS

Concerning S. 659

Before the

SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE
on April 29, 1971

The National Congress of American Indians appreciates very much the concern shown by Senator Kennedy, Senator Mondale, and other sponsors of the bill under consideration today. We thank Senator Kennedy for his continuing interest in American Indian affairs, and we hope, therefore, that these two days of hearings on S. 659 will be only a beginning in a long process which is needed if the diverse Indian tribes and groups are to have meaningful involvement in legislation as sweeping as this bill proposes.

I speak today for the National Congress of American Indians, as its vice-president. As Senator Kennedy knows from having been our honored guest and speaker in Albuquerque, NCAI is the only all-Indian national organization. Although I speak as its vice-president, I do not presume to speak for all Indians or for all sections of Indian country. This is so because there are so many tribes. My testimony is based on the resolutions which have passed in twenty-seven conventions and many conferences sponsored by NCAI over the past years; it is based on concerns expressed to NCAI by the various tribes at the smaller meetings; and it is based on my own personal experience in Indian affairs.

60-433 O - 71 - pt. 4 ---9

Traditionally, Indian tribal leaders have been and are opposed to moves that would fragment the federal responsibilities of Indian affairs by transfers. They are jealous of their special and unique trust status and relationship with the United States government. The National Congress of American Indians continues to take this position. At the Executive Council meeting of the NCAI in 1969 in Albuquerque, New Mexico, a position paper was adopted and said " If the Bureau of Indian Affairs is abolished or its services fragmented it will again jeopardize, and in many cases it will terminate the present services of the Federal Government. It will be termination in disguise. Indian people have never been successful in competing for services through other government agencies, and the services received from these agencies have been very small or pratically nil except for the excellent services now received from the Economic Development Administration and the Office of Economic Opportunity.

Politically and socially it is almost impossible for the Indian to compete for services among other Federal agencies. With the huge back log of services and development needing to be accomplished, at best, the parceling out of Bureau of Indian affairs services to other Federal agencies would only be an injustice to these agencies because of their already insurmountable work load. A revamped and revitalized Bureau of Indian Affairs with sufficient funds can and will do a better job." Therefore in line with this stand, we are opposed to transferring education from BIA to HEW or to the U.S. Office of Education.

Concerning the creation of the National Board of Education, the National Congress of American Indians proposes that this National Board should not be limited to advisory capacity but have authority over the Education Division within the Bureau of Indian Affiars.

Another point of concern, is that the legislation should clearly state that funds such as the Johnson-O'Malley and P.L. 874 be in the control of

SLBI

the Indian people at the local level. We strongly urge that the legislation be more specific on this point, particularly with regard to the committee that is to be established in each community to oversee the expenditure of P. L. 874 funds for special education programs for Indian children. We fail to see at any point in the bill that there is a guarantee that Indian imput will be heeded. This must be corrected. Presently, some tribes are seeking control of the expenditures of the JOM funds, We fail to see any assurance in the bill that these tribes can have this control. President Nixon stated last July that, "the time has come to break decisively with the past and to create the conditions for a new era in which the Indian future is determined by Indian acts and Indian decisions." At this point, we see no reason why this policy statement cannot become a reality.

The revisions proposed in Amendment 6 affecting P. L. 874 also causes the National Congress of American Indians concern. As the legislation is presently written, those school districts on or near Indian reservations may lose the entire portion of their operating budget that comes from P. L. 874 now. This needs to be changed so that a portion of this P. L. 874 money can go for general operating expenses. A case in point, is an analysis made by Mr. David Robinson of the Rocky Boy school finances, "While there are certainly instances of school districts with relatively small percentages of Indian students using impact funds to educate non-Indians and to reduce local taxes, it is equally true that there are districts like Rocky Boy and Red Lake, Minnesota, which have no other source of revenue with which to pay the normal costs of operation. In between, are many districts with varying proportions of Indian land and Indian enrollment which must depend to varying degrees on impact aid for day to day operating expenses."

The Bill's requirement that the funds cannot be used in the general fund budget of the school but must instead be used for programs expecially designed to meet the special educational needs of Indian children (section 304) simply ignores the hard fact that in many districts there will be no other source of funds to pay the janitor's salary or to buy tires for the school busses. At Rocky Boy, as already noted, less than 40% of the basic operating expense can be met by state aid. The rest must come from the federal impact program." The Bill needs to be amended to assure operation and maintenance funds for those schools which are affected by the Bill.

With the misuse of Title I and JOM funds that has recently been disclosed, we at the National Congress of American Indians would like to see this committee include in this amendment strong language that would preclude this type of misuse from occurring again. This requirement can best be met by funding Indian Tribes directly. Another point needs to be raised at this time, too. The amendment provides for a four year college at the Institute of American Indian Arts in Santa Fe, New Mexico. While the proposal warrants support eventually, the idea is premature at this time. There is a greater need for a junior college set up than for a four year college.

Although I have tried to cover most of the major considerations that have been raised to the National Congress of American Indians regarding this bill, I must again state that I do not presume to relate the concerns, desires or needs of all of the Indian communities. I am sure witnesses from these regions and areas will furnish your committee information peculiar to them. For this reason the National Congress of American Indians feels that it is essential for this subcommittee to hold additional hearings on this legislation in the field or hold a White House Conference on Indian Education before it is reported to the full committee. The National Congress of American Indians has long opposed the adoption of legislation affecting the lives and welfare of Indians without consultation and their consent. I quote from an NCAI Resolution No. 8, 1968, "This was a principle which the Founding Fathers of the Nation strongly voiced in their relations with the British Parliament." We feel that the tribes need to be given every opportunity to be heard on this issue, which will affect the lives of their children. To quote a policy statement at an NCAI annual convention held in Omaha, "Federal policy has suffered extreme pendulum swings from overpaternalism to threatened and real termination of federal protection. Indian people have never had an opportunity to key their own efforts to stable, secure and predictable federal programs." Additional hearings for the tribes would be a major step in this direction.

The National Congress of American Indians has repeatedly pleaded with the Congress to inform it and the various tribes of its actions and intentions. Resolutions have been passed and forwarded

to the Congress requesting that we be informed of pending legislation. To the best of our knowledge the tribes were not informed of this bill by its sponsors. We know of no tribes invited to testify on this bill--a major attempt to revise Indian education policy.

So many tribes cannot afford the trip and stay in Washington, D. C. to be heard, we have heard from tribes and know that they must have also contacted this committee requesting additional hearings, preferably in the field. The National Congress of American Indians is therefore formally requesting that additional hearings be scheduled in order that those tribes who will be affected by this major legislative revision will have an opportunity to testify.

It would seem only logical in light of the President's announced intentions to establish self determination, that Indian tribes be asked to testify.

We understand that this bill is proposed as a partial solution to the many problems raised by the Special Subcommittee of Indian education. However, those hearings were investigative in nature and no solutions were proposed at that time.

It is now time for the Indian tribes who have to live with the results of this legislation to testify and state their comments and criticisms.

RESOLUTION No. 72

INDIAN EDUCATION COMMITTEE

WHEREAS, the 26th annual convention of the National Congress of American Indians in Resolution Number 15 authorizes the establishment of an Indian Education Committee, now

THEREFORE BE IT RESOLVED that the 27th annual convention direct the Executive Committee to implement such resolution immediately apportioning membership equally by areas and that the National Congress of American Indians member organizations select such membership within their areas.

BE IT FURTHER RESOLVED that the Indian student in most directly affected by the Indian Education Committee, and that full student participation in the Education Committee is allowed with the Committee on Education being composed of 50% Indian students.

National Congress of American Indians
27th Annual Convention
October 18-24, 1970
Anchorage, Alaska

RESOLUTION No. 71

EXPERIMENTAL SCHOOL IN MINNEAPOLIS

WHEREAS the current policy of educating Indian students in public schools has resulted in high dropout rates, low achievement levels, anti-Indian attitudes and insensitive curriculum, and

WHEREAS, Indian Students who reject traditional educational experience or standard of living that is low, and

WHEREAS, the American Indian has little, if any, influence or control in the education of their children in public schools, and

WHEREAS, a bill was introduced in the United States Congress on September 23, 1970 by Senator Edward Kennedy of Massachusetts and Senator Walter Mondale of Minnesota which calls for basic reforms in the educational system of the American Indian, now

THEREFORE BE IT RESOLVED that the members of the National Congress of American Indians at their Anchorage conference endorse the proposal for an experimental school in the City of Minneapolis.

National Congress of American Indians
27th Annual Convention
October 18-24, 1970
Anchorage, Alaska

RESOLUTION No. 35

DIRECTOR OF EDUCATION FOR THE BUREAU OF INDIAN AFFAIRS

WHEREAS, President Nixon has recognized the importance of Indian education in his recent message to the Congress; and

WHEREAS, the Department of Interior, Bureau of Indian Affairs, Education Division plays a key role in the education of Indian children, and

WHEREAS, the White House, the Secretary of Interior, and the Commissioner of Indian Affairs have not filled the 11 month vacancy of the Director of Education for the Bureau of Indian Affairs,

NOW THEREFORE BE IT RESOLVED, that the National Congress of American Indians immediately call on the White House, the Department of Interior, the Bureau of Indian Affairs to make this appointment,

BE IT FURTHER RESOLVED, that the Education Committee of National Congress of American Indians be consulted on all key educational appointments to the Bureau of Indian Affairs and that, where possible, Indian people be selected for those appointments and that the National Congress of American Indians Education Committee be used as the vehicle to consult Indian people, communities, and organizations on these appointments.

National Congress of American Indians
27th Annual Convention
October 19-23, 1970
Anchorage, Alaska

RESOLUTION No. 34

CIVIL RIGHTS - SCHOOL DESEGREGATION

WHEREAS, the Civil Rights directive to desegregate "de facto" segregated public schools is one method utilized to provide an equal educational opportunity for students from minority racial groups, and

WHEREAS, many public schools serving rural Indian communities have been identified by the U. S. Office of Education, Department of Health, Education and Welfare (HEW) as de facto segregated schools because of a high ratio of Indian children in attendance, and

WHEREAS, desegregation measures such as bussing children, to achieve as acceptable ethnic enrollment ratio, would impose extreme hardships both physical and financial, upon Indian children and school districts affected, and

WHEREAS, the fact that a racially balanced school district does not guarantee that either a quality educational program or an equal educational opportunity will result,

NOW THEREFORE BE IT RESOLVED, That the National Congress of American Indians call upon the Department of Health, Education and Welfare and the U. S. Commissioner of Education to amend this policy and exclude schools located on or near Indian trust lands from this desegregation directive.

BE IT FURTHER RESOLVED, That the Civil Rights Title IV, Section of the U. S. Office of Education, Department of Health, Education and Welfare, recognize the special legal rights of Indian Tribes as related to their trust land status whenever any policy is considered with deals with minority racial groups.

National Congress of American Indians
27th Annual Convention
October 19 - 23, 1970
Anchorage, Alaska

RESOLUTION No. 32

TALENT SEARCH PROGRAM

WHEREAS, There is a definite need to identify qualified American Indian students for entry into institutions of higher education, and

WHEREAS, the United States Department of Health, Education, and Welfare, Office of Education, operates a talent search program on a national level, and

WHEREAS, the Talent Search Program has been highly successful in identifying and counseling qualified students for entry into colleges, universities and other institutions of higher learning, and

WHEREAS, the statutory limit of expenditure is $100,000 per state; thereby limiting the effectiveness of the program, and

WHEREAS, an expanded Talent Search Program would enhance the higher educational opportunity for Native Americans, now

THEREFORE BE IT RESOLVED, that the National Congress of American Indians strongly recommends an amendment to the applicable Federal statute deleting the authorized expenditure of funds for the Talent Search Program.

BE IT FURTHER RESOLVED, that the National Congress of American Indians recommends that Congress appropriate additional funds to the Talent Search Program for an expanded operation to meet the needs of the Native Americans.

Copies of this resolution shall be distributed to the President of the Senate, each member of the United States Senate, the Speaker of the House of Representatives and each member of the House of Representatives; the National Council on Indian Opportunity and other interested and concerned groups at the discretion of the Executive Director of the National Congress of American Indians.

National Congress of American Indians
27th Annual Convention
October 19 - 24, 1970
Anchorage, Alaska

RESOLUTION No. 31

ENDORSEMENT OF PRESIDENT'S INDIAN PROPOSALS

WHEREAS, Indian people have for many years been seeking the right to become involved directly in the management of programs affecting their lives on the reservation and,

WHERAS, Indian people have made very clear their desire to be self-determinate and to be directly involved in those activities of the Federal government which bear on the policies and programs affecting Indians and,

WHEREAS, the President and Vice President of the United States through the historic message of July 8, 1970 have announced clearly the policy of the Administration in Washington to allow Indian people the right to be directly involved in the formulation of programs and policies and,

WHEREAS, the policy of self-determination and involvement uttered by President Nixon has been consistently and forcefully espoused by the National Congress of American Indians and,

WHEREAS, the legislative program sent to the Congress by the Administration is designed to bring about by law the right of the Indian people to be self-determinate when they desire and as they desire, and,

WHEREAS, the President and the Vice President have repudiated termination of the special relationship between Indian people and the Federal government as a policy, and

WHEREAS, the President of the United States has called for regional hearings to be held under the chairmanship of the Indian members of the National Council on Indian Opportunity, which meetings should involve all Indian leaders and other interested Indians, to allow Indian voices to be heard with regard to the message, legislation and other matters,

NOW THEREFORE BE IT RESOLVED, that the delegates of the National Congress of American Indians express their strong endorsement of the policy and legislative initiatives set forth in the message and urge that the Congress of the United States act swiftly and favorably on the President's proposals.

National Congress of American Indians
27th Annual Convention
October 19-24, 1970
Anchorage, Alaska

RESOLUTION NO.30

ADVISORY COMMITTEE TO EVALUATE PROGRAMS AND PROPOSALS

WHEREAS, some colleges and universities are providing specialized studies of minorities, and these, and proposals for others are mushrooming in a hurried manner, and

WHEREAS, there is a national need for quality college study programs about the history and culture of minority groups including American Indians, and

WHEREAS, the National Congress of American Indians is gravely concerned as to the legitimacy of purpose and quality of content of many Indian study programs and proposals of some institutions, and

WHEREAS, the funding of many of these Indian studies programs rests on the discretion of various departments and agencies of the Federal Government, now

WHEREAS, the Indian students are closest to these programs and institutions and closest to the problems of Indian Education, now

THEREFORE BE IT RESOLVED, that the National Congress of American Indians urgently request these departments to create an advisory committee composed of the academic community and Indians selected by the National Congress of American Indians to review and evaluate programs and proposals, and

BE IT FURTHER RESOLVED, that the Indians selected to sit on such a committee be selected by the Executive Committee.

RESOLUTION No. 26

INDIAN HEAD START PROGRAM

WHEREAS, The task force findings of May 8, 1970, call for the decentralization and registration of the Indian Head Start programs, and

WHEREAS, the Indian Government ties have legally and historically consisted of a direct Federal-Indian relationship, and

WHEREAS, the present Indian Migrant Programs Division structure assures greater services because of its direct relationships with the sensitive needs and understanding of Indian people, and

WHEREAS, Dr. Edward Zigler, Director, Office of Child Development, stated publicly at the July 27-28, 1970 meeting of the National Indian Head Start Policy Advisory Committee, that there would be no action taken on decentralization without prior consultation with Indian people, and

WHEREAS, Indian people across the nation have voiced their strong opposition to this or any similar move,

NOW THEREFORE BE IT RESOLVED that the National Congress of American Indians does hereby oppose the proposed regionalization and/or decentralization.

RESOLUTION No. 25

INDIAN EDUCATIONAL SYSTEMS

WHEREAS, present educational systems are not effectively educating Indian, Eskimos and Native American youth, because many educators are not acquainted with the special problems of Indian, Eskimos, and Native American students and,

WHEREAS, the present orientation programs are not adequate to correct these deficiencies, and Indian, Eskimos and Native American students will not be properly educated until these deficiencies are corrected.

NOW THEREFORE BE IT RESOLVED, That the National Congress of American Indians give active support to any and all programs instituted by Indians and implemented by Indians aimed at training educators, administrators and guidance counsellors to understand and work with Indian, Eskimos and Native American students.

RESOLUTION No. 24

HEAD START, DAY CARE AND YOUTH OPPORTUNITY PROGRAMS

WHEREAS, the President of the United States has recognized the need for more adequate services to Indian people but there is an absence of effective lobbying in behalf of services to Indian children and youth, and

WHEREAS, programs for children - such as Head Start, Day Care programs, and Youth Opportunity programs - have had appropriations reduced or maintained at the same level and are, therefore, only able to serve a part of the Indian people, and

WHEREAS, there still remain critical needs for expanded services in Head Start programs, recreational programs, and educational programs for Indian youth,

NOW THEREFORE BE IT RESOLVED that the National Congress of American Indians act as an organization lobbying and speaking out forcefully for improved services for the development of the most important resource of the Indian people - their Indian children and youth.

BE IT FURTHER RESOLVED that the National Congress of American Indians also speak out forcefully for expanded opportunities for the training and development of Indian professionals to enable them to assume full administrative and classroom responsibilities in child oriented programs.

RESOLUTION No. 22

PARENT - CHILD DEVELOPMENT CENTERS

WHEREAS, the earliest years of life are crucial in the total development (intelligence and personality) of the child and the fact that environmental conditions, limited ability, and lack of information often make it impossible for parents to accept the role of helping their child grow into a healthy fully functioning human being, the need for Parent - Child Development Centers is evident.

WHEREAS, President Nixon in both his State of the Union Message of January, 1967, and in his message to education in 1970 urged we try new methods of child development and care from the earliest years and since the home provides then child with patterns for learning it makes sense to strengthen the home disadvantaged by limitations imposed by proverty and to reinterpret to the parent his/her unique role as parent - teacher.

WHEREAS, learning to read and comprehend represents a successful experience in school, it behooves us to consider the early learning which contributes to a readiness to read.

WHEREAS, it is found that only one five year old in four in the disadvantaged areas reaches what might be called normal learning and emotional development for his age.

THEREFORE BE IT RESOLVED that funds be earmarked to the legislative level for all Indian Parent - Child Development Centers for children 6 months - 3 years. That all funds related to Parent - Child Development Centers should be channeled through the Office of Child Development.

RESOLUTION No. 21

INDIAN EDUCATION - ADDITIONAL CLASSROOM SPACE

WHEREAS, there is a paramount need to provide additional classroom space for the youth of all areas within Indian Territory, and

WHEREAS, there is a need to provide an adequate atmosphere for maximum acquisition of learning, and

WHEREAS, there are positive indications reflecting the increasing student population in the afore stated areas, and

WHEREAS, those minimal funds when appropriated seemingly constitute a token effort due in part to the inflationary costs involved in the construction and remodeling industries, and

WHEREAS, this need has been neglected in terms of Congressional Appropriations under Public Law 815

NOW THEREFORE BE IT RESOLVED by the National Congress of American Indians in annual convention at Anchorage, Alaska on this twenty third day of October, Nineteen hundred and seventy, that the Bureau of Indian Affairs and the United States Office of Education assess the national back-log in the area of classroom remodeling and construction needs and that a continuous yearly financial committment be integrated in the Congressional appropriations under Public Law 815, to adequately meet the needs in public and Bureau of Indian Affairs schools serving Indian communities on or near tax free Indian or tribally owned lands.

RESOLUTION No. 20

INDIAN EDUCATION - Public Law 874

WHEREAS, the reduction in the funding level under Public Law 874 has caused critical concern on behalf of impact area schools educating Indian youth, and

WHEREAS, the questionable status of 38 recipients has created concern in many of these same schools, and

WHEREAS, there are many school districts located in rural America educating Indian youth which are dependent upon climactic conditions to support local effort, and

WHEREAS, the financial assistance received under Public Law 874 has definitely enhanced the educational opportunities for American Indians, and

WHEREAS, the delay in appropriations under Public Law 874 has caused a deficit fiscal operation in many of these schools which compounds the problem due to high interest rates on borrowed funds, and

WHEREAS, Indian children educated in these schools have suffered because of the highly questionable nature of the entitlement eligibility of certain comparably rich Eastern Urban districts

NOW THEREFORE BE IT RESOLVED by the National Congress of American Indians meeting in annual convention at Anchorage, Alaska, on this twenty third day of October, Nineteen hundred and seventy, that the United States Department of Education assess the relative financial need of said districts.

RESOLUTION No. 19

EARMARK FUNDS FOR EDUCATION OF INDIAN PUPILS

WHEREAS, the Elementary and Secondary Education Act has already been in effect a number of years to meet the needs of economically disadvantaged students in our educational system, and

WHEREAS, there continues to be critical unmet needs in the education of Indian pupils and reports currently available such as the Havinghurst Study and the Kennedy Sub-committee report on Indian Education - both provide statistical data indicating the seriousness of the problems, and

WHEREAS, no improvement will occur unless specific changes in current regulations and directives are implemented in the allocation and disbursement of these funds to State School Systems that will have direct bearing on local education programs affecting Indian children, now

THEREFORE BE IT RESOLVED, that the National Congress of American Indians through its Education Committee, take the necessary steps to urge and assist the Department of Health, Education, and Welfare and the U. S. Office of Education immediately to establish that a minimum of 5% of all available funds be earmarked exclusively for education of Indian pupils in the public school system. These funds should be earmarked out of the Commissioner of Education's discretionary monies.

BE IT FURTHER RESOLVED, that implementation of this policy and procedure be applied immediately upon approval by the appropriate agency and department heads.

BE IT FURTHER RESOLVED, that the U. S. Office of Education be petitioned by the Education Committee of National Congress of American Indians to recommend to the Administration continuation of the ESEA set aside authorities for funding Bureau of Indian Affairs Schools prior to its expiration in June 1971.

RESOLUTION NO. 62

FUNDS FOR ADULT BASIC EDUCATION - PINE RIDGE

WHEREAS, an adult basic education program, highly mobile in nature to take the program to every district, has operated on the Pine Ridge reservation in South Dakota since 1967, has reached significant numbers of tribal members, has proved highly beneficial to the Oglala Sioux Tribe, and is supported by the Tribe, public and parochial schools, the Bureau of Indian Affairs, and the State Department of Education; and

WHEREAS, this program could provide a model for other tribes;

NOW, THEREFORE, BE IT RESOLVED, that the National Congress of American Indians strongly supports continued funding of this program by the Office of Education, HEW; and

BE IT FURTHER RESOLVED, that such programs requested by other tribes also be funded.

RESOLUTION NO. 60

INDIAN EDUCATION - MINNESOTA

WHEREAS, the State of Minnesota has failed drastically in the education of urban and reservation Indians as evidenced by the large sixty-five per cent high school dropout rate of our Indian young and the shameful potential dropout rate of Indian young presently in the sixth, seventh, and eighth grade levels; and

WHEREAS, the Bureau of Indian Affairs has also failed in education policies due to the lack of imagination and foresight, and their inability to be creative in innovating educational programs geared to unique needs of Indian people, such as Indian parental involvement and control: and

WHEREAS, demonstrated abusive community and school personnel attitudes continue to be a major contributing factor in the huge dropout and potential dropout rate of Indian young people; and

WHEREAS, the curriculum of the public schools is practically void of Indian sensitivity and awareness and does little to upgrade the Indian image, and is alien to Indian history, contributions, lore, art, music, and language; and

WHEREAS, outdated policies geared to assimilation have caused a sense of rejection to Indian identity and pride; and

WHEREAS, certain programs have shown that Indian people can effectively administer their own programs; and so

THEREFORE, BE IT RESOLVED, that the National Congress of American Indians and the National Council on Indian Opportunity support the desires of the Indian Upward Bound staff and Board of Directors, to establish a large, equal and separate Indian educational system within the State of Minnesota which will be proposed as an Educational Park Complex on the White Earth Reservation and within the urban Indian area of Minneapolis, Minnesota The complex will be on a demonstration basis and will constitute programs such as Head Start, Kindergarten, STAIRS, Elementary, Secondary, Upward Bound, Associated Arts College, Adult Basic, Vocational Training and Leadership Training. Total control by Indian parents and Indian community residents will be practiced through an all-Indian Board of Directors;

BE IT FURTHER RESOLVED, that the National Congress of American Indians and the National Council on Indian Opportunity recommend all elected National and State of Minnesota Congressmen

RESOLUTION NO. 15

ESTABLISHMENT OF INDIAN EDUCATION COMMITTEE

WHEREAS, the Education of Indian children both on and off the reservation is given a high priority by the National Congress of American Indians; and

WHEREAS, the National Congress of American Indians is desirous of positioning itself as the spokesman of all Indians, both on and off the reservation on all matters, especially Indian Education; and

WHEREAS, there is no voice of NCAI for Indian Education in the form of/or an Education Co-ordinator, and Education Committee; and

WHEREAS, the lack of a Education Co-ordinator or standing Indian Education Committee at NCAI is to the detriment of Indian children and to the total voice of NCAI in Indian affairs, because it results in non-Indians writing education programs for Indians, thus reducing the self-determinism of Indians at all levels of education, from pre-school through post-grad; and

WHEREAS, NCAI seeks to alleviate this detriment and strengthen Indian autonomy on the education of Indian children,

NOW, THEREFORE, BE IT RESOLVED, that the Executive Council be directed to set up immediately a standing committee on Indian Education, all of whom will be Indian, and this committee will select, if desired an Indian Education Co-ordinator. This proposed Education Co-ordinator and this proposed committee would be charged with liaison between U.S. Office of Education, National Education Association, National Council of Bureau of Indian Affairs Educators, BIA, Universities, Educational Labs, All Tribal Governments, and other National, State, and Local organizations who are desirous of improving Indian Education. Tribal reaction to ALL Indian Education proposals will be a reality through implementation of this resolution.

26th Annual Convention
Albuquerque, New Mexico

RESOLUTION NO. 2

INDIAN SCHOOLS

WHEREAS, for many years the Bureau of Indian Affairs school facilities located at Chemawa, north of Salem, Oregon, have been used almost exclusively for the education of children from Alaska and from the Navajo Indian Reservation, by reason of the shortage of facilities near their homes, and at the same time school children from the Pacific Northwest who are eligible for attending Indian schools have been required to attend Chilocco, Riverside, Fort Sill, and Concho Indian Schools, all located in Oklahoma; and

WHEREAS, many more schools are now being built nearer to the homes of the Navajo children, and there is hoped-for progress in connection with the needs of Alaskan children; and

WHEREAS, the Bureau of Indian Affairs states that it is now the policy of the Bureau of Indian Affairs to phase out the Navajo program at Chemawa and to accept applications for eligible students from Pacific Northwest tribes for attendance at Chemawa, and also states that there are now 160 students from Pacific Northwest Tribes attending Chemawa out of a total enrollment exceeding 850,

NOW, THEREFORE, BE IT RESOLVED, that the National Congress of American Indians, in Convention assembled at Albuquerque, New Mexico, October 6-10, 1969, hereby adopts the following: That the above described new policy of the Bureau of Indian Affairs is hereby endorsed as is the principle that Indian schools in the Pacific Northwest should be the principal Indian schools attended by children from Pacific Northwest Tribes.

FURTHER RESOLVED, that the Bureau of Indian Affairs is urged not to close down any Indian boarding schools as long as needed for education of socially deprived Indian children.

1969 Convention
26th Annual Convention
Albuquerque, New Mexico

RESOLUTION NO. 12

EDUCATION - TEACHING FUNDS

WHEREAS, education of the youths on Indian reservations is of paramount importance to all Indians in the United States; and

WHEREAS, the object of Indian education should be to aid Indians in becoming responsible, well adjusted citizens who participate fully in the benefits of American life without forfeiting their ancestral heritage; and

WHEREAS, appropriations available to the Bureau of Indian Affairs for the education of Indian youths have been insufficient in order to carry on the educational processes on Indian reservations; and

WHEREAS, during this year in particular, due to Congressional action in connection with the Surtax Bill, there have been many cutbacks in budgetary items badly needed in order to meet pay raises necessary to meet competition in the personal services of cooks, bus drivers, etc.; and

WHEREAS, special educational classes are needed and necessary to give the Indian children special attention such as in remedial classes and for the retarded children; and

WHEREAS, in order for the Educational Branch of the Bureau of Indian Affairs to effectively carry on schooling for the youths on Indian reservations and to carry out the foregoing, it will be necessary to have supplemental appropriations to meet the pay raises granted to teaching personnel and others so that a good and proper educational system may be carried on.

NOW, THEREFORE, BE IT RESOLVED, by the National Congress of American Indians in Convention assembled September 24-27, 1968, that it respectfully requests the Congress of the United States to include in the supplemental appropriations bill for the Department of the Interior, Bureau of Indian Affairs, Branch of Education, additional funds necessary to meet the pay raises granted to teaching personnel and others over which the Bureau and the Indian tribes had no control.

1968 Convention
25th Annual Convention
Omaha, Nebraska

Senator PELL. Our next witness is a panel from Minnesota which has been arranged for by Senator Mondale and he will introduce them.

Senator MONDALE. It is my pleasure to introduce three outstanding Minnesota Indian educators: Mr. Jerry Buckanaga, who is currently the principal of a very impressive new experimental Indian school on the White Earth Indian Reservation, Pine Point School; he also serves as treasurer of the Chippewa Tribe, and he has been active in Indian affairs for many years in Minnesota. He serves as chairman of the Minnesota Indian Educational Committee. He was on the board for Americans for Indian Opportunity, and recently won a Bush Foundation scholarship.

Ruth Meyers is a very active and impressive volunteer in educational matters in Duluth and has really performed remarkably in that area. She is a member of the NIEA and a member of the Minnesota Education Committee, and recently elected to the city of Duluth school board.

Mr. Ted Mahto is an Indian consultant to the Minneapolis public school system and I believe that I am correct that the Minneapolis school system has a higher ratio of Indians to non-Indians than any other school system in the country?

Mr. MAHTO. That is correct.

Senator MONDALE. We have the tragic problem of any system which receives Indians, most of whom live in such disparate, poverty-stricken situations.

Senator PELL. What would that percentage be?

Mr. MAHTO. In inner-city schools it ranges to 15 percent.

Senator MONDALE. It would be less districtwise. They are concentrated in the ghettoes. I can get the exact percentage.

Mr. MAHTO. In the total district, it is about 2.7 percent.

Senator PELL. We will now receive a statement from Mrs. Harris, wife of Senator Harris of Oklahoma, who is one of the most knowledgeable people in this field.

STATEMENT OF LaDONNA HARRIS, PRESIDENT, AMERICANS FOR INDIAN OPPORTUNITY ACTION COUNCIL

Mrs. HARRIS. Mr. Chairman, we would like to congratulate you on the proposed piece of legislation that is before us today. We know that it came after long and thoughtful consideration by your committee. During the exhaustive hearings that this committee held, you gave people an opportunity to express their complaints and frustrations about the present inadequate system, but more than that, you gave us the chance to make our input based on our needs as we see them. This has been a fair hearing and we commend you and the committee.

We do, however, have some serious recommendations to make after reviewing the committee's work. Some of our suggestions, no doubt, have been made before but we would like to reiterate them for the record.

The revisions, creations, and additional funding contained in parts A, B, C, D, and E of your amendment, go a long way towards an ideal model for Indian education. We believe as you do that Indian education should be a model of excellence. Why should we waste time on revising the system if it is anything less than excellent?

We would like then to restate what we believe the objectives of Indian education should be and offer some suggestions to strengthen this amendment.

OBJECTIVES

The objective of any Indian education program should be to afford the individual student the opportunity to be educated to his full capacity so that he will be able to make the options in life that other people have.

Indian education whether in public, private or Federal schools, should be a model of excellence in curricula, programs, texts, teaching methods, guidance, instructors, resources, and related services. It should take into account the culture, language and special needs of the child, and should be imaginative, innovative and flexible.

The overall design, implementation and administration of Indian education should be controlled by at least a majority of Native Americans.

Programs at the local level should be carried out only after full consultation and approval of the parents of Indian children.

Public and private schools receiving money for educating Indian children must be made accountable for how that money is spent.

Your amendment does much to meet these objectives but falters in a couple of respects.

RECOMMENDATIONS

Under your amendment only one portion of Indian education is controlled by native Americans. The National Board of Indian Education would not, under Amendment 6, have control over programs administered by the Commissioner of Education. Quite frankly, it seems that if the National Board of Indian Education acts only in an advisory position to the Commissioner, the whole thrust of your bill is undermined. Although HEW may be a bit more benign in these matters than the Bureau of Indian Affairs, there is still no assurance that the mistakes of the past will not be repeated by the Commissioner of Education. This is something that we cannot afford to let happen. It is with this in mind that we recommend that the National Board of Indian Education assume full responsibility for the control and operation of all Indian education programs of the Federal Government, including presentation of the budget for Indian education to the Office of Management and Budget and the Congress.

If this is done we believe that the intent contained in part D of your bill will be strengthened.

Most important, we believe, is that any board that is created should be responsible for the overall development and implementation of an Indian education program. It should be free, so far as possible, from both Indian and non-Indian politics while being open enough to listen to the needs of native American parents and students. It should be primarily composed of professional native Americans as well as representatives of the poor. Its director should have enough authority to carry out an aggressive program and his job should not be subject to changes of administration. In other words, the board should hire an aggressive and competent professional and support him. Such a plan could be implemented with enabling legislation and executive orders promulgated by the President.

We agree with you that the board, not the President, should elect its own chairman and vice chairman.

We also agree with you that Indian education programs should be open to all Indians.

Another aspect of our concern over this amendment lies with the administration of Johnson-O'Malley funds. We strongly believe that Congress should reinforce its intent that Johnson-O'Malley moneys are not meant as a substitute in lieu of general property tax revenues but that they are to go toward meeting the special needs of all native American children. Congress must make those local school systems responsible for administering JOM funds accountable to this end. Anything less is a waste of good money and demeaning to not only native American people but to this Congress.

No matter who administers the JOM program, you must make it clear, for the protection of native American children, that regulations must conform to your intent, and that those administering JOM funds are accountable for their use.

We feel that this Committee's recommendations in regard to making funds available for pilot projects in not only Federal schools but in off-reservation and urban schools is excellent. We have an excellent model for reservation schools in the Rough Rock School in Arizona. Unfortunately, little has been done to develop models for Indian education in urban and nonreservation areas. Funds must be allocated to develop prototypes for Indian education, especially in urban areas.

Finally, Mr. Chairman, we strongly recommend that more attention be given to the creation of a comprehensive free Indian community college system. This system could be initially administered by the National Board of Indian Education, but should eventually be administered by a separate board or at least a standing committee of the National Board of Indian Education. We feel that the Navajo Community College will eventually serve as an excellent model for such a system. Already community leaders from the Pine Ridge and Rosebud Reservations are seeking support for continued development of community college centers in their area. Others will no doubt follow and we believe that priority attention should be given to this area.

In conclusion, Mr. Chairman, we are looking for a comprehensive structure that will allow native American people to create a model of quality and excellence for the education of their children. We believe that this will only be possible when the competent and professional native Americans are allowed complete authority over the total educational system. Your recommendations do much to supply the tools for carrying out this mission. We hope that you will give thoughtful consideration to our recommendations for we believe that their adoption will strengthen your amendment.

Senator PELL. We were most happy to hear from Mrs. Harris and now we will hear from Mr. Buckanaga.

STATEMENT OF JEROME BUCKANAGA, PRINCIPAL, PINE POINT EXPERIMENTAL SCHOOL, PONSFORD, MINN., WHITE EARTH RESERVATION

Mr. BUCKANAGA. Mr. Chairman, I would like to preface my remarks. As to the comment that Senator Mondale made, we do indeed have an experimental school in the State of Minnesota and it was through

his efforts that this school was developed, because of the sad conditions that we hear so much about in studies made by anthropologists and sociologists, et cetera.

The act, as it stands, recognizes that the education of the Indian American is, to say the least, atrocious, and is attempting to modify the contemptible conditions in which Indian children are educated.

I wish to comment on the functions of education, of schools in this country, as they serve the general public in this Nation. The essential function of the educational institution in the social order is to transmit to young citizens those skills and behaviors that will enable the young citizen when matured to lead an independent, productive life in the American social order.

The school in American society also serves as an agent to transmit to the children those behaviors the local community may deem important.

Among the dominant social classes of this Nation, the educational institutions provide children with the skills and behaviors of that dominant class. In a community with a culturally varying population, the wishes of the local community are often neglected. And herein lies the communication, cultural, insensitive what have you, gap of white America versus Indian America. As it turns out in this Nation, a culturally differing community is frequently one that is at the lower end of the socioeconomic scale.

The culturally differing community then is unable to transmit to its young citizens the heritage of the unique culture.

The Indian American children who enter school are too often faced with teachers who feel the Indian culture and life style is wrong, and consequently are unable and fail to incorporate the child's culture into the instructional activities of the school.

The educational institution, the school in this context, takes on an erroneous role of subtly and harmfully attempting to teach the child a different culture and life style.

The Indian child, then, very often, emerges without the behaviors and skills needed for independent adult life, as well as being confused because the school experiences have suggested that his native culture and life style are wrong.

The society then brands the child as a failure. The cycle of failure, poverty, poor health, poor housing, in general, the poorest living standards of any American is reinforced by the educational establishment. The history and culture of the Indian American is, indeed, unique to this Nation, but is overlooked in the American society today. Indian people rightfully express their wishes that Indian children should reflect the culture and identity of their heritage.

Unfortunately, the typical public school in Minnesota does not meet this purpose. I wish to point out four fundamental notions in reference to public education in relationship to Indian Americans.

1. The public schools as they exist are not providing pupils with skills and learnings necessary to participate fully in the social, economic and political resources of the American social order. The data regarding educational achievement, retention in secondary schools, and social behavior of Indian youth unequivocally demonstrate the schools' failure. It is not the Indian children who are failures, it is

the school that is a failure. It is not youth who drop out of secondary school. The school in its failure forces youth out of secondary school.

2. The school is an agency of society, charged by the society to transform articulated purposes into behaviors of children. The local community has the prerogative to designate purposes unique to that community, that the school should accomplish. In a community comprised largely of Indian people, the purposes of the school must reflect the heritage, culture, history, and life style of Indian people. The personnel of the school must have the skill and knowledge to bring Indian culture into the content of the curriculum, and through effective teaching strategies, incorporate this aspect of curriculum content into the behaviors of Indian children.

3. Indian people must be allowed to identify and define within their immediate social and physical environment, those wrongs that require correction. Further, Indian people must be let to hold leadership and expertise to gather resources and implement procedures to correct the deficiencies they identify.

4. Within the political and social domain of the Indian community, an appropriate organizational structure supporting the operations of a school include substantial imput from local education agencies, State education agencies and Federal education agencies. And further, that mandates from the high level political avenues must provide the availability of such operations.

It is my contention that the standard program of instruction, whether they be public, Federal, non-Indian or Indian, is incapable of meeting needs of all America. It is confined to instruction to children of school age, during usually a 6- or 7-hour period, 5 days each week. Excepting a few special events that occur infrequently, the school program does not extend beyond these traditional limits. I suggest that the school can better serve the total community by extending the program of instruction and activities to all members of the community combining all services, preschool, family services, adult education, and in time we may become a unit that is not fragmented, as the middle class American life style has become.

At this point I must explain what my knowledge of the Indian life style was before the coming of the Europeans. The older Indians tell about a circle. And within this circle there was a center. But the circle was dependent on all things that the Indian knew of and these included all things of nature, the sun, the moon, and all and everything which he experienced but he did not fragment his life. There were reasons for all the actions he made and he took into consideration all aspects or consequences he might encounter upon or prior to making a decision.

I hold that, as an Indian American citizen, that this country is in great danger of destroying itself. I contend further that the people who control this country must listen to the Indian nation. Furthermore, all funds must be available in order that the Indian American can demonstrate to the non-Indian society that there are ways and means to correct some of the deficiencies in this country.

Wherever and whatever the funding agencies may be—HEW, Office of Education—they must be made available in order that Indian people can, indeed, control our destiny.

In reference to the Kennedy bill, I make the following recommendations:

1. That the National Board of Indian Education be placed within the structure of the Bureau of Indian Affairs and that the legislative action be required, should this be the necessary course of action. I suggest the following reasons for this recommendation:

(*a*) The National Board of Indian Education would be a strong, viable force which would operate according to the desires and needs of the Indian tribes and organizations, be they reservation or urban Indians.

With legislative mandates it might assist in the concept of local control, bearing in mind that local education agencies would be held more accountable for funds spent on Indian students. The National Board of Indian Education would have authority throughout the Nation and be duly recognized from the Federal level and in this instance be more responsive to the Indian tribes and/or organizations.

(*b*) That since the Bureau of Indian Affairs was created by this government for the Indian people it is incumbent upon this government to be more responsive to the Indian. It would be in order then, to reinforce the existing educational programs within the Bureau of Indian Affairs by placing the National Board of Education within the organizational structure of the BIA, based on the premise that the board is of strong nature.

(*c*) The tribal organizations which must be actively involved in the development of the National Board of Indian Education and at this point the Bureau of Indian Affairs is making an attempt to involve tribal participation, it would be in order to involve the tribes in this action. The national board would be of a more unified nature in the development of educational programs geared to meet the needs of Indian Americans.

2. That Public Law 874, while it provides for funds involving urban Indian education, must be amended in order that it provides funds involving the operational costs for reservation schools as well as provisions for innovative educational programs with increased funding. I suggest this amendment due to the fact that most reservation schools rely on Public Law 874 for operational costs.

3. That Public Law 815 be further investigated and that attempts be made to provide funds for building costs and building renovation. The availability of Public Law 815 would enhance the educational environment and the Indian communities environment.

4. That continued efforts be made in Indian education by the Congress and administration in order that all Indian Americans of this country, reservation and urban, be allowed the many rights that have been denied the Indian Americans.

In conclusion, the time has arrived whereby Indian tribes, Indian educators must be allowed complete authority to create programs of quality and excellence for the Indian. I hope that you will give consideration to this testimony and recommendations for I feel it will provide for a stronger legislative act on behalf of the Indian American.

Senator KENNEDY. That is a very helpful comment. Yesterday the Commissioner of Education told us about a new advisory board for Indian education programs. I was just wondering if you were familiar with this board, if you heard about it, if you knew any of the people who were on it, if any of you were consulted in the makeup of the board? Do you have any——

Mr. BUCKANAGA. I have just heard about it. I haven't seen the makeup of it or anything else.

Senator KENNEDY. I was just interested. I think all of us are very much aware of the problems structurally with any kind of advisory board. This is in marked contrast to proposals included in our amendment. I was interested in your impressions of whether this board is existing in a vacuum or whether they had an opportunity to visit with you or any of the people who have been extremely active. I know the work that is being done now in your State and what you people are doing is some of the most creative and imaginative work in Indian education. I was wondering if any of your views have been solicited?

Mr. BUCKANAGA. I would like to make one further comment on advisory boards.

We do have an advisory board on our school activities. We are involved in public education, but we operate a pilot program in the white community, white district, and the advisory capacity is very limited. There is nothing that authorizes them to really make any kind of decisions and I think there has to be some kind of legislative mandate, whether it comes from a Federal level or should it come from a State level, there have got to be some definite kinds of statements which say Indian people do indeed have something to say about their educational program and not only in an advisory capacity, Senator.

Senator KENNEDY. Thank you very much.

STATEMENT OF RUTH MEYERS, BOARD OF EDUCATION, DULUTH, MINN.

Mrs. MEYERS. Mr. Chairman, Senator Kennedy and Senator Mondale, I am Ruth Meyers, enrolled member of the Grand Portage Band of Chippewa Indians. Having lived in the city of Duluth for 43 years, I am one of those "urban Indians" and it is to this fact that I will speak.

I am 45 years of age, which is 1 year beyond the national average lifespan of the American Indians, so being on free time, I will not waste it on empty rhetoric.

In behalf of the Duluth Indian community I want to thank you for this opportunity to offer comments on amendment 6 of S. 659.

But before I do that I would like to summarize briefly for the record some of the actions attempted and frustrations suffered by an Indian group working in a city with little or no help from Indian agencies.

Our Indian population is estimated at 1,000 of a city of 100,000. Our Indian student population is an estimated 425 of a school district population of 24,000. Too long the special needs of the Indian child and his parents in the urban area have been ignored by the BIA, the tribal people who count us on their rolls and the public school district in which we reside.

To attempt to overcome this neglect, we in Duluth have been struggling for over 5 years in a united effort trying to improve the quality of education of and for our Indian community. We have done this, on our own, on a volunteer basis and with no compensation. We have developed some curricula, served as resource speakers on our history and culture to the public schools and community at large. Involved

ourselves in human relations, teacher sensitivity training and we are working with our local colleges to bring about change in their teacher training.

In addition we provide help on an ad hoc basis to the faculty and student body. We have worked to retain our Indian students in college. We are able to bring about the removal from our school district, a negative to Indian people, State history book "Minnesota, Star of the North."

We have, through our efforts secured the position of Indian education advisor for the Indian students and their families in the Duluth school district. We have requested and secured an Indian education advisory committee, elected by members of the Duluth Indian community, 12 years old and up.

The committee is composed of six Indian adults and six Indian students. This committee, though advisory in name, played and important role in the selection and hiring of the Indian education advisor, all audiovisual material relating to our history and culture is previewed by the committee before purchase.

Our school district now does respond to the feelings and requests of the Indian community. It is not all that bad. We are currently seeking through our school district funding for an Indian early childhood education project.

Although we have achieved these gains the process over the year was very frustrating to us. We lacked confidence in ourselves individually because we did not have a working knowledge of our rights. Because we lack the expertise of proposal research and writing we cannot compete for monies available for community projects. We need expertise in proposal writing and could use some help to cut through the entanglement of white tape [laughter] that every bureaucracy seems to throw in the way of effective parent-community involvement.

We have spent much of our time searching out sources of help. Because we are Indians residing in an urban area the usual sources of help, advice, and expertise available to other Indians are closed to us. Think of what we can do with additional assistance.

By the way, the term "urban" Indians bothers me. That phrase has come to mean something other than Indian. It seems to imply a tribe of Indians that someone has found under a rock and no one wishes to claim. I would see the phrase "urban Indians" as used in the bill changed to an Indian or Indians who reside in urban areas.

To now comment on the bill, I would just like to say that regarding Federal boarding schools—I would not presume to speak on that portion of the bill on which I have no right to judge. I do not or have not had children in Federal boarding schools. My only contact with Federal boarding schools was thus: Out of seven children in my family, two went to Federal boarding schools and were the only two of the seven children to graduate from high school.

The parents and community involved ought to decide and speak on this issue. But I do support that portion of the bill dealing with aid to Indian students in urban areas. We would hope to receive aid in the form of monies for the special education needs of our Indian youth above the amount allocated for reservation areas. To develop an education for our Indian youth, not like that education offered the majority of youth today, but accepting the challenge to provide quality

education for all our Indian youth. We would hope to also receive technical assistance and possibly a pair of sharp scissors to cut through all that white tape.

I am in support of the National Board of Indian Education if it has a direct line to the Indian people and not protected by layers of power structure.

I am strongly in support of a parent and community involvement and control in all levels of Indian education.

I support the need for further hearings.

In conclusion, I would like to commend Senators Kennedy and Mondale for their commitment to Indian involvement and Indian control leading to a better educational experience for all Indian people.

I would hope though that my trip to Washington will see better results in Indian education and self-determination than the trips made in the past by my ancestors.

Thank you.

Senator MONDALE. When were you able to cause that textbook to be removed?

Mrs. MEYERS. Shortly after the informal meeting we had in Minneapolis with you.

Senator MONDALE. How long ago was that?

Mrs. MEYERS. 1969.

Senator MONDALE. What were some of the things in that textbook?

Mrs. MEYERS. A couple of photos saying "the Indian is always dependent on the Government for handouts."

The other part had to do with wild ricing. The men would stomp on the rice to remove the chaff and they never bothered to wash their feet and the Indians never bothered to wash their rice before they cooked it, and the Indian exterminated the buffalo. It was really a terrible book.

Senator MONDALE. This was a widely distributed text?

Mrs. MEYERS. It was a book written in 1927 by an educator, it was called "My Minnesota" revised in 1951 and called "Minnesota—Past and Present." It was revised in 1961, called "Minnesota, Star of the North" and it had never been rewritten in any way, and it had been approved or it was on the approved list of the State Department of Education as acceptable.

Senator MONDALE. I don't think Minnesota is unique because since your action, steps have been taken. It shows how incredibly insensitive we are to local people and the importance of local control, the importance of having to consult with the parents of these children in order to make these—this happened recently in, I think, the most advanced state in the Union.

Senator PELL. Thank you very much, I particularly enjoyed your paper and thought your remark about "red tape" was particularly apt.

STATEMENT OF TED MAHTO, CONSULTANT, MINNEAPOLIS SCHOOL SYSTEM

Mr. MAHTO. I will have to cut mine a little short because I would be rather redundant if I went to some other things, the Indian Advisory Board of Minneapolis Public Schools, particularly the executive committee.

We have reviewed the Indian Education Act and talked to Mr. Ray Peterson of Senator Mondale's staff. The following are some of our concerns.

We found the act to be a great piece of legislation. It looks realistically at the problems of Indians and, most important, is a strong thrust for Indian participation in the decisionmaking process.

For example, section 303 speaks of a local formula. We need information on what criteria is to be used to define Indian students. There are a growing number of Indian students who may not be identified by schools as Indian, but who so identify themselves.

Section 304 talks about pilot projects to test the effectiveness of plans developed. We believe that there would be room here for specially designed programs such as the course in Chippewa taught at Phillips Junior High School in Minneapolis. We would need to take a look at special equipment, such as Job Corps material and Dorsa trailers where programs could be specifically adapated to the needs of Indian young people.

Section 305 speaks of hearings. We trust there will be some guidelines for "effective annual evaluation procedures." We agree that Federal funds should supplement, and in no case, supplant. There needs to be guidelines to file reports and this kind of a section may have to be made.

We totally agree that there needs to be maximum participation of Indian persons. The committee, half of which shall be parents and half persons of minority groups, certainly would be in line with the role of our Indian Advisory Committee which already performs that role in Minneapolis.

Section 306 definitely is valid. It would be important that legislators recognize that aid under this act should not be used to count as extra moneys for the schools serving Indian children.

In section 307, the reallocation of funds to agencies which need additional funds, certainly makes sense.

Section 308 defines "Indian." This definition is crucial. We use a sight count in Minneapolis and certainly miss many youngsters who are of part Indian background and who solidly identify as Indians. We need to question the participation of persons in groups like the American Indian Movement, the Indian Federation, or the Indian Advisory Committee, as a partial aspect of the definition of Indian. It seems that our local Indian people should be the ones who decide who is Indian, and not the Department of the Interior, the NEA, or any other group.

Part B speaks of special programs. Section 810 allows for pilot and demonstration projects. We would hope to be able to expand cooperative programs with the Indian community. Some of the aspects of STAIRS, Indian Upward Bound, the Teen Centers, and others, could be developed so that youngsters might attend the basic part of their School day in the public schools with special Indian oriented classes run by Indian groups.

The mobility between the schools and the reservations is such that there needs to be contact and support both at the reservation level and in the city. It would be great to be able to have a situation where, if a family were going back to the reservation for a month or two for some special reason, that a modified homebound approach could be

taken to help youngsters continue in school and not have to suffer because of mobility.

Part C refers to improved adult education. We would certainly want to see the expansion of ABE and the whole approach to cultural as well as educational aspects for adults. It would be great if we could contract to Indian organizations in the community to do the job of selling Indian adults the education.

Part D refers to the National Board of Indian Education. We would suggest that there be at least one or more paid contact persons in the Minneapolis and Minnesota areas. By this, we mean having someone who would not be in Washington full time, but who would be visiting on a fairly regular basis, so that there would be someone from the Minnesota Indian community to carry their concerns to Washington on a regular basis. We would also like to see it worked out where Indian youth could go to each board meeting. We have a number of outstanding young Indian students in Minneapolis. They should be exposed to the national structure and allowing one or two Indian youngsters from Minnesota to attend each board meeting would be one way in which they could become aware of the "power structure" as it operates in Washington.

Under the aspect of miscellaneous provisions, we would like to see a program developed where Indian young adults who are interested in college in the teaching and helping professions, could have a situation where they might work as an aide or teacher's assistant during their junior year in the Minneapolis schools, spend the summer in a reservation situation so they would be more aware of the reservation school situation, and their final year working part-time as an assistant in the schools. This would help these students to be more qualified to make a decision as to where they want to practice their teaching profession, and would help us to have Indian young adults in the classroom to serve as models while they are going to college.

We believe this act is a great step forward. It recognizes the necessity of education for Indian people, but more importantly recognizes that Indian people have a great deal to offer, to the total society. Indian people in Minneapolis are academically, politically, organizationally prepared to meet the challenge and responsibility that this bill would place upon them.

Senator PELL. Thank you very much indeed.

Senator MONDALE. I am very proud of your role and your testimony, particularly the work that each of you are doing in this long neglected field. It strengthens my view that the best way to give Indians a good education is to let Indian parents control the education of their children just as white parents have done from the beginning of the white system of education.

One of the big problems that Americans have is failing to recognize the strengths that you have demonstrated today, your commitment.

Your testimony is very, very helpful and we are going to continue to watch the remarkable work that you are doing. I hope before another generation passes, we can have the kind of legislation we should have had a century ago, and you can come down here for the victory party.

Senator PELL. Thank you very much, indeed.

The next witness is Mr. Lee J. Sclar.

STATEMENT OF LEE J. SCLAR, CALIFORNA INDIAN LEGAL SERVICES, BERKELEY, CALIF.

Mr. SCLAR. I would like to have my written paper introduced in the record and only speak to a few subjects. I am here on behalf of the California Indian Legal Services, which is an OEO-funded legal service corporation providing service to poor California Indians and also on behalf of the Deganawidah-Quetzalcoatl University, which is a new Indian-Chicano university established near Davis, Calif. on a piece of Government surplus property.

We recently transferred the property for the purpose of establishing a university controlled half by Indians and half by Chicanos. The university expects to start classes this summer.

The main points that I see in the bill, I basically believe the bill is a fine bill, the main points in the bill which I believe need changing are the ones dealing with part A's provision providing 874, which I understand the committee does intend to change and, I believe in addition to that, the other thing that needs changing is that—if I could speak first to 874, I think the committee understands the nature of the problem. I have put a little chart on the back of my testimony which I think helps to further explain the difficulty with that. Rather than dwelling on the need to maintain the funds received by 874, I believe although 874 should be repealed, change does need to be made in 874.

The NAACP report on the use of 874 funds that what was happening in the school districts was that local communities would take their State funds, their local tax funds, and their 874 funds, combine them, but not use them equitably throughout the school system. Indians would not get a fair share of the 874 funds in which they were concentrated. I believe the Congress would solve that problem if they would amend 874 as they did Title 1 of ESEA last year in similar fashion in order to require in order for a district to receive Public Law 874 funds on the basis of Indians, that the district would have to distribute its 874 local and State funds equitably throughout the school system, otherwise we are going to continue to have the situation which the NAACP legal defense funds report of local districts giving vastly disproportionate portions of their combined local-State 874 funds to schools which are really less in need of it in terms of the needs of their students.

Another problem in part A, which I see is something I need to correct my written statement about, through a misunderstanding of section 585 and the use of the word "this title" in there, I understand the definition of a local educational agency was going to be changed throughout title 20.

I understand it is not codified in public law, with the result it will only affect a subchapter on bilingual education. The effect of that difference, and it should result in striking the last sentence on page 4 of my statement, is that schools on Indian reservations will not receive any part of funds as a supplement to what I consider the minimal appropriations from the Bureau of Indian Affairs.

In other words, a school on a reservation essentially receives from the Bureau the equivalent of a minimal tax funding. No funds are provided for the special needs of Indian students on reservations and

as part A is presently written, the part A funds would not come to either Federal schools on reservations or a school district that was run by an Indian Reservation, but which was not part of a State public school system. I hope the committee will correct that.

Then, another feature of part A is the definition of "Indian." The definition in the bill as it presently stands certainly is not workable in California. Many California Indians are not enrolled with any tribe, which is not any fault of theirs, it is just that reservations were not created for many Canifornia Indians through a series of historical developments.

Relying on the Secretary to determine who is an Indian is totally unworkable. In the past they have played games, saying sometimes urban Indians are eligible, sometimes they are not, sometimes non-reservation rural Indians are eligible, sometimes they are not eligible. I would suggest a substitution used by the Census Department. That definition is that an Indian is any person of one-quarter or more Indian blood, or any person of any Indian blood recognized as an Indian in the community in which he lives.

That was a definition suggested by a previous witness. I think that would be a workable definition. I think especially if the functions of determining who is recognized by the community as an Indian are assigned either to the local committees established under part A or the National Education Board, there will not be a lot of trouble administering that.

As far as the National Board goes, I indicated to you I believe these new programs in parts A, B, and C should be assigned to the National Board. There are subtle reasons for that. One was raised by Senator Mondale yesterday, which is that for too long the Bureau has created the dichotomy between the urban Indian and reservation and nonrural Indians and it seems to me that an effort should be made to instead of fragmenting those groups into separate programs, trying to bring them all within the compass of one agency.

Now there may be problems with that in terms of who will control that agency, and it may be necessary, if all those groups are brought into the National Board, there will have to be assurance all those groups will have representation. All those programs regarding education should be concentrated in one agency so the voice on education could be unified rather than fragmented.

Also I think it is important that the board have the power to hire, fire, promote and train people without regard to civil service laws, and that Indians have a preference in employment, training, promotion and reduction in force with the National Board of Indian Education and all the agencies under it. Presently the Bureau of Indian Affairs only gives preference to Indians on initial hiring and the civil service laws are also only waived in the case of initial hiring, and the result of that is that Indians find themselves not being promoted as they should be. They find themselves losing their jobs in reduction in force of white people, they find themselves being cut out by civil service.

The Congress tried to solve this problem when it passed the Indian Reorganization Act in 1934, but a court has recently construed that law as not doing what Congress clearly intended it to do and I would refer the committee in that regard to some testimony by Congressman

Olsen last year which is in the Congressional Record and noted in my statement.

I also believe that the section dealing with the establishment of a local board of education under the National Board should be modified so that it will be local communities who will be able to decide when local school boards should be established, rather than the National Board. I believe the language I have suggested in my statement would facilitate doing that. That would be highly consistent with the idea of local Indian control.

Then some other matters include provisions for community colleges. I would ask that the committee reconsider that section to read "institutions of higher education," rather than just "community colleges," so that all Indian-controlled institutions of higher education would come under that.

Finally, there are some very commendable sections in Parts B and C of the bill giving Indian institutions preference in receiving funds under those sections. The preferences are limited right now to certain programs and do not extend to teacher training. The dissemination of educational information or valuations, I would like to recommend to the committee that the provisions be modified so as to extend the Indian preference in the bill to those kinds of services.

Indian educational institutions and other Indian institutions are now able to perform those functions and consistent with the idea of Indian control of education, they should be given the first chance to do so.

Thank you.

(The statement submitted by Mr. Sclar follows:)

STATEMENT

ON

AMENDMENT NO. 6 (INDIAN EDUCATION)

TO S. 659

BY LEE J. SCLAR

ON BEHALF OF

CALIFORNIA INDIAN LEGAL SERVICES

AND (IN REGARD TO HIGHER EDUCATION

AND SPECIAL PROGRAMS AND PROJECTS)

DEGANAWIDAH-QUETZALCOATL UNIVERSITY

California Indian Legal Services
2527 Dwight Way
Berkeley, California 94704
415/845-6171

April 29, 1971

The failures of the present federal Indian education program are well documented. E.g. Report of the Special Subcommittee on Indian Education, Indian Education: A National Tragedy--A National Challenge, S. Rept. No. 91-501 (1969); NAACP Legal Defense and Education Fund, An Even Chance (1971). Amendment No. 6 to S. 659 seeks to correct some of those failings and has the makings of a good law.

THE ADMINISTRATIVE STRUCTURE

The most important portion of the bill is Part D. Part D would establish a National Board of Indian Education to take over all education functions of the Bureau of Indian Affairs.

This step seems necessary for two reasons. First, the BIA continues to mishandle Indian education. For example, many children are still shipped off their reservations to boarding schools in other states. Also, Johnson-O'Malley funds continue to be distributed under regulations that the Indian Education Subcommittee correctly described as illegal. Second, the BIA is controlled by the Interior Department, which is not responsive to Indian needs. The former head of the disasterous Intermountain School was recently made an advisor on Indian affairs to Secretary Morton. The Interior Department Solicitor has ruled, despite 25 U.S.C. §48, that the BIA has no authority to contract with tribes for the latter to assume control of reservation schools. And the Interior Department selected a non-Indian with no experience in Indian law to rewrite the only treatise on that subject.

The one disadvantage of the National Board would be a fragmentation of the Indian voice in government. However, that is the cost of placing Indian education in the hands of people who are responsive to Indian needs and not tied to past mistakes.

On the other hand, no good reason appears for creating a Bureau of Indian Education in HEW to handle new Indian education programs. Those programs should go, instead, to the National Board of Indian Education. HEW is already a vast bureaucracy. Indian education would only get subjugated to other, more powerful influences there. For instance, John Staehle, Assistant Director for Policy and Procedures, Division of Compensatory Education, recently wrote that Johnson-O'Malley funds are for "general education without catagorical restrictions." The National Board would be concerned only with Indians and would provide a unified voice and a fully coordinated program of Indian education.

Certain other changes in Amendment No. 6 should also be made to be consistent with the reasons for creating a National Board. For one thing, BIA personnel should not automatically

move over to the Board, because some BIA employees are part of the present problem. Rather, the National Board should be able to employ only those BIA administrators and educators who have been doing a good job. The last word of line 18 and all of lines 19-21 on page 27 should therefore be deleted.

Second, the bill should contain an Indian employment preference. The Board should be required and enabled to establish standards of experience, knowledge, ability, character, health, and age for the initial employment, training, promotion, and retention of employees; to hire, train, promote, and retain employees under those standards rather than the general civil service laws; and to hire, train, promote, and retain a non-Indian only when no competent Indian seeks to fill the same position. Cf. 25 U.S.C. §472. The reasons for such a law are that the general civil service laws and the Executive orders requiring equal employment opportunity in federal agencies would thwart the desirable goal of having competent Indians manage their own affairs. A very explicit law is essential to prevent a repetition of what has happened in the BIA under slightly ambiguous laws. See Remarks of Representative Arnold Olsen, Congressional Record E 10371, December 14, 1970. Of course, the law should provide that aside from employment standards and the Indian preference all employees, regardless of ancestry, would be entitled to the rights, priveleges, and benefits provided employees of the competitive service under Title 5 of the U.S. Code (the general civil service law).

Third, and in the same vein, the law should specify that only Native Americans could serve on the National Board and that the Board would choose its own Chairman and Vice-Chairman.

Fourth, the National Board should not be given more power than it needs to do its job. Specifically, Indian communities, not the National Board, should have the say as to when local boards of education are to be created to take over federal Indian schools. Accordingly sections 563 (2 and 3) of Part D should be reworded. The rewording should let the National Board establish general guidelines, but it should also make clear both that the power to establish local school districts would be in local communities and that local communities could de-federalize the schools. Section 563(2) might read: "to establish, under regulations of the National Board and as requested by Indian communities, local school districts comprising schools over which the National Board has jurisdiction and control;." Section 563(3) might read: "to establish and support, under regulations of the National Board, local school boards having control and direction over the school districts established pursuant to clause (2) of this section and over the facilities and employees of those districts;."

HIGHER EDUCATION

Indians have an acute need for post high school education at all levels: technical, junior college, college, and graduate. Especially needed are institutions controlled by Indians which will be attuned to Indian attitudes and foster the survival of Indian cultures.

Sections 582-584 are a step toward satisfying that need. Section 584 should not be limited to community colleges, however. In lines 6 and 9 of page 31 the phrase "community colleges" should therefore read "institutions of higher learning." Also, the benefit granted by section 582 should not be limited to institutions on or near reservations, but it should be limited to Indian controlled institutions. A non-Indian school should not secure a waiver of the 5 year rule just because it happens to be near a reservation; and an Indian controlled school should not be denied the waiver because of its geographical location. Lines 18-23 of page 30 should therefore read:

> end thereof a comma and the following: "except the Commissioner may waive the five-year requirement of this clause with respect to an institution at least fifty percent controlled by Indians in any case in which he determines that such action will increase the availability of higher education to Indians."

INDIAN ELEMENTARY AND SECONDARY SCHOOL ASSISTANCE ACT

Part A of Amendment No. 6 -- the Indian Elementary and Secondary School Assistance Act -- would be technically an amendment to the Impacted Areas Law. The provision has nothing to do with federal land, however. Like Title I of the Elementary and Secondary Education Act, which is also an amendment to the Impacted Areas Law, Part A is designed to help local school districts educate disadvantaged children. Part A is necessary, however, because very few ESEA Title I projects have been designed to meet the special educational needs of Indian children. Part A would, to a certain extent, overlap with the Johnson-O'Malley program, if Johnson-O'Malley were properly administered at the state and federal levels. But Johnson-O'Malley has not been and is not being properly administered at either level (see 25 C.F.R. §§33.4 & 33.5; Special Indian Education Subcommittee Report, supra; NAACP Legal Defense and Educational Fund Report, supra), and this maladministration is due in part to the lack of controls equivalent to those written into Part A. Moreover, under section 585 of Amendment No.6 non-federal on-reservation schools which were part of a reservation school system but not a state school system, and which were thus inelgible for Johnson-O'Malley funds, would qualify for aid under the [illegible] and Secondary School

Assistance Act.

Part A does require some modifications, however.

Section 308(b)(2) in Part A should not be adopted at all, for Indians should not be deprived of what benefits they may derive from attending schools that receive funds under the impacted area law in 20 U.S.C. §§236-241. No repeal is proposed of the construction assistance (as opposed to current expenditure) impacted area law (20 U.S.C. §§631-647) in so far as it relates to Indians (20 U.S.C. §§644, 645, 646). In fact, rather than repealing 20 U.S.C. §244(1)(A), 20 U.S.C. §238(e)(4)(A) should be amended to add funds under Chapter III (i.e. Part A) to the federal sources not used in determining the need for impacted area funds. After all Part A of this bill is very much like Title I of ESEA; and districts continue to receive impacted area funds even if they are elgible for ESEA Title I funds. 20 U.S.C. §238(c)(4)(A) even provides that ESEA Title I funds cannot be counted in determining impacted area aid.

Second, Section 308(b)(1)(B & C) in Part A should be left in only if Amendment No. 6 is otherwise changed to provide that federal Indian schools qualify for aid under Part A. If section 308(b)(1)(B & C) were left in without any other chage in the bill then federal Indian schools would not get a supplement to their minimal federal appropriations either under 20 U.S.C. §241c(a)(1)(A), as they presently do, or under Part A.

Third, the definition of Indian in section 308 in Part A is unsatisfactory. Many California Indians are not enrolled members of any tribe or band or the descendents of enrolled members. Many are enrolled only for claims award distributions, and some are not even enrolled for that. The reason for this situation is that about three fourths of the native California Indians never received reservations. Neither should Indians be asked to depend on the Secretary of the Interior's opinion of who is an Indian. At times the Secretary and his agents have denied Indian status to non-reservation Indians and to Urban Indians. This bill should expressly end such discriminations. It should expressly include on and off-reservation Indians, urban Indians (especially those relocated by the BIA) and rural Indians, Indians in all states (including the Indians in New York and Maine), and Indian who are now treated as non-Indians because of termination (which most people, including President Nixon, now recognize as a disaster). A possible alternative to the present definition is the one used by the Census Bureau, i.e. a person of 1/4 or more Indian blood or a person of any Indian blood who is recognized as an Indian by the community in which he lives.

60-433 O - 71 - pt. 4 ---12

On a more technical level, 20 U.S.C. §244(5) should be amended by deleting the period at the end and adding on "subchapter III of this chapter or sections 452 to 454 of Title 25." Also, section 305(a) should include provisions cmparable to subsections 3(C), 8, 10, and 12 of 20 U.S.C. §241e(a). Third, lines 7-9 of page 9 should read: "under section 305, an amount equal to the amount which such agency is elgible to receive under such application." Fourth, in line 15 of page 5 "but" should read "and;" in line 13 of page 8 "half" should read "a majority;" and in lines 17-18 of page 8 "with, and the involvementof, parents" should read "with and involve parents."

SPECIAL PROGRAMS AND PROJECTS

Parts B and C of Amendment No. 6 would make a good law. Two changes are nevertheless desirable.

First, the preference given to Indian applicants should be extended to include certain types of programs to which the preference does not now apply. Indian organizations do or will exist to undertake projects covered by subsections d and e of section 810 in Part B (teacher training, dissemination of education information, and evaluations) and by subsection b of section 314 in Part C (dissemination of adult education information and evaluations). Deganawidah-Quetzalcoatl University, for example, is especially interested in undertaking teacher training. Accordingly, line 19 of page 18 should read "(a), (b), (d) or (e)" instead of "(a) or (b)," and line 22 on page 22 should read "(a) or (b)" instead of "(a)."

Second, no reason exists for taking out the Indian provisions of 20 U.S.C. §§822, 842, or 1412, as section 521(b) of Part B would do. Rather sections 822, 842, and 1412 should be modified to substitute the National Board of Indian Education for the Secretary of the Interior.

CONCLUSION

Amendment No. 6 to S.659 should be adopted with the changes recommended above. If it is, and if adequate appropriations are provided, the United States will have begun to satisfy its obligation to provide Native Americans with real educational opportunity.

NORMAL SCHOOL DISTRICT	DISTRICT WITH INDIAN RESERVATION	PRESENT AMENDMENT NO. 6	CILS PROPOSAL	ANOTHER POSSIBILITY
		Part A of Amendment No. 6		
ESEA Title I	ESEA Title I	ESEA Title I	Part A of Amendment No. 6	ESEA Title I with a special Indian provision
Taxes	P.L. 874	—0—	P.L. 874 + amendment for equitable distribution of local, state and P.L. 874 funds	P.L. 874 + amendment for equitable distribution of local state and P.L. 874 funds

P.L. 874 provides payments in lieu of taxes for current expenditures.
ESEA Title I provides supplemental funds for the special needs of the educationally disadvantaged.
Part A of Amendment No. 6 would provide supplemental funds for the special educational needs of Indians.

Senator PELL. Thank you very much indeed for your testimony.

Senator Mondale?

Senator MONDALE. I would like to ask many questions, but because of the time limitations, I won't.

Are you an OEO funded organization?

Mr. SCLAR. Yes.

Senator MONDALE. You represent Indians, that is your exclusive function?

Mr. SCLAR. Yes. I am not here purporting to represent all the Indians of California. I am here on behalf of my agency. But that is correct, we represent only Indians. In a couple of cases where non-Indians have been involved with matters of Indian law, we have provided some sort of assistance to them.

Basically our agency is designed to provide services on Indian law matters and questions of discrimination against Indians, although we do other things.

Senator MONDALE. Are you affiliated with a law school?

Mr. SCLAR. Not technically. We have a part-time office at the University of California, Los Angeles.

Senator MONDALE. Maybe you dealt with this fully. I know you commented on it. What might we do to prevent the diversion, waste and illegal expenditure of educational funds spent on behalf of Indian education?

I won't ask you to comment on it now because we are short on time. Maybe you could send us a letter as to what might be done. This plagues all the programs. Being a lawyer in that business, I would like to have your opinion.

Mr. SCLAR. I will be glad to submit such a statement.

Senator PELL. One other question. Are there any Indian lawyers in California?

Mr. SCLAR. Yes, we have one in our program, Jim Echohawk, and on the Board of Attorneys we have two Indian lawyers, Fred Gabourie and Casandra Dunn.

Senator PELL. Thank you.

The next witness is Gerald Wilkinson from the National Indian Youth Council from Albuquerque, N. Mex.

Senator MONDALE. I would like the record to show, following the and dates and copy of the letters be included, together with a letter went to various leaders of the Pueblo Tribe, and I ask that the names and dates and copy of the letters he included, together with a letter received from Mr. Joseph Sando on March 16.

Senator PELL. These documents will be included in the record at this point.

Mr. Wilkinson, I understand you are being accompanied by Mr. Dennis Banks, chairman of the board of directors of the American Indian Movement from Minneapolis, Minn.

Senator MONDALE. Once again we have some more good Minnesotans.

Senator KENNEDY. Is there anybody not from Minnesota?

Senator MONDALE. Where there is genius and creativeness, you will find they are from Minnesota. Dennis has been very active. I believe

he is an employee of Honeywell and works with Indian employment situations there.

Senator PELL. Yes. If you will introduce yourself for the benefit of the stenographer. Identify yourself from left to right.

Mr. TAHDOOAHNIPPAH. Cornell Tahdooahnippah.

Miss REEDER. Eve Reeder.

Mr. WILKINSON. Gerald Wilkinson.

Mr. BANKS. I am Dennis Banks, American Indian Movement, and I certainly hope that those comments of Senator Mondale get back to Honeywell.

Senator MONDALE. You will get a raise.

Mr. BANKS. Right.

Mr. WILKINSON. I will begin.

STATEMENT OF GERALD WILKINSON, EXECUTIVE DIRECTOR, NATIONAL INDIAN YOUTH COUNCIL

Mr. WILKINSON. Thank you very much for inviting the National Council to be here today. My name is Gerald Wilkinson and I am a Cherokee Indian. It is an honor for me to be here to testify before this committee. I am not speaking for any particular tribe because only the chosen tribal representatives can do that. I speak to you instead as Executive Director of the National Indian Youth Council, which is an organization of over 7,000 rural and reservation Indian young people with chapters in public high schools, BIA boarding schools, college campuses, Indian reservations, Indian communities and prisons.

NIYC, which is run and operated and controlled by Indian young people, engages in running education programs and civil rights activities. Our basic aim is the protection and enrichment of the Indian tribal community which we know is the basic source of Indian life and Indian destiny.

We as Indian young people place ourselves between the Indian community and those who would harm it and destroy it. We offer ourselves to take the first blows directed at our people.

Since the founding of NIYC in 1961, many Indian young people in pursuit of the ideal of self-determination have jeopardized their personal lives. Others, like Clyde Warrier, founder of NIYC, have given their very life itself. However, we are honored to take this responsibility for advocating for the people onto ourselves, and we feel a closeness to those relatives and tribal members whose names we do not know, but who sacrificed for the people in the past that we might be a people today.

What I tell you today will not be new. For over a hundred years Indian people have been brought here to Washington. Several generations of Indian people have in their own way told you the same things. They have told your predecessors in the Senate, and I suppose that the successors of the Indian people you have today will be telling the same thing to your successors who will occupy those chairs.

Indian people are reconciled to the fact that Congress, which has done so much to try to destroy us and keep us in poverty, will always be here, but Congress must become reconciled also that Indian people will always be here also.

We are not claiming special privileges. We claim what is ours, and we do demand what is due us. We seek justice, without which no brotherhood is possible.

Congress was made by man. Indians were made by God. It is not right that an institution of man should destroy a creation of God.

The concern of this committee is "Indian Education," but in reality, there is no Indian education. There are buildings where Indians enter, there are desks where Indians sit, there are books that Indians read, and there are teachers to whom Indians listen, but there is no such thing as Indian education. It is all an alien system to which the Indian is expected to adjust. It is not run by Indians, but by others. It is not the Indian parents who decide who teaches and what is taught, or how Indians learn. By the time an Indian student finishes public high school or BIA boarding school, he has every sacred notion he has been given by his people assaulted.

"Your religion is bad, your tribal dress is foolish, your native language is a handicap, your English accent is shameful, your tribal dances are ignorant, your skin color is regrettable, but you must live with it. Welding school, not college, is your destiny," and so on in other ways more subtle and less direct.

Gentlemen, you have caused us more pain and more anguish and more damage through the educational system you have imposed on us than you have to all the soldiers you sent to kill us during the "evil days."

It is disturbing that most Indian students drop out of school. It is even more disturbing that those who drop out are often the most intelligent and most sensitive. They see the hypocrisy of the school and in all honesty to themselves can have no part of it. Those who stay are often the ones who are the most plastic and who can conform the best.

Gentlemen, you have presented education to us as a passport, a passport out of the Indian world and away from our human identity as Indians, away from those ignorant people who live in shacks, away from those relatives who drink and need us, away from that pagan grandmother, away from tribal values and traditions that go to make up our rotten selves.

You cannot continue to destroy us and call it education. Unless education can be presented to the Indian people as a means of getting more effectively involved in Indian problems, rather than as a way of getting away from them, the poverty and misery of our people will continue.

In consideration of the bill now under discussion, two basic concepts must be adhered to. The first is that the Indian parents who sent their children to BIA boarding schools must control that school, and in integrated schools they must have a voice proportional to the number of Indian students. This is only just.

There is a strong tendency in that direction now, and any movement away from this idea is a slap in the face to the Indian people. Indian parents have nothing to prove to the rest of society. They care about their children and can direct their education.

Secondly, the sovereignty of the tribal governments must be respected. Indian young people have often been demoralized by the tribal councils. Sometimes their actions or lack of actions have caused Indian people great harm. Some are strong and some are weak, they are nonetheless our leaders.

Though the concept of the tribal council is an imposed one, it has nonetheless become an important institution for our economic and

social improvement. Any move which weakens the institution of the tribal council is a blow struck at the heart of the Indian people, but the need for change based on these two principles is self evident.

For example, John F. Kennedy School at San Juan, Pueblo in New Mexico, it is a public school on Indian land. About half the school is Indian. None of the teachers or staff is Indian. Several months ago students heard over the intercom that Indian students would not be able to attend a movie that afternoon because the Johnson-O'Malley money had run out and each student owed the school $185.

This was explained to the Indian students at a meeting with the principal. The students walked out of the school. Several days later the students returned on assurances from the tribal council that things would be worked out. A few days later Indian students discovered a note in the school yard making fun of the Joms, as the Indian students are known. This note was written by the daughter of the principal.

The principal was disturbed and called a meeting of the Indian students and his daughter. He forced her to apologize. Then he did something that showed a great ignorance and profound disrespect for them. He forced his daughter to go over and hug each Indian student around the neck.

This type of contact is highly offensive to Pueblo people. No wonder they refer to J.F.K. as "Jail for kids." Something must be done about schools which are run on Federal money which comes in because Indian students are there, and do not offer Indians a real education.

Several schools in Oklahoma have a high Indian enrollment, but graduate almost no Indians. They receive Federal funds and no Indian has ever been absent.

Another example of the need for Indian involvement in Indian education is what has apparently happened in Fort Lewis College in Durango, Colo. This school, under agreement between the Southern Ute tribe and the State of Colorado, is guaranteed to provide free tuition on an equal basis with white students. As a result of this agreement, the college was turned over to the State of Colorado. The college was originally a BIA boarding school.

Last year, the president of the college limited Indian enrollment to 10 percent. There are apparently 220 Indian students enrolled at Fort Lewis College. There is a strong Indian studies program and Indian cultural center.

Several days ago, the legislature of Colorado ruled that the only Indian students who would get through the college would be those from the State of Colorado. This involved less than 10 students out of the 220 which now attend. This is a flagrant violation of an agreement between an Indian tribe and the Government.

You don't have to go back a hundred years trying to find these kinds of agreements being broken. There is a total lack of Indian involvement in the planning of the educational program at Fort Lewis regarding the free tuition, and Indian people have found themselves quite powerless to deal with something while an agreement is being broken.

We have not received very much support from the Federal Government in this matter. There are many kinds of problems which are now confronting Indian people in the field of education. We must consider Indian involvement in any kind of program a step that must be done. The Indian world does not change overnight. Any kind of

program which evolves must be something which Indian people are demanding.

In conclusion, gentlemen, let me state that if you want brotherhood with Indian people, first give us justice. Do not cry brotherhood when we are protesting things that are wrong. Do not try to use the word brotherhood as a weapon to deter up from forcefully claiming what is ours.

You cannot institutionalize brotherhood, nor can you harangue it into existence. If you have it, you have it. If you want it to happen, give us justice.

Indian people are suffering. If I seem negative, and do not dwell on the few positive things that are happening, forgive me, but the white people in BIA and our white missionaries are doing such an overzealous job in telling us how much better off we are than in the "blanket days" and "pagan days" that it is hardly helpful for me to dwell on them. They are the experts in this kind of rhetoric.

Indian people are suffering. We realize that a lot of people are suffering in this country. We understand what suffering is as well as any people, and more than some. We are aware that the road you call self determination is long and difficult. The Indian way is a hard way and we are used to troubles.

Indian young people are not rootless. We act in the context of our relatives and our tribal communities. We are not afraid to accept demands put upon us for the common good for the survival of our people.

I remember a relative of mine at a school meeting when I was a little boy. She told the school officials:

> Why don't you give us our children back? Why do we always have to fight with you for their souls. We do not seek to capture the soul of your children. Why do you want to take what little we have left?

After almost 150 years of "Indian education," Indian people are asking for their children back. This is not unreasonable or a great deal to ask. You Senators have the power to do that for us. We have not lost faith in each other. We have lost faith, a great deal of faith, in you.

What we ask of your today is merely the courage to do the right thing.

Thank you.

Senator KENNEDY. A very good statement.

STATEMENT OF EVELYN REEDER, VICE PRESIDENT, NATIONAL INDIAN YOUTH COUNCIL CHAPTER IN INTERMOUNTAIN SCHOOL

Miss REEDER. My name is Evelyn Reeder, I am from the Intermountain Indian School.

On these things I am going to say, I am going to try to be reasonable and be concerned on behalf of students. I am vice president of the NIYC chapter in Intermountain School. There are 100 members. Since we started the chapter, we have been harassed in starting our chapter. When we started our chapter, our principal seemed to turn us down on a lot of things that we wanted to do, and a lot of times we wanted to say things that we wanted to say, but they kept us from saying them, and there are some things that we wanted to change

there that we disagreed with, that the Indians disagreed with, and I didn't like it myself. And some of the things that we mentioned were on such things as Thorazine, the drug that is given to the students who are drunk and they give it to us because when the student gets drunk, they are violent and want to fight back, and Thorazine would place handcuffs on them.

We approached the school board members that came to our school at one time and we tried to tell them that we didn't want Thorazine injected into the students that were drunk, but we couldn't convince them that we didn't want it there.

Also, our grades, we have 15 levels of grades in all the classes, in our senior class we have 15 levels, and in the top grade there is the Senior-1's, and the Senior-15's are real low. They do the same kind of class work that freshmen do in high school in the public school. I have been to a public school for one year and I used to stay in a bordertown dormitory. When I came to Intermountain, a lot of these things hurt me, and couldn't stand it, so I had to take the chance of standing up for my students there, and the fact that some of the students were being discrinminated against by beatings and against our religion, against our culture and against our tradition, and they had such punishments like head shavings—sometimes we couldn't speak our own language.

Our teachers there, some of our teachers are real old and some of our teachers, half of the time they are in class and sleeping and reading a book, and standing there swaying back and forth. We want to see if we can have some people that are in our own standing, that is young teachers who will teach us some of the things that we want to know, and this school, the Intermountain School, is controlled—they are Mormon controlled. There are more Mormons than Navaho. Our employees have more education. We want some of our employees to get promotions to where we could talk with them and reason with them and conusel with them, but some of the students there, they can't counsel with the white teacher because they feel that they are not smart enough to talk to them.

They feel our place and the beatings they get is when the students get drunk—I don't know. They like to take revenge. Things happened in the past to them, they want to get revenge, and they try to fight back when they get drunk, and they beat them up and take them to the hospital and give them Thorazine shots. It makes them relax and go to sleep.

The way we came out with it, it is a dangerous drug and just recently we had four boys who were in jail because they broke into our school kitchen. These four boys broke into the kitchen because they did not have meal tickets. We have meal tickets issued there, and some of the times our guidance counselors refused to reissue our tickets. Our guidance counselors think that we are not even smart enough to go to college. They don't even prepare us to go into society.

In Brigham City, where the school is at, the store times are limited to all Indian students who go to school there and most of the bars there won't sell beer to a 21-year-old Indian.

Also I was chosen valedictorian candidate, and because I wanted to voice up for the students and talk for them, I got off the valedictorian candidate.

These are some of the real needs for the school. I want to ask you if we can put our school back on the reservation, away from the Mormon country, so we can be close to our homes, instead of 500 to 700 miles away from our families. When we want to see our families, the only time we have to go is during the summertime which is only three months, and some of the students, when they get lonely, you know they just go AWOL and sometimes they don't make it back.

We have mail disturbances going on around there, and sometimes we have our own personal items, such as the mail, and these mails are listed and they are recorded in logs and sometimes we don't get our mail because some of the students there, they just refuse to do their detail and just such things like that.

If you don't do something that somebody tells you, they refuse you to get your mail and there are a lot of problems there in our school. Our dormitories, our dormitories, the school is so segregated, and all the dormitories are separated from each other, and some of the dormitories are real poor. These poor dormitories, there are some students that are 21 years old and they are treated like maybe a 13-year-old. We had an Indian Week up at Utah State University on April 12 through 16, and when I came back to the school—we had a panel discussion up there and we talked about some problems down at our school, and they wrote it in the newspapers, and when I got back to the school, I was questioned about a lot of things that happened around there, and they told me it wasn't true, and such things like that, but I know they were true because I have been there for almost 9 months now.

Well, tomorrow, for some of the wrong things that have been going on there in our school to our Indian students, to our Navaho students, there will be a lawsuit filed tomorrow there, and thank you for listening.

Senator KENNEDY. That is about as cruel an indictment of the boarding school system as we have heard, and it certainly substantiates what this committee has detected in its study of the problem, and what even the view of the Bureau itself is as reflected in the BIA report. Still I think, as Senator Mondale said so well yesterday, nothing is being done.

I can share your frustration on this and I am hopeful that we can get something done.

STATEMENT OF CORNELL M. TAHDOOAHNIPPAH, WASHINGTON RESEARCH CENTER, NATIONAL INDIAN YOUTH COUNCIL

Mr. TAHDOOAHNIPPAH. Honorable Chairman, I am privileged to testify today on this bill before your subcommittee. It has far-reaching implications for the future of my younger brothers and sisters and cousins at home in Oklahoma. The benefits it might secure may not affect me, as I will be out of school in a couple of years, but I hope the kind of experiences and what we students have learned from them could help to shape the form and substance of this amendment.

It certainly has been hard. I represent a statistical elite, having got this far in school. When I think of how many of my friends dropped out of high school permanently, and of those that were lucky enough to get to college, and the equally high Indian college dropout rate,

I almost regard myself as would the sole survivor of an airplane crash.

And I have seen many kinds of schools. I am a product of both public and boarding schools in Oklahoma. And I have attended college in Oklahoma and now here in Washington. It has been a long road.

The National Indian Youth Council is composed of student and community chapters all over Indian country. It is probable that we are now the largest Indian organization in the country, we are getting new chapters every day. Our main office is in Albuquerque, New Mex., we have only recently begun operations here in Washington, trying to get funds for our programs, trying to keep people informed back home.

The National Indian Youth Council had the privilege of testifying before the Special Subcommittee on Indian Education 2 years ago. At that time we were the leaders in experimental summer education projects for Indian college students. For the first time, in our Clyde Warrier Institutes in American Indian Studies, an Indian organization had the chance to get the funding, do the recruiting, keep our own books, write up and control the curriculum, and manage our own behavior. In doing those things we all matured as a result. We have the experience of operating our own institutions. How many Federal programs can give us that today?

Then we were informed last spring that some new bill prevented Upward Bound from funding us any more. If we wanted to have any more summer Indian institutes, we would have to cosponsor the program with some white school. And that is not self-determination. We tried it at Northern Oklahoma Junior College. The administrators thought that Upward Bound was a reform program to try to keep Indian children from turning criminal. It was difficult to bear.

When the parent advisory committee tried to exert their influence, the college decided to drop the programs. We think this amendment should make our tribes and our organizations eligible for Upward Bound and any and all other education programs. If this amendment cannot touch Upward Bound, then a rider should be attached to some other bill to accomplish that before another summer passes. We are ready now. But we have no resources.

I want to make one brief statement about the NIYC approach to Indian education.

We know that there is an increased concern about saving natural resources and a new concern for saving some of the natural resources for Indians. We were very pleased with the outcome of the Blue Lake issue, that the tribe got to keep their ancestral shrine. But Blue Lake did not cost the Government anything. And it is a distorted sense of values to call a victory keeping what you already own. In this education legislation we will see our real support in Congress.

Our National Indian Youth Council is also concerned with our dwindling human resources. Our best minds and a million kilowatts of Indian energy is either in prison or working for some white institution. There is a real brain drain. And most of the brain drain is caused by the very limited opportunities we have had to realize ourselves in our own terms.

We have had to either sell out or drop out. Very few Indians have escaped that vicious dichotomy. And make no mistake, there is a growing polarization between Indians who have both accepted a low defini-

tion of themselves and react to it by either spending all their time proving that they're alcoholics and criminals or else prove that they can be as white as anybody else. We all lose.

Our approach to Indian education is based on the premise that there is a third alternative to dropping out or selling out, and that is ordering your educational alternatives based on what makes sense to your people at this time in their history.

We cannot chase buffalo any more, and call that being Indian, but we can evolve for ourselves a reach way of life which combines the qualities of interpersonal life and naturalness which makes us human. And we need our own institutions to do that. We need our own schools, and where our tribes are not able or willing to operate a school, we need a quality control on the kind of public school education our children receive.

So while we welcome the new titles in this amendment which provides for control of public school programs, we do not feel it provides for an adequate structure for establishing and maintaining tribally operated schools.

In particular, we think the idea of a National Board of Indian Education is ridiculous and impractical.

Certainly there are monumental problems within the Bureau of Indian Affairs. We have never hestitated to criticize them, demonstrate against them, file complaints and suits against them, and generally give them a rough time.

Certainly there are problems the BIA has being inside the Department of Interior, with other branches of Interior.

Those structural problems can and should be changed, but it must be changed intelligently. With the recent ferment and controversy raging about us, we must take a hand in stabilizing those problems. However, reform must be aimed at the total operation of the Bureau of Indian Affairs, not just one part. Our problems will not be solved by fragmenting operations in the BIA.

There must be an overall effort and an overall change. Education is nearly half the BIA budget. Education is tied in with the thrust of the rest of the BIA programs. Taking education away from the BIA would be a dangerous abortion at this time.

We already have one national education setup in the White House which we had no hand in choosing. I do not even know how to contact with that board. Will they let me in the White House easier than I can walk in the BIA building?

Besides that, we have now started more communication with the BIA. We are getting to know who we can and cannot trust. We are starting to learn their ways. This is the kind of access we need to build upon, not destroy.

What the BIA needs at this time are new mandates, clearer authorities which will enable them to contract with us. And they need new money that they can contract with. If the Congress will give the BIA new muscle to fight Interior and the courts with, and more money to answer our needs, you can rest assured we will pound on their desks and lurk in their hallways until we get those contracts. We are ready to pay any price necessary for our education, but we need the options available. We are tired of the diet of promises we have been fed by Congress and the White House.

There are political questions which disturb me keenly. I am not familiar with the rules of the Senate regarding jurisdiction of legislation. I know that while this subcommittee is able to produce changes in the situation of children in public schools, I wonder if it can produce changes in programs relating to Federal Indian schools without taking that responsibility for Indian education away from the Bureau of Indian Affairs.

It seems that it would be a proper strategy for the Labor and Public Welfare Committee or the Committee on Interior and Insular Affairs to work together and secure a piece of legislation which would answer public and tribal school needs and maybe work on two bills that complement those areas.

I can understand the divisions which represents the party system and the ideological division which can lead to conflict. But those issues are not partisan issues, they are legal and moral issues, the nature of treaties and the Indians' relationship with this country. If the U.S. Senate cannot accommodate its rules and priorities to life and death needs of Indians, its capability to respond adequately to larger issues must be questioned.

The things we Indians want and need are not always the same, but they represent real needs. We need several approaches to education, depending upon local priorities and local situations. There is one thing we are united on, every one of us, accessibility, accountability, and responsibility for the education of our children and these are things that we cannot and will not compromise.

Thank you.

Senator KENNEDY. This is a very, very helpful comment, particularly your suggestion on Upward Bound. This is something that I think we specifically can do something about.

Your other comments are well taken, and these are precisely the kinds of suggestions we value in this hearing.

Mr. Banks.

STATEMENT OF DENNIS BANKS, CHAIRMAN, BOARD OF DIRECTORS, AMERICAN INDIAN MOVEMENT

Mr. BANKS. Senators, one short statement.

I certainly hope the character of this entire bill is the reflection of the entire Indian population and the statements that I am about to make are coming from the American Indian movement, and I am going to have to address myself to section (d). I really can't address myself to (a), (b) and (c) until, of course, a National Board of Indian Education is to be established. I am thoroughly convinced that the Office of Education—N.S. Office of Education—is not prepared to change the entire course of Indian education, therefore, if the Board of Indian Education is established, then these expressions coming from the American Indian movement I certainly hope are taken as a valid concern. I certainly believe that the National Board of Indian Education is a must, and certainly must come about. It must be separate, but also equal to the Office of Education, and the Office of Education must be responsible to this National Board of Indian Education in regard to the dissemination of historical data of the United States.

Of course a National Indian Board as it is spelled out will be funded by Congress and that there be established a U.S. Indian Commissioner on Indian Education. Also, point number two, that the National Indian Board would be responsible to and for Indian people, tribes, organizations and communities in regard to funding, the administration, the curriculum, the instruction.

Number three, the National Board of Indian Education, I would hope would assume the responsibility of the Johnson-O'Malley Act and all provisional section of public laws which affect Indian education.

Number four, the National Board of Indian Education would be empowered to introduce new bills from tribes, Indian organizations and Indian communities that bring forth legislation.

Number five, that the National Board of Indian Education would also be empowered to establish as well, local State school boards.

Number six, that the National Board of Indian Education would allow construction funds for urban Indian schools. I am sorry I was not here yesterday to hear the Commissioner's report, but one thing that was removed from the BIA educational manual is the term "scholastic retardation." I certainly think this is a very detrimental term. I think the Office of Education did not prepare at this time to handle a massive change, and I think only through the establishment of a National Board of Indian Education, and as I mentioned earlier, the entire character built by Indian people, Indian tribes, Indian organizations could possible be the only ones to establish guidelines for a new way of life.

Senator KENNEDY. Very fine statement.

I am interested in what your reaction is, if we establish the board, where we ought to put it? This is one of the questions. There are alternatives: the BIA, the Executive Office of the President, or the Department of HEW. Those are three possible alternatives.

We are trying to find out and get some kind of input on where this might best be placed. Do you have any views?

Mr. BANKS. I would put it in the Executive Branch, separate from the Office of Education. It can't be touched politically by any other organization or any other department. I think this is what we are faced with now, a multiple client relationship with the Bureau and with the many departments now. I sort of think that administratively there is a conflict of interest.

Senator KENNEDY. If it is independent, it has got to report to someone. Do you want it directly in the Executive Office, reporting to the President?

Mr. BANKS. It would have to come directly underneath the President of the United States. If you put it under any other department, it will be watered down and washed down.

Senator KENNEDY. What is the rest of your reaction to it? Are you in agreement on this? Do you have different views?

Mr. WILKINSON. It should be within the Bureau of Indian Affairs in that the Bureau of Indian Affairs is somewhat different, in that by law it is supposed to be a service predominately in the hands of Indian people and tribal chairman, and other Indian organizations have built up relationships and contracts and relationships and so forth over the years.

Senator KENNEDY. You have given a pretty rough indictment of the Bureau over the period of years in your statement, in terms of what that has produced. Its attentiveness to Indian education has not been great. Certainly that is our conclusion as well as yours. I am wondering if you think that you can establish this kind of board without its becoming just one more appendix in the BIA.

I am interested in this.

Mr. WILKINSON. There is a possibility that the Indian people can take over the BIA in terms of personnel and in terms of actually directing this operation.

Senator KENNEDY. What gives you that sense of calm and anticipation that this is possible, given the statements that were made by the Commissioner yesterday on vacancies that exist there, the rather poor record that the BIA has in terms of employment of Indians in responsible positions, and the facts that Senator Mondale brought out?

In the education part of the BIA over the last 20 months, there have been three or more vacancies. A top job was vacant 14 months. They said they can't find qualified people who are interested in the service.

Why should we be so hopeful? I hope you are right. I would like to be reassured by someone like yourself. You are enormously sensitive and committed and understand the problems which Indians are faced with.

Mr. WILKINSON. I don't want to defend what BIA has done in the past or at the present, especially as far as the International situation goes. On the other hand, I don't have any confidence that any kind of agency can handle these situations either, and it is a question of putting the board in an agency or in a branch of government in which Indians have no influence or control or expertise, or trying to do with what we have.

It is a question of jumping into the unknown.

Senator KENNEDY. Is this "The devil that you know is better than the devil you don't known," so to speak?

Mr. WILKINSON. Yes, in this case, yes. I think it would take an awful lot of safeguard and an awful lot of consultation with Indian people before we would want to kick a lot of the programs, a lot of the decisionmaking powers into another agency. There is no question that the BIA is not doing what it is supposed to do. There is no question that it is not fulfilling its mission to the Indian people.

I think basically what we would like to do is to see it fulfill its mission. It hasn't done so yet.

Senator KENNEDY. There is a long track record of good intentions and a very short record of results. That is why we are obviously interested in doing what you feel is in the best interests of the group.

Mr. WILKERSON. I don't see that the Executive Branch of the Government has a very good track record either.

Senator KENNEDY. In the development of programs, I remember President Kennedy went back and gave Shriver the responsibility to get the Peace Corps organized, and they got it done. There was the NASA organization, the Manhattan Project, independent operations which have reported to the President, that he has a direct accountability for, that he can be called upon to respond to.

I could think of some rather notable successes. I find that a President can get things done when he wants to, and he can get things done particularly when he is held accountable for them.

I think he ought to be able to get things done in the BIA, too.

Mr. WILKINSON. I think what I have said about BIA stands. I am not trying to push the Indian Board into BIA, but I think there is going to have to be a system that Indian people can live with in which Indian people have confidence.

I think that is the basis of consideration, and were you able to sell to the Indian people the fact that the Executive would do a better job, I think the Indian people will support that. I know you have done an awful lot in setting up Indian programs.

Senator KENNEDY. Can you make some comments regarding Indian community colleges? And do you think the board ought to be in the BIA?

Mr. TAHDOOAHNIPPAH. I would be concerned about having access to the man in charge. I don't know that I can be as open with the President as I can with the Commissioner, that is the whole thing.

But on the community colleges, I am not sure if this bill acknowledges existing programs with the Indian community colleges. There are three in existence, and perhaps five or eight more in the planning stage, but the system of Indian community colleges is very important to the Government educationally, to Indian people. What we need is one great Indian university following the traditions of Carlyle, intellectually and athletically. I think this could become a reality if it had the initial support comparable to Howard University.

There are approximately 40 black colleges in the United States, and they are funded in the area of $130 million from HEW. The community colleges would have a great input providing services to the university. They need some new degree programs. They need to have something in the line of a center for the studies of basic human problems.

I think this is something that Indians need. I would support as many Indian colleges as we could get run by and controlled by Indians.

Senator KENNEDY. Very good.

Senator Mondale?

Senator MONDALE. I was interested in your comment about not having much confidence in the National Indian Board. I must say that I share some of that concern, not because it wouldn't be a good board, but how does it get the power, even if we give it to it? We have school boards in major cities, boards elected by the people, boards which have nothing to say. I think this would be far more valuable than the advisory committees that are selected haphazardly or not consulted.

I think the heart of the issue is the control of the local systems, live boards, elected by the Indian people and with the power over their schools, to do the things that all boards have to, to hire, fire, develop curricula, pass on curricula and the rest. That is the heart of it. I don't know why that would be so mysterious, since the key to the education of most American children is elected school boards.

Somehow when it comes to Indians on reservations in the Federal schools, it is very difficult. Yesterday, you may have been here, we heard that it has been the policy of the Government for some time now to have locally elected school boards running these Federal

schools. Somehow, strangely, it never happens, or only occasionally it happens: six Indian school boards, at the maximum, now exist.

It was suggested that the Indians are fearful and reluctant to become involved in this way. Would you comment on that?

Mr. TAHDOOAHNIPPAH. Historically, the Indian has come from a stone age to a technological age faster than any other race of human beings in the world. When you start talking about school boards, you are talking about degrees of political sophistication and a level of social development, so I would think that there is some hesitancy on the part of many Indian people also, because how are you going to run a school board when there are children from a thousand miles away in this school system? You don't know—they are very backward on culture and it is extremely difficult.

I still think that we have to also concern ourselves with the accountability of such a board.

Senator KENNEDY. Thank you very much. It is very powerful testimony. It is very helpful to us. I appreciate very much your coming here.

The next witness, Mr. Dillon Platero, president, Navajo Indian Education Association.

Mr. MONDALE. I would like to include in the testimony following the testimony of NIYC, this letter.

(The material referred to may be found in the files of the subcommittee.)

STATEMENT OF DILLON PLATERO, PRESIDENT, NAVAJO INDIAN EDUCATION ASSOCIATION

Mr. PLATERO. I thank you very much, Senator Kennedy and Senator Mondale. I appreciate the opportunity to appear before the committee.

I am going to be dwelling mostly upon the vital areas pertinent to the Indian Education Act, and I might go over the five areas, and then I will make some general statements regarding the Indian Education Act.

The first part, I think a clearer definition of who is to be considered an Indian for purposes of this legislation.

Secondly, a decision as to just where the locus of operation will be for the new organization.

Three, clarification of the degree of actual authority the national board will possess.

Fourth, clarification is to how the board members will be selected. I would say, it should be proportional to the number of tribal members.

Five, authority to be given to parents in dealing with impacted areas should be presented in more detail.

It gives me great pleasure to appear before you today to comment on the National Indian Education Act. Having carefully studied it, I want to commend the Subcommittee on Indian Education for the depth of understanding they obviously have and for the general soundness of the proposal. By and large, one can certainly see much of value in the legislation.

Senator KENNEDY. I regret to interrupt you. I have to leave now. Senator Mondale is going to chair the hearing. I will look forward to reading your comments. I know you bring unique background experience to these hearings as the director of Rough Rock, which we

are extremely interested in, and where I had a chance to visit personally.

I hope you will indulge me, and I will look forward to reading your testimony. I looked over your summary points. Many of them are very sound and very useful suggestions and I look forward to reading the rest of your testimony.

Mr. Schifter is here as well, and I will express my apologies to him, if you will continue.

Mr. PLATERO. I would like to make a statement here which should preface my reading of the testimony, and this is the great interest that the Navajo chairman and the vice chairman and many members of the Navajo tribe who are interested in improving Navajo education had in getting together with me to get our comments in a written form. I try to cover these areas and I do have some personal comments which I would like to make after reading the testimony.

Senator MONDALE. Very well.

Mr. PLATERO. Specifically noteworthy is the recognition given to not only reservation communities, but to Indians living in urban settings, in rural off-reservation settings, and on State reservations.

This does, however, bring to the fore one item which will assume particular importance for nonreservation residents: What constitutes an Indian? The current working definition is, to some extent, tied in with place of residence. Provision of educational opportunites under the auspices of the National Indian Education Board would require some rethinking of who is and is not to be considered an Indian.

It is axiomatic that the Federal Government has longstanding contractual obligations to Indian peoples to provide their offspring with educational opportunities. No one questions this.

Just where the apparatus should be located in Government to best fulfill these obligations has, for some time, been in question. It would appear that the committee has found a resolution that should be at least acceptable to all concerned.

However, the actual location of the new board, and their working headquarters is of paramount importance. The unknown element in the relationship between the deputy commissioner of education and the commissioner also gives same pause. With a commissioner understanding of the requirements of Indian peoples, and with extensive freedom of operation afforded to the deputy commissioner, such an arrangement could work well. One wonders though if the potential for success doesn't hinge too much on the personalities of these two people. Independence of action within the general framework of the Federal Government is the sine qua non to successful operation of this plan.

Concerning the proposed National Board of Indian Education, I cannot help but have mixed feelings. The basic idea of such a board is applauded and something that can be of immense help to Indians.

The manner in which it is established and in which it functions, that is the responsibilities with which it is charged, is all important.

Of particular importance is the need for this Board to be advisory in nature rather than a new bureaucratic structure which dictates to Indian people. The concept of local control over their own affairs for Indians must be established and strengthened.

I cannot, therefore, too strongly emphasize the need for this Board to function in an advisory capacity rather than in a policymaking

and/or legislative manner. The latter functions should be the responsibility of local Indian groups. The degree of sophistication of Indians in matters affecting their children's education is sufficient to bring about the acceptance of such responsibility—now.

Senator MONDALE. Would you yield? You have the unique experience of being one of the first to serve as a director of a school under an elected Indian School Board, isn't that correct?

Mr. PLATERO. Yes.

Senator MONDALE. Rough Rock has been in operation how long?

Mr. PLATERO. 5 years.

Senator MONDALE. Is the Board able to deal competently with the education of their children?

Mr. PLATERO. Certainly.

Senator MONDALE. You found they keep an interest and dedicate themselves to a good education?

Mr. PLATERO. Much more so than the boards which I had an opportunity to observe in Arizona and New Mexico and up in Colorado, that is in cities and in rural areas and I feel that with time, that they will begin to understand education in such a way that you don't have to mention what some of the areas of studies the kids might be involved in.

It gets pretty technical, think, but as we mentioned, sophistication comes about with the experience that they gain while they work with the school in that capacity.

Senator MONDALE. Do you think that the community that you serve would want to go back to the old system of federally run schools in Washington?

Mr. PLATERO. No.

Senator MONDALE. Is there any doubt about it?

Mr. PLATERO. No.

Senator MONDALE. You heard, I think, the response of the young man from New Mexico on the question of locally elected school boards. He indicated he saw great problems with that.

Would you respond to that question?

Mr. PLATERO. I think in different situations, with the Pueblo Indians where you have mostly public schools, and then in a situation like the Navajo reservation, where it is on the reservation and it is in a Navajo community and it is completely funded by the Bureau of Indian Affairs that supplies the base funds for the operation of the school, I would certainly have, I think, a lot more and a firmer belief in the Indian people that they can certainly take care of the situations should they arise and should they be faced with it.

In other words, I am saying that I think they can without any doubt, do a much better job.

Senator MONDALE. Do you think the Bureau has been encouraging this movement for locally elected governing bodies as much as they could, or are you in a position to pass judgment?

Mr. PLATERO. I have had the experience of working with several communities who have indicated a strong interest to control and operate their own schools and it has been an unsuccessful venture as far as getting these schools to come under control of the local community.

I think mainly there is fear, they feel—by "they" I mean the Bureau of Indian Affairs feels threatened that the local community will take over these schools and I think there is much more than that. There is a feeling where the local people who are principals, who are teachers, of some reluctance to have this happen simply because they aren't interested in their careers. They have time that they spent there. They have some security and I think this has a lot to do with it.

But I think much more interesting to me and what we have practiced at Rough Rock is that no one, even the director of the school, is eligible for no more than a 1-year contract, and the board then acts on whatever the performance of that person who is in whatever position, so that in this type of thing, they either produce much better performance, possibly, and not sit on their laurels, which in part the accumulations are security and so forth.

Of concern is the manner in which the members of the national board are selected. There must be recognition of the fact that large tribes merit a larger voice in the deliberations of the board commensurate with their large populations.

In the section dealing with impacted areas, the degree of authority given to Indian parents should be spelled out in more detail. Such authority should be real, with options for action resting with the people rather than (a feared possibility) a matter of merely giving consent for actions initiated and executed by school authorities.

I think I want to point that out that in many cases we have applications that are processed and the Indian people are used to the extent that you have an ad hoc session in which you approve of the program and then your involvement after that is practically nil, so that more authority needs to be given to the parent committees in this sense.

The granting of such authority is excellent, the only need is to so define it as to insure that Indian people get a chance to actually exercise it.

The provision for the making of grants to different Indian groups directly is very good. Lack of ability for such groups to get funds directly has in the past hindered the operation of innovative groups, including Rough Rock Demonstration School.

While the upgrading of the Santa Fe Indian Art School to a 4 year college may be desirable, I would emphasize the need for primary consideration to be given to the institutions growing out of the actions of Indian peoples themselves. Thus such an institution as the Navajo Community College, whose Board of Regents are Navajos operating their own college, should be given high priority for financial assistance in becoming a 4 year college.

A definition of "local education agency" should be promulgated which recognizes the independent creations of Indian groups established for the control and management of their own educational institutions.

I am thinking in terms of Rough Rock Demonstration School which is a Rough Rock Corp. The thought concerning this, I think, must be spelled out much clearer so that these schools are included. I think with your good help last year we were successful in putting through the Education Act so that nonprofit corporations such as Rough Rock Demonstration School was eligible.

Senator MONDALE. How much do you receive?

Mr. PLATERO. Direct grants from the U.S. Office of Education.

Senator MONDALE. How much did you receive?

Mr. PLATERO. $150,000.

Senator MONDALE. That is quite helpful?

Mr. PLATERO. Yes, this is why I point out that many of the Indian agencies or schools at this time do not receive sufficient grants in order to bring about a real innovative program.

An underlying fear remains with me as to the manner in which funds might "shrink" from what the Congress appropriates for various tribes to what they actually get. Steps should be taken that overhead is kept at an absolute minimum and that there is no diversion of funds. The intent of Congress must be observed in actually getting the funds to the groups for whom they are appropriated. The discretionary power of administrators to allocate funds should be practically nil.

Of especial concern is the question: Where does ultimate power rest? While we would expect that the Deputy Commissioner and the national board would work together in harmony, one should be prepared for the contingency that such might not always be the case. If such an undesirable condition should arise, just who has the final word? It is hoped that local tribal units would have a large voice in Indian affairs and that their desires would carry great weight.

We are all aware of the far reaching impact this proposed Indian Education Act will have. The manner in which it seeks to establish and maintain local control over education, to give Indian people not just a voice in Indian education but "the" voice in Indian education is heartily commended.

The closer we get Indian people, the consumers of educational funds, to the Congress, the dispensers of educational funds, the better.

Our Indian people are ready, the subcommittee has done a sound job; let this proposal be implemented with all due regard to the rights of Indian peoples to be masters of their children's educational destinies.

Senator MONDALE. Thank you very much, Mr. Platero. That statement is of the high quality that we have come to expect from you. I don't think there is anything that has happened in this country in the Indian education field that has been a greater inspiration to me than the work that you are doing at Rough Rock.

It is such a simple thing to let the Indians do for their children what everybody else does for theirs, and yet to propose it seems to create such furor, I don't quite understand it.

One of the problems we are facing is the impression that we are very anxious to impose our will on the Indian community. Basically what we want to do is to let go and let the Indians run their schools. Yet you have heard today, and we have heard from some others, the feeling that we are moving too rapidly, that we are not listening to all sides, that we ought to have a new set of hearings, after the most exhaustive hearings any committee has had in the field.

The Indian Education Committee traveled more miles and took more pages of testimony, and viewed directly more facilities than any committee with a comparable problem, and we put together a bill and yet it is said: Now we better go out and start again—and Ruth Meyers said she hoped her grandchildren wouldn't be testifying back

here; if we can pass a good bill, her granddaughter won't be in here asking for help.

We are being asked to do something we are incompetent to do: Find out what the Indian community wants. I don't know. I am not an Indian. I can't speak for them. I wouldn't try.

Can you help us sort out how we should proceed now, the timetable and so on? This is not a fair question, I know, but it troubles me deeply.

Mr. PLATERO. Five and a half years ago people had the same feeling about Rough Rock and Navajo reservations, and the thought that Navajo people who didn't even have a year or less of schooling could sit on boards and actually make decisions and make the project a success. People fear failure and any new idea, I think, is going to certainly promote fears and uncertainty.

If Indian education is to make new inroads, to be creative, to be innovative and to improve its total programs by putting it in the hands of the Indian people, I don't see any reason why new ideas shouldn't be tried out. We have certainly worked with the Bureau of Indian Affairs and we have certainly experienced many set backs and continue to have these setbacks even today in some places. We have some successes, but I think overall there is nothing wrong really to try out some new ideas, even if you have set aside the education program away from the Bureau of Indian Affairs, and let the Indian people, let the people through their representation of various tribes take the helm and see what can be done.

I don't see anything wrong with that. I know it is simple to make these statements.

Senator MONDALE. I see an awful lot wrong with trying it any other way. It is significant that Rough Rock, governed by a board of elected non-English-speaking members, I think was the first to produce textbooks prepared by Navajos with Navajo culture and Navajo illustration. Am I right in that?

Mr. PLATERO. Oh, yes.

Senator MONDALE. I said yesterday you have more educated Navajo teachers in your school than in the Federal school systems combined.

Mr. PLATERO. In proportion to the number of kids you have in school.

Mr. MONDALE. In other words, they like to be a part of this system?

Mr. PLATERO. I might mention of 178 personnel that we have at the school, 154, I think, are Navajos.

Senator MONDALE. A slightly higher ratio than in some of the Federal schools?

Mr. PLATERO. Definitely.

Senator MONDALE. Would you submit the source of your funding and in what amounts? You can send us a letter. If you would rather not——

Mr. PLATERO. No, it is no secret. We get the Federal, the GAO people and we get other people who examine our books off and on, so that it is not a secret to anybody and I can certainly say so here.

We get our funding from the Bureau of Indian Affairs which is the base fund, we get for special programs, our experimental programs, $150,000 for Bilingual Education, this is the U.S. Office of Education, from title VII, and we get funds from title I in the amount

of $68,000 for dorm parents and for field trips for students. We get $130,000 from——

Senator MONDALE. Is the dormitory aid and assistance new?

Mr. PLATERO. It is new. I think in many places it is being implemented based on the success that we have had at Rough Rock.

Senator MONDALE. That is right.

Mr. PLATERO. We get $150,000 from the U.S. Office of Education, fallthrough, this is direct funding and title I funding which is eight-nine-one-zero, is through the Bureau of Indian Affairs.

We have a Navajo medicineman program where older medicinemen train younger medicinemen, which the National Institute of Mental Health funds. So we went right to the source at that time. So it is recognized by them that these programs are needed and the therapy is effective with Navajo people and Navajo kids.

Senator MONDALE. You are running one of the most remarkable school systems, and you are one of the most gifted "grantsmen" I have ever met in my life. You found all the pockets and cut a hole in them.

Thank you very much.

You are a member of the National Association for Indian Education?

Mr. PLATERO. I am the first vice president.

Senator MONDALE. Thank you very much.

Our final witness is the long suffering and patient Dr. Richard Shifter.

STATEMENT OF RICHARD SHIFTER, ESQ., GENERAL COUNSEL, ASSOCIATION ON AMERICAN INDIAN AFFAIRS

Mr. SCHIFTER. I am Richard Schifter. I am an attorney in Washington, D.C. I am here as general counsel for the Association on American Indian Affairs.

On behalf of the Association on American Indian Affairs I would like to express our sincere appreciation to this subcommittee for the excellent work which has been done in concentrating public attention on the problems of Indian education. The association has for many years been deeply concerned about the fact that among the handicaps with which young Indian people start in life is the lack of opportunity to obtain a good education. It is indeed high time that the Congress of the United States focus on this problem and attempt to provide solutions.

Of course, we must recognize that the Congress, which can only legislate, cannot assure Indian people of improved educational opportunities. The other side of the coin is competent and effective administration in the executive branch, a followthrough on a mandate from the Congress. However, the Congress can most certainly provide the blueprint for effective administration, and, above all, the founds that are needed to carry on a successful program. Thus, the association is in full accord with the basic principle underlying the amendment No. 6 to S. 659.

As the board of directors of the association has not been able to take a position on the specific provisions of amendment No. 6, my testimony on the association's behalf cannot continue beyond this point. However, I have been urged by a staff member of this subcommittee to present my own thoughts on the specific provisions of amendment No. 6 and shall now do so.

As far as my personal qualifications are concerned, let me say that I have worked with American Indian people for almost 20 years and have also served on a board of education, namely the State Board of Education of Maryland, for the past 12 years.

The most far-reaching change which amendment No. 6 proposes is contained in part D, which would shift the education functions of the Bureau of Indian Affairs to a new National Board of Indian Education. The basic principle of separating the education function from the other functions of the Bureau of Indian Affairs is most desirable.

Education is in many ways the most critical function of the Bureau of Indian Affairs. It uses up approximately one-half of the Bureau's appropriations. Yet, I would guess that as far as the day-to-day work of the top administrators of the Bureau of Indian Affairs are concerned, education must take a backseat in their time and attention when compared to problems of less long-range import, but which are forcefully brought to the attention of the administrators because they are part of the crisis of the day and because impatient adults insist on immediate answers.

Yet, I would be concerned about having the National Board of Indian Education dangling somewhere all by itself in the national bureaucracy without spokesmen with clout being able to defend it when it comes to the allocation of dollars in preparation of the President's budget. I would be concerned that the national board and its administrators might be eaten alive by more experienced and sophisticated executives in the administrative jungle.

My own suggestion, which I described briefly in an article in the South Dakota Law Review last year, is to create an Office of Indian Services headed by an assistant secretary, who would have responsibility for three bureaus, a Bureau of Indian Education, a Bureau of Indian Health, and a Bureau of Indian Social Services and Natural Resources. The assistant secretary would be a person of sufficient standing to go to bat for the bureaus under his jurisdiction.

I have not said in which department such an Office of Indian Services should be located. It is my belief that in the long run Indians would be best served if the office were in the Department of Health, Education, and Welfare, as its programs would be funded there more readily. However, as long as Indian people oppose the transfer from the Interior Department to HEW, it should not occur.

Let me interject in that context. Both you and Senator Kennedy have asked the question about the possibility of lodging this board in the Office of the President. I frankly think it won't work. Let me give just a few examples.

Senator Kennedy referred to the experience of the Peace Corps at the beginning of President Kennedy's administration. There was something rather unique about that experience in that the Peace Corps was at that time headed by the President's brother-in-law, who, as a matter of fact, happens to be my law partner, a most unusual person, who could just, because of his relationship with the President, be able to hold his own. Once Mr. Shriver was no longer in that position, the Peace Corps ended up elsewhere, no longer in the White House.

The Manhattan project was a very unique experience, based on

the fact that President Roosevelt recognized its vital importance to the survival of the United States.

My own direct exposure to this problem was as counsel to Senator McGovern when I drafted the Executive order signed by President Kennedy in 1961 establishing that office in the White House. The weakness in the months that followed—Secretary Freeman, Secretary of Agriculture, as head of the Department was able to exercise much greater authority in the field than George McGovern was able to do, even though he worked in the White House, and before long we were squeezed out of the White House, too.

It is simply the way Washington works, the way the bureaucracy works. I would think the chances of getting the kind of program that is needed here would be greatly enhanced if Indian education were placed in a department where an Assistant Secretary, and ultimately the Secretary can go to bat with the Bureau of the Budget.

At any rate, wherever the Office and its Assistant Secretary are located, one would hope that the Assistant Secretary would have free access to the Cabinet member in whose Department he is located and through him could make the kind of representations to the Office of Management and Budget that would result in budget allocations commensurate with the need.

The second suggestion which I would like to offer concerning the National Indian Education relates to the nature of its mandate. In this context let me say that I agree with much of the criticism which has been directed against BIA schools in recent years.

However, I do not believe that the Bureau of Indian Affairs should be considered unique in providing education of poor quality. Looking across the country we find that suburban schools have by and large been able to provide education of reasonably good quality, but that many urban and rural schools have lagged far behind.

I am inclined to believe that the record of the Bureau of Indian Affairs is neither significantly worse nor significantly better than that of a good many similarly situated rural school systems.

What I would hope is that in setting up a new Indian school administration, the Congress commit itself to create thereby an exemplary educational system, which could indeed serve as a model for the Nation. A great many Indian reservations exhibit the disadvantages of both our rural depressed areas such as Appalachia, with its geographic remoteness and lack of economic base, and of the inner city, with its problems of cultural alienation and social deprivation.

These double disadvantages can serve as double incentives to do better, for a federally funded school system to serve as a model that would not only help Indian people but that can light the way for State-operated school systems which must deal, on the one hand, with the problems of rural poverty and, on the other hand, with the problems of urban social disorganization.

Thus, I would urge that the enabling legislation contain a declaration of policy which would commit the Congress to use the Indian school program as a model for the nation. I submit that such a declaration should place particular stress on the need for an early childhood education program, a vocational education program of high quality and a comprehensive program of psychological guidance.

My third recommendation concerning part D relates to the problem of job security for the present staff. If there is any bureaucracy in which the greatest power is vested at the bottom rungs of the hierarchical ladder it is the education bureaucracy. It is in the last analysis the classroom teacher who makes or breaks any educational program.

If the new National Board and the local boards are to be given a real chance to make better educational services available to Indian people, they must be given the authority to clean house. Like every other school system, the BIA system has good teachers and it has bad teachers. Many of the latter category are now protected by civil service regulations concerning employment rights.

These regulations should be suspended temporarily to permit the replacement of unqualified and incompetent teachers by teachers who have the desire to give of themselves and the competence to help young Indian people. We may very well be entering an era in which an increasing number of qualified young men and women will be anxious to work on Indian reservations. The new National Board and the local boards should have the power to avail themselves of their services.

In that connection let me add I would certainly not find it at all objectionable to provide the kind of amelioration of this set of circumstances that the head of the National Education Association recommended.

Senator MONDALE. What did you say? That you endorse the NEA?

Mr. SCHIFTER. The head, or vice president of NEA expressed his concern about the possibility of incumbent teachers being fired, and suggested that there be some other opportunity for them to find jobs. I think that is fine, but the opportunity ought to be there to fire them.

In section 563, amendment No. 6 does make provisions for local school boards on Indian reservations to exercise administrative control and direction over Federal Indian schools. I would recommend, however, that the language of Section 563 be strengthened and that the legislative history make it clear that the regulations in question are expected to vest real decisionmaking authority in local school boards, rather than having them act as mere fronts.

While Part D deals with the education of Indian children in Federal Indian schools, Part A deals with the education of Indian children in State-operated schools. The concept of amending Public Law 874 and the Elementary and Secondary Education Act in this manner is a good one. However, special arrangements should be made to fund the program of those school districts which, because of their large Indian enrollment, depend on Public Law 874 for their basic educational program. You, Senator Mondale, have indicated you are prepared to have that done.

Let me add that I cannot see the purpose of administering part A through a Bureau of Indian Education in the Office of Education as provided in section 565. I would recommend that the program funded through part A be administered by the National Board of Indian Education and that specific provisions be made for affected Indian communities to influence the distribution of the funds in question here, so that there would be absolute certainty that monies intended for Indians are actually spent for their benefit on programs approved by the Indian people.

What I have just said about the exercise of control by affected Indian communities over the distribution of funds made available by part A of the new law should apply equally to Johnson-O'Malley funds which, under the provisions of section 564, would presumably be appropriated to the National Board of Indian Education.

Just as the National Board of Indian Education should administer the funds authorized by part A, it should also administer the funds authorized by parts B and C. With regard to part B, let me just add that the words and concepts on which this part of amendment 6 are based sound great on paper. However, after some experience with similar programs I have soured on these invitations to grantmanship.

After a project has been funded and has been carried out, a report on its results is often filed someplace and forgotten. Far too often a similar "innovative" program is funded again and the wheel is reinvented once more.

I would hope that whatever agency administers part B will take great care to see that any projects developed under that part relate directly to programs carried on under parts A and D and that the results of a successful innovative project are quickly disseminated, so that they can be taken advantage of in planning the regular educational program. (The doubts I have expressed do not apply to section 810(d), the section of part B relating to the training of educational personnel serving Indian children. Funding for such programs is very definitely needed.)

As I have said at the outset, the Special Subcommittee on Indian Education has done well in directing attention to the needs of Indian schoolchildren. The Association on American Indian Affairs hopes that the Congress will now accept this subcommittee's recommendations for action.

We are, of course, confident that before making your final recommendations you will take into full consideration the thoughts and recommendations of the authorized representatives of the Indian people themselves, and will hold field hearings to obtain these thoughts and recommendations.

In regard to this last point, Senator, I think the answer to the question that you posed is that you don't have to go on indefinitely, but once you have a legislative draft where all the specifics are really before us, it would be a good idea to have one more run at it and let Indian people comment on it.

Senator MONDALE. Very good. I would like to ask many questions, but it is now almost 1:30. We may submit questions to you which you can respond to in writing.

Thank you again for your characteristically able performance.

We have Mr. Stanley Red Bird, chairman of the board of directors of Sinte Gleska College Center, also representing the Lakota Higher Education Center at Pine Ridge; Mr. Michael Rogers, chairman of the Owens Valley Paiute-Shoshone board of trustees, and Mr. Ward V. Anderson, of the Owens Valley Indian Education Center, of Bishop, Calif., who have come here at their own expense. One of them was financed by votes of a tribe and sent out here, and I deeply regret—every once in a while this happens—I deeply regret that I do not have the time to hear these statements personally, but we would like to put them in the record, and you have my assurance that I will read them personally.

If we have questions, we will send them to you in writing and ask that you respond by letter. I shall instruct the staff especially to give special concern to those statements.

Your statements will be distributed individually to each Member of the Committee, which may mean it will be read more widely than those that have been heard today.

I deeply regret this, but at this point I will submit those statements for the record if you will bring them up to the staff.

(The statements of Mr. Red Bird and Mr. Anderson are as follows:)

STATEMENT BY STANLEY RED BIRD, CHAIRMAN, BOARD OF DIRECTORS, SINTE GLESKA, COLLEGE CENTER, ROSEBUD RESERVATION BEFORE THE SUBCOMMITTEE ON INDIAN EDUCATION OF THE COMMITTEE ON LABOR AND PBULIC WELFARE, U. S. SENATE, APRIL 29, 1971

As representatives of the Pine Ridge and Rosebud College Centers are very happy to see this committee concerned not only with the educational needs of our people on the elementary and high school level, but also with the post-high school training our tribes feel is the key to true Indian self determination and leadership. While we have authority to speak only for the Pine Ridge and Rosebud Sioux people, we believe that other tribes, and indeed all rural minority and disadvantaged peoples, would second our testimony.

Because, however, of the prime concern of this committee and of Amendment 6 of Senate Bill 569 with the problems of Indian Education below the college level and because of the dramatic pace of our people toward rebuilding our societies in the past few years, we feel that the intent and much appreciated support of this subcommittee for Indian community colleges and higher education might best be expressed through the backing of certain types of amendments to Senate Bill 545 introduced by Senator Harrison Williams or similar bills.

Senate Bill 545 in its present form provides for the support of community colleges through direct grants to the several states. However, Title II, Sec. 202 (a) (1) of this bill also provides for an allotment of funds by the Commissioner of Education of "not more than

5 percentum thereof among Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands according to their respective needs...." It is our strong recommendation that Title II Sec. 202 (a) (1) and all parallel provisions of the bill be amended to include direct funding to Indian tribes recognized by the Federal government for community colleges as defined in the bill. Also that the percentum of funds be raised to a minimum of 7 per centum to cover the costs.

The Pine Ridge and Rosebud Centers request such amendments to Senate Bill 545 as an alternative to the legislation presently under review because already three reservations have community college operations in existence and others are planned or probable. It is our feeling that assurance of funding with adequate Indian control can most appropriately be had under this Bill concerned with the total national need in the area of community college education. In order, however, to guarantee the local control of Indians over their own affairs supported by this Committee, Congress, and the present administration and to assure that appropriated funds are actually available to Indians, we feel it absolutely necessary that legislation specifically earmark funds to be directly granted to Indian tribes according to need. Such assurance that the will of Congress for Indian participation benefits, we feel necessary in view of the difficult circumstances of higher education generally and the consequent danger that monies channelled through the respective states would reach our Indian tribes only with the greatest luck or altruism. Our experience with other such channelled programs leads us to this recommendation.

It is also imperative that our Indian societies and people be actually given the real control of their institutions which is being verbally offerred. But long experience in all societies has shown that real control follows only with the degree of control over financial resources.

The representatives of the Pine Ridge and Rosebud College Centers are aware, however, that this committee is concerned to know what the needs of our people are in higher education and what is being done, for instance, at Pine Ridge and Rosebud and what is needed there. We can only hope that you will be able to find the legislative means to meet our needs. We would therefore like to testify at this hearing regarding the operations of our centers with the strong belief that our situation represents that of many other reservations and rural disadvantaged groups. We would also like to request permission to testify to such bills as S. 545 or its equivalents whenever hearings are held.

There are four basic higher education needs to be met on the Pine Ridge and Rosebud Reservations:

(1) To create opportunities for all reservation Indians to receive post-secondary education under the most positive conditions.
(2) To radically invert the present economic and social pyramid, with Indians at the base and outsiders occupying the middle-income, professional, and policy making positions, through career ladder training and job restructuring.
(3) To maximize the student's ability to cope with his own identity and the mainstream by the creation of materials and a curriculum enabling him to biaccultureate himself for effective action both in his home culture and off the reservation.
(4) To demonstrate the effectiveness of a model for educational and career development in rural poverty areas in the United States and elsewhere.

The situation on the two reservations, as in other rural poverty

areas, is one wherein the local population finds itself unqualified for existing middle income jobs, effectively handicapped in efforts at self-determination and development through lack of qualified administration and leaders, and limited ability for attracting industry or developing latent resources through the same absence of trained manpower. Manpower training on a post high school level and open to the bulk of the population is essential if Indians are to take advantage of present jobs and create or attract more. In addition, the lack of training makes it difficult for the people to understand the complexities, problems, and opportunities of their society. This contributes significantly to the sense of frustration and apathy already posed by poverty and lack of economic mobility.

Since the job structure calls and will call for post high school training and credentials, opportunities must be devised to open such training to all Sioux residents as well as to prived a bridge curriculum preparing them for college level work. It is essential that training be done in conjunction with a career ladder restructuring effort that would offer meaningful salary and responsibility increments as a result of qualifying education and experience.

To reach the two-fold goal of manpower training and job restructuring, a local system of higher education is demanded. The present lower echelon of workers as well as the majority of the unemployed would experience immense difficulty in leaving the reservation for higher education. Most have family responsibilities and many lack the self-confidence and sophistication to place themselves in an alien environment for a long period of time. A large number require remedial

work and counseling which few campuses can provide. Furthermore, it is unrealistic at present to expect that funds to maintain a critical number of Sioux families or students at an off-reservation site will be forthcoming.

It is an assumption of this proposal that a very large segment of the United States would benefit from the application of this model. Other Indian reservations most obviously.

Spanish-speaking areas, those of the rural Southwest, present almost an identical economic and social picture. There are also the rural Blacks of the Southwest. And while the demand for a bi-cultural orientation may be less central, very large areas of white rural America would also benefit through the institution of such decentralized systems of higher education. Not only the areas of traditional poverty such as Appalachia, mining districts, and the Ozarks, but also rural America generally.

Within the context of the above background and exposition of general needs, the objectives for a system of higher education for the Pine Ridge and Rosebud reservations as well as other reservations and rural disadvantaged groups, may be stated operationally as follows:

(1) A system reaching out to the bulk of the area population through courses and training in the various communities.
(2) A system making full provision for Adult Basic Education, remedial work, and counseling to form a bridge for the academically underqualified.
(3) A system integrated with the agencies and establishments employing the reservation population in order to develop career ladders, facilitate job placement, and to fully utilize educational resources without waste.
(4) A system providing for continuous progression toward credentials and particularly the Associate Degree in the areas of greatest need, viz., administration and clerical, business, education social services, health, agriculture and recreation.

60-433 O - 71 - pt. 4 ---14

(5) A system guaranteeing the validity of course work for transfer to other institutions and for job purposes.
(6) A system with curricula oriented to meet the special cultural needs and demands of the Lakota people and providing the area with cultural resources both of an Indian and non-Indian nature.
(7) A system providing for local tribal and community control.

PROGRAM: PINE RIDGE AND ROSEBUD COLLEGE CENTER

A system of higher education supporting the above objectives for the reservations has been initiated on a pilot basis and it is hoped that it be stabilized through adequate staffing and resources. In the case of Pine Ridge, this system has been developing with actual classes held since June of 1970. Rosebud began offering classes in January of 1971. Developmental planning has been going forward since the Spring of last year. It is already clear from the vantage of a year at Pine Ridge and ½ year at Rosebud that there are a large number of interested students, that the concept of using locally available resources is viable, that the universities and colleges are able to assist the Centers, and that interagency cooperation towards upgrading and training is enthusiastic. It is also very evident that to continue operations at the present level or to expand in any way, a core administrative, instructional, and counseling pattern must be developed and staffed. The reservations are at a point where it is possible to project essential program needs, and seek staffing and facilities that experience has shown to be needed.

The Rosebud and Pine Ridge College Centers have been operating since February 1971 and June 1970 respectively. They enroll currently 400 students with conservative estimate of 600 students for future semesters. The Centers offer 47 courses of a general liberal arts and career oriented complexion. Each Center is also envolved in basic

adult education and community education.

The Staffs of the Centers consist of 2 (Pine Ridge) and 3 (Rosebud) full-time staff members. These persons have complete responsibility under the Board of Directors for administration, development, and coordination of the College Centers. They are unable to do all of the necessary tasks to provide quality education and counseling for the students and direction and supervision for faculty. The Centers' staff and Board of Directors recognize the central need for a budget that will enable us to hire the necessary administrative, counseling, and instructional staff to meet the students and faculties needs.

A three year development plan delineated the budgetary needs for the next three years as:

Year I	
Pine Ridge	$233,830
Rosebud	$206,070
Year II	
Pine Ridge	$196,280
Rosebud	$193,070
Year III	
Pine Ridge	$196,280
Rosebud	$193,070

After this three year development period has placed the centers on an efficent and high quality level, the Centers will need the following amounts per year:

Pine Ridge	$153,080
Rosebud	$149,870

STATEMENT OF: Ward V. Anderson, Executive Director
Owens Valley Indian Education Center
Bishop, California

Supplementary Education of Indians in
Rural and Reservation Areas.

Title III ESEA OEG - 9-8-006205-0149 (056)

On Amendment No. 6 (Indian Education) to S.659

April 29, 1971

ADMINISTRATIVE STRUCTURE:

I endorse local Indian control through a definite and continuous structural mechanism, and a national Indian education board at the executive level, with executive authority.

1. Indian Education projects in relation to public education: administrative authority should be strengthened by stipulating implementation structures through which fiscal and personel decisions by Indians served by projects. There must be definite mechanisms guaranteed, a prior allocation of funds. Indian advisory committees etc. are not sufficient.

2. Administrative authority mechanisms must be a continuous process through funding periods.

3. A National Indian Education Board should be responsible to insure the proper functioning of such mechanisms and serve as grievence board and arbitrator

of authority and responsibility conflicts between involved parties. The National Indian Education Board should be at an executive level to insure unbiased and unobstructed authority.

ABOVE STATED OPINIONS BASED ON SUCCESSES STATED BELOW

Owens Valley Indian Education Center

Grant Rec ipient:	Inyo County Superintendent of Schools, Independence, California
Expended funds:	1968-69 $38,848.07, 1969-70 $54,045.00, 1970-71 $42,348.00
Participants:	Students 534 Community 800 Public School teachers 21

The key purpose of the project is to retard and eliminate the Indian students' deceleration in achievement as they progress through school. The High School drop-out rate has decreased from 40% in 1966-67 to 10% this year. Student achievement has improved by a minimum of .5 in all grade levels. The number of Indians enrolled in Colleges has increased from 1 in 1968, to 12 in 1969-70 to 41 in 1970-71, to an expected 60 in 1971-72. Eleven Indians have received GED diplomas.

The Center has helped decrease unemployment in the Indian Community: 61 Indians directly employed by the Education Center, 52 adults placed in permanent jobs and 126 in temporary jobs.

Successes have been realized because the processes of decision making, implementation and evaluation are controlled by an all-Indian Education Committee (5adults and 2 students). The committee has been made the official education arm of the tribal government. Learning activities have been extremely varied and have reached adults as well as children.

Geographic isolation has limited dissemination. Many official Indian groups have visited the Center -- one from New York State and another from Ontario, Canada. The Center has been featured in several Indian newspapers. The Los Angeles Times, although 300 miles away, has featured the Center's activities as did KNXT, a Los Angeles TV station. The director has given many talks locally and in southern California, but has declined many invitations because of distance and lack of time and funds.

The future of the project looks both bright and dim. Bright in as much as the Paiute/Shoshone community solidly supports the Center and because the Center is becoming a showcase to other Indian communities. Dim because of limited funding resources and a danger of another let down

of the Native American by the dominant society. A Title III Incentive Grant is being requested. An ESEA Bi-lingual/Bi-cultural Project to revitalize the Paiute Culture through the Paiute language has been submitted. The County of Inyo, hampered by a poor tax base, may maintain the Center facilities with on clerk. However, these prospects are far from certain.

Ward V. Anderson II, Executive Director
Owens Valley Indian Education Center

Bishop, California 93514

Senator MONDALE. We will stand in recess until Thursday, May 6, at 9:30 a.m. Thank you very much.

(Whereupon, at 1:30 p.m. the subcommittee adjourned, to reconvene at 9:30 a.m., Thursday, May 6, 1971.)

EDUCATION AMENDMENTS OF 1971

THURSDAY, MAY 6, 1971

U. S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to recess, at 9:30 a.m., in room 4232, New Senate Office Building, Senator Mondale presiding.

Present: Senators Mondale (presiding pro tempore) and Kennedy.

Committee staff members present: Stephen J. Wexler, counsel; Richard D. Smith, associate counsel; and Roy H. Millenson, minority professional staff member.

Senator MONDALE. The committee will come to order.

Our first witness this morning is Mr. Arnold Sowmick, a Chippewa, and a member of the Michigan Commission on Indian Affairs.

Mr. Sowmick, if you would come to the witness table.

I would like to place in the record at this time a telegram from Senator Kennedy and a list which was sent April 30, 1971, a list of the tribal chairmen, inviting them to testify on S. 659. I ask this be made part of the record at this point.

(The information referred to follows:)

1900

April 30, 1971

THE SENATE EDUCATION SUBCOMMITTEE WILL RESUME HEARINGS THURSDAY, MAY 6, ON THE INDIAN EDUCATION AMENDMENT 6 TO S. 659, COPIES OF WHICH WERE SENT TO TRIBAL CHAIRMEN IN MARCH. WRITTEN STATEMENTS AND RESOLUTIONS MAY BE SUBMITTED BY MAIL AND WILL BE INCLUDED IN THE HEARING RECORD. PLEASE INFORM MEMBER TRIBES, AND IF YOU, TRIBAL CHAIRMEN, OR REPRESENTATIVES OF THOSE MEMBER TRIBES WISH TO TESTIFY, PLEASE NOTIFY US BY WEDNESDAY MORNING.

NO TRAVEL EXPENSES AVAILABLE.

EDWARD M. KENNEDY
UNITED STATES SENATOR

Senator MONDALE. Mr. Sowmick, I am glad to have you with us this morning. Please proceed.

STATEMENT OF ARNOLD J. SOWMICK, CHIPPEWA, MICH., COMMISSION ON INDIAN AFFAIRS

Mr. SOWMICK. Thank you.

Mr. Chairman, members of the Senate Subcommittee on Education, friends and fellow Indians, gentlemen, I can't convey to you how strongly I, as an Indian—more important, as an Indian parent—feel about this legislation. This legislation gives to us things we have never had before. Everyone talks about how bad my people are doing in school, but no one seems to want to take the time or effort to correct this. Every time we see or suggest something, there is never enough money to do it.

I am sure the impact of this bill on the Indian communities will be a totally new and dramatic beginning for Indian education.

Besides this new approach to Indian education, the other thing I am excited about is Indian involvement and Indian control. It always seems that someone is devising a program for the training and education of Indians. Unfortunately, we have never been given a chance to make suggestions or recommendations. That is why many of these educational programs have failed. This bill can change that.

In regard to the National Board of Indian Education, I hope this will be made a part of the Executive Office of the President. Hopefully, this will eliminate the agonizing slowness of bureaucratic procedure and in the selection of the board, I hope you consider the possibility of an Indian. The reason I say this: There are a number of strong advocates of justice for the Indian, such as the Kennedy brothers, and others. Possibly if we had a 100 percent native American board, the non-Indian could serve as consultants.

I hope Congress will pass this bill.

Thank you.

Senator MONDALE. Thank you, Mr. Sowmick, for a most useful and refreshingly short statement that says things clearly and succinctly.

You are a Chippewa from Michigan?

Mr. SOWMICK. That is right.

Senator MONDALE. Approximately how many Indians are there in Michigan?

Mr. SOWMICK. Well, the figure goes anywhere from—if you were to ask a number of people in the State, you would get anywhere from 10,000 to 20,000.

Senator MONDALE. I gather there are no Federal schools in Michigan. All of the Indian children are going to public schools?

Mr. SOWMICK. Yes, this is correct.

Senator MONDALE. At least, not to Federal BIA schools?

Mr. SOWMICK. No, we don't have a Federal BIA school. What happens is, in 1934 we did have the Mount Pleasant Indian School. This was a Federal school. At that time, there was an agreement between the State and the Federal Government, and at this time, in exchange for the school, the State said, "well, we will take care of the Indian population."

Now, unfortunately, this hasn't been so. I guess, for the first year it happened this way. They provided the schooling, you know, the necessary things for school——

Senator MONDALE. Where are most of the Indians located in Michigan?

Mr. SOWMICK. Well, we have four reservations. We have the Isabella Reservation, which I am from, and there is the Bay Mills Reservation, Lotts and Hanifal. We have a number of Indian communities such as the Potaskey area, the Atkins area, the Shabetung, but these aren't Federal reservations.

The one thing I like about this bill, being a commissioner on the State commission, you see the people who live off trust land are penalized for some of the benefits that they could get, that the reservation people get, which the nonreservation people can't get.

In reading this bill, I see this opens this up.

Senator MONDALE. That is right.

In Minnesota, our Indians are predominantly Chippewa, too. We have something like 12,000 Indian school children, and only about 2,300 get this kind of help because the others are not on or near a reservation.

What we hope to do with this measure, in addition to making all Indian children eligible, is to provide some control by the Indian parents over how that money will be spent on the education of their children in their public school.

I gather you strongly support that approach?

Mr. SOWMICK. Yes, very much.

Senator MONDALE. You further testified you support the idea of a national Indian education board, but you want it located, in effect, in the White House, under the President, rather than one of the other agencies?

Mr. SOWMICK. Yes, I think this would be a more direct action approach, rather than going through—I know in other areas where you go to your different secretaries on up the line, it is rather slow. I think this has happened throughout the years.

Senator MONDALE. You have watched the education of Indian children in Michigan for some years. Do you think that there is a need for advice and consultation, possibly control, by Indian parents over the expenditure of funds for the education of their children, as you have seen the schools operate? Do you think the schools and the children would profit from that kind of arrangement?

Mr. SOWMICK. Definitely so. I know I had the opportunity to visit your State and see what your people are doing over there, and what Mr. Antell is doing, and the things that the Indian people are getting involved in. I know I was up at Permidre seeing the things that they are doing there.

When I see what they are doing over in your State, and come back to my State, I feel very frustrated.

Senator MONDALE. Minnesota usually leads most States, so that is to be expected.

Well, thank you very much for your most useful statement, and for its impressive brevity. Thank you very much.

Our next witness is Mr. Robert Carr of the Upper Midwest Indian Center in Minneapolis, Minn.

We are very glad to have Mr. Carr with us.

If you would, please come to the witness stand.

STATEMENT OF ROBERT CARR, UPPER MIDWEST INDIAN CENTER, MINNEAPOLIS, MINN.

Mr. CARR. Thank you.

Senator MONDALE. We are very pleased to have you here.

Mr. CARR. Mr. Chairman, my name is Robert Carr. I am a member of the Laguna Pewablo Tribe of New Mexico. Presently, I am the executive director of the Upper Midwest Indian Center in Minneapolis, Minn. The statement which I am going to present to you has come from the membership of this organization.

First of all, we would like to commend Senator Kennedy, along with the other cosponsors of the Indian Education Act, for getting underway what we hope will eventually lead to quality education for Indian people.

Secondly, we appreciate the opportunity of appearing before this committee. We can't help but believe that the procedure being followed today—that is, listening to as many Indian people as possible, to learn their views of Indian education as it now exists, and what they hope will come about in the immediate future—will lead to something greater for Indian people in the area of education. For the presentation of this kind of opportunity, we commend you.

Very briefly, I would like to tell you something about the Upper Midwest American Indian Center, because I believe it illustrates what a community of concerned Indian people can do for themselves and for their community.

In 1961, a small group of Indian people incorporated themselves into this organization for the purpose of helping their fellow Indians. However, it was not until 1967 when this organization had any money to hire a staff. Since 1967, this organization has grown to where we have a full-time staff of 11 people, and a part-time staff of 10 people.

This staff is responsible for the carrying out of approximately 12 programs and activities in the areas of housing, employment, emergency services, scholarships for college, high school and elementary students, and for vocational students, a halfway house for single Indian men, group activities for the entire family, and a group work program for elementary age Indian youngsters who are referred to us by the Minneapolis public school system, and also a summer camp program.

Senator MONDALE. Mr. Carr, what is your annual budget, and what is the source of those funds?

Mr. CARR. For 1970, our annual budget was approximately $115,000. $70,000 comes from the United Fund of Greater Minneapolis, and the rest comes from small contracts from Model Cities and a contract with the Presbyterian Church.

Senator MONDALE. You don't have any money from OEO?

Mr. CARR. Our organization is involved in this model urban Indian center demonstration project, and OEO has some part in it, but it isn't yet underway.

Senator MONDALE. Very well.

Mr. CARR. The point that we would like to make is that Indian people weren't only the founders of this organization, but they were also the planners, developers and implementers of all the programs and activities which this organization is involved in. Because of our ex-

perience within and without our organization, we are firmly convinced that if we are to make constructive and effective long range changes, we have no choice but to develop to the fullest degree those people who will be affected by any program that is to be developed.

We must be willing to go beyond this point which this Education Act stresses, and is to develop only those programs which have been determined by Indian people themselves. Too long we have had programs developed for us. Then the planners wondered why they failed.

We feel that this Education Act provides that opportunity for Indian people to have a very definite part in determining the kind of education they want for their children. We believe that we have come to a time that we can no longer view education as something that takes place 5 days a week between the hours of 8:20 and 3 o'clock, in school buildings within our communities. The total educational process with which we must concern ourselves includes not only the time the youngsters spend in the school building, but also attempting to supplement in overall education by involving the children and their parents in activities which relate in some way to their identities as American Indians, if they so desire.

This is where we believe the noneducational agencies, such as our organization, could provide the greater support for students and their families. For example, we received a grant from the Minnesota Governor's Commission on Crime Prevention and Control to develop a group work-oriented program for elementary age youngsters who are referred to us by the Minneapolis school personnel. We feel we are not only providing a resource for the youngster and his family, but also providing the same resource for the public school personnel.

Should not the development of this kind of a program be the responsibility of an educational agency? Hopefully, the passage of this Education Act will provide the financial resources to develop innovative programs, not only within the educational system, but also outside of these institutions. This Education Act provides some opportunities to develop programs and activities that take into consideration the needs of the total child.

We believe there must be a much heavier emphasis on counseling both within and outside the schools. It is therefore imperative that much more effort be placed in the training of social workers, psychologists, guidance counselors, and other supportive personnel. We must emphasize the need for Indians in these professions.

Along with the emphasis on counseling comes the need for the development and the use of appropriate testing techniques that could be used for evaluating Indian children. We must keep in mind that tests which might be appropriate for evaluating white middle class children might not give us a reliable picture of the Indian youngsters.

Is not proper evaluation of a child's capabilities and potential as important as teaching them how to relate to his peers? We believe it is. Therefore, we feel there is a tremendous need to develop appropriate evaluative methods and techniques so that our children will be no longer evaluated by standards which don't take into consideration the possible differences between two cultures.

Although we have more Indian people graduating each year with teaching degrees, we also realize there are few colleges and universities that offer courses which focus on how best to work with Indian chil-

dren. For this reason, it becomes extremely important that we make available to individuals and/or institutions of higher learning, who are interested in developing better teaching methods and techniques which might be more relevant to the teaching of Indian children. Priority for such grants must be set by a body of Indian people, knowledgeable about Indian education.

Many demonstration projects are presently in existence which were probably designed and implemented by non-Indians for Indians. We believe it would be advantageous to both the Indian communities and the funding agencies if Indian people would have an opportunity of evaluating such projects. We believe we have, today, expertise in various fields, so such evaluations could be carried out.

In the area of adult education, must we continue to stress the GED for all adults? We believe there are many Indian adults who would utilize the program, not to work toward a GED, but possibly for other reasons. For example, in a program of adult basic education as being carried out now by an organization called "Opportunities Unlimited" for Minneapolis Indians in Minneapolis, Duluth and Bemege, Minn. One of the greatest things we have observed within this program is the older Indians teaching the youngsters various forms of arts and crafts. No other program has presented the Indian in this kind of learning experience for both the young and the old.

This Education Act stresses program development opportunities for both reservations and urban Indians. We would like to make it clear that we are interested in cooperative projects, rather than competing with reservation Indians for available moneys.

We have received little or no encouragement from funded agencies to develop joint proposals. In order to better serve the Indian people, funds must be available for joint projects. If not, competition for moneys will develop and program coordination between reservations and cities will never come about. All of this results in poor services to those who need it most.

We believe the Federal agencies have some responsibility in the encouragement of joint projects between reservations and urban centers, and we believe very strongly that the quality of services will improve greatly.

We believe this Education Act encompasses some of the things we have talked about and dreamed about in the past. We believe this—we have talked and dreamed about parental involvement in the past, but someone has always limited us on how far we were to go. We have talked and dreamed about Indian control, but things were always predetermined for us by some bureaucracies or non-Indians. We have talked about Indian education, but there weren't many, if any, involved in it.

We believe some of these things are needed. However, unless all of us are committed to what has been stated in this Education Act, we are going to continue to just talk and dream about Indian control and Indian education. The only way we can accomplish our goals of Indian control over education of Indian people is to have Indian people not only at the highest level of authority in our Government, but at all levels which have anything to do with the planning, development and implementation of educational programs for Indian people.

A commitment of this nature is imperative. If there is this commitment, we will be able to fulfill our goals.

Thank you very much.

Senator MONDALE. Thank you, Mr. Carr, for a most useful statement, and for summarizing, in a very rapid way, the effective work of your organization.

As I understand your testimony, you are in support of the Kennedy amendment to the Higher Education Act?

Mr. CARR. That is right.

Senator MONDALE. One of the key reasons being that you find it essential that Indians be in control of the education of their children?

Mr. CARR. Very denfiitely so. I believe, in terms of my limited experience with the community in Minneapolis, that some of the areas that we seem to have succeeded in are those in which we have really made an all-out effort to get people involved, not only putting them on advisory boards, but really getting down and saying what kind of programs and activities, and how should we develop them. I believe that we really don't have any choice but to do this. I think some of the programs that have been implemented by non-Indian groups, organizations, and even by some Indian organizations that have tried to do it for, say, the community, these are programs that really have faltered and probably won't last very long.

So, I am definitely in support of this.

Senator MONDALE. I find that very significant testimony, because I think it is correct that Minneapolis has the highest ratio of urban Indians of any central city in the country. The numbers aren't large, but the percentage is very high as compared to any other central city; so you have seen through your experience what a better than average public school system has done, and nevertheless you testify for the need for parental control of funds spent for Indian education.

Mr. CARR. I think we have come to a time that the public schools, whatever their size may be, really must begin getting out into the community. We have too many school buildings that are standing empty after 3:30 in the afternoon that could very easily be utilized by the neighborhood children. They don't have anyplace to go play, other than out in the streets or a few playgrounds around the area. Therefore, I think in order to become more effective with whatever the community is, whether it be Indian, black, Chicano or whatever, they are going to have to become serious in wanting to get out into the community and say, how can we work with you. I have a feeling that if they don't go in this direction, that we are going to have very serious problems within all of these communities in the next few years.

I think the Minneapolis public school system is probably ahead of other public school systems of its size in terms of trying to make some initial approaches to the Indian community, and saying, how can we work together. Therefore, on this basis we developed a consultant in Indian education which we now have established within their administration of the public schools, which I don't believe is in existence in any other public school system. But yet I think this is only an initial step, because I see the next step as the public schools coming back to the Indian community and saying, look, there is this title program available for, say, community involvement. Can we work with you to develop a proposal that would give the moneys to a community organization, say, like Upper Midwest Indian Center, like Indian Upward Bound, rather than saying could you serve in an advisory

capacity while we develop a program for you. This is where we are. They still have not taken the next step in terms of saying, what kind of proposal do you want to draw up, and we will support you in getting you the money. This is not the case at this time.

Senator MONDALE. At the conclusion of the exhaustive work of the Indian education subcommittee, which has now expired, we came down to the same thing you do. Control is the central question. So long as it is an outside-dominated institution which does things for the Indian, maybe with some consultation, the effort will fail. We have to start the other way around. I feel very strongly about that.

In addition to that, this bill for the first time tries to help Indian children, wherever they are located, and make them eligible for Indian education assistance; the "On or near" reservation distinction on the present title denies about 80 percent of our Indian schoolchildren that assistance.

Approximately how many Indian children are there in the Minneapolis public schools?

Mr. CARR. I am sorry, I don't know the breakdown. I know the highest concentration is on the very near north side of Minneapolis, and on the near south side. I think in the junior high that is highly approximately 800 children, there are approximately 150 Indian children, and in the high school, probably over 100, the south high school, which has the highest concentration of Indian children. And on the north side, it is a little smaller, so these are the one junior high on the north side and the high school that are the areas where they are highly concentrated.

Senator MONDALE. How are the children doing in the school, in your opinion?

Mr. CARR. The latest figures that we got, I think it was in the League of Women Voters' booklet, Indians in Minneapolis, that they did 2 or 3 years ago, stated that the dropout rate was up to close to 60 percent, or about 60 or 65 percent, and I am a social worker by background and I worked as a school social worker at Phillips Junior High, which has the highest concentration of Indian students there 2 years ago, and I think one of the things that I noticed that—Indian children just cannot remain in classes. There is a high absentee rate. There is a high rate of children missing 2 or 3 days a week and coming back for a day and going back out.

I think part of the problem that I see is that, number one, very little effort is made by the schools themselves—primarily because of lack of personnel—to really establish any kind of close contact with the families of these children.

I think the second part of it is that very little effort on the schools' part to develop working relationships with community organizations that might be working within their particular district. I think third, of course, that always comes up, is that there is very little—maybe it is changing just a little bit—but very little with which the Indian children can identify that relates in some way to their identities as American Indians.

Senator MONDALE. How many teachers, if you know, are Indians in the Minneapolis school system?

Mr. CARR. In the Minneapolis school system right now, we have—we had about three of them. Right now we only have two that are

active school teachers. One of the other Indian teachers became head of the audio-visual department for them on a special project. We really only have two.

Senator MONDALE. So, they don't have any adult figures in the school system, or very few, that they can identify with?

Mr. CARR. Right. One program that is trying to maybe help in some way in this area is the Indian upward bound program, which is geared to seventh- and eighth-grade children rather than the regular 11th- and 12th-grade children, and they are concentrated in the two schools, junior high schools. Here, there are Indian people available within that program that at least provide some kind of possible or positive image for some of these children. But again, along with a few aides that the public schools hire, nothing any higher than, say, aides at this point.

Senator MONDALE. Do you have any idea what percentage of Indian children in the Minneapolis public schools are at grade level in the basic skills? Are you provided with data, or is there data available——

Mr. CARR. I am sure data is available to a limited degree. One of the problems that we have had with the public schools—this may be changing—was the problem relating to not being able to identify children by race other than sight count. Therefore, this created some problems in terms of really knowing how many Indian children are going to a public school.

We know that many of the children drop out in the seventh and eighth grades, and especially in the ninth grade, so that there are very few going on into high school. This is the reason for the emphasis of the Indian Upward Bound programs at the junior high level as opposed to the high school.

Senator MONDALE. How long has that Upward Bound program been in effect?

Mr. CARR. It has been in existence since the fall of 1968.

Senator MONDALE. Do you think it is helping?

Mr. CARR. I think it is helping primarily because, if not for any other reason, the fact that they have provided them with activities outside of the school, and they have, I think, developed a very strong summer program for them. The teachers or some of the people that work within the program have provided them some emotional support. At least they know maybe they can go to someone within a school, when something comes up and they need some help.

I think it could also do a lot more, and I think—I often think when we get governmental grants we are so—we get so caught up in working toward the next year's funding that we have very little time to concentrate on really developing innovative kinds of activities.

I would like to recommend also that I think in the future, should anybody have anything to do with us, that when demonstration grants are provided that somehow there must be some incentive within these grants whereby the funding agencies could say, you will be able to receive, say 20 percent more for the next year if you maintain your present program but also develop another innovative program attached to your present program. This, I believe, is the kind of thing that we need so that it will help us to grow in a program development and to provide a wider range of services.

Senator MONDALE. As you may know, there is a section in the Kennedy amendment which provides for direct funding of nonprofit organizations such as yours. I will have this material sent to you. I wanted to make one other point. We just passed in the Senate what we call the Quality Integrated Education Act, with funds for which minorities are eligible. We set aside 10 percent of the funds for nonlocal educational associations, organizations nonprofit, which would include organizations such as your own. The fund is $150 million. I will send you some material and you look at it.

I would think that it is very likely that these funds would be available for Indian efforts in Minneapolis, in Minnesota. I think there is a great role for organizations such as yours outside the school system, working in cooperation with the school system.

I think this bill is the broadest and boldest effort to bring outside organizations to bear on the school problems outside the school system.

Thank you very much, Mr. Carr, for your very useful testimony.

I understand we have some Indian students from Fort Lewis, Colorado. Would you please come to the witness table? Would you please give us your names.

STATEMENT OF HAYES LEWIS, ZUNI, PUEBLO, N. MEX., ACCOMPANIED BY PHILLIP CUMMINS, CROW-SIOUX, AND CAROL LITTLE WOUNDED, CHEYENNE RIVER SIOUX, SOUTH DAKOTA

Mr. LEWIS. My name is Hayes Lewis. I am from the Zuni, Pueblo, New Mexico.

Mr. CUMMINS. I am Phillip Cummins.

Miss Little Wounded, Cheyenne River Sioux from South Dakota.

Senator MONDALE. Fine. Would you proceed?

Mr. LEWIS. We would like to thank this committee and Senators Kennedy and Mondale for allowing us to give a few ideas of our own on this amendment to Senate bills before us now.

We have a statement that has been submitted to you for the record.

Senator MONDALE. Is this to the subcommittee investigating 659, three pages here?

Mr. LEWIS. Yes.

Senator MONDALE. Signed by several students?

Mr. LEWIS. Yes.

Senator MONDALE. We will include that as though read, unless you would like to repeat it. We will put this in the record, and you may comment on such points as you wish; however you wish to proceed.

Mr. LEWIS. We would like to just comment more or less informally.

Senator MONDALE. Very well.

(The material referred to may be found in the files of the subcommittee.)

Senator MONDALE. Let me just quickly say that the main points you make, along with the students that you represent, is the great lack of svmpathetic instruction to the Indian history, Indian culture. Two, the dire need for competent counselors responsive to the educational needs of Indian students. Three, a need to inform sometimes indifferent or hostile administrators of the possibilities in Indian education programs. Four, the unnecessary sending away of young Indian children to Indian schools.

Those are the central points that you wish to make. These are matters we uncovered in our work. Wherever we went, we kept hearing the same points from Indians.

But you proceed to make these points, or any others, and expand on it; whatever you wish to do.

Mr. LEWIS. The primary reason we are here in Washington is we are under a program, a 2-week program, to study and evaluate the BIA structure, and how we could possibly make recommendations for recruitment in some areas. We have been going mostly department by department, having the speakers come in and talk to us. Possibly this would have an effect on our future plans and goals after graduation. That is the main reason we are here.

We thank you again for letting us come and give some of our ideas.

Senator MONDALE. What year are you in school?

Mr. LEWIS. I am going to be junior this year.

Senator MONDALE. Did you go to a Federal school?

Mr. LEWIS. I attended junior high and high school in a public school on Indian land.

Senator MONDALE. I see.

Mr. LEWIS. The portion concerning section D about the Indian Board of Education, we would like to see this at the central level and have Indians in control of this board. There is a need for many special projects in schools on the Indian reservations that the Indians are setting up themselves, like the Indians in Minnesota, and this type of school would have a great effect on the high dropout rate that we now experience among Indians and it has a great effect on the environment, the learning environment, and the learning process. That concerns the Indians.

We would like to say we are in support of this amendment to bill 659, and although there hasn't been too much in the past concerning Indian legislation, we would like to see more in this area.

We are glad to see that Senators Kennedy and Mondale are in support of Indian education. We would like to see this continued.

Senator MONDALE. Very well.

Who would testify next? Would you like to add anything?

Mr. CUMMINS. Mr. Lewis said everything we want to say.

Mr. LEWIS. We would like to have you consider our other ideas in the statement.

Senator MONDALE. That is right.

We thank your fellow students for joining in that statement. We will make that part of the record and refer to this in developing the legislation.

Would you like to make some points? All right.

Carol, where did you go to public school?

Miss LITTLE WOUNDED. During the early part of my high school, I was in a private boarding school for Indian girls, under the Episcopal Church.

Senator MONDALE. Where was that?

Miss LITTLE WOUNDED. In Springfield, S. Dak. It was St. Mary's School.

Then my mother got sick, so I had to go home and I was in the BIA school for about half a year.

Senator MONDALE. Which one?

Miss LITTLE WOUNDED. In South Dakota.

Then I went to school in Reading, Mass., under the Lexington Congregational Church.

Senator MONDALE. In other words, you went to Massachusetts to a religious school?

Miss LITTLE WOUNDED. A public school.

Senator MONDALE. A public school?

Miss LITTLE WOUNDED. Yes.

Senator MONDALE. How long were you in that school?

Miss LITTLE WOUNDED. I was there for 2 years.

Senator MONDALE. How old were you when you attended that school?

Miss LITTLE WOUNDED. I was about 16 when I went out there, but then tribal rules got my date of birth and everything all mixed up, so I was actually 15, and then after high school, I went to college, a private college in New Concord, Ohio.

Senator MONDALE. How long did you go to that school?

Miss LITTLE WOUNDED. I was there for about 1 year. I was the only Indian student there.

Senator MONDALE. How did you happen to go there?

Miss LITTLE WOUNDED. Well, the people I stayed with in Massachusetts wanted me to go to school in Massachusetts, and my parents back home wanted me to go to school in South Dakota.

Senator MONDALE. So they compromised in Ohio?

Miss LITTLE WOUNDED. Yes. That was like half a scholarship there, too, and this other place——

Senator MONDALE. Now you are going to Fort Lewis College?

Miss LITTLE WOUNDED. Yes.

Senator MONDALE. What year are you in there?

Miss LITTLE WOUNDED. I am a sophomore, but after credits this summer, I should be a junior in the fall.

Senator MONDALE. What are you majoring in?

Miss LITTLE WOUNDED. I don't know yet. Sometimes I want to look into sociology, and sometimes law interests me, but whatever I feel like going into, I don't think it will be working in Washington. I would rather be at home.

Senator MONDALE. Get out of this town?

Miss LITTLE WOUNDED. Yes.

Senator MONDALE. I don't blame you. [Laughter.]

Could we ask Mr. Cummins, would you tell me where you went to school, what year you are in now at Fort Lewis?

Mr. CUMMINS. I attended public school in Montana, graduated from there, went to high school in Kansas, graduated from there, and went to——

Senator MONDALE. Where did you go in Kansas? A Federal school?

Mr. CUMMINS. Yes.

Senator MONDALE. What is the name?

Mr. CUMMINS. High School of American Indian Junior College.

From there, I went to Fort Lewis. I am a junior now.

Senator MONDALE. You are a junior at Fort Lewis. What is your major?

Mr. CUMMINS. Business administration. Minor in education.

Senator MONDALE. I see.

Can you comment on what you thought of the Federal schools, how they responded—what kind of an education you thought you got in the Federal school?

Mr. CUMMINS. Well, my experience in the high school-junior college was very influential to me. I thought it helped me to go on to college. It did help me. In comparison with public schools, I think it was on an equal level, but in some areas it wasn't, whereas public schools didn't have Indian programs in the BIA.

Senator MONDALE. How many Indian teachers did you have in the years you have been attending school?

Mr. CUMMINS. Approximately four, I believe.

Senator MONDALE. How many Indian teachers have you had in the years you have been going to school?

Miss LITTLE WOUNDED. I never had any.

Senator MONDALE. You never had one?

Miss LITTLE WOUNDED. No.

Senator MONDALE. How about you?

Mr. LEWIS. I had two.

Senator MONDALE. You had two.

Now, you have spent several years in all-white school systems, haven't you?

Miss LITTLE WOUNDED. Yes.

Senator MONDALE. Public schools, private schools. What does it feel like being the only Indian, or one of a few?

Miss LITTLE WOUNDED. I really didn't like it. I think the main reason I left Ohio was because their values weren't the same as mine, and their emphasis was mostly on socializing and on how to make money real quick and everything, so I didn't go back there last year. I just stayed at home and rested, I guess, and tried to think of what I wanted to do. But I wouldn't want to go back there again. They really messed my mind up and everything. I didn't learn that much about Indian education or Indian legislation or anything that in the back of my mind I wanted to know about. That is why I went to Fort Lewis.

Senator MONDALE. Why did you leave Massachusetts so fast?

Senator KENNEDY. Careful, now. [Laughter.]

Senator MONDALE. That was not a serious question.

Go ahead.

Senator KENNEDY. I am very sorry I missed your testimony. I just got back from the Midwest where I was with the Senate Health Committee in Chicago. I was in the northern part of the city, where there are approximately 17,000 to 18,000 native Americans, and there was a real underutilization of the health services. They were trying to establish some maternal clinics, developed by the board of health in Chicago.

One of the principal problems that we observed was the fact that there were no American Indians involved in the planning and formulating of programs, or on the council for the maternal clinic. Later on in the afternoon we heard some really eloquent testimony about the general health problems of the native Americans in one of the great urban areas. This morning we address ourselves to the problems of Indian education. I certainly hope we can make some inroads in both of these areas.

Senator Mondale pointed out so well, in the past this has, of course, been a troublesome problem, and I am hopeful that this legislation before us today will help to move in that critical area of need.

As I say, I apologize for not being here for your statement. I look forward to reading it with interest.

Senator MONDALE. Thank you very much for your helpful testimony.

Our next witness is Mr. Lehman Brightman, president of the United Native Americans, lecturer, University of California.

Mr. Brightman?

STATEMENT OF LEHMAN L. BRIGHTMAN, PRESIDENT, UNITED NATIVE AMERICANS, LECTURER, UNIVERSITY OF CALIFORNIA

Mr. BRIGHTMAN. Thank you.

Senator MONDALE. We are glad to have you back again, proceed.

Mr. BRIGHTMAN. Well, one of the basic reasons I came, 2 weeks ago I was at Utah. I gave a talk at Utah State College, or university, in Logan, Utah, and while I was there a number of Indian students, as well as employees of Intermountain Indian School, asked me to come down and look over their school. They told me some of the sad conditions that existed there.

I stuck around an extra day and went down and visited Intermountain Indian School, located in Brigham City, Utah.

Senator MONDALE. Is that a Federal school?

Mr. BRIGHTMAN. Yes, sir. It is run by the Bureau of Indian Affairs. This is the largest coeducational boarding school in the United States, possibly the world. They have approximately 1,600 Indian students there. The majority are Navajo. It is about 400 miles from the Navajo reservation.

The conditions that exist at their particular school are the worst that I have ever seen. I personally investigated five—this is the fifth Indian boarding school run by the Bureau of Indian Affairs that I investigated, and this is by far the worst of the lot.

The conditions that exist in this school shouldn't be allowed in any particular school. As an example, they are shooting the young students there with a drug called thorazine, which is a tranquilizer. It is a suppressant. When they find Indian kids coming in drunk, they shoot them with this drug. Thorazine is a depressant. They are using a depressant on top of a depressant, which is alcohol. One girl complained she had dizzy spells ever since she had been given this drug. She said she lost her equillibrium at times. Some students said it takes 4 to 5 days to come off the full effects of the drug.

Thorazine is mainly used on mental patients who become violent. I asked some of the employees there why they were using this drug. They said they have a drunk tank in one of the boys' dorms, and when the boys come in drunk, they bring them into the drunk tank, and the drunkest ones, they put them into the U.S. Public Health Hospital there, and they then shoot them with this drug.

Up until a year ago, they were using handcuffs on these students and shaving their heads for drinking. I talked to some of the students and they said a lot of the students still carry the scars from the handcuffs that were put on. I saw some of the memos put out. The memos stated they weren't to show the handcuffs or wear them in visible sight. While

I was there visiting some of the boys dorms, I saw a set of handcuffs on one of the beds.

These kind of conditions, you would think, would have disappeared about 50 years ago, but nevertheless at Intermountain Indian School, they do exist.

The dormitories—I visited three different boys' dormitories, three girls' dormitories. The buildings are old, dilapidated, very sad condition. The furniture is mismatched. It is old, broken furniture. Broken furniture was stacked in corners. They had broken furniture stuffed into extra rooms. One dorm there had the front porch completely stuffed with broken furniture. No rugs on the floors. The place was dirty. The floor was dirty. Trash inside and outside the building. The bathroom smelled. You could smell it three doors down. Some of the commodes were run over. There was no toilet paper. Windows were broken throughout the building. The walls were dingy, dirty, needed painting. Many had markings on them.

When we got inside some of the living quarters, there were virtually no desks for any of the buildings in the living quarters. They had six to eight students stacked in these overcrowded conditions in these rooms. They are using double-decker beds which you found in the Army about 20 years ago with siding mattresses and bedsprings. Broken windows inside. As for dressers, some of them had no dressers for the students to put their clothes in. Some had one dresser with maybe four drawers in them, not enough to go around for the six to eight students. The wall lockers they had for the students, many were broken, doors hanging by one hinge. I asked them why they weren't repaired. They said they don't have repair kits. They break down and get shoved in the corner or get thrown away.

The lighting in these rooms was extremely bad. It would be impossible to read in there without straining your eyes. They don't have desks anywhere.

We found that there are virtually—the students complained there was virtually no privacy, they are so overcrowded in these rooms.

The candy machines in the boys' dormitories, the employee in charge told me, were removed because they found mice in them.

All the TV sets, a majority of them anyway, in the boys' dormitories were broken, old, outdated, wouldn't work. There was no door handle on the girls' dormitory we went into.

The reason I bring some of these things up is because the United States is the richest, strongest country the world has ever known, and we have a branch of that Government over American Indians, and they can't provide adequate facilities and buildings and so forth for these people, Indian people, who are by far the worst off in this country educationally, economically, and healthwise, and who need help the most. Indians are by far the worst off in this country economically, and they can't provide adequate sanitation or building facilities for these students.

I looked at their library. I talked to some of the students there. They said it was only open from 9 in the morning to 4:30 in the afternoon. It isn't open on weekends. They claim that there were virtually no books on Indians.

Senator MONDALE. Did you look at the library?

Mr. BRIGHTMAN. I couldn't get in. It was closed. It was on a Saturday that I visited. But I went by and looked and some of the students told me that the ones who want to study on weekends can't, because it isn't open.

The teachers don't give homework, virtually no teachers give homework in this particular school. Some of the students complain that the teachers fall asleep while reading to them. The literature teacher in particular has only one book, and he reads to these students, and when the students complain they would like books to take home, they tell them, you would only lose them if we gave them to you. This is the pathetic attitude of the teachers there. They tell them, you would only lose the books if we gave them to you.

Also, they post the names of the students throughout the entire school who are failing for sloughing, insufficient grades, AWOL, or coming in late, or aren't doing their make-up work.

There was a small group of students who formed a NIYC chapter, National Indian Youth Council, there. The students who joined this particular group, which is a bonafide national Indian organization, are being punished. Their meetings are disrupted. They transfer them from one dormitory to the next. The students complain they are being graded on attitude, rather than on their grade work that they are handing in. They tried to discourage any type of self-determination among young Indian youth and any Indian that stresses Indian power, which is defined by myself and many other people as self-determination, are called Black Panthers and they tell them they are like Black Panthers. They told them the National Indian Youth Council and my organization are like the Black Panthers, stressing violence and so forth. This is a lie. I have never been involved in any violent activity, and don't believe in violence.

The PE classes, physical education classes, they give mass punishment there if any of the students are found goofing off or coming in late, called sloughing.

There are approximately 120 to 130 teachers at this particular school, at Intermountain. Only five are Indian. They only have four Indian counselors at this particular school. These teachers there evidently don't want the Indian youth to get involved in any type of national Indian organizations, and as I said before, they downgrade them. They give them bad grades if they try to join any of these.

SENATOR MONDALE. In other words, the kids told you that they were discouraged from joining any national Indian youth organization?

Mr. BRIGHTMAN. Yes, sir.

While I was there talking to a group of the students, a student chairman came in and said that my organization, UNA, and NIYC were similar to the Black Panthers and they shouldn't associate with us.

At this particular school, they had two girls, two rape attempts on two of these young girls coming from Brigham City back to the school. On one side of the campus, the north side, there is a little wooded area there, and they had two girls who had rape attempts on them in the past 2 months. They had numerous girls who had their clothes ripped off. They lost their packages and shoes running back to the dorm when people were trying to attack them. The non-Indians wait in this particular area and try to lift the girls' dresses. They fondle them. Many of the girls actually had to run for their lives in this particular area.

They asked the Bureau of Indian Affairs staff there at this particular school to put in flood lights there so in the evening there would be a little protection for them. The Bureau of Indian Affairs' officials refused. They also asked them to supply extra guards in this particular area so these girls wouldn't be molested in coming home. So far, they haven't complied with this.

The students I talked to, particularly a lot of the girls, and they were very upset about this—also, Brigham City, Utah, there is a four-lane highway which is right adjacent to the school. There are approximately 1,600 students in this school. They cross this four-lane highway at one time or another during the 24-hour period, because there are a number of Dairy Queens and other stores across it. When they cross this extremely busy highway to go over and buy food and so forth, they have asked the City of Brigham to put in a crosswalk or street light. Brigham City has refused. Yet they had two Indian youths hit in the past 2 years by cars, and they had numerous other students who complained they were nearly hit, and they say it is almost a race for your life to get across this highway. Yet Brigham City won't put in any type of street lights or crosswalk for these children.

The students complained of discrimination in Brigham City. They say that some of the stores there won't serve them after 7 o'clock in the evening. One particular store called the Hamilton Drug Store, they have a chain there, refuse to serve Indians after 7 o'clock in the evening. They will serve non-Indians. When the students walk in, they watch them like hawks. They say that Hamilton Drug Store has another chain of stores further down into the interior of town where the prices are extremely—they are much cheaper there. Evidently, they charge the Indians more than they do non-Indians there.

I visited the cafeteria there. I had lunch. The food was very bad. The students complained that they were given beans about three to four times a week for a couple of meals a day. They are not given seconds at this school. When I talked to some of the girls, they said yes, they do give seconds the last 15 minutes of every meal. Can you imagine 1,600 students trying to get seconds in the last 15 minutes of the meal? Also, they don't serve coffee at this school. About 75 to 80 percent of the employees there are Mormon, and they don't believe in drinking coffee, so they don't serve coffee to any of the Navajo students or the other people working there. Yet coffee is almost a staple part of the young Navajo diet when they grow up. Coffee, meat, mutton, and so forth. Yet they are refused coffee here.

The students tell me whenever they lose their meal cards, they don't eat. One girl did without food for 3 days because she lost her meal ticket, and they take their sweet time in issuing new cards for them.

I talked to some of the personnel there, and they told me until last year they had powdered eggs there. You could smell the odor when you walked in. It would turn your stomach. They quit issuing them this year, but the food is still bad, virtually no variety. Some of the students complain they would like some juice in the morning, and coffee with their meals.

Recreation at this school, most of the recreational activities they charge for. For instance, they charge them to play pool. They charge for athletic events. They charge for the movies. They charge for the dances. If you are a poor student there, you don't have any money, you can't ever participate in any of the recreational activities.

Most of these kids come from parents where there income is far below the poverty level. It is no wonder they turn to drink.

The VD rate at this school increased 80 percent over the last year. They have an exceptionally high runaway rate, and some of these students, they have been tested out, they find they can't read very well. I don't doubt this, since they don't issue them books. The library is closed on weekends, not open in the evenings.

The employees at this particular school have cited a number of complaints against the school. I have some of the complaints that were filed last year as well as this year.

Some of the complaints read off as such—the particular complaints I will read off were filed by Amerino, which is a Government employees' union. They sent copies of their complaints to the Commissioner of Indian Affairs in 1970, and again this year. So far, nothing was done. Virtually the same.

Intermountain Indian School is a bed for elicit practices, a major practice is discrimination. The Indians have been consistently excluded from promotions to higher levels, or to promotions of responsibility whereas the non-Indians are quickly moved up and out to higher positions. The Indians have been denied relevant and meaningful training opportunities, whereas the non-Indian supervisors choose their favorites for training. The Indian employees are burdened down with harassment by ill-defined regulations and by non-Indians.

The Intermountain School has engaged in, and continues to engage in a pattern of flagrant and humiliating discrimination against Indian students through outright mistreatment and inferior management. It appears that equality as a theory is more adequate than equality as a right. A suffocating atmosphere of despair, distrust, and fear tries the Indian at this school.

The Indians are tired of living with daily abuses of discrimination. The Indians are tired of their every action being scrutinized and criticized. The Indians are tired of the long delay between job promotions. The Indians are tired of the lack of relevant training. The Indians had extreme patience in affiliations, but this stifling air has reached an intolerable level.

We believe the time has come for this school to become responsible to the needs and wishes of the Indians. In the past, our advice for changes have been muffled by deliberate schemes. Today, our grievances will be clearly heard. We hope that resort to more forceful legal methods are unnecessary. We join now together in this presentation. and these are some of the conditions:

Discrimination in promotions. When Intermountain School came into being, the Indian predominated the dormitory and guidance positions. Almost 100 percent of those Indians were Navajos. Today, Indians comprise 20 percent of the staff. The most dedicated Indian personnel have been suppressed in promotions. Many Indian employees complain that their last promotions were granted 4 to 5 years ago. Indian employees with 15 to 20 years experience at Intermountain School maintain GS–3 to GS–7 level ratings. Indians who have earned college credit have not been rewarded with promotions. There are many with as much as 100 hours of credit. Although several Indian employees have been recommended for incentive salary increases, it has been denied without explanation.

60–433 O—71—pt. 4——16

Senator MONDALE. Mr. Brightman, let me suggest this: You have prepared a very detailed report which we have, which I will put in the record. As you know, it is a repetition of what we heard time and time again from these schools. I think what interests us here is what can we do about it. Where do we go? This is an off-reservation boarding school?

Mr. BRIGHTMAN. Yes, sir.

Senator MONDALE. It is the largest one in the system. As I recall, about 3 years ago, the BIA funded a series of studies on these schools. Some of the reports were just as devastating as the one that you have read. Then, when they testified here the other day, they said they were studying them again, have a new study going. Apparently, the Indian students can't do anything about it.

Mr. BRIGHTMAN. Right.

Senator MONDALE. The schools are not under the control of the Indian parents in any way at all?

Mr. BRIGHTMAN. No.

Senator MONDALE. So, the parents can't do anything about it. The Indian employees apparently feel that at this point, nothing is being done about their grievances. In many of them, there seems to be precious little education being achieved, and the other things to which you made reference. Our Indian education report was very, very clear on this. Yet so little seems to be happening. You have watched this system for some time. What do you think should be done?

Mr. BRIGHTMAN. It has been proposed that they form a National Indian Education Board, and I am highly in favor of that. I know a lot of Indian educators throughout the U.S. are very much in favor of this. I think it would alleviate some of the problems. I understand that the Bureau of Indian Affairs is against that for the fear that it might take some of the authority away from them. Also, that some of the tribal leaders are against this. A lot of these tribal leaders have third and fourth grade education, and some of them have trouble finding their rear if they actually were to search for it, and I don't know what they are going to do in education. Most have a third and fourth grade education. I can't see how they can feel competent to judge whether a national board can do the work or not.

The Bureau of Indian Affairs has the longest reign of failure of any branch of government. They would have to look hard to find any evidence of success in their educational policy, so I don't know why they are against it unless they are afraid it will take away some of their authority.

But I think this national board would do an awful lot of good, especially if they would pick people democratically. This could be done on a national level, and it should be done on a State level also, to further disseminate this information and help select them in these areas.

Indian education will have to take a drastic change if it is going to meet the needs of Indian people. They will have to change the curriculum completely. They will have to start teaching Indian history in these schools, of the particular reservations and tribes. They will have to teach Indian history and culture. They should be teaching the language and give them credit. Bilingual people offer much more to society and their learning experiences are much more meaningful. They are overlooking this.

I think it will take some drastic changes within the Bureau of Indian Affairs' educational system before any of these come about. I think the scene has changed now. Young Indians across the country—I gave 45 talks last year at different universities, colleges, and reservations, and the young people that I talked to are all demanding that they change the educational policies today. Change the curriculum. Start teaching Indian history and culture. Develop pride and confidence in Indian youth.

They are searching everywhere for this leadership, for something to grab on to, and I think that is why the slower Indian power is becoming so prominent among young people, because there is hope there. I think you will see Indian youth on these reservations' boarding schools start demanding to get rid of the non-Indian teachers and start supplying more Indian teachers, Indian teacher aides, resource people, hire more Indian counselors. This is something badly needed. Most of the youth that I have talked to complain—they can talk to non-Indians, but would prefer an Indian to talk to, to get some of the things off their chest because they feel they have more feeling for what they are trying to do.

The Bureau of Indian Affairs has made some minor changes in the past year. I look for them to make some more changes in the next year or two, possibly, because you are going to see young Indians all over the country demanding this, but until they hire more Indian teachers, Indian resource people, teacher aides, change the curriculum to meet the needs of the Indian people and of the specific communities and reservations, they are also going to have to change the atmosphere of the schools themselves to make it a little different.

Senator KENNEDY. Do you have a feeling where a national Indian education board ought to be?

Mr. BRIGHTMAN. Sir?

Senator KENNEDY. Do you have a feeling of where the national board ought to be located? Should that be within the Department of the Interior, or independent, or within the Executive Office of the President, or in the Department of HEW? This is one of the features that we are trying to wrestle with. There are a lot of different factors besides the strict education question which I know you are very sensitive to. I think we need some guidance on this, because I am sure the last thing that Senator Mondale and myself want to do is try to come up with something that is running contrary to the interests of the Indian people. I think we are realistic that a matter such as this will be controversial, and I think we are prepared to take whatever heat there is in coming to a conclusion. But we want to make sure that at least we are marching in step with people like yourselves who are completely committed to Indian control in terms of education, health, and human resource development.

I am just wondering whether you have given this some thought, and whether you could help us in trying to make some legislative proposals on that?

Mr. BRIGHTMAN. My own feeling is that I think it should be independent, out of the Bureau of Indian Affairs, and out of the Interior Department. It is a conflict of interest to have the Bureau of Indian Affairs where it is. I can't see the need of adding to this. In think they would stifle any type of growth.

Senator KENNEDY. There is a lot to this, I think, if you get it firmly under the Executive. Then the Executive is accountable, perhaps, more directly. When the President says he wants local control of Indian schools, if it is within his immediate control, he would not be able to find the excuses for not having achieved it. I don't think there is justification in any event for not moving more rapidly. The President can get things done if he really wants to. There are strong arguments for it.

I think this is certainly one of the areas where we need some guidance. I know you have given it some thought. That is why we appreciate your comment.

Senator MONDALE. Thank you very much, Mr. Brightman, once again, for helping us understand, and for your really unique work in going on the scene and reporting what you see. That is fresh information. We appreciate that.

Senator KENNEDY. I want to thank you. You have been a great help to us, and this kind of testimony which gives chapter and verse lends itself to giving us the kind of information which is so essential if we are really going to bring about change. I know you have taken an extraordinary interest in this, and I know you must share the same kinds of frustrations that many parents of young people do, and as we do here. I want to thank you for the service you provided to this committee, and I think really to the Indian people.

Senator MONDALE. It would be a good idea to send this report to the BIA and ask for their response.

Senator KENNEDY. I think we ought to send it to the Secretary of the Interior directly.

Mr. BRIGHTMAN. I was going to do that. Will you take this responsibility, or shall I?

Senator MONDALE. Why don't you send it, and we will also send it. That way, one of the letters may get to him.

Mr. BRIGHTMAN. I tried to get hold of the Commissioner yesterday to make an appointment for today. If I can't see him, I will leave one in his office. I will send one to the Secretary, too.

Senator MONDALE. I understand there is a representative in the room today.

We now have Mr. Don Lagarde of the Grand Portage Tribal Council, Minnesota.

We are very glad to have Mr. Lagarde here. Please come to the witness table?

STATEMENT OF DON LAGARDE, GRAND PORTAGE TRIBAL COUNCIL, MINNESOTA

Mr. LAGARDE. Thank you.

Senator MONDALE. We are very pleased to have you with us this morning. I understand you may be expressing your personal views here, and not necessarily speaking for the council, which is fine.

Mr. LAGARDE. Yes. I was contacted late Monday evening to come in here, and of course we didn't have any—there was no time to get a group together or anything to come up with the feelings of a lot of people.

I read this bill quite thoroughly, and I read it again yesterday on the way in. The only thing that most people are concerned with right now is taking the—relieving the BIA and setting up the national board. Most of the people don't agree with this. They would like to remain in the Bureau of Indian Affairs. Personally, I would like to see the national board set up. I think we would get a lot more done.

Senator MONDALE. Can you tell us why you feel that way?

Mr. LAGARDE. Well, I think there would be more control this way if we had a national board, and if we could have local school boards set up, I think we would get more control over funds that are being spent. I know in our particular situation where I am, our school district has been cut drastically by the State and they are suffering financially right at the present time. They were cut $110,000 earlier. Right at the present time they are facing an $85,000 additional cut. I don't know where they are going to cut.

Senator MONDALE. They have no real estate tax base to pick that up?

Mr. LAGARDE. None whatsoever. Our land is 90 percent untaxable.

Now, the first thing that comes up when they say cut is we will close a school. We have a very small school, and a two-room school, a very limited amount of students. The per pupil cost in our own particular school, the Indian school, is $2,500 per year per pupil.

Senator MONDALE. Is that boarding?

Mr. LAGARDE. No. This is public. Against the county average, which is right around $500 to $600, the first thing comes up is, we would like to cut your school. Our school is supported by Johnson-O'Malley about 74 percent right at the present time, with the county coming in with a very small amount. Now, most of the Johnson-O'Malley funds that are put in there, no one knows where they are going, whether they are spent on Indian students or Indian education.

Senator MONDALE. Mr. Lagarde, that percentage of the students in the Grand Portage School are Indian students?

Mr. LAGARDE. Eighty percent.

Senator MONDALE. What percentage of the school board are Indian?

Mr. LAGARDE. None.

Senator MONDALE. None?

Mr. LAGARDE. None.

Senator MONDALE. How many Indian teachers in the Grand Portage school system?

Mr. LAGARDE. None.

Senator MONDALE. How widely does the local schoolboard consult with Indians in developing curriculum for the Indian children?

Mr. LAGARDE. I have been there since 1967. I moved back to Grand Portage. In that time we have set up an Indian education committee locally, just with the Cook County School District, and the parents and concerned people from the reservation.

Senator MONDALE. In other words, this school is run by the Cook County School Board?

Mr. LAGARDE. Right.

Senator MONDALE. Countywide?

Mr. LAGARDE. Right. This is the only contact we have, this little local Indian education committee taht we have set up. We don't have a whole lot of people involved in it.

Senator MONDALE. Does the local principal consult with that committee?

Mr. LAGARDE. Yes, he is one of them.

Senator MONDALE. Is this Mr. Peterson?

Mr. LAGARDE. Right.

Senator MONDALE. Is he still there?

Mr. LAGARDE. Yes. He is not there as a teacher. He is working as elementary director now.

Senator MONDALE. I was told a few years ago that this school had 100 percent graduation rate, that the kids were getting through school and——

Mr. LAGARDE. Yes, sir. In the last 10 years, we have had three dropouts. In the last 5 years, we had one dropout.

Senator MONDALE. This is a really remarkable story of Indian education. We just had a report in Minneapolis of 65 percent dropouts. We have schools in Minnesota where it is 100 percent dropouts. In Grand Portage you had in some classes 100 percent retention to high school graduation.

Mr. LAGARDE. Right. One in the last 5 years has dropped out.

Senator MONDALE. That is a remarkable story.

Mr. LAGARDE. In this past year, we had six signed up going on to higher education.

Senator MONDALE. What is the key to that success?

Mr. LAGARDE. I don't know. I think we have probably more parents being involved in what their children are doing. Of course, the teachers have a lot to do with this also.

Senator MONDALE. Mr. Peterson is an extraordinary man.

Mr. LAGARDE. Yes, and he has taken no credit from his wife. She is also a good teacher.

Senator MONDALE. Isn't she a Chippewa?

Mr. LAGARDE. I think she has Cherokee. It is minute. But the work of these people has been real good. They worked real hard. They got a lot of support from the local people.

Senator MONDALE. Under this bill, funding levels would be increased. In addition to that, before expenditure, the Indian parents would have to be consulted and approve the programs for the expenditure of that money for their children. They have to be consulted and approve the program. Do you agree with that approach?

Mr. LAGARDE. Yes, up to a certain point. Personally, I don't feel that I would be qualified to say where the funds should be spent. I would like to have a board set up that would do this.

Senator MONDALE. In addition, of course, we would call for the establishment of a National Indian Education Board, which I gather you favor, but we would also like to get some local control vested in Indian parents over the expenditure of funds.

Mr. LAGARDE. I was hoping that before we would get down here we would have a lot more involvement with people. I was real disappointed when we didn't have, so that we could get more feelings of local people and Indian people.

Senator MONDALE. This record will be open for a while. When you get back home, get some people together and go over this. We will give you a summary before you leave, give you some copies. You might discuss it with them and write us a letter, and we will put the letter in the record.

Mr. LAGARDE. I would like to ask you one question. You have been contacted by the Minnesota Chippewa Executive Committee on a regional hearing.

Senator MONDALE. I am sorry?

Mr. LAGARDE. Have you been contacted by them on a regional hearing?

Senator MONDALE. Yes. You see, our problem is that we are not in a position to go out on the road. We had traveled nearly 10,000 miles—I was a member of the Indian Education Subcommittee which has now expired. We established the most exhaustive hearings on Indian education—field hearings—that have ever been held by a congressional committee. Now, many say start over again. Well, we are never going to pass a bill if we delay. What we have tried to do is encourage the Indian representatives to come here and tell us about it. We have sent copies of the bill, explanations of the bill to several—to all the representatives we can think of. Then we have encouraged the National Congress of American Indians, and the other groups, to circularize their members, and hold meetings, and tell us what they think. There have been some meetings—there was a meeting in Pierce, S. Dak. of the Association of Tribal Chairmen, and we sent a staff member from this committee out there with copies of the bill, and they had long meetings, and they approved the Kennedy amendment with certain reservations, and we have put that in the record.

Then, just to make certain that no one was left out, we called this meeting today, and we wired any number of people saying, "Come on in. We would like to hear from you." Plus the higher education bill, to which we hope to attach this, is being marked up in about a month. If we have to go out and hold field trips again; I don't think it will happen. It will kill the bill. That is what will happen. Then it will be 15 years, and maybe somebody else will try later on.

In addition to that, the Indian Education Committee made one of its strongest recommendations, the convening of a White House Conference on Indian Affairs, broadly representative of Indians, to go over these questions of Indian control: National Indian Board, where should Indian affairs be? BIA, HEW? Both? White House? These questions.

We have been unable to get such a White House conference called.

But I think we have heard at least 15 witnesses.

Mr. LAGARDE. Yes; there was a group down last week.

Senator MONDALE. From Duluth, Minneapolis, Jerry Bucknawa, Will Antel, Ted Mahto. Will served as a staff member with us to help on Indian education matters. Yourself. In addition to that, we had witnesses—we had a witness this morning from the Upper Midwest Indian Center in Minneapolis, Mr. Carr.

We tried very hard to hear—if we have to take to the road, we are just not going to get a bill.

Mr. LAGARDE. I was at this meeting where they agreed to try to set up a regional hearing with the tribal executive committee, and they expressed the feeling that they didn't want education taken out of the Bureau of Indian Affairs.

Senator MONDALE. Several witnesses have said that.

When you return, would you tell them to send up a letter stating exactly what they think should happen?

Mr. LAGARDE. Yes. I will have a meeting with them.

Senator MONDALE. Tell them I will put that in the record here and read it personally to make certain that these views are expressed.

Mr. LAGARDE. Yes.

We had a meeting along with the Minnesota Indian Education Committee and the tribal executive committee. This was the feeling, one particular part, that they didn't want education taken out of the BIA.

Senator MONDALE. We heard many witnesses say that.

Mr. LAGARDE. On the rest of the bill, they were—they felt most of the bill was pretty good, except for the taking out of the BIA. I don't agree. I would like to see the national board.

Senator MONDALE. I would say what you have just said is pretty much what the Minnesota witnessess——

Mr. LAGARDE. If it is made up of Indians.

Senator MONDALE. I think so.

If you would ask them to look at anything they want to suggest, we want to hear about it.

Mr. LAGARDE. OK.

We will have time to write letters back?

Senator MONDALE. Yes. If they could get us a letter, say, in 2 weeks, it would be helpful.

Mr. LAGARDE. All right.

Senator MONDALE. The record will close 2 weeks from today. Could we have it in by then? That would be helpful.

Mr. LAGARDE. Okay. I will make phone calls.

Senator MONDALE. It would help us.

Thank you very much.

We will stand in recess.

There were some other witnesses, including Mr. Don Wright, president of the Alaska Federation of Natives, who is over in the House side testifying this morning. We will hold the record open. Their testimony will be submitted.

Thank you. We stand in recess to the call of the Chair.

(Whereupon, at 11:30 a.m., the subcommittee was recessed, to reconvene at the call of the Chair.)

APPENDIX A

Memorandum of Understanding Between Bureau of Indian Affairs (Department of the Interior) and Office of Education, DHEW, Relative to Title I, Elementary and Secondary Education Act of 1965

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

MAY 7 1971

Honorable Claiborne Pell
Chairman, Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

It was a privilege to appear before your Subcommittee last week to discuss ways of meeting the critical needs in Indian education. I join you and the other Subcommittee members in your deep concern for these problems and I look forward to the positive action that must follow our discussion.

I am pleased to announce that the same afternoon Commissioner Bruce of the Bureau of Indian Affairs and I signed the enclosed memorandum of understanding regarding the use of Title I funds allocated to BIA. This agreement represents a positive and significant step in the cooperation between the Office of Education and the Bureau of Indian Affairs. This cooperation must grow if we are to address the pressing needs in Indian education.

Sincerely,

S. P. Marland, Jr.
U.S. Commissioner
of Education

Enclosure

MEMORANDUM OF UNDERSTANDING
BETWEEN
BUREAU OF INDIAN AFFAIRS
(Department of Interior)
AND
OFFICE OF EDUCATION, DHEW
RELATIVE TO
TITLE I, ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965

GENERAL

Title I of the Elementary and Secondary Education Act of 1965 authorizes financial assistance to meet the special educational needs of educationally deprived Indian children in BIA (Department of the Interior) schools and out-of-State Indian children being educated in elementary and secondary schools of local educational agencies under contract to the Department of the Interior.

POLICIES

I. BIA RESPONSIBILITIES

1. The program will be conducted through discrete projects developed and approved in accordance with the legislation, regulations, and criteria issued pursuant thereto by the U.S. Commissioner of Education. All Title I funds must be spent in accordance with such approved projects or project amendments.

2. All Title I project applications and project amendments must be submitted by BIA school or agency administration to the Commissioner of Indian Affairs for approval or disapproval. Headquarters (Central Office) and Area Office projects will be limited to those prescribed in sections IV-1, IV-2 and IV-4 of this memorandum except as mutually agreed to by BIA and OE.

3. A project application will be considered for approval by the Commissioner of Indian Affairs only if it contains but is not limited to the following:

(a) Identification of the groups that were involved in analyzing needs and planning the program and a description of the nature and extent of their involvement, including meetings with Indian parents for their consultation and assignment of priorities.

(b) An analysis of the needs of the children, involving appropriate objective educational measurements, indicating the source of information and major conclusions concerning the incidence and severity of needs.

(c) All data required by the Title I regulations on parental involvement.

(d) Statement of performance objectives.

(e) Description of proposed program to meet the performance objectives.

(f) Description of inservice training to be provided including joint training activities for education aides and professional staff members.

(g) Description of program to meet the special education needs of Indian students attending private schools within the jurisdictional area of the applying agency.

(h) Specific provision, where applicable, for the participation of parents in the programs designed to meet the needs of the children in order to build meaningful relationships between the parents and the school.

(i) Specific provision where applicable, for an Indian person to act as liaison between non-English speaking local Indian communities, school boards and the school; to hold community seminars on Title I, disseminate information and to establish communication between school professional staff and local Indian communities through PTA type meetings.

(j) Description of evaluation methods.

(k) Description of dissemination activities.

(l) Budget, including an explanation of items of expenditures and appropriate justification of all items of equipment, equipment inventory, and construction.

4. BIA will utilize the results of annual evaluations to improve subsequent years' programs and will assure that development of current year projects reflect the influence of latest available evaluation results.

5. BIA school or agency administration will be responsible for implementing the program.

6. BIA Central Office will furnish the Office of Education with a copy of each approved project and each approved project amendment within five (5) days of approval. It will also provide OE with copies of the evaluation report and such statistical and other reports as may be required by the Commissioner of Education.

II. TITLE I PARENT COUNCILS

1. BIA will be responsible for the establishment of the parent councils as required by Title I regulations and their meaningful involvement in the planning, development, and operation of Title I programs. Furthermore, BIA will adhere to the Title I regulations with regard to parent councils, and all such regulations are made a part of this agreement. The travel and per diem expenses of parent representatives on Title I parent councils for off-reservation boarding schools may be approved as part of the project application.

III. OUT-OF-STATE INDIAN CHILDREN IN PUBLIC SCHOOLS

The following policies will govern payments to local education agencies that provide services to out-of-State Indian children under contract with BIA.

1. BIA will make Title I funds available annually to local education agencies under contract for the education of out-of-State Indian children. The amount to be made available shall be consistent with the amount per child made available to the State (in which the agency is located) by the Commissioner of Education in accordance with the formula in the statute.

2. BIA will establish a count of out-of-State children in BIA dormitories and attending public school as of February 1, determine amounts to be made available to the affected local education agencies, and notify simultaneously, the Office of Education and the Title I Coordinators in the cognizant State education agency of these amounts as soon as possible for the succeeding fiscal year.

3. State Departments of Education will have authority to negotiate project revisions, approve projects and/or project amendments funded through this procedure. A copy of the approved project application will be forwarded to BIA and the U.S. Office of Education by the State education agency.

4. Following receipt of the State approved project application or amendment thereto, BIA will make payments to the local education agency through its existing contractual authority.

5. In the event any local education agency chooses not to participate, the unused funds will become available for use in Title I projects in BIA schools.

IV. BIA ADMINISTRATION

1. BIA will exercise strong leadership and administrative direction of the Title I program. The administrative arrangements for staffing, organization and functions to be performed will be set forth in a special project, together with a budget, to be approved by the Office of Education. This special project will include a description of all functions to be performed in the administration of the Title I program.

2. BIA will make provision for training sessions for the members of Title I parent councils, either by contract or in cooperation with the local school.

3. BIA will make the following documents available for inspection or, upon request and at reasonable cost, (not to exceed the additional cost incurred to BIA) provide an interested party with a copy of the documents. In no event will members of parent councils be charged for any Title I documents.

(a) current and past Title I applications,

(b) all documents and records (except those which relate to the performance of named students and teachers) relating to the planning, development, operation, and evaluation of Title I programs,

(c) other documents and records, whether prepared for Title I specifically or not (except as exempted in item b), containing information necessary for comprehensive planning or evaluation of the compensatory education program.

4. BIA Central Office will conduct or contract for a cross-section evaluation of all BIA Title I program or agency projects.

5. BIA will be responsible for monitoring BIA Title I programs yearly.

6. BIA will be responsible for making a maximum effort to combine its Follow Through Projects with special activities for the same pupils under Title I in accordance with the regulations and guidelines of the Follow Through program.

7. BIA will investigate and resolve complaints related to the Title I program. Within five (5) days of receiving a complaint, the Title I office will send a copy of the complaint to OE. BIA will notify OE of the actions taken with respect to the resolution of such complaint on a timely basis.

8. BIA will be responsible for implementing any changes identified by the OE through program reviews as necessary to bring the program into compliance with the statute and the regulations.

9. As a part of its dissemination program, BIA will provide a copy of this document to each BIA local school administrator and each local parent council.

V. OE RESPONSIBILITIES

1. The Office of Education annually will review BIA program administration and implementation to determine compliance and effectiveness of Title I programs and will report its findings to BIA.

2. BIA, in the first instance, is responsible for the investigation and resolution of all complaints. If a complainant is dissatisfied with the final action taken by BIA he may present his complaint to the U.S. Commissioner of Education. The findings of fact by the U.S. Commissioner of Education with regard to such complaints shall be conclusive.

3. OE will provide technical assistance to the Bureau of Indian Affairs in the administration of the Title I program.

4. DHEW General Counsel's office will interpret and clarify Title I regulations and requirements for the Bureau of Indian Affairs.

5. The BIA Title I program will be audited by the Department of Interior.

VI. GENERAL

1. OE will transfer to BIA the amounts available on a quarterly basis.

2. This memorandum will be reviewed annually and mutually agreeable changes will be made on the basis of legislative changes and of the experience gained in the program.

3. This memorandum will be effective and implemented immediately upon its approval by OE and BIA.

APPROVED:

Allan Bowman — DATE: 4/28/71
U.S. Commissioner of Education

Louis R. Bruce — DATE: 4/28/71
Commissioner of Indian Affairs

APPENDIX B

Material submitted by Health, Education, and Welfare

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

Honorable Edward M. Kennedy
United States Senate
Washington, D.C.

Dear Senator Kennedy:

This is a further response to your request of February 5 for information and financial data indicating the extent to which our programs are affording educational opportunities to American Indians.

As you know, we already have provided you with the materials gathered in the course of the contract study on Indian education conducted by Dr. Havighurst. With this letter, I am pleased to forward the remainder of the information and data compiled in response to your request. I trust you will find these materials informative and helpful.

Enclosed you will find a copy of the consultants report on Title I and various data on expenditures for Indian education under Office of Education programs.

Regarding your inquiry concerning the recommendations made in the final report of the Indian Education Subcommittee, let me say that my upcoming testimony on the proposed legislation will bear upon the substance of those recommendations. In addition, and at my direction, those recommendations are under study by a specially constituted policy group. The preliminary findings and recommendations of that group, with respect to a broad spectrum of policy considerations in the area of Indian education, are expected to be available in the near future.

A Memorandum of Understanding between this Office and the Bureau of Indian Affairs, Department of the Interior, dealing with that part of the Title I, Elementary and Secondary Education Act, program administered by BIA, is now being prepared in final form, with a view to its submission to BIA at the earliest practicable time. It is believed that implementation of the contents of the Memorandum of Understanding will further strengthen the cooperation and coordination between the two agencies and produce increased and improved educational benefits for Indian school children.

Page 2 - Honorable Edward M. Kennedy

If this Office can be of further assistance to you in your efforts to improve and expand educational opportunities for American Indians, please call upon me.

Sincerely,

S. P. Marland, Jr.
U.S. Commissioner
of Education

REPORT ON FUNDS ALLOCATED TO THE BUREAU OF INDIAN AFFAIRS FOR INDIAN EDUCATION BY THE OFFICE OF EDUCATION

1. Data that are available from the former Title I publications and 1969 CPIR for Indian education through Federal funding are as follows:

a. The amount of funds, over the past five years, allocated and spent for Indians under Title I, ESEA, for public and federal schools.

TITLE I—ASSISTANCE FOR EDUCATIONALLY DEPRIVED CHILDREN ALLOTMENTS AND EXPENDITURES FOR FISCAL YEARS, 1967, 1968, 1969, 1970, AND 1971

Fiscal year	Allotments	Expenditures
1967–68	$5,000,000	$4,413,398
1968–69	9,000,000	8,907,237
1969–70	9,000,000	8,966,255
1970–71	10,660,353	[1] 10,000,000
1971–72	11,702,304	(2)

[1] Estimated.
[2] Not available.

b. Allotments for Fiscal Year 1970 and 1971, under programs administered by the Bureau of Elementary and Secondary Education.

ALLOTMENTS FOR FISCAL YEAR 1970, 1971 PROGRAMS ADMINISTERED BY THE BUREAU OF ELEMENTARY AND SECONDARY EDUCATION

Program	Allotment	
	Fiscal year 1971	Fiscal year 1970
Title I, assistance for educationally deprived children	$11, 702, 304	$10, 660, 353
Title II, ESEA	117, 233	60, 693
Title III, ESEA	298, 113	230, 458
Sec. 402—ESEA		
Title V, ESEA		
Title III, NDEA	50, 000	42, 500
Title V-A, NDEA		17, 000

Note: Previous years are in a report prepared by Ila Reamer, title II, Dr. Philips office.

c. Highlights for the 1967 Title I publication *Statistical Report, Fiscal Year 1967, Title I/Year II.*

1. Three percent of total entitlement was withheld for use by the Department of the Interior (Bureau of Indians Affairs).

2. Number of children participating in Title I activities by grade span.

Grade span	*Number of participants*
Total, all participants	48, 370
Prekindergarten	100
Kindergarten	320
Grades 1 to 3	19, 530
Grades 4 to 6	11, 790
Grades 7 to 9	8, 740
Grades 10 to 12	6, 640
Ungraded	1, 250

3. Number and percent of children in public and nonpublic schools participating in Title I activities, fiscal year 1967.

Control of school	Participants	
	Number	Percent
Total, all schools	48, 370	100. 0
Public	47, 670	98. 6
Nonpublic	700	1. 4

4. Total entitlements for the Department of the Interior for fiscal year 1967 was $5,000,000. Their total expenditures were $4,413,398. The percent of entitlements expended was 88.3 percent and the average expenditure per child was $91.

5. The Department of Interior is treated as a eligible school district, in stratum 1 with a weight of 100.0.

6. Number of employed staff members and volunteers.

Type of staff members	*Number of staff members*
Employed staff:	
Total, all employed staff	1, 080
Professional:	
Teacher	170
Other	100
Nonprofessional:	
Teacher aides and library aides	520
Other	290
Volunteers	----

Report on P.L. 81-874 and P.L. 81-815 Funds

for Indian Children

1. Approximately 700 school districts claim pupils in connection with Indian properties under Title I of Public Law 81-874. In addition to payments for pupils claimed from Indian properties, many of these districts receive payments for pupils claimed from other (Federal) properties. Estimates of payments for Indian pupils as well as estimates of total payments to these 700 school districts are as follows:

FISCAL YEAR	ESTIMATED PAYMENTS FOR INDIANS	ESTIMATED TOTAL PAYMENTS (INCLUDING PAYMENTS FOR INDIANS)
1966	$14,139,000	$56,066,000
1967	15,039,000 1/	62,926,000 1/
1968	16,977,000 2/	73,980,000 2/
1969	17,837,000 3/	77,085,000 3/
1970	18,784,000 4/	77,181,000 4/

2. These payments are deposited in the general maintenance and operations expense accounts of the school districts and, therefore, are used to maintain the educational program for all children attending schools in the districts. Most of the payments for Indian pupils are made under Section 3(a), children who live on, parent employed on Federal property. Language in the 1971 Appropriation Act provides 90 percent funding, 100 percent in some cases, under Section 3(a). Thus, payments for Indian pupils are expected to be $23,000,000, an increase of over $4 million from 1970.

1/ 98 percent of entitlements
2/ 98.7 percent of entitlements
3/ 91.7 percent of entitlements
4/ 84.7 percent of entitlements

FILMED FROM BEST AVAILABLE COPY

3. During the five-year period, 1966-1970, $11,975,499 was reserved to construct schools under Sections 14(a) and 14(b) of Public Law 815. These subsections of the Act provide for the construction of school facilities for children who reside on Indian lands. In fiscal year 1970, Public Law 815 was amended by Public Law 91-230 to grant priority in funding Sections 14(a) and 14(b) equal with Sections 9, 10 and 16. As all funds appropriated through fiscal year 1970 were committed to on-going project applications, the 1971 fiscal year appropriation will be the first one for which Sections 14(a) and (b) applications will compete for funding.

4. The Division of School Assistance at this time has 44 tentatively eligible and eligible applications which total over $34 million for the construction of Indian schools under Public Law 815. See enclosed table.

1/ Assumes (1) if applicant is eligible under Section 5, that in most instances payment would be made under subsections 14(a) and (b), and (2) if applicant is potentially eligible under subsections (a) and (b), that applicant would request processing for the larger entitlement. Final selection of subsection of eligible applicant may significantly change the total figure.

2/ Estimated entitlement includes prior year applications from the same applicants which remain unfunded.

3/ Applications are on file, but tentative eligibility, if any, cannot be determine on basis of information contained in the application.

APPENDIX C

Material submitted by Bureau of Indian Affairs

1. WHAT STEPS HAVE BEEN TAKEN TO IMPLEMENT THE RECOMMENDATIONS OF THE PRESIDENT'S MESSAGE?

The President's message of July 8, 1970, stressed:

1. a policy of non-termination,
2. Indian initiative and self determination in the management of Federally funded programs,
3. assumption of such programs when tribes wished,
4. directed the NCIO to establish an Indian subcommittee to help communities establish school boards and to do a nationwide review of education for Indians whereby they were attending school and,
5. amend the Johnson-O'Malley Act to authorize the payment of public school support funds directly to Indian tribes and communities.

Seven legislative proposals to completely implement the new policies and goals outlined by the President were sent to Congress before the end of July. Each proposal was introduced in the Senate and the House of Representatives.

The legislative proposals were:

1. "To amend certain laws relating to Indians." -- S. 4114, H. R. 18572, and H. R. 18828.

2. "To establish within the Department of the Interior the position of an additional Assistant Secretary of the Interior, and for other purposes." -- S. 4115, H. R. 18570, and H. R. 18827.

3. "To provide for financing and economic development of Indians and Indian organizations, and for other purposes." -- S. 4116, H. R. 18571, and 18790.

4. "To retain coverage under the laws providing employee benefits, such as compensation for injury, retirement, life insurance, and health benefits for employees of the Government of the United States who transfer to Indian tribal organizations to perform services in connection with governmental or other activities which are or have been performed by government employees in or for Indian communities, and for other purposes." -- S. 4163, and H. R. 18735.

60-433 O - 71 - pt. 4 ---18

5. "To provide for the assumption of the control and operation by Indian tribes and communities of certain programs and services -- S. 4164 and H. R. 18728.

6. "To provide for the creation of the Indian Trust Counsel Authority, and for other purposes." -- S. 4165, and H. R. 18727.

7. "To amend Acts entitled 'An act authorizing the Secretary of the Interior to arrange with States or Territories for education, medical attention, relief of distress, and social welfare or Indians, and for other purposes', and 'To transfer the maintenance and operation of hospital and health facilities for Indians to the Public Health Service, and for other purposes." -- S. 4166 and H. R. 18729.

Copies of the bills, as introduced were sent to each agency with the request that they make copies available to the tribal officials.

Several of these bills have been reintroduced in this Congress. Meantime, plans to transfer authority to local agencies and tribes have been made by the BIA; model contracts for school operations have been developed and considerable effort to disseminate the information to local tribes continues.

The NCIO held regional hearings and this information was disseminated; the objective has been to stimulate, facilitate, and support the direct involvement and planning between Indian people and other agencies and departments.

In the Bureau, summer program activities, though curtailed last year, have this year shown remarkable progress. Not only were 18.5 thousand children served by these programs, but approximately 11.2 thousand jobs were generated, bringing an additional 6.6 million dollars income to Indian youth through the school year. (This large figure does include 1.1 million spent on 10,000 youth by the National Youth Corps.)

Early childhood education had 75 units with 1681 in enrollment in 1970. Today 123 units are in operation with over 2400 children in attendance.

Notable progress has been made in bilingual education with a quarterly newsletter being circulated nationwide and to many foreign countries. Currently, plans are being developed with the U.S.O.E. for the 1 million dollars which was "ear-marked" for bilingual programs in Indian schools by the last appropriations bill. Meantime, a number of pilot projects are underway.

The BIA is undertaking expanded bilingual programs of its own in a teacher training program to recruit, select and train Indians as bilingual teachers for both BIA and public schools. The first five years of this program will provide and employ 300 fully-certified bilingual Indian teachers.

As of March 1971 the BIA Education Office acts as a "State Department of Education" in identifying and advocating Title VII projects to be funded under ESEA for Bureau schools. This year (FY-72) BIA schools share a small portion (c. $300,000.00) of the one million dollars allocated for Indian bilingual education.

THE DEVELOPMENT OF CULTURALLY SENSITIVE CURRICULUM MATERIALS, (B) TRAIN NATIVE TEACHERS, AND (C) PROMOTE TEACHING AS A CAREER AMONG INDIAN YOUTH.

Major efforts are already being undertaken:

(a) to develop culturally-sensitive texts for classroom use. This is evidenced principally in five programs which are funded variously through the BIA, Title VII and private foundations. They are:

(1) The Creative Writing Project for 20 BIA schools through the University of California at Santa Cruz.

(2) The Navajo Reading Study through the University of New Mexico for the identification and production of texts in Navajo.

(3) Alaska Bilingual Program produces classroom texts in Yuk (Eskimo) to be expanded to other dialects.

(4) Doris Duke Oral History Project attempts to save Indian cultural commentary and make it available to text writers.

(5) BIA Teacher-Training Project will produce and adapt mother tongue materials for classroom use.

(b) to train native teachers. Apart from the widespread training and employment of Indian aides in BIA schools, the major thrust in the training of Indian teachers is in the BIA projects to train 300 certified bilingual teachers in the next five years.

(c) to promote teaching as a career among Indian youth.

(1) FY-72 projections for scholarships to Indian youth budget 15 million dollars for 8,000 students and in FY-73, 30 million dollars for 10,000 students. Nearly ½ will major in education.

(2) the BIA teacher training program for bilingual Indian teachers will certify 300 such specialists in five years.

All 200 BIA schools now report that they have school boards or education committees of various kinds. (This includes the one now being organized at the Institute of American Indian Arts, Santa Fe, New Mexico.) These boards and committees are becoming increasingly more active and are assuming greater management roles in regard to curricula, student personnel services, personnel, construction, and educational objectives.

Project TRIBE established the policy and the vehicle for the creation of local boards to assume policy and operational responsibility for schools which are currently federally operated. This can be done under contract with the Bureau providing funding at a level comparable to that maintained in federally operated schools.

Four local schools are now being operated by tribal groups: Stephan High School, Stephan, South Dakota; Blackwater Day School, Coolidge, Arizona; Rough Rock School, Chinle, Arizona; and Ramah School, Ramah, New Mexico. The Navajo Tribe also operates the Navajo Community College. Several other local school units are making plans to operate their own schools in the future.

The BIA is now using the charette concept in community school planning and expansion. All the local resources (parents, patrons, students, tribal officials, and school staff) as well as outside expertise are used in an effort to arrive at a consensus of opinion concerning various alternatives available to reach the community's educational objectives. The idea of involvement has been expanded to include actual control and operation of schools by contract at the local level. These boards are playing a constantly expanding role in the operation of the schools. Concurrently, at each boarding school on Navajo, attempts are being made to expand the day enrollment attending the school. This has met with notable success at locations such as Lukachukai Boarding School where the enrollment is now half day and half boarding with special provision made for breakfast and evening meals for day students.

Also on Navajo, there has been underway at eight locations a new direction for dormitory staffing which results in greater attention being given to providing a home-like atmosphere for the students and better utilization of professional personnel.

A "model dormitory program" has been developed with USPHS assistance and is underway at a Navajo reservation boarding school. Two colleges are now providing courses at Navajo reservation locations which provide non-degree employees with an opportunity to get college work. Finally, greater use is made of parents in the programs of the school. To illustrate, "Moms and Pops" programs funded under PL 89-10 are common in most Navajo reservation boarding schools.

The need for funds for an all-weather road system on Navajo remains urgent.

Fifteen innovative programs are currently funded under Title II and III of the Elementary and Secondary Education Act. Title II is demonstrating that one of the causative factors of Indian students' lack of progress according to current educational statistics is the lack of innovative instructional materials and supplies in the hands of students and teachers. The hypothesis will be tested against controlled student populations with the purpose of pointing out to the Bureau the significant academic gains that can be made when the budget for instructional materials and supplies is adequate and safeguarded.

The Bureau's Title III ESEA proposal for a Parent-Child Center in the Bethel District of Alaska was recognized by the Office of Education at the President's National Advisory Council meeting as the best submitted from a field of over 200 proposals from the Nation. The proposal is designed to eliminate nutritional, intellectual and language handicaps prior to a child's entering a formal education program. Title III is also funding developmental music programs at the primary and elementary level since there is a definite correlation between academic proficiency and music training. The vital assist to speech, social and academic development of students from music training should be augmented by the project's concentration on native music.

In a special reading project at Papago, during the first half of the present year, the Title I target group of children made a gain of six months as compared with a gain of three months in the control group. At the schools at Gila Crossing and Casa Blanca, the target children gained seven and five months, respectively, during the first three months of the project.

As new methods, techniques, and programs have established their worth in meeting Title I objectives, encouragement has been given to incorporate such practices into the regular program. Thus, ESL (English as a Second Language) programs developed under Title I are now becoming a regular part of school programs in the Navajo, Juneau, and other areas. The Reading Laboratory developed at the Chemawa Indian School has met with such success that all 9th grade students are now scheduled into a remedial-developmental reading program as a part of the regular program. The Tribal Education Coordinators have met with such success in developing community involvement that they will be funded in the regular budget during the coming year.

Within the last two years the total number of counselors in BIA schools has increased by over 15% (from 270 to 313), the percent of professionally trained and state certificated counselors has risen from about 27% to almost 50%. The counselor is now, in most instances, not a dormitory manager but a full time child contact professional.

In-service training for dormitory child contact people is carried on in almost every boarding school. Outside consultant staffs from colleges and universities, Public Health Service, mental health clinics, etc., as well as BIA professionals are used to aid dormitory personnel to become more competent in child contact procedures.

Schedules at boarding schools are staffed so that students have opportunity for counseling during school hours, afternoons, evenings, or weekends - at the time of their need. We have been able to reduce the overall ratio of children to adults in dormitory from 34 to 1 - to a new ratio of 19 to 1. This does not as yet meet the optimum which permits for rations of 15 children to 1 adult during the total number of hours children are not in classroom - but it is a substantial increase of effectiveness. We shall continue to develop this important aspect of our program as personnel ceiling and funding permit.

A post-high education consortium now exists to better meet the needs of American Indian youth in the areas of occupational training and comprehensive general programs. The schools forming the consortium, Haskell Indian Junior College, Southwestern Indian Polytechnic Institute, Institute of American Indian Arts, and Chilocco Indian School provide maximum options for Indian students in the following areas:

1. Instruction and training in arts related occupations.

2. Broad occupational preparation programs where a student may get off the educational ladder at any point he feels he has the skills necessary to obtain and hold a job.

3. Diploma and certificate junior college programs and college transfer programs.

Another option available to Indian students for vocational education is training under Public Law 959. This program, administered by the Bureau, permits Indian students to enroll at the consortium schools for specific courses approved by the Division of Employment Assistance.

Indian involvement in public school education is on the increase. For example, all but one of the 16 reservation-based districts in Arizona had school boards with Indian members. The Indian members were on these school boards. Data gathered last year by the Oklahoma State Department of Education revealed that 291 Oklahoma schools receiving Johnson-O'Malley funds had a total enrollment of 152,769 of whom 15,282 or 10 percent were Indian. In these same schools 20 percent of the school board members and 11 percent of the professional staff were Indians.

At least three of the six Johnson-O'Malley funded States have local Indian advisory committees that work with the local school administration in planning programs which meet the special needs of Indian children. In one additional state, included in the study, an Indian corporation administers the program for the entire State. For more than two years, training sponsored by the Bureau has been available to Indians in school affairs. This training has included two workshops on a national level and numerous sessions at the Area and State levels.

All JOM State contracts have new dimensions of involvement in them, with Indian people being heard. At the present time some choose to do it through local committees, others prefer to use Statewide committees as the coordinating bodies with input from local groups. The most effective way is through Indian representation on school boards. All Special Education projects funded by Johnson-O'Malley shall be developed with the participation and approval of a committee composed of the parents of the Indian children enrolled in the school. The committee shall be selected in a manner decided upon by the Indian parents who have children enrolled in the school. Disagreements regarding special education projects which cannot otherwise be resolved, shall be appealed to the Indian school board or, if such a school board does not exist, to the tribal education committee.

New application forms and guidelines for developing budget requests, operational budgets and reporting have been developed and are in use. Also an improved system of monitoring and auditing is being implemented which should result in greater State and Federal attention to these matters.

United States Department of the Interior

BUREAU OF INDIAN AFFAIRS
WASHINGTON, D.C. 20242

IN REPLY REFER TO:

PROPOSED CHANGES IN STRUCTURE AND
POLICY OF THE BUREAU OF INDIAN AFFAIRS

The documents that follow attempt to spell out, as clearly as possible, the changes that Commissioner Bruce announced on November 24, 1970. Since that announcement, there has been some confusion and misunderstanding about the details of these changes and what they will mean for individual Indians, Alaskan Natives and tribes. These documents attempt to fill this information gap.

In the pages that follow you will find accurate statements of each of the four main policy changes that were announced:

1. The policy on reassignment and selection of BIA employees.
2. The statement on inspection and evaluations.
3. The policy on redelegation of Area Office authorities to agencies.
4. The policy on contracting out BIA functions to Indian groups.

Also attached is a copy of Commissioner Bruce's December 13th letter to all tribes which answers some of the most frequently asked questions about these policy changes.

It is hoped that, at long last, the Bureau's new direction will guarantee Indians a more meaningful role in the many decisions that affect their lives. These new policies represent nothing more than the beginning of a system which provides for regular consultations with tribal groups. Though some have criticized the BIA for instituting policy changes without adequate consultation, these changes do little more than set up the necessary machinery for a permanent system of consultation with tribes. The process of consultation has now been formalized and these new policies have built-in flexibility at every step.

There remains one policy, however, that is not flexible: The Bureau will continue to hold firmly to its trust responsibility for Indian lands. To destroy this link with the Federal Government would be to negate all the promises and hope that our new direction seeks to offer the Indian people.

THE POLICY ON REASSIGNMENT AND SELECTION OF BIA EMPLOYEES

Introduction:

It has been the policy of this Bureau to select, provide development opportunities and assign employees so as to best serve Indian people. Programs such as the Merit Promotion Program, the Equal Employment Opportunity Program and the reassignment policy have been used to accomplish these general objectives. Our experience to date indicates that these objectiyes are not being met. Many employees remain in positions too long which has had an adverse effect on Bureau programs and careers of employees. In the absence of a firm policy, serious difficulties have been experienced in reassigning employees to other locations as well as between organizations and program activities. Tribal officials have expressed dissatisfaction with administrative practices of the Bureau, and it has been difficult to be responsive to tribal governing bodies.

In order to overcome these difficulties, a policy of planned reassignment and new personnel selection procedures has begun. These policies will apply to managers and administrators throughout the Bureau.

A. Reassignment of Employees.

1. Insofar as it is consistent with good management practices, managers and administrators will be eligible for reassignment every two to five years. These employees will usually not be subject to reassignment until after they have served for two years. The length of time, beyond two years, an employee remains in a position will be determined by the Bureau in consultation with the tribe or Alaskan Native group involved. In no case will the BIA reassign such an employee without first consulting with the tribe or Alaskan Native group.

2. At least once every six months after the initial 2 years, the Central Office, in direct consultation with the tribe or Alaskan Native group involved will review the performance of the field administrator (formerly superintendent). Should his performance indicate a need for reassignment, actions will be instituted.

B. Criteria for Selecting Field Administrators (formerly Superintendents).

1. Whenever a vacancy occurs, a designated member of the Commissioner's staff will meet with the tribal governing body to obtain the vital information needed to assist in selecting a new field administrator. This will include a profile of tribal needs, the Agency operations, and the special qualifications that the tribe or Alaskan Native group requires.

2. A list of candidates to fill the vacancy will be compiled from the potential Field Administrator Roster, nominations by the tribal or Alaskan Native governing body (either current federal employees or outside candidates) and field administrators scheduled for reassignment.

3. Selection to fill the position by promotion or reassignment will be made within ten work days of the vacancy if possible, only after consultation with the tribe or Alaskan Native group.

4. All Field Administrators, unlike present Superintendents, will be judged on the degree to which Indian tribes are meaningfully involved in the day-to-day operation of BIA-managed programs. This will include such areas as selection of personnel, encouraging the organization of school boards and other advisory groups, involvement in budget preparation, etc.

5. The success of a Field Administrators will not be measured by the extent to which tribes or Alaskan Native groups assume control over the functions he directs, since some tribes will not choose to exercise the option of actually taking over BIA programs under contract.

THE INSPECTION AND EVALUATION OF AGENCIES

Introduction:

Success in the BIA's efforts to increase Indian participation depends upon the responsiveness and initiative of the Field Administrator and his staff. They should become personally involved with Indian leaders in developing programs. In keeping with this policy directive to involve the Indians in program development, and in order to improve the management system, field operations and the use of resources, an evaluation unit has been established to measure the responsiveness of the field structure to the Commissioner's policies. Tribal and Alaskan Native participation is a crucial part of this evaluation effort.

With the help of tribal insight, these findings will assist in the further refinement of programs and policies in the days ahead.

1. Guidelines have been established for conducting on-site field evaluations of diversified agency operations within the Bureau of Indian Affairs.

2. We will begin by completing the evaluations of 12 agencies by the end of January, 1971:

1. Western Washington Agency, Washington
2. Crow Agency, Montana
3. Minnesota Agency, Minnesota
4. Seminole Agency, Florida
5. Palm Springs Agency, California
6. Osage Agency, Oklahoma
7. Eastern Navajo Agency, New Mexico
8. Northern Pueblo Agency, New Mexico
9. Nome Agency, Alaska
10. Pine Ridge Agency, South Dakota
11. Salt River Agency, Arizona
12. Concho Agency, Oklahoma

3. Four teams will be conducting these 12 Agency evaluations. Each team is composed of an Assistant to the Commissioner as Chairman, a BIA technical program specialist, a respresentative from NCIO, a representative from another agency within Interior and a member or members of the tribes served by the agency under evaluation.

REDELEGATION OF AREA AUTHORITY TO THE AGENCY

Introduction:

It is the policy of the Bureau of Indian Affairs to reduce and eventually eliminate all line authority of the Area Offices and to redelegate such authorities to the operating level closest to the Indian tribes served. Within this policy, a planned reorganization will be implemented to convert Area Offices into technical assistance units. More final decisions will be made on the spot at the Agency level where increased tribal participation will be encouraged.

1. Area Offices (which now have line authority over programs operated at the Agency level) will be converted

into Technical Service Centers. They will provide high quality advice and assistance to Field Administrators.

2. At the present time, no significant change in the number of employees at Area Offices is contemplated. Area Directors who have served two years or more are eligible for reassignment.

3. Nineteen off-reservation schools, four irrigation projects and sixty-six agencies or field offices which now report to Area Offices will report directly to the Central Office.

4. The new general operating procedures will be developed initially in the Central Office and then revised after tribal review. Operating plans will be developed by the Field Administrators and Technical Service Center Directors, under Central Office leadership and with full Tribal participation. The organization, redelegations, general procedures, and operating plans will be made effective by a notice of implementation. This notice will be published in the Federal Register and announced in correspondence and the public news media.

5. Regionalization is not part of this plan.

6. The following are examples of some of the currently proposed authorities that will be delegated directly to the Agency level:

-- In general, full authority to administer on-reservation BIA schools.

-- With some exceptions, authority to approve tribal ordinances relating to law and order adopted pursuant to 25 CFR 11.

-- Authority to approve tribal enactments relating to disenrollment of persons who do not meet enrollment criteria.

-- Authority to approve an increased number of leases.

1955

ASSUMPTION OF PROGRAM RESPONSIBILITY BY INDIANS

Introduction:

The policy of the Bureau of Indian Affairs is to make available to Indian people the option to take over the administration of any or all programs which the Bureau provides for them. Naturally, activities which clearly involve the Bureau's trust responsibility must be excluded from this list.

It is important to underscore that this matter of Indian "takeover" is not a program that the Bureau is pushing, but, rather, is only an option. Under no circumstances will tribes be pressured to "contract" to operate BIA programs. Nor will assuming contracts be allowed to prejudice the traditional Indian-Federal relationship in any way.

In order to assure that this indeed is the case, the Commissioner has undertaken the following actions:

1. All BIA employees are specifically forbidden from soliciting tribes to undertake contracts.

2. All tribes wishing to contract must have their actions cleared through a tribal programs contracting unit headed by an Assistant to the Commissioner.

3. No tribal service contract will be approved that does not contain provisions for retrocession at any time.

4. The National Congress of American Indians and the Indian Law Section of the American Bar Association are being invited by the Commissioner to establish a joint committee to recommend a contract format that will provide maximum safeguards against the loss of Federal funds or the termination of the Federal trust over Indian lands and resources.

5. In order to assure that this major BIA policy direction is available to those tribes which wish to take advantage of it, Indian leadership now is encouraged to deal directly with the Washington Office in negotiating contracts to take over BIA programs. A Washington unit headed by Assistant to the Commissioner Billy Mills, a member of the Oglala Sioux Tribe, has been established for this purpose.

6. Beginning immediately all vacancies at all levels of BIA operations will be held open and monitored by Mr. Mills and his staff so that tribes first are offered the fullest opportunity to assume these positions under contract.

POLICY FOR ROTATION OF EMPLOYEES IN THE BUREAU OF INDIAN AFFAIRS

It has been the policy of this Bureau to select, provide development opportunities and assign employees so as to best serve Indian people. Programs such as the Merit Promotion Program, the Equal Employment Opportunity Program and the reasignment policy have been used to accomplish these general objectives. Our experience to date indicates that these objectives are not being met. Many employees remain in positions too long which has had an adverse effect on Bureau programs and careers of employees. In the absence of a firm policy, serious difficulties have been experienced in reassigning employees to other locations as well as between organizations and program activities. Tribal officials have expressed dissatisfaction with administrative practices of the Bureau and it has been difficult to be responsive to tribal governing bodies.

In order to overcome these difficulties, a policy of planned rotation of employees will be commenced immediately with the following objectives in mind.

1. To be more responsive to the needs of Indian people.

2. To more effectively carry out the policies and programs of the Bureau.

3. To maximize opportunities for employee development.

For the immediate future, this policy will apply principally to managers and administrators. The Bureau requires competent and well-trained managers and administrators to manage and direct its complex programs. The application of this policy to these positions is intended to assure maximum development of an overall management capability in the Bureau by broadening managerial perspective and developing managers to assume higher level executive positions.

The following general guidelines will be observed in implementing this policy:

1. Insofar as it is consistent with good management practices, managers and administrators will be reassigned every two to five years. The length of time an employee remains in a position or at a location will be determined administratively by taking into consideration the circumstances in each case and the objectives set forth above.

2. Committees will be established to recommend reassignment of employees. Committee deliberations will be preceded by in depth evaluations of the needs of Indian people, programs, and employees.

FILMED FROM BEST AVAILABLE COPY

In their dealings with tribal leadership, Field Administrators must never allow themselves to become authority symbols and must never compete with tribal leadership for the attention and loyalty of the reservation constituency. All ideal Field Administrator will function in a low-keyed manner assisting his Indian colleagues to sort out the range of practical approaches for meeting local needs. He must understand that it is the perogative of Indian leadership to make the final selection best suiting local needs. Field Administrators must be strong advocates for the Indian cause and must be devoted to the Bureau's principal legal responsibility, which is to protect Indian land and resources and assure that maximum economic benefits are derived from them.

Bureau Policy on Rotation of Employees - Briefly stated, this policy calls for the reassignment of managers and administrators every two to five years. The movements of these personnel will be guided by an executive committee in Washington which I have established for the purpose.

Changes and Procedures for Selecting Field Administrators - Coupled with the new Bureau rotation policy, new procedures have been established for selecting Field Administrators.

This procedure, inter alia, calls for the formation of an executive committee which meets every six months to review rotations and periodically fill vacancies as they occur. The committee is scheduled to discuss these rotational policies and individual moves with tribes in order to fulfill the Commissioner's and the Administration's commitments.

All Area Directors except one are scheduled to be rotated under this policy. Likewise, some 69 Agency Superintendents and Field Employment Assistance Directors also are scheduled for reassignment under the new plan within 90 days.

My new Executive Staff and I feel that these moves are key to implementing the basic thrust of the BIA's policy to make the Bureau more responsive to Indian needs, for placing control at the local level, and for transforming the BIA into a service organization.

Changes in Delegation of Authority - It is the present policy of the Bureau of Indian Affairs to reduce and eventually eliminate all line authorities from the Area Offices and to redelegate these to the operating level closest to the Indian tribes served. Within this policy, a planned reorganization will be implemented within the next 90 days to convert Area Offices into program service and technical assistance units.

FILMED FROM BEST AVAILABLE COPY

I made these comments in a statement before the Senate Committee on Insular Affairs, on August 11, 1969:

> "The main goal of the Bureau of Indian Affairs under my administration will be to actively encourage, allow, and train Indian people to manage their own affairs under the trust relationship and to make the Bureau more responsive to Indian needs. In order to do this, I intend to examine, redefine, and request from the Congress necessary authorities and clarification to make this possible."

I spelled out these intentions more clearly at a meeting of inter-tribal Indian leaders held in Denver, Colorado, on May 21, 1970, stating that:

> "BIA Area Offices will be made fully responsive to Indian needs and expressed desires. Flexibility will be the new order at the Area level. Development of Indian communities and tribal estates will be the objective--and the objective will be carried out along lines that the Indian tribes themselves feel to be appropriate and necessary."

I feel that Indian involvement as promulgated by the Administration in consultation with Indian leaders requires that American Indians and Alaskan Native people must be full partners in an Indian-Federal partnership. In order to effect such a relationship, the decision making processing must be initiated locally. Only by direct involvement at the reservation level can Indian citizens, through their elected tribal representatives, be afforded maximum opportunity to determine those programs, projects, and services most essential and beneficial to their social and economic progress.

Procedures for Buy Indian Contracting - One of the five principal thrusts of my annunciated policy has to do with contracting by tribes. This was clearly stated in my speech at a meeting of the inter-tribal Indian leaders held in Denver, Colorado, on May 21, 1970, on which occasion I stated:

> ". . . Tribes will have the option to take over any or all BIA programs and functions with the understanding that BIA will provide assistance, or reassume control, if any tribe so wishes."

This gives meat to the idea of BIA as a service rather than a management agency. The extent of local tribal takeover of BIA programs will be entirely a matter of decision by each tribe.

BIA's role as a service agency to tribes will apply to those seeking more autonomy as well as to those wishing to continue traditional BIA supervision. Under no circumstances, will program responsibilities be forced on unwilling or reluctant tribes.

This policy was given added strength in President Nixon's July 1970 message in which he clearly pronounced that Indian people must be allowed self-determination without the threat of termination and that Indian people must have the opportunity to manage, operate, and control their own programs. It is also my avowed policy that once BIA program activities are assumed, they may be retroceded at any time and that an adequate funding level will be maintained by the most aggressive action on the part of the Washington Office.

Although this policy has been in effect since April of this year, I am sorry to report that it has not been implemented significantly at the Area Office or the reservation levels. In order to assure that this major BIA policy direction is available to those tribes which wish to take advantage of it, Indian leadership now has the option of dealing directly with the Washington Office in negotiating contracts to take over BIA programs. A Washington unit headed by Mr. Billy Mills, a member of the Oglala Sioux Tribe and Olympic gold medal winner, has been established for this purpose.

Beginning immediately, most vacancies at all levels of BIA operations will be reviewed by Mr. Mills and his staff to assure that tribes first are offered the fullest opportunity to contract or to supervise these positions under the 1834 Act.

Mr. Mills' group also has reviewed the Bureau's policy regarding tribal contracting under the "Buy Indian" provisions of the Act of 1910 (24 Stat. 2946). Last reviewed in August of 1968, significant changes have been made and transmitted to the Solicitor's Office for review. These new provisions assure that a more flexible use of these authorities will be available to tribes wishing to undertake service contracts.

Establishment of evaluation and Inspection Teams - I have established an evaluation unit to make an in-depth evaluation of the responsiveness of the field structure to my policies. Guidelines have been established for conducting on-site field evaluations of diversified agency operations within the Bureau of Indian Affairs. A list of 12 selected superintendencies, representing a cross section of Bureau agency operations, will be evaluated. Teams include an Assistant to the Commissioner as chairman, a BIA technical program specialist, a representative from NCIO, a representative from another agency within Interior and a member, or members of the tribes served by the superintendency under evaluation.

These multi-agency and tribal evaluation teams will be assigned the highly critical responsibility of conducting thorough but expedient reviews of a diverse cross section of agency operations. Through professional capabilities and tribal insights, these findings and recommendations will assist me in further refinement of programs and policies in the months ahead.

<u>Recommendations by National Indian Education Advisory Committee</u>

Recommended that the Dept. of Agriculture assume financial responsibility for the hot lunch program for Indian students in Bureau and public schools. This has been accomplished.

Recommended that BIA and the Committee offer every support and encouragement to Advisory School Boards. This is being accomplished.

1964

Recommended that the BIA develop a meaningful career ladder and training program for instructional aides. This is being accomplished.

Recommended that $2.3 million be restored to the budget for JOM kindergartens in 1970. This was accomplished.

Recommended that administration at the National level consider all the needs that are not being met for the Alaskan student and that a reassessment of priorities be made. Recommendation under review.

Recommended that the Bureau present on an annual basis its proposed construction priorities to the National Indian Advisory Committee for final review before formal presentation to the BOB. This is being done this year.

Moved that a recommendation be presented to the Commissioner that a competent research and evaluation staff be employed immediately to insure that adequate statistical background information is available to substantuate budget requests. Will be implemented this year.

Recommends that higher education grants from BIA be considered supplementary to whatever other funding is available and not looked at as a base. Is accomplished.

Recommended use of Indian organizations by BIA when contracting for services. Is being accomplished.

National Indian Education Advisory Committee responsible for selection of all Indian personnel to provide kindergarten training, assistance and determination of the content and location of training program, and involvement of appropriate national groups. Accomplished.

1965

Recommended funding of a PhD Program. Have worked with OEO to accomplish.

Recommended BIA support of OEO sponsored MA program for Indian School Administrators. Is being accomplished.

Recommended BIA sponsor a conference on student relations. Not accomplished yet, but will be implemented this year.

Recommended strengthening the procedure for dismissing employees who are incompetent and unsuited for the job. Civil Service regulations prevent accomplishment.

Recommended 3rd Annual Workshop on School Affairs be financed by BIA and planned by the Committee based on interest from 2 previous training programs. Not accomplished due to lack of funds.

Recommended removal of Superintendent at Phoenix Indian School and support for Inter-tribal school boards. Done, 1970.

Many of the Committee's varied activities are not reflected in these recommendations which are merely highlights. The attached Annual Report supplies more specific information. The Committee has been instrumental in the establishment of Education Coordinator positions at the local level, school board training opportunities for local Indian people, the performance of program reviews at certain Bureau operated schools, kindergarten staff training, etc.

Curricular materials in native language.

Every BIA school which has a bilingual program approach to Education develops native language materials of necessity. Texts in Indian languages must continue to be produced at an uncommonly great pace due to the dirth of such materials. This is especially understandable when we face the fact that most Amerindian languages have yet to develop a system of writing and a standardized alphabet. In those languages which already have a developed and accepted orthography, progress is being made. Evidence of this is found in the accompanying bibliography from the Navajo Reading Study, a project supported by the Bureau of Indian Affairs. Books, tapes, language texts and dictionaries are of necessity produced in all the Title VII ESEA projects in Bilingual Education. At present there are projects in full operation in the following Indian and Eskimo languages: Yuk (Eskimo), c.f. samples enclosed; Navajo, samples accompanying; Ute, Crow, Cree, Cheyenne, Choctaw and Cherokee. Soon the work done in the Alaska BIA Bilingual program is to be duplicated in another Eskimo dialect, Inupiak.

As of November 30, 1970, the total number of Bureau of Indian Affairs' employees is 15,974. Of these 8,726 are Indian (about 54%).

Breakdown by grades:

Grade	Total	Indians
GS-1	10	6
GS-2	220	183
GS-3	1,564	1,360
GS-4	2,359	1,981
GS-5	1,510	975
GS-6	270	154
GS-7	922	376
GS-8	44	23
GS-9	2,813	535
GS-10	70	7
GS-11	1,250	290
GS-12	880	161
GS-13	409	79
GS-14	283	50
GS-15	70	20
GS-16	6	2

Addendum to Number 8.

The number of Indian applicants for teaching positions for next year as compared to other years.

In addition to the statistics cited by the BIA Office of Teacher Selection in the Albuquerque office of personnel, it is significant to bring to your attention a pilot project for the attraction of Indian youth to the teaching profession. The pilot project in teacher training being inaugurated this summer (1971) on the Navajo Reservation will soon spread to Alaska and other areas with a great concentration of Indians who are monolingual in a language other than English.

The projection at the time of this writing is to fully train, certify and accredit at least 300 Indians as bilingual teachers in a five-year program. This is an innovation in Indian education from which the BIA and state schools serving Indians will learn extensively about the proper preparation of bicultural, bilingual teachers.

RECRUITMENT YEAR 1970
(November 1969 through October 1970)

	Applications rated acceptable	Provided Cert. of Ind. Blood	Claimed Ind. Ancestry
Elementary	2,036	36	18
Guidance Counselors	948	30	12
Secondary	2,902	50	21
Total	5,886	116	51

RECRUITMENT YEAR 1971
(November 1970 through April 1971)*

	Applications rated acceptable	Provided Cert. of Ind. Blood	Claimed Ind. Ancestry
Elementary	3,520	98	46
Guidance Counselors	1,262	10	6
Secondary	4,796	48	24
Total	9,578	156	76

*The first 6 months of the recruitment year have just passed. Projection is for full year. Applications are being filed at the rate of approximately 60 per day. About 40% of all who claim Indian ancestry are able to establish proof that they are 1/4 or more degree Indian blood.

WHAT HAPPENED TO THE $1.6 MILLION IN EDUCATION FUNDS SUPPOSEDLY TURNED BACK? IF REPROGRAMMED, HOW?

There were no unused education funds. As of June 30, 1970, financial reports indicated that there was an unobligated balance of $1.7 million in education operating funds. However, all unobligated funds were used to cover pay increases authorized by Public Law 91-231, and the unobligated education funds were so applied. This was in accordance with the provisions of Public Law 91-231.

HOW WOULD BIA SPEND ADDITIONAL FUNDS SHOULD THEY BE AVAILABLE?

The Bureau has proposed an increase in funds for operations in fiscal year 1972 to cover: increased enrollments and operating funds in the Johnson-O'Malley program $3.0 million; additional scholarships for college students at a more adequate level of funding $9.0 million; increased enrollment and operating funds for Federal school operations $6.2 million. This increase would enable us to provide a more adequate program and to initiate a new phase effecting increased participation by the Indian people themselves.

WHAT ACTION IS BEING TAKEN TO ENCOURAGE INDIAN SCHOOL BOARDS TO TAKE OVER OPERATIONS?

Under the President's policy of Indian self-determination, the Bureau of Indian Affairs is moving from a management to a service-oriented agency to assist tribal groups in assuming control of all or part of local school operations. The Educations Programs Office has established a School Contract Coordinating Committee to assist tribal school boards in planning and developing program proposals subsequent to contractual negotiations under various types of statutory authorities, viz, the Johnson-O'Malley Act, Buy-Indian Act, and the 1834 Act. The Coordinating Committee, based in the Central Office, serves to bring together Federal, State, local, and private educational agencies who can provide technical, fiscal, and professional resources in assisting tribal groups. The major function of the School Contract Coordinating Committee is to serve as the focal resource in the Bureau of Indian Affairs advocacy system. Continuing and ongoing technical resources are available to tribal school boards, upon request, from the Bureau of Indian Affairs in all areas of school programming, including administration, curricula, pupil personnel services, plant management, food services, pupil transportation, and staff development.

The National Indian Education Advisary Committee has planned, conducted, and evaluated two nationwide workshops related to Indian School Boards. Over 400 Indian persons have participated at these Conferences.

WHY DON'T WE HAVE A MORE ACTIVE PROGRAM WITHIN BIA TO ENCOURAGE INDIAN SCHOOL OPERATIONS?

We have a very active program. However, limited staff at Central and Area Office levels skilled in the transactional processes of school board operations are a major deterrent. Statutory authority in the Federal government is oftentimes confusing and counter-productive to lay people serving on school boards. Greater technical involvement from BIA resources and private agencies is providing increased assistance to school boards, within the constraints of personnel and fiscal limitations. Much more can be done in involving higher education facilities and regional educational laboratories to assume cooperative liaisons with tribal communities in a support role.

Time and consistent professional efforts will be needed to draw-out the inherent potential of Indian communities as a positive force in overcoming the psychological barriers imposed by traditional paternalistic government policies toward Indian peoples. The National Indian Education Advisory Committee and the BIA Office of Education Programs have taken leadership roles in encouraging, assisting, and extending local Indian direction of their own schools whenever they wish to do so.

National Board of Indian Education

There should be enacted legislation authorizing a National Board of Indian Education. Its primary function would be to advise the Commissioner of Indian Affairs and the Commissioner of Education, through the Office of Education's Indian Education Office on:

- policy issues
- budgetary considerations
- major program priorities of Indian education
- the wishes of Indian people re education

The members should be appointed by the Secretary of the Interior in consultation with the Secretary of H.E.W.--one member to be chosen from each of the 12 BIA areas plus 3 at-large members. The National Board's Chairman would be designated by the Secretary from among the members. The terms of the membership should be 3 years, with the exception of the first 2 years when the terms would be staggered to provide continuity.

The Board should be authorized to make school program reviews with the concurrence of the Commissioner. It should also be authorized to hold hearings on particular educational issues.

Other responsibilities of the Board should include:

- Promoting the establishment of local school boards and furnishing technical assistance to them.
- Making recommendations on high level personnel appointments - (inconjunction with local boards for local appointments).
- Making recommendations on policy, program, etc. involving adult and vocational education.

The National Board would convene at the call of the Secretary or at least biannually.

THE REORGANIZATION OF THE BUREAU OF INDIAN AFFAIRS

Mr. Louis R. Bruce, Commissioner of Indian Affairs, after assuming office and as a result of many meetings with Indian people and tribes announced the following five point policy:

1. The BIA is being transformed from a management agency to a service organization.
2. BIA Area Offices will be made fully responsive to Indian needs and expressed desires.
3. The trust status of Indian lands is reaffirmed.
4. Tribes will have the option of taking over any or all BIA program functions, with the understanding that the BIA will provide assistance or reassume control if any tribe so wishes.
5. The new BIA reaffirms its priority responsibility for meeting the economic and social needs of Indians living on trust lands, and at the same time recognizes its obligation to be a strong advocate of urban Indian interests.

Commissioner Bruce announced his intention to make changes in the administrative structure of the Bureau of Indian Affairs and to bring Indians into top level positions of the BIA.

In November of 1970, Commissioner Bruce, utilizing his top Washington executive staff members, organized four task forces with directions to prepare policy and procedural statements relating to: (1) reassignment of personnel and rotation policies; (2) preparation of contracting procedures dealing with the "Buy Indian Act"; (3) redelegation of the BIA Area Directors Authority; and (4) an effective evaluation and inspection program.

Based upon the work of the staff, the Commissioner submitted for Secretarial approval a change that redelegates authority from the Washington level. The area offices would continue but will essentially provide technical services to the agencies. There would be greater delegation of authority to the agencies, the operation level closest to the Indian tribes being served.

The Commissioner also announced his intention to commence in 90 days to rotate all but one of the Area Directors and some 60 Superintendents. The two remaining committees on Contracting and Evaluation continued their efforts to improve the systems by which tribes could take over BIA programs and of evaluating the responsiveness of the field structures to BIA policies. The announcement of the redelegation and reassignment policies met very substantial opposition from tribal groups on two counts: (1) they were not actually consulted before the abrupt change was announced, and (2) they wanted to keep many of their present Superintendents and Area Directors, who they considered satisfactory.

Issuance of the policy of redelegation and reassignment resulted in considerable reaction from Indian tribes, BIA employees, and members of Congress. The Senate Interior Committee held a hearing on the policy and announced that another hearing early in the new Congress to hear the views of the tribal leaders.

The policy, although attempts were being made to meet the established timetable, was in various stages of implementation upon the announcement of a new Secretary of the Interior. The Commissioner was requested to halt the policy implementation until the incoming Secretary of the Interior could review the situation.

To obtain assurance that the new policy directions would achieve maximum program efficiency and effectiveness, the Commissioner of Indian Affairs in coordination with Secretary Morton established a high level Management Assistance Survey Team. This team was composed of experts specializing in the fields of management, personnel, organization, administration, and financial management and were drawn from the Internal Revenue Service, the Office of Management and Budget, the Department of Agriculture, the Civil Service Commission, and the Department of the Interior.

The findings and recommendations of this team were presented to a representative cross section of Bureau of Indian Affairs personnel at a meeting in Phoenix, Arizona, on April 15 and 16, 1971. The meeting provided an objective viewpoint of the BIA picture and resulted in the establsihment of a Planning Committee representing all three levels of BIA management. Using the findings of the Management Assistance Survey Team as a foundation it is the intention of the Planning Committee to develop means whereby an orderly implementation of the Commissioner's policy will result in improved services to Indians.

The Commissioner also announced his intention to commence in 90 days to rotate all but one of the Area Directors and some 60 Superintendents. The two remaining committees on Contracting and Evaluation continued their efforts to improve the systems by which tribes could take over BIA programs and of evaluating the responsiveness of the field structures to BIA policies. The announcement of the redelegation and reassignment policies met very substantial opposition from tribal groups on two counts: (1) they were not actually consulted before the abrupt change was announced, and (2) they wanted to keep many of their present Superintendents and Area Directors, who they considered satisfactory.

Issuance of the policy of redelegation and reassignment resulted in considerable reaction from Indian tribes, BIA employees, and members of Congress. The Senate Interior Committee held a hearing on the policy and announced that another hearing early in the new Congress to hear the views of the tribal leaders.

The policy, although attempts were being made to meet the established timetable, was in various stages of implementation upon the announcement of a new Secretary of the Interior. A. Assistance to pupils in non-Federal schools: Fiscal year 1971, $25,750,000; fiscal year 1972, $37,750,000; increase, $12,000,000. The increase consists of:

	Increase (+) or Decrease (-) Amount	Positions	Total Program	Total Positions	Explanation
(1)	$175,000	-	$1,925,000	-	To meet increased costs of peripheral dormitory program.

	Increase (+) or Decrease (-) Amount	Positions	Total Program	Total Positions	Explanation
(2)	2,825,000	-	20,727,000	-	To meet normal program increases in public schools educating reservation children.
(3)	9,000,000	-	15,098,000	4	To meet increased need for college scholarship grants to Indian youth.
	12,000,000	-			

Cost Factors Involved in Increases

(1) Contracts with public school districts in eight locations covering increased costs of educating out-of-district Indian children, $175,000.

(2) Contracts with State Departments of Education, tribal corporations, and public school districts for partial costs of educating increased numbers of Indian students and to meet increased operational costs, $2,825,000.

(3) Grants to an additional 2,300 Indian college students, increased operational costs, improved funding base, and other related costs, $9,000,000.

Need for Increase:

Public Schools:

(1) The increase of $175,000 requested for the peripheral dormitory program is based upon the prior year's expenditures for educational services.

(2) The increase of $2,825,000 for State and tribal contracts is needed to meet additional costs due to increased enrollment and increased operating expenses.

Increased Enrollment - $1,800,000:

To provide for an increase in enrollment of 7,000 students. There will be an increase of 300 students in the Alaska Boarding Home Program which will cost $2,000 per student or a total of $600,000. The remaining $1,200,000 will be needed to meet the approximate $180 per capita supplemental cost for assisting the remaining 6,700 students. Such funds will be used to help support the basic education programs for Indian children in approximately 100 public schools where they constitute a large part of the total enrollment. This assistance will need to continue until Office of Education P.L. 874 funds and State aid can adequately meet basic education costs. These funds will also be used for supplementing or fully supporting special programs and parental costs in schools already providing these services.

Increased Operational Costs - $1,025,000:

As teacher salaries accelerate and other operational costs increase, additional funds are needed to assist the 79,760 students who will be served by the program. This is an approximate 5.5 percent increase in cost.

Basic program cost increases will be met in those schools requiring such funds. Special programs now in place will be continued.

Reading specialists and speech teachers have already demonstrated that by working with classroom teachers and directly with students, they can accelerate the learning process. So far, they are available in only a limited number of schools.

The same is true with teacher training programs, teacher aides, visiting coordinators and summer programs. States can only meet requests for a limited number of such programs.

Visiting coordinators are playing an important role in involving Indian parents in the education of their children. These coordinators are usually individuals of Indian descent who relate well to Indian people and school personnel. They work to bring about a closer relationship between the home, schools, and other agencies providing services to children. States and school districts having such services report improved attendance, reduced dropouts, increased number of graduates, and increased parental involvement in school affairs.

Teacher aides now employed not only free teachers for teaching responsibilities but they also provide a valuable link between the school and the community. Indian people in communities where their own people are employed as aides are becoming more interested in the education of their children and more involved in school affairs.

Summer programs not only provide recreational outlets for Indian children but they also offer educational opportunities where needed individual attention can be given to each student.

Increased costs for special transportation, tutoring and parental cost items (rental of band instruments, activity and related fees, material for industrial arts, home economics and crafts classes) must be provided if these important services to Indian children are to be continued.

The Boarding Home Program is supported with Johnson-O'Malley funds, with the State of Alaska providing tuition and foundation program support costs to the local districts enrolling these children.

The table on the following page shows the expected distribution of funds by States.

AREA / State	Amounts 1971	1972	Increase
ABERDEEN			
Nebraska	$ 400,000	$ 550,000	$ 150,000
North Dakota	450,000	590,000	140,000
South Dakota	1,335,000	1,530,000	195,000

(3) Higher Education. The increase of $9,000,000 is requested to provide viable alternatives and adequate financial aid for Indian students in junior, four-year or graduate colleges.

	F. Y. 1971	F. Y. 1972	Increase
Number of Students	6,100	8,400	2,300
Amount of Grant	$6,098,000	$15,098,000	$9,000,000

Grants are made to Indian students who want to attend college but lack the necessary resources to make attendance possible. There is an acute shortage of qualified Indian professional people. Even today only a limited number of teaching positions in Bureau and public schools are filled by Indian people. The need for these people in other professional fields is even more acute. To date, only a very small beginning ($15,000-FY 71) has been made in providing funds for training law students. There are many other fields where training programs are needed if Indian people are to assume their proper leadership role. The Bureau of Indian Affairs is the primary funding source for the Nation's Indian youth.

The increase of $9,000,000 is requested to provide basic financial aid to the rapidly increasing number of Indian college students.

The expected large increase in enrollment will result from:

1. A more adequate funding base.

2. The enrollment of larger numbers of married students who for the first time will be able to adequately feed and house their families under the grant program.

3. The increased number of students who would have chosen vocational training but now will enter college because of improved funding.

4. The normal enrollment increase pattern.

A study of Indian dropouts made by the Northwest and Southwest Laboratories indicated inadequate financing as a major reason for more students dropping out of college.

The majority of students receiving assistance from the Bureau's Higher Education Program come from homes with incomes below today's poverty level. The normal pattern for the Indian student is to look to the Bureau for service and support in his efforts to attend college. These needs can be expressed in the following manner:

1. A very minimal financial contribution from students and parents.

2. Lack of experience in the dominant society which calls for special counseling services.

3. A language handicap which requires tutoring classes and in the beginning a reduced academic load.

4. For many students, they are attending classes for the first time with non-Indian students. Even students who come from public schools have had very little experience in working with non-Indian students. This lack of experience can best be rectified by strengthening orientation programs, providing for special reduced size classes, tutoring and remedial services, and indepth counseling programs.

5. These students leave behind a rich Indian culture when they enroll in college. In order to maintain their identity and pride in their own culture and properly assist them in their new environment, colleges and

interested Indian groups are establishing on-campus Indian Studies Centers. These centers are designed to implement progress in many relevant curriculum areas. Colleges recognize the value derived from such programs, but faced with budgetary limitations, look to the Bureau for support.

The fiscal year 1972 budget will assist 8,400 students. The Bureau's share of this grant depends upon the amount of other resources that can be found. In most cases, the Bureau will continue to be the prime resource. The following tables will illustrate the costs of educating the estimated 8,400 students who will enroll in college in 1972 and the resources available:

ESTIMATED EXPENDITURE

	Fiscal Year 1971			Fiscal Year 1972		
	Students	Grant Per Student	Amount	Students	Grant Per Student	Amount
Single	(4,300)1/	$2,012	$12,274,000	6,400	$2,300	$14,720,000
Married	(1,800)1/			2,000	3,989	7,978,000
Total	6,100		$12,274,000	8,400		$22,698,000

1/ The 4,300 represents the estimated number of single students and 1,800 represents the number of married students who will receive assistance at the single applicant level.

RESOURCES

	F.Y. 1970	F.Y. 1971	F.Y. 1972
Bureau of Indian Affairs.....	$3,767,418	$6,098,000	$15,098,000

Total.....	6,067,218	12,274,000	22,698,000

Program of Work

Public School Operations. Under the Act of April 16, 1934, as amended, commonly called the Johnson-O'Malley Act, the Bureau of Indian Affairs provides supplementary aid to public school districts which face financial problems due to the presence of tax-exempt, Indian-owned lands within the district boundaries and the enrollment of relatively large numbers of Indian children.

Many of the school districts on Indian reservations have insufficient funds to operate effective school programs even with State aids and general Federal aid to education programs. Such districts have little or no tax base. In these districts, Johnson-O'Malley aids are used to assure operation of a basic school program.

As States and local school districts assume increased responsibility for basic education programs, Johnson-O'Malley funds are made available for special education purposes that identify with Indian children. Such programs will have a positive effect in improving education achievement, reducing dropouts, and pave the way for entrance into improved employment opportunities or higher education programs.

The funds are made available through contracts with the State Departments of Education and tribal groups operating on the basis of plans developed cooperatively by the Bureau of Indian Affairs and the contracting agency. The plans take into consideration the ratio of Indian children involved, local tax efforts, all other sources of aid available, including other Federal programs of aid to education (Public Laws 81-815, 81-874, and 89-10), and any special situations or needs related solely to Indian children.

Aid is also provided to cover the full per pupil costs of education of Navajo children housed in Federal dormitories who attend out-of-district public schools peripheral to the Reservation. A contract is negotiated with each such district for a specified number of Indian students. In addition to the full cost of education, funds are provided for parental items such as lunches, school supplies, etc.

In the State of Alaska, Johnson-O'Malley funds are also used to provide subsistence for approximately 350 students housed in dormitories at Nome and Kodiak and for over 1,000 students placed in urban boarding homes where high schools are available.

Higher Education. Grants are made to Indian students who cannot qualify for other types of scholarship aid or who require additional funds that cannot be obtained from other sources, and who would otherwise be unable to attend college.

Financial need is determined through the financial aids office of the college the student plans to attend or is attending. Although the demand for financial assistance from needy students other than Indians often depletes college resources, Bureau scholarship representatives will continue to support, where feasible, the "package" plan utilizing other financial assistance programs combined with Bureau funds to adequately finance Indian college students.

The importance of adequate vocational counseling for post-secondary education is readily apparent. Contact with high schools enrolling Indians will continue to be an integral function of the Area Scholarship representatives as will expanded on-campus visitation. Indian input with the operation of the Higher Education Program includes contracts for scholarship services with recognized tribal organizations, contracts with on- and off-campus Indian organizations, and higher education field meetings.

Examples of Recent Accomplishments

Enrollment of Indian students in public schools receiving Johnson-O'Malley assistance reached 72,081 in fiscal year 1970, an increase of 8 percent over 1969. During the same period, the number completing elementary school increased 11 percent and the number completing high school increased 12 percent for a total of 3,238 high school graduates.

During fiscal year 1970, more than 1,200 professionals and paraprofessionals working with Indian children in public schools were provided in-service training and educational support through training programs and summer workshops.

Approximately 460 individuals from the local communities, most of whom were Indian, were working in public schools as teacher aides and home visitors. They are valuable as cross-cultural interpreters of behavior to teachers, children and parents; they represent a way of incorporating Indian adults directly into the educational enterprise; and they provide a means by which Indian adults can become better informed concerning the education of their children.

In addition to the approximately 500 Indians serving on local school boards, most all local communities with a significant number of Indian children enrolled have Indian committees that work with the local schools in planning and executing Johnson-O'Malley programs. Indian corporations in two States have now taken over the administration of the program from State Departments of Education. Three more are making plans to do so.

Over the past two years, Johnson-O'Malley funds have made it possible for public schools to provide kindergarten experience for 3,000 Indian children.

College Education. In fiscal year 1971, 6,100 Indian students are being assisted with their college education through scholarship grants, a 42 percent increase over 1970. For the first time, opportunity for grant assistance was provided to assist a limited number of married students, graduate students, and supplemental assistance to Indian veterans.

Recognized Indian tribal organizations have indicated an interest and desire to more actively participate in the higher education of Indian youth through contracting for Bureau Higher Education services. One tribal organization, the All-Indian Pueblo Council of the Albuquerque Area, consisting of a unified effort of 19 Indian Pueblos, has successfully undertaken 90 percent of the Albuquerque Area Higher Education Program.

Overall, an estimated 350 Indian students will be awarded college degrees in fiscal year 1971, enabling the recipients to enter the labor force at a professional salary and standard of living.

B. Federal Facilities: Fiscal year 1971, $115,806,000; fiscal year 1972, $123,537,000; increase, $7,731,000. The increase consists of:

	Increase (+) or Decrease (-) Amount	Positions	Total Program	Total Positions	Explanation
(1)	+3,300,000	+143	121,141,000	8,667	To provide for increased enrollments in Indian schools.
(2)	+2,931,000	-	-	-	To provide adequate operating funds for the Indian education program
		-	-	-	Item reduced $369,000 due to program savings in paper work management.
(3)	+1,500,000	-	2,396,000	-	To raise the level of Indian participation and self-determination in the education program.
	+7,731,000	+143			

Cost Factors Involved in Increases

(1) One hundred forty-three (143) permanent positions at an average annual salary rate of $6,800, $970,000; supplies, materials, and equipment for classrooms and dormitories $1,200,000; travel and transportation of things $120,000; rents, communications and utilities $100,000; other services necessary in the education and care of children $910,000.

(2) Equipment, supplies, and materials for classrooms and dormitories $1,720,000; travel and transportation of things $315,000; rents, communications, and utilities $780,000; other services $485,000.

(3) Contracts with tribal groups to provide education coordinator services in Indian communities, $1,300,000; training for sub-professional Indian employees in dormitory positions $200,000.

Need for Increase:

(1) Increased Enrollment. An increase of $3,300,000 is requested for 1,665 additional pupils. Enrollment in Indian schools is expected to increase by an estimated 2,450 pupils in 1972. Some of this increase will be dispersed over a wide range of schools and in such numbers that it is anticipated the schools can absorb them without additional funding. The estimate of 1,665 additional pupils for which this increase is requested would be distributed by areas approximately as follows:

Area	Number of Pupils		Day Schools	
	Boarding	Dormitory	Pupils	Units
Aberdeen	60	-	100	4
Albuquerque	500	-	60	2
Anadarko	100	-	-	-
Juneau	-	-	225	9
Muskogee	-	100	-	-
Navajo	300	-	-	-
Phoenix	140	-	80	3
Total	1,100	100	465	18

In those locations where an Indian group is prepared to assume responsibility for the operation of a Federal school, the Bureau will enter into contracts with the Indian school boards. When this is done, the funds included here for Federal schools will be transferred to the Indian school board subactivity. Estimates are that such transfers will be made at nine locations in 1972.

(2) Cost of Living Advances. A net increase of $2,931,000, ($3,300,000 less $369,000 savings in paper work management) is requested to offset cost of living advances to date in the Indian school program.

Without increases to offset rising costs, Indian schools will be faced with curtailment of items directly affecting the well being of children. They will be forced to reduce the level of textbooks and other instructional materials, dormitory supplies and materials, and food, since these are items in which there is some flexibility. The Indian children who will be affected are for the most part those who live in remote areas which are not served by the public school system. Their communities lack the public utility and recreational facilities that exist in most American communities. The conditions of isolation and poverty found in these areas place the children at a distinct disadvantage in school achievement. To help overcome these disadvantages there is need for

higher levels of teaching materials and equipment and for more supplementary dormitory reading materials, recreation supplies, etc. The additional amount requested is needed to avoid curtailment in such program offerings.

Distribution of these increases by purpose would be approximately as follows:

Cost of Living Advances

Item	Fiscal Year 1972 Increase Requested	Total Available	Average Per Pupil
Instruction..... (Personnel, travel, textbooks, supplies and materials, equipment, furnishings and other items related to instruction.)	$850,000	$39,313,000	$700
Library and Pupil Personnel Services..... (Personnel, supplies, materials, textbooks, equipment, etc., related to library services, guidance, counseling, recreation, psychological services, school social work, and special education.)	247,800	7,512,800	124
Food Services..... (Food, personnel, supplies, utensils, etc., related to dining operations.)	440,000	17,299,000	374 Bkfst. 90 Lch
Dormitory Operations..... (Personnel, travel, furnishings, books, linens and bedding, laundry supplies and services, equipment, etc., related to domiciling of children.)	470,000	21,001,000	503
Local School Administration..... (Salaries and expenses of school superintendents, principals, registrars administrative and clerical-stenographic employees, and related expenses necessary to management and control of schools.)	176,000	7,074,000	117
Plant Operations..... (Costs of heating and utilities for school plants, including janitor services, garbage collection, fire and protective services.)	322,200	13,276,200	220
Pupil Transportation..... (Fares, bus operations including contract services, and personnel.)	88,000	3,295,200	59
Summer Programs..... (Supplies, materials, minor equipment, transportation, feeding, and related services for remedial and recreational summer activities.)	14,500	1,464,500	38
Program Direction..... (Personnel rendering supervisory services, supplies, materials, and related expenses.)	131,000	3,770,000	62

Item	Fiscal Year 1972 Increase Requested	Total Available	Average Per Pupil
(continued)			
Other..... (Transportation of things, motor vehicle operations, and other administrative services not otherwise identified.)	191,500	7,135,300	118

(3) Increased Indian participation. The increase of $1,500,000 is requested to provide for the employment of tribal education coordinators, $1,300,000; and for training of Indians occupying paraprofessional positions in Federal schools, $200,000.

The increase of $1,300,000 is needed for the employment of personnel by tribes to provide support to the education program. They will serve as the link between children at the school and their parents. Tribes or other local Indian organizations will select and place these education coordinators as aides to professional school staff. Representative activities that these individuals will perform include assisting the teacher in developing, administering and scoring examinations, tutoring individual students, visiting students' home to confer with parents about student problems and school attendance; participating in community meetings designed to increase parental support for school programs; and providing individual and group guidance and counseling for students. The amount requested will provide for the employment and orientation of 100 education coordinators.

The increase of $200,000 is requested to finance training for Indian employees in paraprofessional positions in Bureau schools. These employees are by reason of their education and limited experience in the lower grade levels, yet by reason of their duties they spend more time with the children in these schools than any other group of employees. Upgrading their skills will enhance their abilities to assist students in their personal adjustment problems, matters of personal hygiene, etc., as well as contribute to increased Indian input in the education program.

The funds will be used for expenses of local and regional inservice training, Bureau conducted orientation and training workshops, and for contracts with universities and colleges of education covering training needs.

Program of Work

1. Boarding schools (including dormitories)

	F.Y. 1971	F.Y. 1972	Increase
Amount	$82,675,000	$87,559,000	$4,884,000
Number of pupils	40,548	41,748	1,200

Boarding schools provide instruction at the elementary, high school and post high school levels. Enrollment is made up of those Indian children who do not have suitable education opportunities in their home communities, who are orphans or who, for social reasons, must be educated away from their homes. These schools must also provide a home living program to assist students in making social and cultural changes necessary for successful school adjustment.

Dormitories house children who attend local public schools. These are children who do not have public schools available in their home communities. They are enrolled at both the elementary and secondary levels. The dormitories provide housing, feeding, and out-of-school recreation and tutoring activities.

2. Day Schools

	F.Y. 1971	F.Y. 1972	Increase
Amounts	$26,108,000	$27,321,000	$1,213,000
Number of units	705	723	18
Number of pupils	18,180	18,645	465

The majority of those enrolled in Bureau day schools are in the elementary grades with only around five percent in high school. Most of these schools are small schools in isolated locations. Programs are designed to compensate for the effects of isolation and economic and social deprivation experienced in such locations. Kindergarten classes are provided for five-year-old children.

3. Indian School Boards

F.Y. 1971	F.Y. 1972	Increase
$1,034,000	$1,096,000	$ 62,000

This activity provides for the development, training, and related expenses of Indian school boards and for the operation of schools under contract to Indian school boards.

4. Special Services

	F.Y. 1971	F.Y. 1972	Increase
(a) Program Direction	$3,639,000	$ 3,770,000	$131,000
(b) Transportation of boarding school students	900,000	954,000	54,000
(c) Education coordinators	-	1,300,000	1,300,000

(a) Program Direction covers the salaries and expenses of education employees rendering field supervisory services, as well as the education staff in the Central Office. Responsibilities of these employees include planning the overall academic and vocational program for Federal schools in cooperation with Indian tribes and with State and local officials; the development of increased Indian enrollment in public schools; teacher recruitment and inservice training for Bureau education employees.

(b) This provides for plane, bus, and rail fares, and incidental expenses of transporting pupils from their homes to and from boarding schools.

(c) This subactivity provides for the salaries and expenses of local Indian education coordinators employed by tribes under contracts.

5. Summer Programs

F.Y. 1971	F.Y. 1972	Increase
$1,450,000	$1,537,000	$87,000

Summer programs provide remedial instruction to help Indian youth overcome academic deficiencies; and provide field trips, recreational and camping experiences to broaden the background of the children.

Examples of recent accomplishments

During school year 1969-1970, 52,195 Indian children were enrolled in 215 Bureau schools. In addition, domiciliary care was provided in 19 Bureau operated dormitories for 4,043 children who attend public schools. Of the Federal school enrollment, 74 percent of the students were in the elementary grades (kindergarten through eighth), 23 percent in high school grades, and 2 percent in postgraduate courses. Over 79 percent of the students were fullblood Indians. The record of completions was as follows: 1,939 high school graduates; 2,667 eighth grade graduates; and 318 students awarded postgraduate certificates of completion.

80-433 O - 71 - pt. 4 ---21

With special funding provided in 1971, upgrading of the program toward accreditation is under way at Haskell Indian Junior College, Lawrence, Kansas. A consortium consisting of Haskell; the Institute of American Indian Arts, Santa Fe; the Southwestern Indian Polytechnic Institute, Albuquerque; and Chilocco Indian School, Oklahoma, has been organized. This is viewed as a system which will provide maximum options, a stronger presentation of post-secondary programs to Indian students, more effective student referrals and better communication. The plan also provides a flexible and diverse program to meet the cultural needs and skills development for American Indian students in earning a livelihood through cultural arts, and specialized technical and vocational as well as general education programs.

Bilingual bicultural educational programs have been introduced in Alaska and on the Hopi Reservation in Arizona. Also a bilingual bicultural program for the first grade has been added on the Navajo Reservation.

Two curriculum bulletins on Environmental Education for American Indians have been developed and introduced as teachers' guides for the 1970-1971 school year.

An Administrator Exchange Program was conducted under an arrangement between the Bureau and the National Association of Secondary School Principals. This has involved administrative staff and students of Choctaw Central High School in Mississippi, the Turtle Mountain Community School in North Dakota, and Phoenix Indian School in Arizona.

Summer program opportunities were provided for Indian children and 18,540 students participated. Emphasis was placed on academic programs to supplement regular school courses at all levels, including precollege, and on student employment opportunities and local recreation activities.

A second National Indian Workshop on School Affairs was conducted in February 1970 under the sponsorship of the National Indian Education Advisory Committee. There were 200 Indian participants, and all instructors (13) were Indian.

C. Adult Education and Community Development: Fiscal year 1971, $2,553,000; fiscal year 1972, $2,553,000. "No change."

Program of Work

The Adult Education program will continue to stress basic literacy education, the development of high school equivalency programs, as well as to undertake a number of non-classroom oriented activities directed to the development of social skills, citizenship and economic self-sufficiency. In an effort to expand the number of persons served, a program initiated on the Navajo reservation, which hires Federal and public school teachers to work part time in developing Adult Education classes, will be expanded nationally. As vacancies occur in existing Bureau of Indian Affairs Adult Education positions, tribes served will be encouraged to contract with the Bureau of Indian Affairs to hire their own Adult Education staff.

Community Development - This activity will continue to stress staff training, particularly that of superintendents and officers in charge, in becoming more responsive to Indian needs and to encourage Indian tribes to take over and themselves operate programs and other activities which have traditionally been administered for them by the BIA. Funds are granted to Indian tribes to help them gain the training and expertise to take over traditional BIA programs by contract or by other means. Special emphasis is being placed in developing contracts with universities, with Indian interest groups and with other appropriate organizations to provide tribes and local

FILMED FROM BEST AVAILABLE COPY

Indian communities with technical assistance and to develop pilot projects which will assist them to negotiate with the Bureau of Indian Affairs to take over Bureau programs and activities.

Recognizing that Adult Education and Community Development often engage in a number of like activities and seek similar end results, every effort will be made to coordinate these programs for maximum mutual benefits.

Examples of Recent Accomplishments

Last year, as in the previous year, the increasing awareness of the Indian in bettering himself was manifested by an enrollment of over 5,000 individuals in basic education courses in the Adult Education program. High school equivalency certificates were awarded to 736 people.

Community Development contracts with tribal groups resulted in the tribal take-over of the Road Maintenance program of the Flathead Agency through the Elmo Dayton Community Development Project. The roads are now better maintained than before and the organization is actively seeking funding to extend its road system to further economic development of the area.

A contract with the Rosebud Sioux Educational Board resulted in a proposal that will take over all of the existing educational functions of the Rosebud Agency. This would place all of the diverse programs of the Bureau, Office of Economic Opportunity and the tribe under one organization. The tribal council has given its preliminary consent to this plan.

Community Development/Adult Education funds are being used in a joint venture with the Office of Economic Opportunity in establishing an educational radio network on the Ramah reservation. This network will enable all families at Ramah and the Indian operated high school to receive broadcasts originated and transmitted on the reservation.

A contract with the Miccosukee Tribe of Florida for a vacant Adult Education position and some additional Adult Education funds enabled the tribe to hire an Adult Educator who, in addition to holding classes, developed a proposal for the tribe to take over all of the Bureau activities within that agency. This contract proposal is in the final stages of negotiation and should be final early this year. Similar contractual arrangements are being explored with the Seminole Tribe of Florida that may lead to tribal take-over of the Adult Education and the education program at that Agency.

This year, $40,000 of the Community Development/Adult Education budget was made available to pay tribal leaders for travel and other expenses in order that they might participate in the planning for the fiscal year 1973 budget.

A contract was let with the National Indian Training and Research Center (NITRC) at Arizona State University to develop a program designed to provide orientation and the necessary training for community development workers who will assist organized tribes, school boards and other recognized Indian interest organizations in negotiating tribal service contracts with the Bureau and other government agencies.

APPENDIX D

Communications to Hon. Walter F. Mondale, a U.S. Senator from the State of Minnesota

To: Senator Mondale.
From: The Citizens of Westwood, Lassen County, Calif.

We the following citizens of Westwood, Lassen County, California, would like for you to know that we are all in favor of the Senate Bill S. 659.

We would all like to endorse this bill and hope and pray for its passage.

We remain respectfully yours,

ROBERTA SHRIVER
(And 19 others).

WESTWOOD, CALIF., *May 14, 1971.*

Re Senate Bill S. 659.
To: Senator Mondale.
From: Alice L. Caldwell, Chairman—Lassen County Council.

DEAR SENATOR MONDALE: Very recently the Senate Bill S. 659 was brought to my attention. I have read a copy of this bill and I want you to know I am very much in favor of it.

Please accept my small token of appreciation for the efforts and work you are putting forth for the passage of this bill.

Very truly yours,

ALICE L. CALDWELL,
Chairman, Lassen County Council, Lassen County, Calif.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: Please accept this letter as complete support of the Senate Bill S. 659.

I agree with everything stated in the bill and I wish for you to know that I and my family appreciate all of your efforts concerning Senate Bill S. 659.

We hope it passes. Good luck.

Truly yours,

MRS. FLORENCE HIRTZ.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: I have been made acquainted with Senate Bill 659 and would like to say I am in complete agreement with this bill.

In view of its importance I wish to encourage your efforts and express my endorsement and hope for its passage.

Respectfully,

MRS. NETTIE TYLER,
Representative, Senior Citizens.

WESTWOOD, CALIF.

SENATOR MONDALE: I have just gone over the Senate Bill S. 659 for the third time. I have given much thought to the contents of this bill and have decided I would like very much to see this bill passed.

Please accept my encouragement for your efforts in trying to enforce the passage of this bill.

Sincerely,

ROBERT W. BINGHAM.

2007

WESTWOOD, CALIF.

RESPECTFUL SENATOR MONDALE: Who needs help more than the unfortunate American Indians?

Let me add my words of encouragement to your most honored efforts for the passage of Senate Bill S659.

I am sincerely hoping for the passing of this bill.

Sincerely yours,

JESSIE CARDIN.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: I am writing to you in reference to the Senate Bill S-659. I am very much in favor of the passage of this bill.

There are several Indian families that I know in this area and they are fine people and I would like to see them helped in any way possible.

I know that this is a very important bill and would like to encourage your efforts to get it passed.

Sincerely yours,

THIDO F. FINLAY.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: During the past several days, we have been reading and rereading a copy of Senate Bill S 659.

May we say that we admire your patience and efforts in working for the passing of this bill. Keep up the good work.

We are very much in favor of helping the Native Americans in every way that we can.

Respectfully yours,

LORRAINE AND RICHARD FRENCH.

WESTWOOD, CALIF.

SENATOR MONDALE: There is an important bill concerning the American Indian that I would like for you to know that I am in favor of.

The bill in question is S–659.

Please try your best to get this bill passed. The American Indians need all the help they can get.

Yours truly,

CONNIE J. BARTON.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: My husband and I want to add our words of encouragement to all of our Friends and Neighbors.

We are in favor of the Senate Bill S659 to help our native Americans. We certainly hope and pray that this bill becomes a reality.

Thank you.

We remain,

Mr. and Mrs. BYRON W. CALDWELL.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: I am a resident of a county which has several American Indian families residing therein. I feel it is time we give every support to our Native Americans.

I hereby declare my personal support of Senate Bill S. 659.

Respectfully,

PATRICIA AND RALPH THOMAS.

SUSANVILLE, CALIF., *May 27, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senator,
Committee on Labor and Public Welfare, Washington, D.C.

DEAR SENATOR MONDALE: I would like to register my approval and support of Senate Bill 659, Indian Education Act—Amendment.

I am an American Indian of the Maidu Tribe in Northern California and I thank you for your concern of the education of the American Indian Children.

As a parent I firmly believe that the future of the American Indians lie in

our children. The better education a Indian child can receive the better equipped he or she will be able to compete in the so called "whiteman's society", and to be proud of their heritage.

Sincerely,

YVONNE MORALES.

SUSANVILLE, CALIF., *May 26, 1971.*

DEAR SENATOR MONDALE: I support the Indian Education Amendment to Senate Bill 659. The Indian children that I have met have had a great affect on me. They are so kind and wonderful and I want to make sure that they get a good education. Please do not be swayed from our moral duty by those B.I.A. bureaucrats and other people of that ilk. Please continue the fight for excellence in Indian education.

Thank you.

CAROLYN HAWLEY.

Letter of support to Senate Bill 659.

DEAR SENATOR MONDALE: I am in full support of this bill, because I live and work with Indian children and in many cases they are being slighted in education. I believe as headstart teacher that parents (Indians too) are interested too in their children's education. As an Indian I think we have been on the bottom long enough.

Sincerely,

CINDY MUNIZ.

SUSANVILLE, CALIF., *May 27, 1971.*

Senator WALTER MONDALE,
U.S. Senate,
Senate Office Building, Washington, D.C.

DEAR SENATOR: My husband is a school teacher in Lassen County and many of the students are Indian. We can daily see the need for Indian parents to control the education of their children. Far too long now, self-appointed experts on Indian Education, such as BIA Bureaucrats, have consistently disregarded hopes and aspirations of Indian parents and children. Now is the time for this to stop.

Those people who have a self-interest in keeping Indian people down will of course fight this measure. I can only say resist their efforts with all your energies.

You have my whole-hearted support for the Indian Education Amendment, Senate Bill 659.

Respectfully yours,

CAROL SILVERNAGEL.

SUSANVILLE, CALIF., *May 15, 1971.*

DEAR SENATOR MONDALE: I am writing you in support of the Indian Education Amendment to Senate Bill 659. Although I am not an Indian I live in an area where there is a large segment of the population is Indian. I have many friends who are Indian. I am a witness to the many problems that were talked about in the speech you made in preparation of Bill 659. I am sick of talking to intelligent Indians who can not get a better job than fighting fires. I am tired of seeing alcoholic Indians because of the psychological problems attain from living in a "sick" white society. Please do your best in passing this bill and giving the Indians of this country a better change to live a good life.

Respectfully yours,

GREG MALBY.

SUSANVILLE, CALIF., *May 14, 1971.*

DEAR SENATOR MONDALE: Being a college student in a small community I have been associated with Indians in my area, especially children. And I have noticed the needs of these children in respect to adjusting to the educational system. There is a strong need for education in respect to their own heritage; as a people.

The Indian Education Act would allow for the necessary knowledge about their own culture which would help assure them a respectful identity and adjust to their environment.

Respectfully yours,

MIKE E. BARBIER.

CORNING, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I am in favor of Senate Bill No. 659 in support of Indian Education. I feel we need it and it is long overdue.

Sincerely,

MRS. DELMA DARLING.

WESTWOOD, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: Please be assured of my whole hearted support for Senate Bill 659.

Sincerely,

MARY E. PACATTE, (M.V.S.)

SUSANVILLE, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I am sending you my support for Senate Bill 659, of the Indian Education amendment.

Sincerely,

MARY E. MULVIHILL.

CHESTER, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I am writing to encourage your support of Senate Bill 659. As a California State Preschool (1331) teacher, I am aware of the tremendous need for funding of Indian education programs. What is particularly appealing to me about bill 659 is its provision for parental control over the use of the money.

You are supported by our entire preschool staff.

Sincerely,

JANE LITTLE.

RED BLUFF, CALIF., *May 13.*

DEAR SENATOR MONDALE: I am in favor of educating the Indian children and I am therefor in favor of bill number 659.

Respectfully yours,

MARGARETA BROWN.

SUSANVILLE, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I am writing to express my support of the passing of the Bill 695. I am aware of the tremendous educational needs of the American Indian. As a teacher assistant for the Head Start Program, I have had some contact with these disadvantaged people and have strong feelings as to providing them with the means of securing a good education.

Sincerely,

ANNA BURCH.

SUSANVILLE, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: Regarding Bill 695, I want to assure you that I am in full support of your efforts in this measure. As a Head Start pre-school Teacher Director, I am interested in the educational needs of children. I am aware of the plight of the disadvantaged Indian child and have hopes that this kind of legislation will alleviate their many educational problems.

CATHIE MENDONSA.

QUINCY, CALIF.

DEAR SENATOR MONDALE: I wish to support Senate Bill 659, Indian Education Amendment.

Yours truly,

MRS. MILDRED ELLIS.

RED BLUFF.

I am writing in support of Senate Bill S. 659.
I believe it is a good bill for the Indian.

ELLN VONSIKLE.

APRIL 18, 1971.

DEAR SIRS: As a concerned citizen I would like to offer my support of bill S. 659.

Sincerely,

CLARICE MEYERS.

QUINCY, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I wish to support Senate Bill 659, Indian Education Amendment.

Yours truly,

EVELYN COMPTON.

GREENVILLE, CALIF., *May 13, 1971.*

DEAR SENATOR MONDALE: I wish to register my support for the Indian Education Act, Amendment to Senate bill 659.

I feel the Federal Gov't money for local school children should be distributed to the parents of the Indian children.

I am Assistant teacher for a Pre School 1331 program, in which we have 11 Indian Children attending.

I feel the success or failure of our programs depend on Parent Involvement in our schools.

MRS. LUCILE HOULAND.

GREENVILLE, CALIF., *May 12, 1971.*

DEAR SENATOR MONDALE: I wish to register my support for the Indian Education Act, amendment to Senate bill 659.

I feel the federal government monies for local school children should be in the hands of the Indian parents to distribute to their children as they see fit.

I have been teaching in the Indian Valley 1331 program this past year as well as other Head Start programs and at present we have eleven Indian children in our program.

I feel the success or failure of our program depends on total parent involvement.

Sincerely,

MRS. ROY OLDING.

WESTWOOD, CALIF.

DEAR SENATOR MONDALE: As a resident of Westwood, Calif., I support the Amendment of the Indian Education Act. I believe it would be a great benefit for the Indian children in Lassen County.

Sincerely yours,

RAMONA TALLMAN.

COMMUNITY ACTION AGENCY, INC.,
Quincy, Calif., May 11, 1971.

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: Amendment to bill 659, I support the bill 659, Indian Education Act.

I believe in the bill for better education for all Indian children to up-grade themselves in the society in which they live in. I truly believe with passing this bill it will help save the Indian children, so I support this bill whole heartedly.

Sincerely,

PEARLY ARNOLD,
Community Aid.

QUINCY, CALIF.

Amendment to bill 659, I support the bill 659, Indian Education Act.

I believe in the bill for better education for all Indian children to upgrade themselves in the security in which they live in. I truly believe with passing this bill it will help save the Indian children, so I support this bill wholeheartedly.

PEARLY ARNOLD,
Community Aid.

ALTURAS, CALIF., *May 1, 1971.*

DEAR SENATOR: I support Senate Bill 659.

Because we Indians need education which goes along with our everyday lives and gives the truth about Indians.

The history books should be written to tell the truth about the great Indian leaders, and not just down grade Indians with lies.

The Commissioner and the National Governing Board for Indians Education should be all Indian and represent various parts of the conutry and tribes.

They also should be Civil Service so when they retire they will have something.

"Priority should be given to schools run by Indians."

There should be an Indian Parent's Advisory Committee on each local level.

I don't believe that the Secretary of the Interior should decide who is an Indian. That part of the definition of an Indian on page 11, should be done away with.

There should be travel money provided, so that people in widely scattered and thinly populated areas can attend Indian Parents Advisory Committee meetings.

Sincerely,

MARY PRESTON.

ALTURAS, CALIF., *April 30, 1971.*

HONORED SENATOR: I'm in favor of Senate Bill No. S. 659 for Financial Assistance for Indian Education of the children & Adults.

Indian run schools should get the money first—as it's time the Indian children have Indian heroes & wise ones to look up to instead of making all Indians, savages & bad guys!

The members of the National Indian Education Governing Board & The Commission of Education should all be Indian & they should have to take Civil Service Exams. They are just as smart as anyone else.

It is a good idea to have Local Parents Advisory Committees as children learn better when education is respected in the home. But where the distances are so great, like in our isolated county, there should be travel money provided so they can attend these meetings.

Sincerely,

CECILE A. DENNIS.

ALTURAS, CALIF., *May 1, 1971.*

DEAR SENATOR: I am writing to you in support of the bill S-659 for Indian education. I am a Indian mother with five children, all of them being all school ages. I would like very much to pass the bill as soon as possible.

I would like for the money to go first to school run by Indians, for Indians, adult as well as children. It should be clearer that National Board should be made up of all Indians, No non-Indians what-so-ever.

I feel that the commissioner should also be an Indian. It is good to have local Indian parents advisory committees for all schools which have this program.

Your projected program for the improvement of the educational opportunities for adult Indians seems very good. I also think there should be mostly Indian teachers.

Your, sincerely,

BARBARA THOMPSON.

CANBY, CALIF., *April 22, 1971.*

GENTLEMEN: I give my support to bill S–659 for Indian Education for both young and old Indians.

I like it that you have given priority to the All Indian run schools.

I believe that the Commissioner of Education should also be Indian.

The Commissioner and the members of the National Board should come under Civil Service, as there are many intelligent Indians who could pass them.

The National Board should have Indians from different tribes.

How can any white person decide who is Indian or not? This should be left to the tribal councils or checking with the rolls of the enrolled Indians or their decendants.

I like the idea of local Indian Advisory Committees, like Headstart, but enough money for travel expenses should be provided that people in far corners of the area can be enabled to attend.

Travel money should also be provided for the National Board if it is to function actually and not be just a paper Board.

Sincerely,

(MRS.) LEELA C. SMITH.

CANBY, CALIF., *April 22, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I give my support to bill S–659 for Indian Education for both young and old Indians.

I like it that you have given priority to the All Indian run schools.

I believe that the Commissioner of Education should also be Indian.

The Commissioner and the members of the National Board should come under Civil Service, as there are many intelligent Indians who could pass them.

The National Board should have Indians from different tribes.

How can any white person decide who is Indian or not? This should be left to the tribal councils or checking with the rolls of the enrolled Indians or their decendants.

I like the idea of local Indian Advisory Committees, like Headstart, but enough money for travel expenses should be provided that people in far corners of the area can be enabled to attend.

Travel money should also be provided for the National Board if it is to function actually and not be just a paper Board.

Sincerely,

(MRS.) LEELA C. SMITH.

ALTURAS, CALIF.

I support Senate Bill S. 659.

There should be priorities established for Indian run schools. The National Board of Indian Education and the Commissioner should be all Indians of various tribes from different parts of country. Both the Commissioner and members of the National Board should be under Civil Service.

So when they retire they will have something.

There should be local Indian parents advisory committees set-up.

Sincerely,

NORMA GARCIA.

SUSANVILLE, CALIF., *May 3, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: I support Bill 659, which gives the Indian control over their own educational destiny.

I would be interested in how you plan to vote and why.

Sincerely yours,

(MRS.) CAROL MCCREERY.

ALTURAS, CALIF., *May 3, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: I would like to support the bill S. 659 for Indian education.

I would like the money to go to the Indians run by the Indians. Schools should be for Indians, adults as well as the children.

"I am a young Indian girl and I would like to know more about the Indian education."

Sincerely yours,

GOLEEN GARCIA.

RED BLUFF, CALIF., *April 27, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: I would like to be counted among those who are in favor of Senate Bill No. 659.

I feel that Indians should be able to manage their own moneys as far as education is concerned.

Sincerely,

VIVIAN K. WING.

SUSANVILLE, CALIF., *April 27, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: Many of us here in Susanville know many Indians and know the conditions in the schools and their living conditions.

Senate Bill No. 659 has my complete support because the people who know what the Indians need, the Indians themselves would be able to handle their own funds.

Sincerely,

CAROL DIGGS.

RED BLUFF, CALIF. *April 27, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: I am a Wintun Indian and I am very much for Senate Bill 659. I hope it will be passed very soon.

Sincerely,

ROBERTA L. KELUCHE.

ALTURAS, CALIF., *April 22, 1970.*

GENTLEMEN: My daughter & I would like to give our support to Senate Bill S-659 for special education opportunities for Indian children and adults.

You should give first consideration to schools run by Indians to educate the Indians.

The National Governing Board & the Commissioner should be all Indian & come from many tribes.

We think the Indians could pass the civil service exams & have some permanent work.

Indian parents should say what their children are going to be taught, & should be in every local town & city.

There should be money provided for Indians in isolated places to get to their meetings in a central location, both for the local Parents' Advisory & the National Board, too.

Yours truly.

VIRGINIA STUMBAUGH.
LAURA STUMBAUGH

SUSANVILLE, CALIF., *May 15, 1971.*

DEAR SENATOR MONDALE: I am writing you in support of the Indian Education Amendment to Senate Bill 659. Although I am not an Indian I live in an area where there is a large segment of the population is Indian. I have many friends who are Indian. I am a witness to the many problems that were talked about in the speech you made in preparation of Bill 659. SUSANVILLE, CALIF., *April 19, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I emphatically support the Senate Bill 659 and urge its passage immediately.

Sincerely,

PAULA CHOO.

SUSANVILLE, CALIF., *April 19, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Committee on Labor and Public Welfare,
Washington, D.C.

DEAR SENATOR MONDALE: I wish to give my support to the Senate Bill No. 659.

Sincerely,

Miss LUPE GRANADOS.

ALTURAS, CALIF., *April 11, 1971*

HONORED SIRS: The Alturas Teen Group wishes to support the amendment to bill S. 659. We think it is unfair to Indians not to have sympathetic studies made about their own history and culture, and make them available to people. There are studies of Blacks and Mexican-American, there should be some made for Indans, too.

The history books at school don't say anything about great Indian heros such as Deganawidah who united the Indian tribes into the Six Nations who cooperated peacefully with each other, instead of being divided among themselves and fighting.

It's not too clear about the National Board of Indian Education. If it will be composed 100% of Indians of various tribes which represent different parts of the country. We feel that this is the way this should be.

We think that the Commissioner should also be Indian as Indans will be more apt to accept help from other Indians.

The Commissioner and members of the National Board should be civil service because this will give them more standing.

We have heard that if a person claims his rights as an Indian he gives up his rights as a citizen. If this is true it should be changed. It isn't fair.

In each of the towns and cities under the Local Education Agency for the Education of Indian Children, it should be required to have an all Indian Local Parents Advisory Committee, because it has more meaning for the Indian children if their parents are involved.

Yours respectfully,

BETH WYNNE,
Secretary Pro-tem.

GREENVILLE, CALIF.

DEAR SENATOR MONDALE: This letter is being sent with regard to Senate Bill 659 known as the Indian Elementary and Secondary School Assistance Act. I am writing to voice my support of your bill and to urge you to emphasize the Indian Community involvement in that program. The only way I can see that such a

program could insure itself success would be to encourage parent involvement in the program with some kind of invested power that they could exercise to insure responsive implimentation of the program through the public schools. Here in Plumas County there is a drastic need for a program directly responsible to the Indian community as the present programs are not directed towards their unique educational needs. I hope that this letter will be of some help to you in persuading others to support your bill. This letter reflects the sentiments of many citizens in this area for responsible legislation for the grass-roots needs of the Indian population.

Sincerely,

RALPH M. PALMER.

PLUMAS COUNTY, CALIF.

DEAR SENATOR MONDALE: I am writing this to give my *support* to Senate Bill 659, the Indian Elementary and Secondary School Assistance Act. Too many times Indians have been sold down the river, maybe once Congress can do something that really meets the needs of poor Indians and not just a bunch of crappy words.

I'm writing this letter in hopes that it will help my children (12).

Sincerely,

JOE HILL.

SUSANVILLE, CALIF., *April 7, 1971.*

Hon WALTER F. MONDALE,
U.S. Sneate,
Washington D.C.

DEAR SENATOR MONDALE: As a registered voter in Lassen County, California, I would like to indicate my support for Senate Bill 659.

I think more control over American Indian education by American Indians is a very worthy objective.

Yours truly,

GUY R. MCNETT.

SUSANVILLE, CALIF.

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I support Senate Bill 659. In my opinion it will be a great benefit for Indian Children in this county. Our schools must be made responsive to the special needs of Indian children.

Respectfully,

JIM MULVHILL.

SUSANVILLE, CALIF., *March 30, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I am asking that your immediate attention and support in the Senate be given to Bill 659, regarding education for the Indian people.

My support is given on this program and I ask that your deepest consideration be given this bill.

Respectfully,

LEONA MELTON.

SUSANVILLE, CALIF., *March 30, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I have read the Senate Bill 659 of the 92d Congress, 1st session. You have created a piece of legislation that will do much to right the historic wrong done to the First Americans.

Indian people have rights under the law to good education. However, as a report on Federal funds for Indian children in public school districts, compiled by the NAACP Legal Defense and Educational Fund, Inc. with the cooperation

of the Center for Law and Education, Harvard University points out: "By every standard, Indians receive the worst education of any children in the country."

Your legislation will hopefully rush forward the day when a report on Indian education will say, "Indians receive the best education available in the United States and are as successful in school as their fellow Americans."

You have my whole hearted support in this landmark piece of legislation.

Sincerely yours,

STEPHEN J. LA ROCQUE.

SUSANVILLE, CALIF., *March 30, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: As a concerned American, I wish to state my all-out support for Senate Bill 659 and urge its immediate passage.

Respectfully,

LARRY THOMPSON.

SUSANVILLE, CALIF., *March 30, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: As an older American who has seen much in this country, good and bad, let me state my strong approval of Senate Bill 659. I believe it will be a good thing for Indian people.

Sincerely yours,

JOHN DE PALMA.

SUSANVILLE, CALIF., *March 30, 1971*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I am a young Mexican-American girl who has lived among Indian people all my life.

I have seen the educational system fail my Indian friends sometimes.

I hope that Senate Bill 659 will be a way of helping Indian children in school.

I give this Bill my deepest, sincerest support.

Yours truly,

AZALIA NINO.

WESTWOOD, CALIF., *April 5, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I wish to convey to you my support of Senate Bill 659.

I believe it will be of great benefit to Indian children.

Respectfully,

LOETIA D. DONOHOO.

SUSANVILLE, CALIF., *April 5, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I believe Senate Bill 659 will greatly enhance the Indian children's chances in Lassen Counties Educational System.

Please make the education departments accountable for monies spent.

Peace,

KEN MCCREERY.

SUSANVILLE, CALIF., *April 5, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I would like to express my support of the Indian Elementary and Secondary Educational Act. This will give a greater amount of Indian children the education they may not, otherwise receive.

Respectfully,

ROBERT MARKHAM.

SUSANVILLE, CALIF.

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I am writing in support of Senate Bill 659. You have my thanks for proposing a bill of this caliber to go before the Senate.

There is such a great need for Indian children to receive a better education. We who live out here in the West, especially Northern California, can really see the need for better education for the Indian. The pitiful living conditions that he is forced to live in come from a poor education. Jobs that most men can fill, the Indian is not able to fill because of lack of education. Mothers could help their families, but they lack the formal education that could help them get work.

Again, I would like to thank you for this bill and you have the full support of my family and myself.

Sincerely,

MRS. JEANNE HENLEY.

ALTURAS, CALIF., *April 16, 1971.*

GENTLEMEN: The Modoc County Council is supporting Senate Bill S-659 for Financial Assistance for Special Educational Opportunities for Indian Children.

This bill has good potential but needs to spell out a few things very plainly.

1. Priority should be given to all Indian-run Schools.
2. It should be made very clear that the National Board of Indian Education will be composed of all Indians, of various tribes and different parts of the country.
3. The Commissioner shall be an Indian.
4. In the *definition of Indian* on page 11, lines 17 and 18, there should be a period after member (or who is considered by the Secretary of the Interior to be an Indian.) should be deleted. We do not believe a non-Indian should decide this matter.
5. The Commissioner and the members of the National Board should be Civil Service. There are many smart Indians who are quite capable of passing these exams. These people should have the standing this would give them; and too, when they retire they should have pensions to look forward to.
6. It should be clearly understood that there will be local Indian Parents Advisory Committees set-up in all the cities and towns under this Act. There should be adequate provision for travel expenses for people in the remote and isolated parts of the country to attend these committee meetings.
7. We approve the program for Improvement of Educational Opportunities for Adult American Indians. Adequate provision should be made to have Indian Teachers also in this program.

Sincerely yours,

MODOC COUNTY COMMUNITY ACTION COUNCIL,
DOROTHY MADDOCK, *Chairman.*

DEAR SIR: I'm writing in regard to the bill 659. I give full support to this bill because our country is in desperate need to improve the educational opportunities for Indian children.

Yours Truly,

JAMES WELCH.

SUSANVILLE, CALIF., *March 31, 1971.*

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SIR: I would like to take this opportunity to express my support for Senate Bill S. 659.

It is my feeling that this proposed measure will make available money more relevant to the expressed need of the Indian children in our country.

Sincerely,

JERRY BUBERL.

REDDING, CALIF., *April 19, 1971.*

Re Senate Bill 659.

Hon. WALTER F. MONDALE,
U.S. Senate, Committee on Labor and Public Welfare,
Washington, D.C.

DEAR SENATOR MONDALE: I strongly urge the passage of Senate Bill 659 as an effective and equitable means of insuring quality education for Indian children.

Sincerely,

MRS. MARGARET D. EWANOSKI.

MARCH 30, 1971.

DEAR MR. MONDALE: I wish to give you my support on the passing of Senate bill 695. I believe that if passed this bill will give the support to those who need it the most. Good luck on it having a speedy passage through Congress.

Sincerely,

ROBERT B. SMITH.

SUSANVILLE, CALIF., *March 30, 1971.*

HON. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: As a concerned Senior Citizen, I wish to state my wholehearted support of Senate Bill 659.

Sincerely yours,

MRS. LENORA DOLLARHIDE.

GENTLEMEN: I support the Bill S. 659 for better educational opportunities for the Indian children. They should have the right to live and work where they want. They should be able to handle some of their own affairs. They should staff the National Board of Indian Education. Books should be published for all American children in school to read and more special educational programs for adult Indians, more Indian cultural programs. The Indian people should have a freer way of life in the United States, and not just its ward.

LILY C. JOHNSON.

ALTURAS, CALIF., *April 16, 1971.*

GENTLEMEN: I wish to go on record as supporting Senate Bill S. 659 on Financial Assistance for the Education of Indan Children as Title III of the Elementary and Secondary Education Act of 1965 as amended.

Priority should be given to Indian Run Schools.

It will be good to have the history books show the correct history of this country and how much the white man owes to the Indians; since first landing in 1620. The Indian Leaders and Prophets should be given as people the Indian Children can look up to. Not just a few warriors & chiefs.

The wording about the National Governing Board should be made clearer. It should be an All Indian Board from various tribes and geographic areas of the country.

The Commissioner should also be an Indian. And both Commissioner and National Board Members should be Civil Service. There should be retirement pensions for those serving. There are lots of smart Indians and they would have no trouble passing the Civil Service Exams.

Each town and city should have Local Indian Parents Advisory Committees. The program will go better if the whole family are involved.

Sincerely,

DOROTHY MADDOCK.

APPENDIX E

Miscellaneous Articles, Communications, and Statements

STATEMENT OF DONALD R. WRIGHT

PRESIDENT, ALASKA FEDERATION OF NATIVES

to the

SENATE EDUCATION SUBCOMMITTEE

on Amendment 6 to S.659

Mr. Chairman and Members of the Committee.

My name is Donald R. Wright and I am President of the Alaska Federation of Natives which represents all of the 53,000 Eskimo's, Indians, and Aleuts in the State of Alaska. In the spring of 1968, the Senate Subcommittee on Indian Education under the Chairmanship of Senator Ted Kennedy carried out what was the most comprehensive field investigation of the educational and related problems of Native Villages in the history of Alaska. Never has a Congressional investigating committee spent more time, visited more villages across the State, talked with more Natives in their homes and community centers, and in general exercised their Congressional responsibility with greater interest, sensitivity and concern.

My people deeply appreciated that extensive field trip and fully expected that it would result in important

60-433 O - 71 - pt. 4 ---22

changes and improvements. Perhaps the most important evidence of the good faith and conscience of that Subcommittee investigation lies in the Indian Education Act which has been introduced by Senator Kennedy and is presently under consideration in these hearings. I am delighted to note that this legislation is unanimously supported by the Alaska Congressional Delegation and that both Senator Stevens and Senator Gravel are co-sponsors.

I see no need to elaborate on the immense deficiences of educational programs for native Alaskans. These deficiences are thoroughly documented in the hearings, Committee Prints and Final Report of the Indian Education Subcommittee. In summary, it might be said that the worst educational failure in the United States can be found in the programs presently available to Native Alaskans. It is almost beyond belief that in 1971, well over a thousand native students must not only leave their villages, but must leave the State of Alaska to receive a high school education.

I also, do not feel that it is necessary to elaborate on the various provisions of the Indian Education Act - Amendment 6 to S.659. It is an excellent piece of legislation, which I whole-heartedly endorse. It contains

many provisions which will be of great benefit to Native Alaskans.

I have only two recommendations that I would put forward as to how the legislation might be improved. First, I believe that the National Indian School Board should be a part of the Executive Office of the President. It is clear that the intention of that provision in the bill is to bring about Indian control and educational excellance at all levels of the Federal Indian School system. For this to be accomplished requires the highest attention, and most forceful mandate that the Federal Government can bring to bear on this transformation. The Executive Office of the President provides the best vehicle for seeing that these goals are actually accomplished as quickly as possible and with the necessary substantial increases in funding.

Secondly, I would recommend that a new title be added to the bill which would address itself to the tremendous outstanding needs for adequate educational facilities for Indian children and adults. As this Subcommittee is well aware their are huge backlogs of current construction needs both in the Federal Indian School System and in public school districts serving

Indian children. This is a particularly severe problem in Alaska where thousands of native students are without high school facilities. The result has been and continues to be that many native students do not receive a high school education at all, or are forced to leave the State of Alaska and travel as far as Oklahoma to participate in what could at best be described as a very mediocre high school program. This can no longer be permitted to continue. It will require substantial monies to meet these construction needs in rural Alaska, and I would strongly recommend that provisions be added to this bill which would help us resolve the problem.

I would like to urge that this Subcommittee act as expeditiously as possible in reporting out this legislation. The need for a total reform of the BIA education program is urgent. The need for a substantially expanded and high priority Indian education program in the U. S. Office of Education is urgent. The need for real Indian control of all educational programs serving their children is urgent. The time for delay, consultation and equivocation is long past - now is the time for action.

No Subcommittee in the history of Congress, has listened to a greater number of Indian witnesses, held hearings in more parts of the U.S., and listened with greater sensitivity and respect to Indian voices than the Indian Education Subcommittee. No Subcommittee has compiled a more substantial and exhaustive record before preparing new Indian legislation. It is a remarkable and unique record.

This respect for Indian advice and consultation has continued in handling the legislation presently before this Subcommittee. Their was extensive Indian consultation prior to the final drafting and introduction of the bill last fall. Copies of the bill were widely distributed and discussed at the NCAI convention in Anchorage, Alaska last fall. The bill with substantial revisions were re-introduced this Spring, and copies of the bill were sent to Indian organizations and communities across the country.

In preparation for public hearings, two Indian consultants were hired by the Subcommittee and they in turn prepared a comprehensive analysis of the bill which was mailed to Indian tribes across the country and followed-up by extensive conversations with Indian leaders and groups. This is a remarkable record of Indian participation and consultation and one from which all other Congressional

Committees concerned with Indian matters could learn a vital lesson.

I am particularly pleased that an Alaskan Indian Mr. William Demmert has been employed as a full-time consultant for this Subcommittee. I understand that he was responsible for the comprehensive analysis of Amendment 6 to S.659. It is an excellent piece of work and with the Chairman's permission I would like to have it placed in the record following my testimony.

In conclusion, I would like to point out that the results of the Special Subcommittee on Indian Education are not restricted to this legislation or the tremendous impact it has had in mobilizing reform activities in the field of Indian education.

In my opinion, the Special Subcommittee did more to reshape Indian policy and programs; to focus national attention on Indian problems and unmet needs; to gain respect for cultural differences in our pluralistic society; to revitalize the interest and constructive activity of other Committees in this Congress concerned with Indian Affairs, than any other investigation or report since the Miriam Report of 1928 which laid the base for the sweeping reforms of the 1930's.

I seriously doubt, that the Alaska Federation of Natives could be successful in obtaining a just and fair land claims settlement without the national impact of the Special Subcommittee. That impact is still reverberating in the halls of Congress and the Executive Branch of government and has led to President Nixon's remarkable special message to Congress on Indian Affairs last July. Without that special message the Alaska Federation of Natives would never have succeeded in shaping and obtaining an outstanding land claims bill from the Administration. Nor, would I have had the opportunity to speak personally with the President and conduct a White House Press Conference about this issue of vital importance to all Alaskan Natives.

For all of this; including the Indian Education Bill presently before this Subcommittee, I, all Alaskan Natives, and all American Indians are deeply grateful.

Owens Valley Paiute-Shoshone Band

Board of Trustees

POST OFFICE BOX 791
BISHOP, CALIFORNIA 93514

STATEMENT BY:

My name is MICHAEL R. ROGERS, Chairman of the Owens Valley Paiute-Shoshone Board of Trustees

ON:

Amendment 6 of the Education Act

MR. CHAIRMAN:

Honorable Senators of the Committee of Education:

We, are emphatically in favor of amendment number six to the Higher Education Act which could provide the needed opportunity for your fellow Americans.

Having experienced a federally funded educational project for our Paiute-Shoshone Indian people which turned their attitude from negative to positive in regards to education, because of their participation in the administration of this study center project through our own Indian education committee.

Therefore, we firmly believe that with the American people's vast technical scientific and intellectual abilities, there are no problems we cannot solve through reasoning and understanding if we care to do so.

America has been built upon the cultures, the contributions and the sacrifices of all people,of all colors, represented by the red, white and blue.

Your fellow Americans need educational opportunities as greatly as they need housing.

INDIAN EDUCATION ACT COULD MEAN TERMINATION FOR RESERVATION INDIANS ATTENDING PUBLIC SCHOOLS

The Indian Education Act, as presently worded, will eliminate PL 874 (Impact Area Funds). There is no assurance in the Act that these funds will be replaced for reservation Indians attending public schools. California reservations and rancherias will be threatened by the elimination of PL 874. Public Schools, many with reservation Indian students from 5% to 5o%, will not tolerate the loss of $300 per Indian student without compensating taxation. Some schools may be forced to close. The communities served by these public schools will scream for termination of the federal status of Indian reservations and rancherias, thus making the lands taxable.

This otherwise worthy Indian Education Act must be changed to protect the funds provided by PL 874 or to guarantee financial support for reservation Indians attending public schools. Otherwise, I say NO !

Education Subcommittee
United States Senate
Washington, D.C. 20510

Dear Sirs:

I have read with great care draft Amendment 6 to S. 659, the Indian Education Act introduced by Senator Kennedy. I find it a fine bill with one ~~important~~ exception. The language of the bill does not specifically include funding for research in Indian education except for the adult education section. The programs authorized by the bill such as inservice training or bicultural education cannot be optimally effective without the type of information that research can provide.

My own work in secondary education for Alaskan Indian and Eskimo students may illustrate the need for this type of research. At the beginning of the year, I was asked to provide inservice training for urban public school teachers who have Native students in their classrooms. While I could give these teachers general background information on Indian and Eskimo students, I could not help them to deal with their specific classroom problems because little research was available on effective instructional methods or on such integrated classroom situations. It was this type of information that the teachers actually needed. After a year spent on research in the area of effective instructional methods in an integrated classroom, I can now provide the type of inservice training that will hopefully be of some direct use to teachers and of some direct benefit to the Indian and Eskimo students in their classrooms.

Educational research is often irrelevant to central educational issues and there have been legitimate objections on the part of Indian and Eskimo leaders to research with little if any pay-off for them. However, research directed toward important educational questions can be of great value. Without it, the type of programs proposed in the Indian Education Act cannot achieve their potential.

I would like to suggest that the language of the Indian Education Act be altered to include support for research directed toward developing education procedures that would increase the effectiveness of the programs authorized by the bill.

PLEASE REPLY BY AIRMAIL

DEVILS LAKE SIOUX TRIBE
FORT TOTTEN, NORTH DAKOTA
58335

MAY 4 1971

United States Senate
Senate Committee on Labor
and Public Affairs
Special Education Sub-Committee
Washington, D.C. 20201

Dear Committee Members:

This is in regard to the proposed Bill S.659 which pertains to American Indian Education.

The Devils Lake Sioux Tribal Council has passed the attached Resolution No. A05-71-71 opposing this bill. The Devils Lake Sioux Tribe is in the opinion that this bill is detrimental to the education of the Indian people as a whole.

Some of the items the Devils Lake Sioux Tribe takes exception to are:

1. Transferring the education function to the Department of Health, Education and Welfare. The Devils Lake Sioux Tribe prefers having this function funded through the Bureau of Indian Affairs as it is at the present.

2. Establishing state administration for the educational program. The Devils Lake Sioux Tribe is opposed to any program administered by the state due to poor experience in the past and making it more difficult or complex to operate a program.

3. That any school district will be reimbursed for the cost of educating any Indian student enrolled in their school. The Devils Lake Sioux Tribe is opposed to this "open funding" of Indian education as in many cases the Indian parents are operators subject to the same taxes as non-Indian operators and therefore should be eligible for the same education as non-Indian children without federal reimbursements.

The factors enumerated are primarily the reasons why the Devils Lake Sioux Tribe is opposed to this bill. Therefore, the Devils Lake Sioux Tribe is hopeful that this bill will not be passed.

Sincerely yours,

Lewis Hoothouse
Tribal Chairman

April 14, 1971

Hon. Edward M. Kennedy,
Senator, State of Massachusetts
New Senate Office Building
Washington, D.C. 20150

Dear Senator Kennedy:

Some of the off-the-cuff concerns and questions regarding the Kennedy Bill are as follows:

a. The big question is why? What is to be accomplished and is this the best way to accomplish it?

b. I am not sure a national board is the answer. What if it gets too political?

c. If not a board, would Indian education be better off in OE? What happens to B.I.A.? What do the Indians think of the B.I.A. placement? If the Indian wants it to remain in the Interior then this bill is going to add to organizational and competitive problems.

We need a bill to bring together all facets of Indian education and give to the Indian tribes authority and money to operate and control their own educational systems.

Sincerely,

Ned A. Hatathli

Commissioner Louis Bruce

APRIL 29. 1971.

Senator WALTER MONDALE,
Washington, D.C.

DEAR SENATOR MONDALE: I have studied the material you sent me concerning the education of Indian children. I have also spoken with several people about the Proposed Bill Amendment to S. 659 and "the present situation in Tama County". The two are interrelated in that the basic problems outlined in the bill are still prevalent in the school system which educates Indian children. I am offering my assessment in the light of the Mesquakie or Sac&Fox Indian education problems as found in the public schools today. A deep dissatisfaction exists among the Mesquakie and are especially disappointed with the results of their law-suit against the BIA. What the law-suit was intended to prevent and forestall—the complete transferral of control and responsibility of "educating" Mesquakie Indian children, and the termination of the Sac&Fox Indian Day School, to the South Tama Public School District—has come about anyway. Our suit against the Federal Government would not have materialized if such a bill being introduced by the Senator from Massachusetts had been in effect prior to the 1960's. The BIA's action in turning the school as an "attendance center only" over to the State School System was, however, but the last in a series of moves in which the Mesquakies have successfully opposed with the help of Senator's Senate Subcommittee on Indian Education. This will allow us to prepare for the reestablishment of a community-type school on the Mesquakie Settlement. In this regard, one may say that the Sac&Fox Indian Day School, Bureau of Indian Affairs, has already been terminated, albeit so far as the role in the field of Indian Education is concerned with the BIA. Although, when I have mentioned in the past to the Sac&Fox Tribal Council, the BIA has wanted out of the education on the Settlement and "We" need to control and operate our own educational responsibilities to our children. (What better time to revamp the education of our children than right now!) As you know the "now" Tribal Council dismissed the case for various sundry reasons. Out of these ashes will rise the Mesquakie community-school with the advent of the New Education Act of 1971.

What troubles the people most about the present school situation is the absence in the schools in which the Mesquakie children attend of any programs or concessions to the native culture and heritage. The South Tama School system has made concessions for teacher's aides (all Indians) to help in the class-room condition, i.e., discipline, truants, etc. However, most of these aides have been selected by the "Now" Tribal Council and the choices they have made have been less than exemplary to the Mesquakie life. One aide is a Winnebago Indian who cannot speak "Mesquakie", and is married to the "chief's son"; four of the remaining aides have families which are under the school-age and they remain ineffective in arranging a more viable education even under the present re-orientation methods used by South Tama. The Tribal Council still does not have effective control on the policies affecting the Mesquakie children as they have not taken steps to alleviate some of the minor problems which tend to expand into major proportions with inactivity. The Tribal Council still maintains the BIA should have the ultimate "say-so" in the determination of education policies; the "father-knows-best" syndrome. Inasmuch as I am in support of good government and proper representation, being a student of Political Science, I find the TC behaving and reacting to suggestions and "recommendations" to the contrary. The selection of the aides to the School System is but one of the facets of the mismanagement of Indian education in the present context. In retrospect, this approach made by the TC is producing discontentment among the people concerned about their children. I would like to see a citizen's committee established to help the TC in the policy-making decisions which affect the Indian children. In addition, complaints made by parents to the administrators are often referred to the BIA/MAO Officer-in-Charge who determines what action to follow up with. I have heard that the complaint is often settled without the benefit of the Tribal Council's action towards the disposition of the complaint. The Sac&Fox Tribal Council have cursory powers only as their past inability to act on prior complaints indicate the trend it supports. I hope that the Council exercises the option of taking control of their own programs as the Navajoes have done in Ramah, N. Mex. The Council could conceivably establish their own school district, but, the chances of accomplishing this without opposition from all agencies would snuff out the desire to attempt such a move without adequate support.

60-433 O—71—pt. 4——23

The present system is based on a transfer of JOM monies from the BIA to the South Tama Schools, but, the JOM permits the BIA to transfer the money to other entities besides state operated schools. The money could go to the Mesquakie Settlement directly, either to the Tribal Council or to an organization composed of the people whose children are in school. Given the political climate within the structure of the Sac&Fox Tribal Council, and the availability of the new bill in Washington which so strongly favors Indian control of Indian programs, the chances are excellent that the Mesquakies could gain full control of their educational system in that fashion. The basic concept advanced by the BIA and the South Tama School System is that of competency on the part of the people to be able to administer their own school. The Tribal Council has in the past fulfilled this image and graciously bowed-out to both agencies. I am sure that with proper perspective and knowledge of the new bill, the Mesquakie can function with both agencies for the benefit of all concerned.

I am sorry for writing so much as it must seem irrelevant to the purpose of this letter. I will begin to make my concluding remarks at this time. In 1968, the Tribal Council opposed the closing of the Indian School by going to court only to drop the suit by mutually consenting to the BIA and South Tama. More money has been poured into the school district without regard to where it is being funneled. The Council does not have the adequate power or influence to affect any changes upon the existing program. There is no grass-roots organization as the council makes assumption that all is well-handled at the MAO level, and at the Washington level, the Commissioner was willing to contract directly with the Mesquakies and, in 1969, that would have been a distinct possibility if the communication had not died in the Minneapolis level. Also, I had indicated an investigation by the GAO would be beneficial to the cause of better handling of the JOM funds, but, I was reminded that the MAO would have to decide since they authorize the budget expenditures. The Commissioner expressed concern in the way the budgets were presented and indicated a more detailed description which he probably never received before he was out of office. It is understandable that this could have happened given the convictions of some of the personnel in the Minneapolis level. The man in charge then seemed to be o.k. in his other transactions but he either had not been given accurate information about this particular situation either by design or belief. Whatever happened in that level of communications, it was never transferred to the local OIC/Fld. Office or the tribal council. The MAO Director indicated some surprise that the Mesquakies or Sac&Fox Tribal Council asked the BIA to maintain the status quo in July of 1969. He stated that he even had a difficult time convincing the Central Office that was what the Sac&Fox Tribal Council wanted. The director knew nothing of the compromise that the Mesquakie had bought and it is a mystery that no communication existed with the Mesquakie when the MAO knew that the Central Office had authorized the contract for operating the school. While the BIA finally destroyed the plans for a Mesquakie operated school, the problems of the Indian child have not been eliminated. Offering two examples to support this assumption, I stand ready to be corrected on those basis. The JOM Funds are being used for other purposes than what they were intended for as the monies are set into the 'general operating' expenditures. The curriculum has not been adapted to the cultural-heritage of the Indian children except through the 'cultural enrichment programs'. The School is making a half— attempt to show the BIA it is trying to adhere to the contract and the purpose of the expenditures. The second evidence of corrections needed, in my estimation, is the proper counseling of Indian students as to their educational programs. There will be seven Indian High School students graduating this spring and only *four* of those students are adequately prepared to enter a higher level of learning according to admissions requirements needed at Iowa State University. The entering Freshman in high-school level are often ill-advised as to the curriculum needed for 'adequate' education benefits. The counselors have either been remiss in their duties to the system or they regard the Indian students with less aplomb than that of a common duck.

I especially like the explanation about the bill on page (12); ie., "this Indian Education Act amends Senate bill 659. . . ."; Parts A and B. The other parts, except for 'D', are not applicable to the present Mesquakie situation, however, the over-all amendment will have the desired results for Indian Education in general. The elements which deals with the programs and projects being analyzed by the community and parents whose children will be affected is of great significance as the success of any program designed for Indians is commensurate to

the approach chosen. I feel that with the passage of the Bill, the improvement of Indian education will be inclusive in making substantial improvement in the education level of the American Indian.

I hope these views are helpful to you in your evaluation of the bill. I have many more questions and comments about the Mesquakie situation, however, with your involvement in the introduction of the comprehensive-amendment to S. 659, I have faith that you will give wise and fitting response to the sentiment of youth and change in the field of Indian Education. Closing with the best of regards, I remain,

Sincerely yours,

DONALD W. WANATEE.

Sincerely yours,

Clarence W. Skye
Executive Director

CWS:gb

JO WADE REPORT

Criticisms

1. Criticisms

   If, under the new Bill, these Funds (P.L. 874) can continue to be used for basic education, as well as special education, I doubt that full per pupil two years go would be sufficient now to provide for both basic and special needs of Indian Children. In addition, the Grants to local Educational Agencies under this Bill are made on the basis of a state average expenditure.

2. Does this Senate Bill 659 really turn control of Indian Education over to Indians?

3. Does the objectives in Senate Bill 659 solve any of the Indian School Problems at the end of this period?

4. Does this Senate Bill 659 provide provisions for direct funding to Tribal Organizations?

5. In Senate Bill 659, there are no definite stipulations that the National of Indian Education be made up of Indian.

6. Senate Bill 659 - Reference to Part D.

   We oppose this portion of (Senate Bill 659 - Part D) that is creating another Bureaucracy with the National Board of Indian Education.

7. We oppose the portion of the Bill in reference to the Miscellaneous Part-E.

8. States: Many States with Indian Tribes contained in their Boundaries often do not administer the designated funds to the Tribes or Tribal Organizations because of poor relationships.

9. Definition of an Indian - This identification of an Indian under the present form of Senate Bill 659 is re-identifying again a new type of Indian.

SENATE BILL - 659

Recommendations

1. Commissionership: Should be established with a three-member Commissioners, selected from Geographical Areas is the United States, and mostly Indians, that will serve in equal power to make decisions and be established under the Direct Order of the Commissioner of Indian Affairs in the Department of Interior.

2. Under Senate Bill 659, parts A,B&C, should state that funds will be directly administered to the Tribes or Tribal Organizations (non-profit) that are participating in Educational Services.

3. States: In Senate Bill 659, our recommendation to the Senate Sub-Committee on Indian Education shall be that no States shall be recipents of any portion of the funds designated for Indian Education.

4. JOM: In Senate Bill 659, the funds in this Bill should revert into the Johnson "O" Malley Program for an expanded Program for the welfare of Indian People.

5. Payments: Under Part A in Senate Bill 659, it should state that Local Agencies or Tribes and Tribal Organizations (non-profit) after expending their amount appropriated, should be able to expand their Budget for the next appropriation allocated by the Commissioner.

6. Indian Identification: We would recommend that this Bill recognize all Indians enrolled under recognized Tribes and Federally recognized Tribes.

7. Self-Determination: Under the present Form of Senate Bill 659, there should be a part described to provide for Indians for self-determination.

8. Off-Reservation Indians: Off-Reservation Indians who establish Organizations must get the concurrance of the Tribal Chairmen or Tribal Organizations before applying for Grants under this Program.

COLVILLE INDIAN AGENCY
NESPELEM, WASHINGTON 99155

AIRMAIL

May 12, 1971

Honorable Edward M. Kennedy
Chairman, Special Indian
Education Subcommittee
New Senate Office Building
Washington, D. C. 20510

Dear Senator Kennedy:

We have examined the proposed Amendment 6 (Senate Bill 659) and have great concern as to the meaning of several of the provisions.

We urge that there be additional hearings and hopefully, hearings in the field so that we and other tribes will have an adequate opportunity to be heard after we have had time to study the implications of this bill. We do not think a mere study as to what is wrong with Indian Education automatically qualifies your committee to make such far reaching changes without in-depth discussion with Indian people.

We welcome increased financial obligations on the part of the Federal Government toward Indian Education, however, we are concerned with the increased role given to the Commissioner of Education within the Department of Health, Education and Welfare. We would like to have clarified, if these funds are to replace existing Johnson O'Malley funds and Public Law 874 funds, exactly how Indian involvement will be implemented. In an agency as large as the Department of Health, Education and Welfare, we must be assured that Indian programs will not be lost in a Bureaucratic maze.

We endorse in concept the creation of the National Indian School Board, however, we feel that in section 564 of Part D more problems are created than solved. We do not understand how a school board created by this act could assume immediate responsibility upon passage of this act. Senator Jackson's Bill S-1401 is certainly a more logical approach to making the Indian School Board operative in such a manner as to secure continued success.

We conclude that although there are benefits to Indian education to be secured from Amendment 6 to S-659 we would oppose passage unless and until field hearings were held where provisions could be clarified and the committee could have the advantage of studied Indian input.

ORGANIZED FEBRUARY 3RD, 1950

May 4, 1971

Honorable Edward M. Kennedy, Chairman
Senate Subcommittee on Indian Education
United States Senate
Washington, D. C. 20510

Dear Chairman Kennedy:

In a special called session of the Inter-Tribal Council of the Five Civilized Tribes held in Durant, Oklahoma, on April 30, 1971, this official body went on record unanimously opposing Amendment No. 6 to Senate Bill 659.

It is the feeling of this official body that this bill, as amended, is not in the best interest of the Indian people of Oklahoma, and they strongly recommend that the education program in Oklahoma should remain as is--under the Bureau of Indian Affairs.

This action of this Council is respectfully submitted to you for your sincere consideration.

Sincerely,

Overton James

Re: Senate Bill S-659 Indian Education
Amendment to Act

Dear Sir:

The subject amendment as interpreted by the Ute Mountain Ute Tribe would transfer control of educational programs now under the Bureau of Indian Affairs to a new National Board of Indian Education.

The Ute Mountain Ute Tribal Council wishes to take this opportunity to express their opposition to this amendment. At this time we do not feel that the Indian people themselves are in a position to assume complete local control of funds being spent on schools.

For your information, the Ute Mountain Tribal Council, the Ute Mountain Educational Committee, and the Ute Mountain people have a voice in how money is being spent for our children as explained by the Johnson O'Malley Act. We would hate to see the control as exercised by our people in the Johnson O'Malley Act changed in any manner.

Therefore, the Senate Bill S-659 amendment does not, at this time appear to fill the long range goals of the Ute Mountain Ute people.

Sincerely yours,

Albert Wing

Washington, D. C.

Gentlemen:

I am writing in reference to Amendment 6 in regard to Indian Education. As principal of an elementary school which serves Chippewa Indian children, I simply indicate my support for this amendment. It seems to me that the Indian community must be vitally involved in any program of this type. I can say that the Indian people in the Mt. Pleasant are becoming more acutely aware of and interested in the educational problems of their children.

Please keep me informed as to the progress of this amendment.

Sincerely,

Dear Mr. Mondale:

I'm writing this letter to express my support for the Indian Education bill sponsered by Sen. Edward Kennedy.

After 100 years it's about time the American Indian be given the right to control his own educational programs.

Thank you for the work you are doing on behalf of the freedom of the American Indian citizens of this country. Much more needs to be done.

Sincerely,

Mrs. John H. Weinberg

Mrs. John H. Weinberg

cc Sen. Edw. Kennedy

From what I have read in the newspapers this seems to be a good bill. Also, the Indian educators of Minnesota are top people in their field.

Senator Edward M. Kennedy
United States Senate
Washington, D. C. 20510

Dear Senator Kennedy:

I am sorry that it took me this long to respond to your proposed Indian Education Act, however, if it is not too late, I would like to make the following comments:

Generally speaking, I believe this bill is a very good one. Particularly good is the removal of educational responsibility from the Bureau of Indian Affairs, although this might have some adverse effect. At this time, anything is better than BIA.

I am somewhat worried that the Bureau of Indian Education could possibly become a centralized bureaucracy, even though run by Indians and even though it has a mandate to further the local control of Indian schools. Navajo schools should be run by Navajos in Chinle, Tuba City, Fort Defiance, etc., not by Navajos, Apaches, Kiowas, Sioux, etc., in Washington. I think the provisions mandating local control should be made even stronger, so that a tribe, such as the Navajo, could successfully insist on running its own schools if it so desired, and not be blocked by the Bureau of Indian Education. It might even be desirable to provide that any local Indian community could in this way insist on running its own school without interference from the Bureau. If a tribe or community decides to run its own schools, it should be guaranteed funding and supportive services from the Bureau at a level proportional (by number of students) to the funding and services received by schools administered directly by the Bureau of Indian Education.

LAW OFFICES OF
DINEBEIINA NAHIILNA BE AGADITAHE

Senator Edward M. Kennedy
April 30, 1971
Page Two

The bill makes numerous provisions for the supply of funds to state schools having a large proportion of Indian students. These provisions should be retained since they can help the many Indian students who attend schools in non-reservation and/or urban settings. However, where a state school is located on a reservation and/or has a majority of Indian pupils - Window Rock High School is the perfect example - I think the Bureau of Indian Education should be directed to take over the school. (Appropriate compensation would, of course, have to be made to the State.) The Bureau then would operate it in the same manner as its other schools and would have the same mandate to hand it over to the local community if and when the local community wanted local control.

I think the higher education proposals are good. What about the idea of using the present boarding school facilities as community colleges and using the money for community colleges to construct decentralized community grade schools and high schools. The boarding school complexes could probably be converted to community colleges quite economically.

Sincerely yours,

Leo Haven,
Director

Enclosure

RESOLUTION OF THE INCORPORATED
February 25, 1971

A group of Navajos representing various organizations incorporated to render services on the Navajo Reservation (see List attached) met on February 25, 1971, to discuss the education of children, including their own children, on the Navajo Reservation and passed the following Resolution:

WHEREAS: President Richard M. Nixon by his message on Indian Affairs of July 8, 1970 and Commissioner of Indian Affairs, Louis Bruce, by his memorandum of August 14, 1970, have supported the principle of local Indian control of schools attended primarily by Indian children and have also supported the principle that the various Indian Tribes should, by contract with the Bureau of Indian Affairs, assume the functions now performed by that Bureau;

WHEREAS: There is at present very little control by Navajo parents over the education of their children and, further, little progress has been made toward this end; and

WHEREAS: Schools now existing on the Navajo Reservation, whether they are controlled by the Bureau of Indian Affairs, private religious groups, or the state public school systems, are not controlled by Navajos and do not respond to the desires of Navajo parents concerning the education of their children,

NOW THEREFORE BE IT RESOLVED:

1. That this group supports and demands the immediate creation of the proposed Navajo Tribal Department of Education, within the Tribal government and with the responsibility for policy making, administration and supervision of all education on the Navajo Reservation in the best interests of Navajo children; and

2. That this group urges and demands that the Bureau of Indian Affairs turn over its school facilities on or near the Navajo Reservation and its educational responsibilities to the Navajo Tribal Department of Education, with that Department taking full responsibility for administration of the schools, including the disbursement of all federal monies and the hiring, firing, and supervision of personnel; and

3. That this group urges the immediate termination of all state public school activity on the Navajo Indian Reservation, with all state facilities on the Reservation to be turned over to the Navajo Tribal Department of Education and with all federal monies paid to the states for the education of Navajo Indian children to be paid directly to the Department of Navajo Education; and

4. That all private schools on the Reservation, whether sectarian or non-sectarian, shall be required to meet the educational standards established by the Navajo Tribal Department of Education for all schools operating under its supervision; and

5. That the members of this group offer their full cooperation and support to the Chairman of the Navajo Tribe and to the Navajo Tribal Council in order to achieve the goals set forth in this resolution.

CERTIFICATION

We hereby certify that the foregoing resolution was deliberated and considered by the "Incorporated" on February 25, 1971, at Window Rock, Arizona on Navajo Indian Reservation, and that the same was passed by a vote of 27 in favor and 0 opposed, this 25th day of February, 1971.

Honorable Edward M. Kennedy, Senator
Senate Office Building
Washington, D. C. 20510

Dear Sir:

This letter is to express my appreciation for your concern, thoughtfulness and time taken to introduce an Indian Education amendment. If at all possible, I would like to express my views regarding education for Indians.

We have more "educated" Indians today, than at anytime in the history of Indians, yet we have more problems today than at anytime in our history. Looking at the outside, it is unsettling to discover that, nationally, we have more scientists and scholars than at anytime in the history of man, yet, nationally, there are more problems today than at anytime in the history. Clearly, something is lacking in the system labelled education.

Our university and college programs need to be expanded. In other words, not all students are cut out for university, college or vocational schools. The propaganda is: "If you don't go on to school, you will be good for nothing." This message affects the attitude of the young people. Many students, either can't make the grade or are not interested in technical training in some profession and at the same time, are not interested in vocational training either. Consequently, these people are convinced they are now good for nothing. After all, university or college is nothing more than training grounds for vocational competence-one is at a more technical level.

I cannot help but think of Thomas A. Edison who dropped out at Third Grade; Henry Ford quit at Eighth Grade; Albert Einstein flunked and Benjamin Franklin is a drop out. Yet these men have been instrumental in bringing about profound changes. Certainly, the pioneers, who helped build our greatness, were not educated. Yet, it seems everyone is looking to the academic institutions for some answers to the social ills. The officials in them are either oblivious to the demands or are shirking their responsiblities toward their fellowman or are ignoring the demands because they don't know what to do. They were blissfully unaware of the turmoil until the riots hit the universities.

New thrusts in education geared to address the social problems are resisted, anyway, by the populace. Perhaps this means new ideas will be similarly blocked in the future. However, the Indian reservations are fertile fields to try new approaches in education, as they (Indians) are accustomed to seeing new programs frequently and changing programs on

the reservations are not uncommon.

I am disturbed about this because, in the first place, we have entirely too many Indians dropping out of universities and colleges. This brings out another factor that is pertinent. It is the preparation before higher education. The problems of the reservation continues because of the kind of education the Indian has received. Schools they have attended were not designed for the Indian. Traditionally, an educational institution is viewed as a media for inducting an on-coming generation into its culture. In order to do this, the system must transmit to this emerging generation the acceptable values and what has happened in the past so that the product of the school will know how he happened to be here-the present. This, theoretically, will allow the product to intelligently make decisions as to what aspects of his culture he must abandon, what to maintain and what to innovate in order to be in tune with the changing times. This premise, if it is correct, is not being implemented in Indian education. The Indian students are treated as if they came from a vacuum, a void and attend schools with a curriculum designed to meet the needs of middle-class urban children. The drop out, in this case, is really the school.

The concepts and precepts in education are the product of urban minds. For this reason, the institution has tended to ignore the values of the rural and regard these values are not worth considering. "Hayseeds" and "Hicks" as derogatory terms coined by city people are significant in connection herewith.

In the past, too frequently, emphases have been placed on facilities and salaries without considering the program or content of education. There is a fallacious assumption that shiny ultra modern facilities and higher salaries will, somehow, enhance learning. In the mean-time, our drop out rate continues.

Higher salaries paid to teachers and instructors in higher grades represent our topsy-turvy world. Actually, higher salaries should be paid to teachers in the bottom grades. After all, whether a child stays in school or not is dependent on the kind of teaching in the first year of school. This will require a highly skilled teacher in the first years of the school program and this will mean a higher salary in order to attract the good teachers.

At one time, the teachers and the parents were very close, often living together, shopping together and worshipping together. A gulf has developed between education and the community now. The communication line has been broken. It is no longer strange to see or read about a bond drive, to bring about improvement, being defeated by the citizens due to lack of factual information. New education ideas with "new" responsibilities for teachers are needed today.

The administrations of the schools are worth mentioning at this point. The administrative sections are becoming an overwhelming bureaucracy, and, often, there is a continuing war between administration and teachers. This, in turn, affects the teacher-pupil relationship. Very likely, the increase in drug use in the schools throughout the country could be the consequences of this conflict between administration and instructors. Incipient, maladjusted students are not always the direct

result of the students' homes and environment. This conflict has also driven many good teachers out of classrooms.

I endorse your education amendment (No. 6 to Senate bill 659). As you know, recently, I hand-carried a proposal to Washington for funding and I was given a merry run-around. No one said, "Yes, we will provide the funds." nor a definite, "No! We will not approve your proposal." I had contacted all Departments that had anything to do with education. This kind of limbo is maddening. When your amendment is enacted, I will know, definitely, one way or another, whether my proposal for Community Colleges will be approved or not. In the event my proposal is not approved, I may as well forget about it, because, now I know other departments will not approve it. In other words, your bill is our one hope.

I am sending along couple of editorials on the subject of education as supporting statements for the amendment. Please, include them as my statements. If at all possible, include the two education proposals as well.

I also endorse Senator Jackson's S. 1401. I believe your amendment and S 1401 go together or, at least, they reinforce each other.

Sincerely,

Carl

GOVERNOR'S COMMITTEE ADVISORY ON INDIAN AFFAIRS (GACIA) - STATE OF KANSAS

Minutes

Saturday, May 1, 1971 - 9:00 a.m.
at Community room of St. Margaret Mary Church in Wichita, Kansas

The meeting was called to order by Charles G. Shunatona, chairman.

The invocation was given by Mr. James Andrews, member of GACIA and representative from Arkansas City, Kansas.

Members of GACIA present were: Chief Shunatona, representative of Wichita, Kansas; James Andrews, representative from Arkansas City, Kansas; and Karl Talawyma, representative from Lawrence, Kansas.

Seated at the speakers' table were: James Andrews, Mr. Billy McCray, state representative; Chief Shunatona, Mario Two Hatchet, acting secretary; Tommy Tommaney, retired deputy assistant Area Director of Education, Tahlaquah, Oklahoma; and Dr. Leon Wall, deputy assistant Area Director of Education, Anadarko, Oklahoma.

Tribes represented from the Indian population of the metropolitan area of Wichita, Kansas, were as follows: Seminole, Pawnee, Otoe, Kiowa, Papago, Creek, Omaha, Potawatomi, Winnebego, Osage, Cherokee, Chippewa, Sac-fox, Delaware, Arickara, Euchee, Shawnee, and Wichita.

Chairman Shunatona gave a summerized report on the American Indian Diagnostic Council, a three day seminar, which was held in the Raddison Hotel, Wichita, Kansas, Friday, Saturday, and Sunday, November 20, 21, 22, 1970. He emphasized the importance of Indians attending business meetings, workshops, etc., related to the American Indian. Their two directional channels of operation are to inform the Indian and to give the American Indian a voice.

Chairman Shunatona introduced Mr. Billy McCray, the state representative from Wichita, Kansas who in turn read and explained the House Bill No. 1386 which was signed by Governor Robert Docking. The act of legislature gave American Indians who are enrolled on their tribal membership roll and who reside in the state of Kansas the right to hunt and fish without license in the state of Kansas. The bill stated that upon request of any game warden or other law enforcement officer, an Indian must exhibit a certificate issued by the Bureau of Indian Affairs. This certificate must state this person's degree of Indian blood. This state law becomes effective July 1, 1971. The bill did not state to what degree the Indian blood must be.

After much discussion and deliberation on the contents of this State Hunting and Fishing Indian Rights Bill there was a complete understanding by all present. It was decided that the normal certificate issued to tribal enrollees by the various Indian Agencies would suffice as proper identification in compliance with this law.

Chairman Shunatona had invited Mr. Tommany and Dr. Leon Wall to this meeting to serve as consultants because of their Indian education administrative background.

Mr. Tommany, upon the request of Chairman Shunatona, read Amendment 6 to S. 659. These findings from the two year investigation of Senator Edward Kennedy's subcommittee on Indian Education. The amendment was read in its entirety and then

was re-read in part and was discussed. After lengthy discussion by the participants attending this meeting the concensus of opinion was:

1. That appreciation of the Indian people be expressed to Senator Edward Kennedy and his committee for their great concern of the Indian Education problems and for their sincere and thorough investigation of said problems.

2. That the Bureau of Indian Affairs be kept in effect with certain structural and implemental changes being made for improvement of BIA.

3. That the recently adopted policy of local advisory boards and school boards to various Indian schools be extended to the inclusion of a National School Board composed of American Indians with said board sitting in advisory capacity to the Commissioner of Indian Affairs, his staff, and the BIA programs.

4. That greater consideration be given to urban Indians for participation in Indian educational programs.

5. That greater funding be allocated for better implementation of Indian Educational Programs.

6. That the Federal Government be made aware that the National census figures do not give the true Indian population.

Announcements were made.

There being no further business the meeting was adjourned by Chairman Shunatona at 12:30 p.m.

Copies: Senator Edward M. Kennedy, Washington D.C.
Governor Robert Docking, Topeka, Kansas
Louis Bruce, Commissioner Indian Affairs, Washington D.C.

Honorable Edward M. Kennedy,

This is in response to a bill S.659 introduced by yourself which calls for a comprehensive Education Act to meet the special educational needs of Indians in both federal and public schools. I, having had twenty (20) years in the federal government, part of this time in the educational area, now presently serving as Chairman of the Flandreau Santee Sioux Tribe and Chairman of the Flandreau School Board, recently established for the involvement of the Flandreau Indian School, a federally operated school, have the following questions concerning this bill.

1. Will it adequately meet the educational needs of Indian people?
2. Does it really turn control of Indian education over to Indians?
3. What kind of Indian involvement or what organization was contacted in implementing this bill?
4. What assurance do we have the programs will continue for Indians after five (5) years?
5. What are your objectives in solving Indian School problems at the end of this period?
6. Does the bill provide provisions for direct funding to tribal organizations?
7. Are there definite stipulations that the National Board of Indian Education be made up of Indians?
8. How will this bill or policy affect federally operated boarding schools?
9. Is this new bill or structure really going to meet the needs of our Indian children?

In my present positions, it appears school structures are going to have to come from the youth or students and also that many little needs must be met so that our Indian Youth will gain status in attitude, character and feel like a true human being instead of a statistic or number.

I have two (2) delegates from this reservation that would be very interested to testify as a witness regarding Indian education problems.

Sincerely yours,

Gordon J. Jones, Chairman

Dear Senator Kennedy:

We have read with jubilation your news release wherein you have co-sponsored an Indian Education Act with Senator Howard Cannon.

The Nevada Indian Affairs Commission is real receptive to this type of legislation to assist the educational opportunities for the Indians in Nevada and in the nation. We support this legislation and wish to convey to you our heart-felt thanks for introducing this vitally needed revision to the education in the public schools.

If we could request a copy of the proposed Bill and the time of the Hearing, we would like to have the information available to disseminate to the various Nevada Indian Tribes to have them assert an expression of support to you and Senator Cannon.

With best wishes.

Sincerely yours,

Ross Morres

Gentlemen: re: Senate Bill 659
Indian Education

I am attorney for the Coeur d'Alene, Spokane and Kalispel Tribes of Indians in this area. I also represent the Affiliated Tribes of Northwest Indians. The purpose of this memorandum is to express the attitude of these tribes and of the Affiliated Tribes regarding Senate Bill No. 659. We are advised that the report of the hearings are being held open for written testimonies until May 13 for those tribes who did not appear on May 6.

The Coeur d'Alene and Kalispel Tribes, as is the case of the other tribes of the Northwest, do not have BIA Indian schools on their reservations. Most of the children go to public school. The only non-public school is the Mission School run by the Sisters at DeSmet, Idaho, on the Coeur d'Alene reservation. Each of the tribes has a better than average relationship with the local public schools and school boards. Working as a team with the BIA educational specialists, tribal officers, tribal attorney and local school officials, real progress has occurred in the direction of better educational programs for the Indian students, use of Johnson-O'Malley funds for Indians and a general recognition that the public schools should not simply absorb Indian funds into their general budgets. An example of progress has been the employment by the Cusick, Washington, School District of Henry SiJohn, a member of the Kalispel Tribe, as a School District employed counselor to work with the Indian students. Mr. SiJohn is a professional educator. Similar programs are in effect on the Coeur d'Alene and Spokane Reservations. We believe that other Northwestern Tribes are making like progress.

The tribes of the Northwest, and particularly those the writer represents, consider Indian education to be an integral part of the overall governmental and tribal relationship with the Indian people. Through the years, and particularly within the last ten years, they have worked increasingly well with BIA people in all the aspects of this relationship. The Indian Bureau has become a

resource, a valuable member of the team to work closely with the tribe in all fields, land and resource development, industrial development, housing, employment opportunities, community development, range management, administration of leases, and in the fields of education.

The tribes vigorously oppose any plan, such as expressed in S. B. 659, which would fragment and separate away portions of the overall programs from each other. Very often the position of community development and educational specialist is combined in one person or office along with social services. The same BIA personnel work with the total picture, the total family and community. The tribes want it left that way. They would rather develop and improve the present situation than have education pulled away from this coordinated approach.

As a tribal attorney for the last twenty years, I have personally observed and participated in the great strides that have been made in Indian involvement, particularly in Indian education. All over the country I find many Indian school boards in BIA schools. The concept of Indian involvement, however, implies total involvement in integrated programs. Nothing is more disastrous to Indian involvement than the sudden fragmentation of programs into different bureaus. This involvement presupposes a certain coordination and unity, not only of the Indians, but of the government functions in which they are involved. Fragmentation at the Federal level destroys this coordination and impairs the involvement.

Every time the Congress becomes aware of an Indian problem, invariably a problem that has existed for generations, it looks in the direction of reorganization. It blames the Indian Bureau. It loses sight of the fact that, with all of its weaknesses and strengths, the Indian Bureau is the one bureau that the Indians understand and are accustomed to. They have been working with it for more than a century. Any Congressman or Senator could visit the Indian Bureau on any forenoon and find several Indian delegations from various tribes passing from one office to the other taking care of their business. I have been there with the tribes I represent innumerable times.

The Indians know this "trail". They know the people. They are effective in working within the BIA.

On the other hand, the Indian people find it most difficult to cope with the prospect or reality of having an existing program suddenly shifted to another bureau. The continuity, the familiarity, the Indian confidence is broken. The Indians know that just shifting

an Indian program to another bureau, or, as in the case of SB 659, to a newly formed agency, requires years of adjustments, new people, new approaches, another bureau or agency to contend with. For the most part, they want their regular Indian business consolidated and kept in one spot, within the BIA where they are used to going.

The writer, as a tribal attorney, has, for many years, attended Indian conferences and conventions all over the United States where proposals for removing the educational functions from the BIA have been repetitiously discussed. As he wrote to Senator Kennedy on one occasion, the writer is at a loss to explain the contention of supporters of these bills that they have consulted with the Indians and find them in agreement with the change. This is just not true. The writer has sat as attorney for innumerable resolutions committees of the Indian organizations, NCAI, Affiliated Tribes and many others, and has drawn and redrawn over and over again resolutions that the Indians have adopted opposing any transfer of BIA functions, especially those dealing with eudcation .

The Affiliated Tribes of Northwest Indians will hold its convention within the next three weeks. As it has in the past, it will speak out against the transfer of educational functions from the BIA and will oppose S. B. 659. When that record is made the writer will see to it that your committee received copies of the resolutions.

As explained above, the tribes the writer represents, the Spokane, Coeur d'Alene and Kalispel Indians, strongly oppose SB 659 and any other bill which would transfer the responsibilities for Indian education from the BIA to any other department or agency.

Respectfully submitted,

Robert D. Dellwo

Robert D. Dellwo
Attorney for the Coeur d'Alene,
Spokane and Kalispel Tribes
of Indians.

St. Labre Indian School

ASHLAND, MONTANA 59003

May 1, 1971

Senator Edward M. Kennedy
United States Senate
Committee on The Judiciary
Washington, D.C. 20510

Dear Senator Kennedy,

Thank you for your letter of April 21, 1971, regarding Amendment 6 to S. 659, the Indian Education Act, which you introduced in response to recommendations of the Special Subcommitte on Indian Education. I regret that your letter had to be forwarded to me in Missoula, Montana, where I am temporarily occupied in taking courses at the Univeristy of Montana. For this reason I received it too late to reply in time for the scheduled hearings on April 28 and 29, 1971.

Nevertheless, I wanted to write and assure you of my own and our staff at St. Labre's full support of the bill and the suggestions already made in reference to to the Amendment #6-S.659.

One of my concerns is that members listed as candidates for appointment to the National Board, be listed and appointed regardless of political affiliation (i.e., Democrat, Republican, etc.). I don't feel that partisan politics should enter in as a consideration for appointment as it has for the appointment of Commissioner of Indian Affairs; rather appointments should be made on the basis leadership potential and ability.

Otherwise, I find this a thoroughly fine bill and wish to express my own appreciation and that of the Indian people with whom I am associated to you and your associates for the time you have put into creating it. I wish you much success in its final refinement and approval.

Sincerely,

Fr. Michel Antoine

Senator Edward M. Kennedy
Senate Office Building
Washington, D.C. 20510

Dear Senator Kennedy:

Thank you for your communication pertaining to the proposed Indian Education Act and related changes in other legislation affecting Indian education.

A major change is the establishment of a National Board of Indian Education having complete jurisdiction over Indian education programs, and functioning apart from the Bureau of Indian Affairs.

It may be appropriate for the National Board of Indian Education to operate within the organizational structure of the Bureau of Indian Affairs. The Bureau of Indian Affairs should be restructured; however, with the area offices being directly responsible to the National Indian Education Board, which would determine policy and provide for direction and accountability in the administration of the programs, many questions remain unanswered. I would concur, however, with the need for reorganization of existing methods and the encouragement of Indian participation and self-determination at local, state, and federal levels.

Sincerely,

Patrick J. Lucey

RE: S. 4388--Indian Education

My dear Senator,

On Saturday I attended a board meeting of California Indian Education, Assn., at which your proposed legislation was discussed in some detail (as to several provisions.)

The board did not take an official action on the bill, but the discussion brought out a number of points which clarified my own thinking.

Our board is representative of California Indian opinion--from San Diego to Hoopa, and I feel that objections and suggestions were presented from many perspectives including urban and rural.

Personal suggestions I would make after listening to these representative ideas:

1) Education should be removed from the B.I.A.'s control.

   Whether a separate bureau, under Interior, should be created, or whether it should be moved into HEW as an autonomous agency, probably needs additional discussion.

2) The National Board of Indian Education is an excellent provision. However, presidential appointment is highly controversial, as it would be subject to possible political strategy. A better solution would be to make the first board an interim one, to serve for one year and at the end of that time to present a plan for board members to be elected. Thus, grass-roots would be able to feel involved in choice of its representatives.

3) Some of the provisions in the Act should be left to the Indian board to determine. For instance, whether or not the Institute of American Indian Arts should become a four year institution. Also, what would qualify an off-reservation higher education school to receive federal aid for Indian students, etc.

4) Definitely, the Act should provide full tuition and fees for an Indian student attending a college anywhere in the U.S.--either by reimbursing the college (I am speaking of state institutions supported by public funds) or by giving him an allowance to cover. No student should be limited, by lack of funds, to a college solely in his state of residence.

Senator Kennedy, from Black Re S4388 May 3, 71

2-2-2-

5) A not directly concerned but related problem is that of nationwide use of textbooks in the public schools which denigrate or ignore Indian cultures and the whole history of Indian-white relations in this country. This is a very sore point with Indian people because they feel the books often imply a subtle defamation or disparagement which contributes to an attitude of superiority on the part of fellow students.

Would it not be possible through special O.E. grants to "reward" states or districts which make an honest effort to choose better books or introduce approved-by-Indians supplementary materials? And, also, could not special funding be provided for teacher workshops to broaden the background of instructors--even to encourage teacher training institutions to introduce courses as part of undergraduate instruction?

Now that I have written all this, I am quite positive on Point 1: I believe an Indian Education Bureau belongs under HEW, and despite controversy, which you can suspect may be instigated by BIA employees, I am sure that most Indian people will approve--especially if the bill includes provision for adequate funding. This was one item which worried some members at our meeting last week.

I surely hope you can be successful in obtaining, at least some measure of forward movement in this field. Heaven knows, the present condition of Indian education is a national disgrace.

most sincerely,

Kay Black

Washington, D.C. 20510

Dear Senator Kennedy:

Amendment 6 to S. 659 , the Indian Education Act, would greatly benefit Indian Education in Maine. This bill would break the Barriers to federal funds currently maintained by BIA administration. It is the vie. of Maine Indian Education funds should be made available to all Indians on the basis of need not residency (off or on reservation) or historical accident ("State" or "federal").

Please add Maine Indian Education to the list of supporters for Amendment 6 to S. 659 the Indian Education Act.

Sincerely,

Meredith A. Ring

Members of the Sub Committee on the Indian Education Act:

It is a privilege to be able to have the opportunity to respond to the Indian Education Act that is being introduced to you and to the Senate by Senator Edward Kennedy. The Hopi Education Committee feels that it is the right path that you are taking in asking the Indian people what they want and feel about their own educational systems. It is also a way of bringing up our upright to know that we are capable of doing these things and to think about the education that concerns our children and young people. In the past it has always been that anything that was brought before the Congress or before Committees was brought to you by people who felt that we need certain things because they know us. But now, as Indian people, we can express our own feelings of how we see things and how we read them and how we can implement them into our own educational system.

This Bill that is being brought before you has been discussed by the Education Committee of the Hopi Tribe and we have talked at great length about many of the ideas that you have expressed and there is much agreement on the things that you have written down.

It is true that the Bureau of Indian Affairs have not functioned fully to the needs of the Indian people as had been intended. And it is also true that not only the BIA, but Public School Systems have fallen into this area, losing the ideas and interest of the Indian people. We, as the Hopi Tribe, are aware that we do have problems in our BIA systems such as teachers, curriculum, help of our children and we feel that now with this Bill that has been introduced it brings to light many a things that we do need to look into. But to many, of course, is that this Bill is not just a page of written words but that it does mean something to improve the things that we have.

The Hopi Tribe is located in the State of Arizona and within our Tribe we are directly involved with the Bureau of Indian Affairs. Our children, from the time they start school do go to BIA schools, day schools, and on up through high school, from the 9th to the 12th grade, are sent to off-reservation boarding schools. And in this way we are well aware that the problems do exist as has been brought out in your Bill and feel that the step is right in setting up a Board of Education at the national level because it is at this level that many times rules are made by people not of Indian descent that have other nationalities that feel that there are certain things that the Indian needs. Further, the education program administered by the BIA is for reservation Indian children and, therefore, Indians recommended by Indian Tribes should make up and control the National Board of Indian Education, preference shall be given to enrolled Indians on the Board.

We agree that when the Board of Education is set up that it should be made above Indian educators who know who have lived on the reservation and know of our problems. But we feel also that this Board of Education should not be separate organization from BIA but instead of having a set up so that eventually the Bureau will be done away with, we feel that this Board of Education can be controlled of the BIA system. As you know there has not been a Director of Education in the Bureau and if this is the case this Board could be the ones who would hire these people and who would take care of moving the BIA along so that they will continue to operate.

We know that the Bureau does run into problems of red tape of waiting until rules are followed before they can act. As Indian people, we cannot see why decisions can't be made, why we have to wait until someone else gives an okay, or we have to wait until so & so says something to so & so before this takes place. We feel that the Board of Education can make many of these decisions and get them to us who are on this educational system on our schools. The reason we state this as saying that the Bureau of Indian Affairs should have a

Board of Education above them is that with the President's message there was stated that Indian people would become more involved in what they are doing now. And in order to find out if this will really happen we will have to work on it now and start to do the things that has been promised. And in order to find out that if the Bureau would be willing to operate in this way we would have to test it and find out if this would take place. If this doesn't take place then we can think about setting up a separate system. The schools as we do now have them on the Hopi Reservation are beginning to go into this direction.

We have one school that is operated under a community type run school again with a Hopi person as a Principal. Another school in Polacca is now being turned into a school run by a Hopi man who has had a chance to work on his Masters, and now our Reservation Principal is a Hopi person who is well qualified for this position. We are now moving in a direction that we hope will eventually bring our system up to the level that we feel is right. So we also feel then that the Board of Education that you are suggesting should be made to have direct control over the BIA and not be made up into another area which would again run into a bureaucracy type control. We feel that with the present system it can be improved and it can be made so that rules that are made up by them we would be able to follow them but still work directly with BIA.

Another area that we feel is a very important area that you have covered in your Bill is that of controlling Johnson-O'Malley funds, Title I funds and Public Law that has to do with impact funds. We feel that the State is now misusing these funds as far as working for the betterment of the Indian child. In the State of Arizona once the Johnson-O'Malley funds and the Public School funds are brought in the identity of these funds are lost and we have asked why they are not given directly to the Indian child. There has been no answer given to us by the present Public School Administration. If this is the case that they can't tell us why the money is not getting to the Indian child then we know that the Indian children are not getting this money that is supposedly earmarked for them. We want this Board of Education to control this so that we know that the Indian children are getting this money. We also feel that when this is done that a system for improving the Indian education will be greatly helped and will be able to uplight those of our kids who are away to school.

Another suggestion that we feel that could help in the Board of Education is that each time that a new Board member is appointed to the Board that the Indian people be consulted and again make recommen-

dations of who they would like in their Board. This would be fair to all tribes and not only that it would control it so that these politics that are so evident in Washington would not be part of choosing these people. We feel that one of the problems that happens is that each time the administration changes there is a tendency to fill it with an appointee made by the President. This we feel is not right. We feel that we have many people of Indian descent who are very very capable and that we, as Indian people, know who these people are so that we can be the ones to make recommendations whenever they are terminated from their positions.

Another area within this too is that in your recommendation you said that the President should be the one to appoint the Chairman and Vice Chairman of this Board. Again we feel that the members of the Board should be the ones to choose or appoint their own Chairman and Vice Chairman. This way again if the Indian person who is doing it and if anything goes wrong, the Indian people can be the ones to say, "We are the ones that were wrong." We feel that we are capable enough to do what we are to do and we do not ask others to do it for us as in the past. We want to be the ones to do our own thinking in alot of ways but also to be able to communicate with those of you who are in Washington working with us in this area of education.

Again we would like to re-emphasis that the Hopi Tribe do believe in education for their people because we feel that they are the ones that will take control of our tribe and lead us in the direction we are aiming for and that is to help others of the tribe to become more and more educated. And we feel also that the Bureau of Indian Affairs can improve if those in Washington and on the Board of Education be the ones to relay back to these people that they have a job to do because we want people who are interested in helping to educate the people, not people who are here for a job and for their pay check.

We again would like to thank you for letting us be a part in the decision on whether or not this Indian Act should be made a part of the law for this country. And we feel that the Indian person has been neglected for a long time but that now if we will only not just have this written up and put away in your records but there will be something done about it and that it will be worked on and that all Indian people who do express themselves might be satisfied with the way it is set up. But again we emphasize that we would like to see this Board of Education be the head over the Bureau of Indian Affairs and not have to do away with the Bureau of Indian Affairs as a total. We feel that we can function better and work better and leave the system as stands and improve upon it. This way we will know if it is true that the Bureau of

Indian Affairs is willing to change.

One thing that we are afraid of that would happen if that we set up a new system is that again we will run into the problem of red tape, setting up rules and trying to follow them. But with the present system we can build upon the Bureau of Indian Affairs school system and make it better than what it is now. And that way we will still work to improve what we have now.

We would like to thank you for this opportunity but would recommend that the next time you would like an oral report given before your Sub Committee that we be notified further in advance. We were notified two days before the report was to be given and, therefore, were not able to appear before you. It is easier to speak how we feel than to put it in written words.

Thank you.

Sincerely yours,

LeRoy Shing

ANB EDUCATIONAL TALENT SEARCH
P.O.BOX 449
JUNEAU, ALASKA 99801

OFFICE OF
SENATOR
EDWARD M. KENNEDY
WASHINGTON, D.C.
MAY 13 11 31 AM '71

May 7,1971

The Honorable Edward Kennedy
United States Senate
Washington,D.C. 20510

Sir,

Recently I received a note from Bill Demmert,Jr.inviting me to comment on the amendment 6 to S.659.

As you are probably aware, Talent Search is a federally funded program under the Department of Health,Education and Welfare, Office of Education. The Alaska Native Brotherhood administers the Talent Search Program in Southeast Alaska. The education of the Native people is of utmost importance, especially with the pending land claims settlement. Self-determination is what we all are after, but without the proper education, we cannot hope to rid ourselves of the poverty and despair we now exist under.

It is my firm belief that we must have a voice in our destiny. To be able to change the educational system that we have been subjected to is our only hope for survival. To do this, we must have some form of control over the distribution and administration of funds which relate to Indian students. I feel that your amendment will finally give the Indian people the power they need to bring about educational change. I am especiall impressed with the second suggestion that Indian tribes qualify for funds to develop their own schools. I'm hoping that this will include supplemental educational programs not given in public schools how, such as the teaching of one's own culture,history and language, using the elderly members of the Indian Community as the instructors.

I fully support this amendment and hope that it will be adopted.

If it is at all possible, I would like a few copies of the summary of the subcommittee's investigation on Indian education entitled"Indian Education-A National Tragedy,A National Challenge".

If there is anything more that I can do to support the amendment, please let me know.

Cordially,

Edna Belarde

DEAR SENATOR KENNEDY: Please read the article on the proposed amendment. This article expresses the feelings and opinions of our group unanimously.

We do hope that the voice of the *Indian* People in this instance will be listened to and heeded.

Respectfully,

MRS. PAULINE BLUM,
Secretary.

GEÉSQUA

[From the Indian-American Student Association]

KENNEDY-MONDALE AMENDMENT

At present the BIA has jurisdiction over Indian Education. The Kennedy-Mondale Amendment divests the BIA of that authority and transfers it to a proposed National Board of Indian Education. NBIE will consist of fifteen Indian members, appointed by the President, and would be under the Commissioner of Education in Health, Education, and Welfare, who would handle the administration of any program in which Indians participate.

It is our opinion that the NBIE would be so far removed from implementation of programs, and with such little real authority, that it would function less than adequately. This would place Indians in competition with other larger minorities. If you think you have a lot of trouble getting money from the BIA for education now, then try this proposal!

We as Indians remain unique today in that we have a Bureau of Indian Affairs with the responsibility of "helping" us with our so-called "socialization". By removing the backbone of the BIA in education we will be witnessing the beginning of the end of our protection, especially when termination legislation passed in the fifties is still on record and has not yet been repealed.

We know that the BIA needs tremendous improvement and especially in education. If it is going to cost 25 million to implement this proposal, why not give that 25 million to Indian schools and to help finance scholarships for urban Indians rather than spending it to implement a program which we do not want.

In a letter to Senator Kennedy, Charles G. Shunatona, Chairman of the committee, expressed the consensus of the committee's disapproval of the bill and recommended the NBIE to be an advisory board to the BIA while at the same time implementing structural changes in the BIA's educational programs. They also requested greater support for Indians attending public schools.

It seems apparent that the white people still have this so-called "melting pot" theory. This proposal is part of the integration of Indians into this "melting pot", thereby relieving the United States government of its responsibility (they took this responsibility, we did not give it to them) to the Indian. We are Indians and unique, let us remain Indian and preserve the promise of our heritage.

UNITED NATIONS PLAZA at 46 STREET, NEW YORK 17

May 7, 1971

The Honorable Edward M. Kennedy
United States Senate
Washington, D. C.

Dear Senator Kennedy:

This is in response to your request for comments on the Indian Education Act which you have introduced. We appreciate this opportunity.

In an effort to secure reactions from grass roots areas, our Albuquerque Field Office that administers the American Indian Program, was requested to secure comments from a cross section of Indian tribal officials and leaders.

We have made no attempt to analyze every section but rather report general feelings of the Indian people consulted on major provisions.

It appears to be the consensus that they do not favor transferring the administration of the Federal Indian Education Program from the Bureau of Indian Affairs, Interior Department, to the Department of Health, Education and Welfare. They feel any such move would merely result in the fragmentation or termination of services as there are too many interrelationships between Indian education and other Bureau of Indian Affairs programs.

Most of the adult Indians favor the proposed National Board but think the provision should be amended to limit membership of Indians of at least one-fourth degree Indian blood, and that appointments should be made by the President from nominations submitted by Indian tribes only, instead of tribes and organizations, and that the Board should select Board Officers. Some members of the National Indian Youth Council believe the idea of a National Board is impractical.

All Indian persons consulted had strong feelings favoring greater involvement of Indians in every phase of Indian education, including the development of contracts with State Departments of Education and subsequent supervision of uses of the funds. Also favored was programing and budget development of BIA schools by local Indians. Funds for pilot and demonstration projects directly related to improvement of Indian educational opportunity were endorsed as well as expansion of the kindergarten and adult education programs.

American Indian Program | 5208 A Constitution Avenue, NE, Albuquerque, New Mexico

Southern Mountain Program | 5604 Lawrence Road, Knoxville 17, Tennessee

The Honorable Edward M. Kennedy

May 7, 1971

Some Indians spoke on the desirability of consolidating higher education funds for college and vocational training, merging the two programs for greater continuity of service to Indian youth.

The Indian people were unanimous in the belief that the real need is for substantially greater funding for Indian education.

We feel the Indian Education Act is timely and has much merit if revisions are made in line with recommendations from Indian leaders. To obtain views from more Indian people they would like to have more hearings conducted on the various reservations instead of in Washington.

Sincerely,

Glen Lost
Executive Director

Sir:

I have read with care the copy of Amendment 6 to S.659, the Indian Education Act, which you have introduced into Senate as a result of the findings and recommendations of the Special Committee on Indian Education. I have also read the suggestions for improving this Amendment.

I wholeheartedly and totally endorse the Amendment and agree with and second the suggestions for improving the Amendment. In addition, although belatedly, I would have liked to submit a suggestion of my own; namely, that organized groups of Indians living in urban areas should be eligible for Office of Education funds to develop programs designed to preserve and maintain Indian culture, language and arts and crafts.

My congratulations and sincere best wishes to you and all the co-sponsors of this Amendment. It should be passed as is and strictly adhered to; first and foremost the National Board should be all native Americans.

Again, my best wishes to you. My prayers for your success be with you continually.

Respectfully yours,

Herbert H. Locklear

Washington, D. C. 20510

Dear Senator Kennedy:

I am well aware of the good work you are doing in the area of Indian education and particularly with Amendment 6 to S 659, the Amendments to the Higher Education Act.

We in Rapid City, with more than nine hundred Indian youngsters in our schools, are particularly interested in all kinds of legislation relative to Indian education. One of the unfortunate and unfair aspects of most legislation is that schools such as ours which have no Indian lands receive no funds whatsoever. However, the urban Indian is in need of as much, if not more, special attention. Even though we have a large number of Indian students who have migrated here from the reservations, there are no available funds for compensatory programs and services.

We are an extremely poor school district and this problem becomes an even heavier burden. It is frustrating not to be able to help these youngsters. Even though I have contacted our congressmen from time to time about this matter, nothing has developed to improve the situation.

The attached copy of a letter I sent to (Omitted) Vice-President Agnew some time ago further explains our dilemma. It is my hope that your influence and interest in Indian education will help to alleviate this concern.

Sincerely yours,

Charles A. Lindly

Dear Sirs:

We, the members of the Taos Pueblo School Board representing the Pueblo Governor's office agreed that establishment of the fifteen men National Board of Indian Education under Bill S-659 is practical. We support this bill with the following stipulation:

1. Each area should be represented by two members of the board, for example--two members from the Albuquerque Area, two from Phoenix Area and so forth to insure equal representation on the board.

2. Selected members should qualify in terms of awareness of educational needs in the area which they represent, and members should consult and disseminate information to the people they will be serving.

3. We wish to maintain the trust relationship with the Federal Government, however, we feel that education is so important that it be elevated to departmental status.

4. We are opposed to elevating the Institute of American Indian Arts School to 4-year college level for the reason that we feel Indian students should be exposed to a broader educational base. With a broader exposure, they would compete at any level in a society.

We recommend that area field offices be established for all school board representatives with the main headquarters in Washington.

Sincerely yours,

Tony Reyna 1st

Tony Reyna, Chairman
Taos Pueblo School Board

School Board Members:
Mrs. Peggy Sandy
Mrs. Ida Isaacs
Mr. Jim Cordova
Mrs. Lorraine Martinez

May 12, 1971

Mr. Kennedy:

As a professional behavioral scientist with three years of experience at Albuquerque Indian School (AIS), an off-reservation boarding school, I should like to commend you on the general excellence of your proposed Amendment, S. 659, and offer a few comments relative to the "detailed investigation of the off-reservation boarding schools to determine which ones should be converted into therapeutic treatment centers"...etc.

While such a detailed investigation is welcomed by one who has endured much frustration in working within the present context of such a school, a word of caution is considered appropriate relative to what one defines as "therapeutic treatment centers". This is especially true in terms of what therapeutic models one employs in such a setting, especially with reference to the traditional "medical model" or method.

What is wrong with off-reservation boarding schools is what is wrong with the entire educational system in this country (which it imitates) plus a few more factors guaranteed to accomplish the ultimate result. These added factors include (a) an increased chance for the social break-down syndrome to appear because of their residential status; (b) a more global and insidious form of institutional racism (almost a de facto policy) which

60-433 O - 71 - pt. 4 ---26

heightens the self-fulfilling prophesy of failure and incompetence; (c) English-as-a-second-language problems peculiar to groups without a written language who are forced into bilingualism often at age six in the company of strange, white, and often feared adults; (d) suffering from a values crisis while caught in a cultural double-bind; (e) enduring the tyranny of an antiquated staff made sacrosanct by the beaurocratic civil service process. While the above five add upon the general crisis in education, they remain in addition to the general crisis. This general "wrongness" of our educational programs has been powerfully stated by Walter L. Thomas, Ed. D. (Toward A Concept For Affective Education", Combined Motivation Education Systems, Inc., 8300 River Road, Rosemont, Illinois, 80018, March, 1971):

> "One of the things the school has mastered best is a fail-safe process of alienating children and youth. This process, now a master plan, has been derived over years of experience and has profited from the input of thousands of educators across the country. Education has successfully established and carefully implemented these principles of alienation and dehumanization, so that most children and youth are fortunate enough to be modestly affected...

(Not the Indian child, though, who must be maximally affected in these residential schools especially with all the additional factors heaped upon him).

> "A careful analysis of the dehumanizing function yields the following reliable guidelines for schools to follow:
>
> 1. Organize the school around the concept of subjects and disciplines.
>
> 2. Arrange all learning experiences on a fixed interval schedule.
>
> 3. Assure the rate of student to be generally passive.

4. Justify all requirements and expectations on the basis of some future reference point.

5. Include ample amounts of activities that are sometimes referred to as busy work.

6. Feature the teacher as the star in all classroom learning situations (front center and active).

7. Provide as little opportunity as possible for the student to participate in education planning evaluation, policy, or decision-making.

In short, the alienating function is accomplished by intellectualization, externalization, paternalization, and allocation of more money and facilities. These are the very same responses the white middle class makes to all social tasks and problems. The white middle class teacher and administrator have successfully spread the effect of these defense mechanisms to encompass education."

And the ultimate effect on minority groups, I might add, is devastating, especially when you have a "captive audience" in an off-reservation residential Indian school.

Our problems in these schools are primarily ones which can be loosely classed as behavioral and affective (values area). Dealing effectively with behaviors demands an approach predicated on social learning and value theory (read A. Bandura, Principles Of Behavior Modification, Holt, Rinehart and Winston, Inc., 1969) which predicates the establishment of a motivating environment dealing with observable behavioral events not with symptomology such as the traditional medical model attempts to do. Stopping the dehumanizing alienation process demands an effective affective education program. "We must attempt to humanize the institutional monstrocities we have created...(knowledge and skills) are very important, but only when the possessor has been tempered with the values of a sensitive

and moral man...Affective education has to do with values and feelings... If education is to be humanized, the affective areas of living and learning must be given a top level priority in the schools. The final difference among people is not what they know or what they can do, but what their committments are. The final difference among people pertains to their values and feelings, not their knowledges and skills." (Thomas, op. cit.).

Remember! The medical method has failed in the mental hospitals. Behavioral programs--motivating community concepts--are increasing yearly in mental hospitals around the country as they are in other institutions. (For example, read: Ayllon and Azrin, The Token Economy; Staff Manual For The Motivating Community, Behavior Therapy Program, Department of Psychology, Central State Psychiatric Hospital, Nashville, Tennessee). As the above-mentioned manual states:

> "This brings us to the question of how can we best utilize the hospital to prevent chronicity? On many wards in any mental hospital, patients remain mute, are incontinent, hallucinate, and exhibit every psychotic symptom in the book. But, if we take a closer look at them, we find that very few of them will refuse to line up for meals, go to the commissary, go to bed or get up on time. Behind the shadow of incompetence, apathy and overt psychosis, there is a continued responding to the basic daily routine. And here we find our first clue, which is to rearrange the mental hospital routine which fosters dependence and abnormal behavior in such a manner as to include more and more socially adaptive activities. These activities

should correspond as much as possible to those activities which are carried out in the community to which the patients shall return. In order to qualify our endeavors as a treatment process, we must be able to show that we change or alter both the environment of the hospital and the behavior and status of the patients. Therefore, let us define what we mean by therapy. Previously, we said that psychotherapy is the attempt on the part of one person to change the behavior of another, either in a group or in an individual setting. The success or failure of therapy is determined in the final analysis by the changes, or lack of them, in the patient's behavior. While the patient may talk about changes, unless these changes are carried over into his observable day-to-day behavior, therapy has not been successful and, in a sense, has not taken place. Therefore, we shall define our treatment program as making beneficial changes in the patient's observable behavior in the direction of activity, social communication, self-reliance, and appropriate adaptive responses to his environment.

"With regard to treatment, we shall employ those techniques of changing behavior known as "behavior modification" or "behavior therapy." This approach utilizes the principles of operant conditioning to direct and to control the behavior of distressed individuals. Our "cure" shall be

> defined as beneficial changes in the behavior patterns of the patient following "therapy", which makes possible his return to, and maintenance in, society without requiring further treatment."

This quote provides a pointed example of the ineffectiveness of the medical model even in mental hospitals, and the recognized effectiveness of the behavioral approach.

Perhaps I have belabored these points overly long, however, their importance cannot be stressed too much.

Much of what happens in off-reservation residential schools which is alienating and detrimental to development and learning has to do with the "closed system" traditional schoolness of the process and more importantly perhaps, the daily transactions with the staff and peers. Behavioral events derive from these transactions. Some of these behaviors are non-viable in terms of development and learning. It is important to recognize that they occur in ecological or environmental context, regardless of the internal state of the student or the "set" he brings into the transaction with him (from a "broken home" or otherwise). As Gruenberg and Zusman (International Journal of Psychiatry, April, 1967, Vol. 3, No. 4) state concerning the social breakdown syndrome, in this case, in mental hospital patients:

> "The most important etiological factor is not the institution but rather those around the patient--whether they are hospital staff and other patients or parents and siblings" (or teachers and dormitory counselors and aides).

So where are we?

We need a behavioral modification program for "propping up the system" for renovation and repairs. We need an affective education program to humanize the school, to provide experiences for value development and value clarification, remembering the importance of human unity and cultural differences. "Values are what make individuals distinctly human." (Thomas, op. cit.). Machines can do the rest, probably better than humans in many cases. We have educated too many of our children into alienated dehumanized machines!

I am taking the liberty of enclosing several items which may prove to be of interest. (Omitted.) The large volume, The Motivational Environment Program specification is an initial attempt by me at setting up a behavioral program at A.I.S. this year (1970-71) under Title I. An evaluation report will be forthcoming this year. A mid-term evaluation is already out.

If any small portion of this rather lengthy discussion proves of benefit, I am rewarded. My primary motivation in all this is to help the Indian children I have become so intimate with, and whom I have grown to love so much.

April 1, 1971

The Honorable Edward M. Kennedy
Senator from Massachusetts
Senate Office Building
Washington, D. C. 20510

Dear Senator Kennedy:

Thank you for your letter dated March 10th. I appreciate your sending me a copy of the Congressional Record, which contains the Indian Education Act.

The past several times I have been in Washington, I have tried to make an appointment with you and/or with your Indian Education Authority, Mr. Susman. I have not been successful yet, but I hope that I sometime have the opportunity of sitting down with you and with him and discussing Indian Education. As you undoubtedly are aware, we are facing some rather rapid changes in the area of Indian Education and your bill identifies some of these and will run afoul of others. I am sure I am telling you nothing new when I suggest that the establishment of this National Board of Indian Education will be the most difficult, in my estimation, with regard to acceptance by the Indian people. There is a built-in dilemma in the establishment of such an entity in that we are striving for local Indian control and we establish a National Board. Obviously, there needs to be someone who can run and steer the ship and make certain that it keeps on its course. Nevertheless, I am certain from my conversations with Indian leaders, that there is an apparent incongruity between the existance of this National Board and the existance of local controlling bodies. Certainly your bill describes the functions and powers and duties but I still feel that this will be one of the most difficult areas in which to gain acceptance by the Indian people.

In my estimation, this means that the tremendous value of your bill and the vital importance of such a bill may well be lost because of something which really is not all that important. I have seen in the past several years good recommendations made which were rejected by Indian people in some instances solely because there was some minor area of conflict or uncertainty.

Your bill identifies what I consider to be the major areas of concern that exist in Indian Education. The problem is to make certain that Indian people are involved in the full development and expression of this or related bills. A good case in point is the report "An Even Chance" prepared by a number of well-intentioned people from the East. What they found was vital and improvements must result but nevertheless, they failed to take into account the role of Indian leadership and I fear made jeopardy of the very thrust of their recommendations by such a default.

I believe you must actively establish a dialogue with Indian leaders through visits to reservations and through continued support for Indian initiated programs. I do hope I have the opportunity of discussing in much greater detail with you or with Tom this bill.

I agree that structural change is essential and I also believe constant Indian involvement is imperative.

At one time I had the dubious distinction of serving on President Johnson's Secret Task Force on Indian Affairs. At that time we discussed at great debth possible changes and ways to improve Indian Education. I wanted more far-reaching changes than any one else on the Task Force and I therefore like your bill in that it does more than many possible changes I have heard.

Nevertheless, I am concerned about the National Board in the sense that it is appointed by a President who may or may not be interested in Indians and who may or may not appoint Indians who represent the Indian people who have the programs and therefor the problems. As you know, there is an ever-increasing gulf developing between urban and reservation Indians. I believe it is essential in our thinking about Indian programs that we recognize that the needs and interests of these two groups do not always coincide. I of course believe that this Board, if there is to be one, should primarily reflect the needs and wishes of reservation Indians and you also know I am sure that there is little agreement among this group. The real question is the relationship of such a board to the President. He already is plagued with so many commissions and boards reporting directly to him that I wonder exactly what kind of attention such an independent body would receive from the President. Finally, I wonder why it would not be possible to provide regional boards which could more nearly reflect the needs of Indian people in the specific regions. It has been my experience that one of the problems facing the so-called Indian Education Advisory Board is that it is difficult for that group to speak as a unit in the sense that it can make statements that are applicable to all reservations and to all schools. In any event, I greatly admire your interest in Indians and I trust it will grow deeper and never lessen.

Sincerely,

Robert A. Roessel, Jr.
Chancellor

February 19, 1971

Dear Senator Kennedy:

The quest for Indian self-determination and control over their own destiny is continuously being frustrated at every turn under the present Government administered programs. In fact, the whole national educational system and Government administered programs are not geared to Indian needs. They do not take into account unique Indian background and heritage. The criteria, guidelines, regulations, and channels of operation of Federal and State programs are definitely tailored to middle-class white America, totally leaving Indian citizens at a very limited involvement and participation.

The bureaucratic domination over the lives of Indian people for more than 100 years has taken away opportunities for using their own judgment, assessing their situation, and planning and implementing programs designed to meet their needs and problems. It has forced them into the role of unconsulted receivers of services that may or may not make sense to them, resulting in serious dependency, hopelessness, loss of pride, and what appears to be lack of responsibility and lack of ability to make decisions.

This long prevalent situation is changing now. Indian demands for the right of self-determination are increasing. Indian leadership, both on the reservations and in the cities, is growing in sophistication and the Indian people in general are growing in their ability to chart their own future. The American Indian stands ready now to implement the policy of self-determination, but the present programs policies under HEW, Office of Education, HUD, and others reject such efforts.

Although the Bureau of Indian Affairs' prime responsibilities lie with American Indians, it is limited to the Indian on the reservation, and

every day they deny services to numerous off-reservation, or non-reservation, and so-called terminated Indians in the cities and small towns. About one-half the Indian population is in the cities. When the urban Indian turns to State and local services, he is also denied. As a result, thousands have not been successfully assimilated and find themselves confined to hopeless city environments of despair because of a lack of education and skills.

I can no longer live with my conscience and continue to play bureaucratic games to countless numbers of Indian groups, agencies, organizations, and individuals coming into our office (DHEW, Education for American Indians Office), desperately wanting financial assistance for their many and varied projects and programs, only to go back unassured, uncertain, and often discouraged. While our office and other so-called "Indian desks" (with no budgets) do give every assistance in channelling Indian programs within the various Federal agencies for possible funding, the chances for funding are one out of 100, if that. The usual bureaucratic responses are: "We do not have the authority to fund..."; "We do not fund Indian tribes or organizations..."; "We only work with and through the States..."; "BIA takes care of Indians."

I am writing you because in your hands lie the authority, the power, and the political pull to bring congressional action and legislation to at least alleviate some of the glaring critical circumstances, because they demand action of the highest order.

Trying to "scare up" funds for special needs of Indians is a continuous hopeless venture and as a trained professional Indian educator, I find it intolerable to continue raising false hopes in Indians who are already suspicious of a long history of broken Government promises. Therefore, may I recommend a few goals or strategies as suggestions in your pursuit for action.

1. Appropriations and a budget for Education for American Indians Office, HEW, and so-called "Indian desks" in other agencies. At present, they are merely "token" Indian offices, not meeting, and in fact legally unable to meet, the needs of Indian citizens.

2. Special appropriation and use of discretionary funds to meet the special needs of Indians, particularly urban Indians. These funds could be channeled through the above mentioned Indian offices or other appropriate bureaus to enable Indian initiatives and ideas to be tested and tried.

3. Special appropriations or legislative funding for Navajo Community College and other Indian initiatives in establishing higher education on or near reservations. At present, the Navajo Community College, the first Indian college on a reservation, is in dire need of financial assistance.

4. Provisions or amendments made in the present policies of Federal programs to contract with Indian tribes and urban Indian centers along with State and local educational agencies. Tribal councils have the authority to speak and act for the tribe and represent it in negotiations with Federal, State and local governments. The tribal governments are organized and structured in a way that if given financial support, they would meet their own economical, social, educational and health needs. Urban centers are seriously deficient in funds but they too are organized to meet special needs of Indians in the cities if given financial support.

5. Major policy initiatives to redefine and restructure programs to meet the unmet needs of all terminated Indians which at present BIA, Federal, State, and local government services are completely ignoring. The terminated Indians suffer accute limitations, disabilities, and indignities that few disadvantaged groups in America suffer in equal measure.

6. Federal departments, other than Interior, urgently need to redefine and restructure their present program, project, and funding procedures so that American Indians, whether urban or rural, can take advantage of their programs on an equal basis with other citizens. Such words as "tribe," "urban Indian centers," "Indian college," "Indian non-profit organization," "National Indian Education Association" and other Indian organizations should become common vocabulary in Federal program policies and regulations.

7. The above mentioned recommendations could be essential parts of a much needed bold comprehensive Indian education bill to meet the special educational needs of Indians in both Federal and public schools, including any Indian administered and controlled schools.

As an American Indian and as a tax-paying American citizen, may I urge your immediate action to once and for all make positive, sincere commitments to start meeting the urgent needs of the First Americans who, at present, have become the last American to receive equal rights, privileges and services.

Now that our Nation has met the needs of middle-class white America, why not start meeting the long overdue, urgent needs of Indian America!

Please help!

Sincerely yours,

George P. Lee

The Hon. Edward M. Kennedy
United States Senate
Committee on Labor and
Public Welfare
Washington, D.C. 20510

Dear Sir,

My people are Rosebud Sioux of the Dakota Nation. One of my cousins is Dellas Bordeaux, Chief Eagle of the Rosebud Reservation, South Dakota. Another of my cousins is Sister Christine Hudson, O.S.B., administrator of Marty Mission's Indian School in South Dakota.

I am a student at the University of California at Santa Barbara, studying the Religious Tradition of the Dakota Paralleled with the Judaic-Christian Tradition, under the guidance of both the Institute of Religious Studies at UCSB, and Fr. Vincent Martin, O.S.B., of St. Andrew's Priory, Valyermo, Ca.

One of my friends to whom you had written, is Lawrence Baca, the temporary chairman of the proposed Indian Studies Program at UCSB. Through Larry, I became acquainted with your Bill, the Indian Education Act. Having read this Bill, I took it upon myself to write you my comments on it.

For the time being, I am not in any educational or administrative capacity, although I will teach someday. Therefore I am commenting on your Bill only as an Indian student, who sees the Bill's potential for assisting the completion of my study in order that I may help my own people.

Thus I see first that the Indian Education Act will possibly provide some money to complete my future graduate work. Secondly, I see that the Indian Education Act will possibly provide a framework within which I can work upon completion of my studies.

This is good.

But I will complete my study and work for my people, even without the assistance of your Bill. However, some Indian students and leaders will not be able to continue their work without the help of the Indian Education Act. I am concerned for them, should the Bill not be accepted.

Also, I ask you with what degree of compromise is this Bill being proposed? And by compromise I mean that frame of mind wherein a person asks for much, so that he will receive at least a little. Do you ask

for $25 million in your Bill, knowing that you will be lucky to receive $1 million, if that much? If so, I do not find that such a compromise makes any difference, notwithstanding the money involved, since the main reason your Bill must be accepted is more important than simply financial aid for educating my people. I hope that I see this Bill establishing precedent for helping my people through agencies other than the B.I.A.

This is good.

But you know as well as I do, that since the truth hurts, the B.I.A. will not take lightly being told it is a failure. But this does not make any difference either, since the alienation that already exists between our leaders and the B.I.A., will have by means of the Indian Education Act a means of becoming officially solidified. And even the negativeness of this alienation is to be preferred before the stagnation of indifference that exists now between the majority of my people and the leviathan B.I.A.; a stagnation and apathy that is the result of our fighting to live under the B.I.A. and not being able to do so.

And this too, is good.

In short your Bill is the perfect catalyst my people, as dying survivors, must have to be able to begin again living as Indian people, for all time.

For this I thank you.

I have the honor to remains yours

very sincerely,

Kiswacinsini, peacefully

Joseph Hudson

THREE FEATHER SOCIETY
Box 9
Avenal, CA 93204

12 March 1971

Edward M. Kennedy
United States Senate
Committee on Labor and Public Welfare

Dear Senator Kennedy:

Thank you very much for your letter of March 5, 1971 regarding American Indian Education. Your efforts are much appreciated.

I believe a National Board independent of the Bureau of Indian Affairs would be preferrable.

Please do not think that we criticize the B I A simply because it and the U S Indian Service, its predecessor, could not solve the immensely complicated problems of Indians. I have much to thank the old U S I S for; it and the Massachusetts Indian Association were responsible for my getting a medical education.

Since my retirement some three years ago I have taught at the University level, travelled much, and corresponded with a large number of Indians-at-large - people who have not been closely connected with the BIA, either as reserve or urban Indians.

Many, many Indians are ' making it ' in general public life - and contributing their share. These people, and reports such as the recent Havighurst Report, plus my own experiences, convince me that the Indian people as a whole have potential as citizens which has not begun to be tapped.

Aside from the many ppoblems suggested by the late Oscar Lewis in his works on the 'culture of poverty', the Indian people have problems best understood by Indians. If they are to succeed, it will be as Indians, not as imitations.

Indian-Americans, Armenian-American, Irish-Americans, German-Americans, Japanese-Americans all function from the depths of their natural characters, and they fail to the extent that they try to be something else.

If you fail from your own mistakes, you face up to it and learn - if you fail as the result of other's mistakes, you have an excuse rather than a reason.

We have many Indian students in colleges all over the country, many hanging on precipitously, due to improper preparation, poor financing, or being allowed into schools simply to let the school say it is giving the ethnic groups a chance.

I have enclosed some suggestions,

Sincerely,
Thomas S. Whitecloud, M.D.
Thomas S. Whitecloud, M.D. (Chippewa)

2100

THREE FEATHER SOCIETY

Suggestions for the improvement of Indian Education.

1. Improvement of home conditions. Jobs. No welfare without attempting to let the recipient do something in order to retain his self-respect.

2. Housing. Good example is the Alabama-Coushatta reserve, run by the state of Texas. Man puts in several hundred hours of labor as the down payment on his house. Then the house payments are taken up as in regular financing. Must have protection against loss of land.

3. New approach to the teaching of young. Use Indians if possible, or audio-visual methods using Indian commentators. Children should not be constantly confronted with an authority figure who is alien, no matter how kindly that figure is.

4. Break away, somehow, from the system that makes a child feel he is an 'A' person, a 'B' person, a 'C' person, etc. These classifications deal with academic ratings, ignore other facets of character such as honesty, consistency, critical ability, originality, etc. Try to grade if necessary on the group, so that each may contribute without seeming to degrade others.

5. Make a definite effort to predetermine potential dropouts, find out their problems, solve them, but if not, arrange to have some sort of continuing education for the dropout.

6. Arrange for preparatory school education for those going on to the larger colleges. Courses in these schools in how to study, how to write papers, how to take tests, how to use libraries, how to type thesis papers, use of audiovisual materials, use of copying machines, familiarization of journals, classical textbooks of the various fields.
   This should be done with a minimum of financial worry, extra-curricular activity, or other distracting forces.

7. Same for pre-nursing, pre-medical and paramedical students at the appropriate level, such as between college and medical or law school.

8. Keep in constant mind the importance of teaching each child the positive factors of his parent's culture at its best. History must not be taught so that the child becomes embittered by a lack of recognition of his people's history, or by a one-sided description of the wrongs done his people. Rather teach a balanced history, stressing the difficulties each group of American citizens went through, and how the student's people fit into the overall picture.

9. Teach the teachers. Again in a balanced manner, give those teachers who will be teaching Indian children instruction in racial differences, sensitivities, methods of praise and recognition within the culture, methods of criticism and punishment.

10. Arrange for formal credit for field work away from the classroom and the university. Let Indians study Indians or whites as much as non-Indians have studied them. Many misconceptions might be corrected.

Thomas St. Germain Whitecloud, M.D.

April 20, 1971

Honorable Edward M. Kennedy
United States Senate
431 Senate Office Building
Washington, D. C.

Dear Senator Kennedy:

We would like to take this opportunity to express our appreciation for your interest and involvement in Indian Education. For many years now, we have attempted to work within our communities to affect change in education. With your continued support, we are sure to succeed.

I do have some questions about the Bill S 659, which you have presented. There seems to be no direct statement allowing Indians to contract for education monies, such as Johnson-O'Malley Programs. As you well know, Johnson-O'Malley is the one factor directly related to Indians in education. Tribal councils need to have control of this money, working in coordination with school districts.

There should also be some consideration given to a stipulation that all programs affecting Indian Education have the involvement and endorsement of responsible tribal governments. Too often, we have had to accept decisions affecting our lives and our children. These decisions, normally, have no endorsement of our elected tribal leaders. We must become involved in all levels of decision making, not just with making suggestions and letting non-Indians decide for us what is best. I agree that parents must be involved in making these decisions, but so must our tribal leaders. Parents elect our councils, and school districts must recognize this fact. The fact that the State of Washington's Department of Public Instruction has denied active participation of tribal councils has caused much dissension within the Johnson-O'Malley Committees. This matter should be resolved. We need to be more than advisory committees. We need to have full authority to make decisions - decisions that affect our lives.

I fully endorse your proposal for new programs for our education, but is there going to be enough available funding with these programs? We know you realize the need for adequate funding; we also hope you receive the full support of Congress to supply our people with the necessary monies.

April 20, 1971

The National Board of Education sounds like a great idea. I would wonder, though, if you have taken the step necessary to insure that this board would, in fact, be Indians appointed by Indians. The President can listen to our requests and suggestions, but who finally makes the appointments? I feel it is definitely a requirement that you must have the endorsement of tribal governments in the selection of the appointees. We must receive more than token involvement.

Attached is a statement I have prepared for presentation to the Appropriations Committee on Interior and Insular Affairs. You may be interested in reading this.

I feel your proposed bill is a step in the right direction; maybe I am just too sensitive over this Indian control we talk about.

If you feel I can be of any assistance, please contact me.

Most Sincerely,

Virginia Brown

CALIFORNIA LEAGUE FOR AMERICAN INDIANS

Post Office Box 389 • Sacramento, California 95802

April 9, 1971

Honorable Edward Kennedy, Chairman
Subcommittee on Indian Education
Committee on Labor and Public Welfare
Senate Office Building
Washington, D. C. 20202

Dear Senator Kennedy:

The Board of Directors of the California League for American Indians, at its meeting in Sacramento March 20, 1971, discussed your subcommittee's Senate Bill 659 regarding Title V, Indian Education.

I am writing to express the views of the board and a motion passed unanimously placing the League on record as favoring this legislation with a request for a few changes and additions which would strengthen this bill, and at the same time be more meaningful to the Indian people.

Part E, Title V, Senate Bill 659
Concerning part E, this organization believes that the term "community colleges" should be changed to "higher education." This would enable Indian colleges of higher education now being formed to be part of this legislation.

Part D, Title V, Board of Directors
This organization believes that, if the Indian people had more of a responsibility in appointing the officers of the board, the appointees would be responsible to the Indian people and not to one person or organization.

Johnson-O'Malley
The Johnson-O'Malley funds are presently limited to Indians on or near reservations. If a greater number of Indians are to be assisted in education, the Johnson-O'Malley program must be broadened to include those Indians who have left the reservations and those who have never had a reservation with which to identify.

Additions to Senate Bill 659

Senate Bill 659 failed to mention two important problem areas for American Indians.

1. The Indian dropout from school

2. The urban Indian and his problems in an urban environment

Please let us know if there is anything this organization can do to assure passage of this vital bill.

Sincerely,

Camilla Collins

Camilla Collins, President
California League for
American Indians

GOVERNOR'S COMMISSION ON INDIAN AFFAIRS

Robert B. Mackey
Director

April 13, 1971

Senator Edward Kennedy
United States Senate
Committee on Labor And Public Welfare
Washington, D. C. 20510

Dear Senator Kennedy:

We as Indians of the three Tribes of Nebraska - the Omaha, Santee - Sioux and Winnebago Tribes generally concur with the basic concepts and proposals as it appears in amendment #6, wherein broad latitudes appear available to Federal schools and public schools - on Reservations, off of Reservations, in rural areas and in urban and Metropolitan areas.

Apprehension arises in the language which would in effect give administrative authority of funds to public schools for educating Indian children in Public Schools, in a short time, a situation unfavorable to the Indians who have seen the results of non-Indian handling of these special education funds under the Johnson-O'Malley fund and reject amenment #6. A clear definition of the Bureau of Indian Affairs in its role with Indian Education is imperative, and some thought may be given to the possibilities of continuing the B.I.A. functioning as the administrator of the Johnson O'Malley funds in Public Schools to safe guard the "satisfactory and relevant education for Indian children.

The National Education Board will be the appropriate governing and controlling agency if it is composed of all Indian participation on the Board. The University of Nebraska under Dr. Paul Olsen, and the University of South Dakota under Dr. Tom Golden have been involved in extensive work concerning the Indian Education needs from special curiculum Development to special teacher and counselor training that are meritorious of consideration for consultation in the formulation of amendment #6 under the Indian Education Act of 1971 S-659.

The Nebraska Indians concur with the need to bring about a new concept for Indian Education because this need has not been fulfilled because there were no guidelines to control the public school administration of Indian Education Programs under the Johnson-O'Malley Fund. Amendment #6 would place control with State Department of Education.

There is a need for off reservation benefits for those of us who have left the reservation, seeking a better way of life. For some, socio-economic conditions improved with employment opportunities. For others, conditions did not improve. There is broad and far reaching need for legislation to encompass the survival needs of these "displaced" Indians who are no less Indian by having left the reservations to seek opportunities which are non existant at home.

It is suggested that Regional meetings with Indian leadership be held to provide grass roots data in the Educational need of Indians, and recommended solutions, as there is a general rejection of the amendment #6 as it now stands.

Sincerely,

Robert B. Mackey
